585. No, the Foreign Office and the Colonial Office papers would in that case be covered by the salary. The salary would then be restricted to two classes of business practically, apart from some small business. First of all, there would be the patent business which, although it imposes a certain amount of trouble upon the law officers, is, as you say, only a mode of paying them?—While you are upon that subject I should like to say that in my judgment a great deal is said about the duties of the law officers in patent cases, which is hardly said fairly. I can only say that I used habitually to read through every specification that came before me, not only for the purpose of seeing that there was an invention, but also for another very important purpose, namely, to see that the revenue was not being cheated, because a patentee might cram two or three inventions into the same patent; for instance, if he was taking out a patent for an improvement in ships, he might include an improvement in anchors, an improvement in the keel, and an improvement in the cordage, as all being improvements in ships. There were constant squabbles about that, and I used to make the patentees divide it into two or three different patents. Therefore there was something, and in fact a good deal, to do in those matters.

586. I do not know what your practice was, but I believe the practice to be, as a rule, that the patent clerk reads through the patents under general instructions, and then brings before the law officer first of all any objections that he has to make in any case which he doubts about?—I used to find practically that his objections were, generally speaking, formal.

587. Except as to those very questions that you have been referring to, whether two inventions were not being included in the same patent?—I found that those were very often omitted altogether by him. I know this, that in two or three instances when instead of putting in a provisional specification a complete specification came in, I had to return them and refuse to have anything to do with them, because they had put two or three inventions in the same patent.

588. I do not suppose, whatever you may have done, that every law officer reads through all the specifications?—I can only say that I used to do it in order to see that there was something like an invention before I passed them. But that was a very useless office when it was done, because if there was, in my opinion, an invention, however slight, I was obliged to pass it.

589. Practically your duties were confined to matters of form with very few exceptions?—That was the point that I chiefly looked at, that the revenue was not cheated by putting two inventions in the same patent.

590. Do you not think that with the exception of opposed patents all the duties performed by law officers in respect of patents could very well be performed by a good and experienced clerk in the Patent Office?—I should not like to express an opinion as to whether you would not want a man of a certain amount of scientific experience.

591. I am not speaking of examinations, I speak of the duties performed by the law officers as regards seeing whether a patent is in due form or not?—If it is merely to see that the patent is in due form and to see that there is not a second patent involved in the specification, it might be done in that way.

592. And whether it is a proper subject matter of a patent?—That is a difficult thing for a law officer to determine. I will give an instance of that; when I was in office, a man came and said he wished to take out a patent for a new mode of making an envelope. He said there was a great difference between his and any envelope I had ever seen. All I could say was, "This seems to "me to be new, but the public may of course find "out some day that the principle is a very old "one." When the new specification for the improved envelope was laid before me, I looked through it to see what was said. The man said, "I first of all bend down the sides instead of the top which used to be the mode of making these envelopes," or something to that effect.

593. Do you not think that an experienced officer in the Patent Office would be quite as likely to know what is a proper subject matter of a patent as the Attorney General?—I think he would be much more likely to do so; at the same time there is no means of testing his opinion.

594. There would be no difficulty about appealing from such an officer?—Nothing could be more

Sir *J. Karslake*, Q.C., M.P.

10 June 1875.

more unsatisfactory than the jurisdiction of the law officers in this business.

595. If the patent business were taken away from them, they ought to have a compensation in the way of salary?—I think so; it would not be in the least worth while for a man at the head of the profession, with a very few exceptions at all events, to give up the greater part of his own business and become a law officer, with the requirement of being in the House of Commons, for it may be sometimes 10 or 12 hours a day, probably doing little, but waiting there at the beck and call of the Government without having something considerable for it.

596. As regards advising for the Foreign Office, the present Attorney General suggested that the business of the Foreign Office had probably very much increased since they have ceased to pay for it directly. It is impossible to compare the quantity of business at different times, therefore one cannot be certain about it, but that was his suggestion?—I have always understood that it depends very much upon who is the Foreign Secretary; some Foreign Secretaries do not send their business to the law officers at all, others do.

597. So I have understood, but, independently of that, do you think it is worth while to impose any check upon the Foreign Office either as to the mode in which they send business, or as to the nature of the business that is to be sent?—I cannot see where it is possible to draw a line. The great labour that I used to find with regard to the Foreign Office papers arose from this. You come to a set of papers which have been accumulating perhaps for four or five years, with the opinions of perhaps three or four successive sets of law officers upon them, and you have some question put to you which involves the necessity of your reading through the whole of those papers before you can express any valuable opinion upon it. I cannot help thinking myself that a permanent lawyer in the Foreign Office would be of the greatest possible assistance to the law officers for the time being in advising upon those papers. I stated my opinion to Lord Stanley in 1868 that it was useless to have a case stated, or a précis sent to the law officers upon Foreign Office matters, because it was almost certain that some most important document would either be overlooked or wrongly abstracted, or something of that kind. At the same time the greatest possible assistance would be rendered by a permanent counsel who could tell a law officer who comes in one day and goes out perhaps six months afterwards, what really has been done in the matter, what is the outline of the case when it comes into his hands. I do not know whether it is within the scope of this Committee's duties to consider that, but of course it was in that respect that the Queen's Advocate was able to render such great assistance. If he had been long in office he knew at all events the general outline of the old papers that had to come before the law officers afterwards. What made the work so extremely laborious was, that in order to reply to a question when you were asked what answer should be given to a particular despatch, you had to read back papers which had been accumulating for perhaps five years.

598. Sir *H. Holland.*] And after all it might be a question of drafting a letter; there might be no real question of law involved?—Yes. What the Chairman was asking me, as I understood it, was as to what could be done with reference to these Foreign Office cases. I see nothing that could be done. Of course what always strikes me in reference to compounding in these matters for a salary to be paid to the Attorney General is this, it will operate very unequally indeed upon successive law officers. At this moment we are in a state of peace; next year or the year after we may be in a state of war, and the difference in the labour of the law officers depending upon whether you happen to be at war with some other country or not is enormous. There are all sorts of questions of blockade, and so on, arising during a state of war.

599. Mr. Justice *Archibald.*] But the system of payment by salary having been once adopted, do you think it would be advisable to revert to the old system, although you would not have approved of adopting it in the first instance?—I should infinitely prefer reverting to the old system.

600. *Chairman.*] Even taking the risk of the patent business disappearing?—No; then you must pay upon the Foreign Office papers, &c., at a very much higher rate than you have done hitherto, and you must give a salary besides.

601. As I understand you, you would not return to the old system unless there is either a salary given to replace the patent fees, or the patent fees are allowed to remain?—If the patent fees remain, and are paid upon the scale on which they were paid when I was in office in 1868, although I do not think the Attorney Generals made anything like the fortunes that it was supposed they did then, I should be perfectly content with that state of things, because I should know that if I happened to be in office at a quiet time I should get a comparatively small amount of work from the Government, and could, therefore, take a comparatively large amount of private practice; if on the other hand there was a war in Europe, I should have my hands so full that I could not take much private practice, if any, but I should be remunerated in the other way, that is to say, upon the Government business. I think it would be unfortunate that that state of things should occur, if only on this ground, that I look upon it that the more the Attorney and Solicitor General can be seen conducting cases in court, the better it is by far for the dignity of the profession of which they are members. I think nothing can be more unfortunate than having an Attorney General in office, who really is never before the public in private cases. But you must sacrifice those private cases if you have a great deal to do for the Government, as you necessarily have in times of war.

602. Mr. Justice *Archibald.*] The Attorney General is not only the principal law adviser of the Government, he is also the head of the bar?—He is the head of the bar; and I am quite certain if he is never before the public in the great mercantile cases, and other cases which attract the attention of the country, he is very little thought of.

603. *Chairman.*] He loses prestige, and thereby damages the office?—Not only that. I recollect, when I was a boy, or at least when I was coming on to the bar, when we heard that an Attorney General in large practice was going to argue a case, we always went to hear him, because he was the great man in the profession; but that would be altered if the Attorney General never came into court except upon Government business. If

the

Sir J. Karslake, Q.C., M.P.

10 June 1875.

the Attorney General loses prestige in that way, I think it is a great misfortune.

604. Sir *H. Holland.*] Whether the Attorney General is paid by salary, or whether he is paid by fees, in times of war, or other times of trouble, he must attend to the Government work, and therefore he would not be able to come into court on private business?—Just so. I say, so long as the patent system goes on he should be paid altogether by fees, patent fees and others. Then a law officer, who had a great deal to do for the Government would receive a proportionate payment in fees for the Government work that he did; on the other hand, a law officer who had comparatively little to do for the Government could take briefs from private clients. But the more he can appear in court and in public as one of the leading counsel in England, the better for the bar and the better for the public.

605. The appearing in public does not depend upon the system by which he is paid; it is a mere question of whether he has time to go into court or not?—Yes. A law officer goes in for a lottery to a certain extent. He says, "I think, if I give "up my private practice, I ought to be able to "get an income from the Government." He says, "I may diminish my income very much by taking "the Government work, but I must risk that. If "I get a quiet time, I shall be able to do a large "amount of private practice too; if I do not get "a quiet time, I shall be paid for an additional "amount of Government work; in one way or "the other, I shall be paid for what I do." It will be known that an Attorney General cannot go into court in unquiet times, simply because he has so much work to do that he cannot afford the time for it.

606. Mr. Justice *Archibald.*] And as we know, changes of Government do take place, and an Attorney General must look forward to reverting to his private practice some time or other?—Yes; that has two aspects. I have thought over it very much; there have been a certain number of men who have held office who increased their private practice by doing so; they have made a mark, perhaps, by the way in which they have conducted the Government business, especially the Government law business. Other men, on the contrary, have done themselves infinite damage by holding office; they may not have had a very sure footing in the profession before they took office, and they have not strengthened their position by being in office, but have rather lost the footing that they had before. It is a risk.

607. Sir *H. Holland.*] A man must take his chance of that when he accepts office?—Yes, he must run the risk; but I think you must always remember those chances in considering this question, because the Government for the time being ought to have the most eligible men who can be procured for the position of law officer, having regard to certain other things that must be looked to. A law officer has got to get his seat and keep his seat in Parliament; that is one point. My opinion certainly would be that in the interests of the law officers, as long as the patent law remains in the present state, I would very much rather take the patent fees, and take proper fees upon Government business than have any salary at all. That would avoid many disagreeable questions arising, and it would be more satisfactory to the law officer himself.

608. Taking into consideration the chance of an alteration being made in the patent law, and taking also into consideration the fact that the system of payment has been changed, and that the law officers are now paid by salary, would you make a change in the system, either by reverting to the old system or otherwise?—If you put that question to me, I must take into consideration the probable contingency of the patent fees being taken away.

609. There is the contingency of the patent fees being taken away altogether from the law officers, or of some change being made; but then, on the other hand, there is the fact that a change has been made in the system of payment, and that the law officers are now paid by salary. Taking those two things together, should you be inclined to advise that there should be a change in the present system by reverting to the old system, or would you leave things as they are?—It is very difficult indeed to give an opinion upon that until you tell me whether the patent fees are to be taken away.

610. *Chairman.*] I think you must assume that the present patent system will not last much longer?—And that there will be no substitute for it giving the Attorney General comparatively less work to do, and a handsome remuneration for doing it.

611. That is not very likely. That would look like a sort of sinecure?—Then I should say the best plan would be to give the Attorney General for the time being a certain salary, as a sort of retaining fee, which should be paid to him as a law officer, for the advice he has to give the Government upon all sorts of questions, independently of the actual law work he does, and to give him also liberal fees upon the papers that are placed before him from time to time, and that there should be some rule laid down as to what the departments are bound to send to the law officers. That is really a matter for serious consideration, because I can imagine nothing more unfair than to ask a law officer to advise up to a certain point upon cases which may come into the Court of Exchequer or any other court, and then to tell him that the solicitor to the department concerned is to decide whether a law officer or any other counsel shall receive a brief.

612. Sir *H. Holland.*] The suggestion of the Master of the Rolls will entirely cover that, I think?—I think not. That suggestion has reference merely to what is "contentious business." I am upon a different point, and that is this: at one time, in every single case in which the Government was concerned, there was a brief given to the law officers. That was a very vicious system, and nothing could justify it. Those were called complimentary briefs. I do not advocate a return to that system in the least; but I say if the Government go to a law officer, and ask his advice upon a case, then they ought to send him a brief if it comes into court. If they refrain from going to a law officer at all, then let the law officer practise like any other barrister. Let it not be said to him, the Crown will be content with the advice of a junior in this case, but you shall not go into court against the Crown. The effect of that would be that the law officer, not having advised upon the case, and not having received a single sixpence in the case, whether it is a revenue case or any other in which the Crown is concerned, would be precluded from going into court on the other side, although if he is a barrister in large practice, he would probably have received from a private client a brief and double

Sir *J. Karslake*, Q.C., M.P.

10 June 1875.

the fee that the Crown would give him. There ought to be a rule laid down as to whether a law officer is entitled as a matter of course to demand a brief in cases in which he has advised, or in which the Crown is really substantially interested. I do not mean in all small prosecutions, but those cases ought to be looked into and defined. If the solicitor to a department may say, "I will not "give a brief to the Attorney General in this "case; I think a junior will do the work very "well," although the Attorney General might have settled the information, and might have expended much time and attention upon it, and might, if he had not been a law officer, have argued the case on the other side, that is very unfair. It is not fair to say, "We will not let "you argue the case for the other side, and yet "we will not have you for the Crown." And I may remark that even in small matters at times I think it is sometimes expedient that the Attorney General should appear as representing the Crown.

613. *Chairman.*] I think you must limit that answer. Any information in the Court of Chancery the Attorney General must sign, but he signs, not because he advises upon it, but because he acts at the instance of other people. You would not compel a party proceeding by information to employ the Attorney General because he signs it, and therefore leave out the Solicitor General?—No, not when he signs only *pro formâ*; not in cases where, although he signs, a private individual is really taking the proceedings; I think that ought to be defined, however, but I mean in cases where really and substantially the Crown is interested. In proceedings which are substantially promoted on behalf of the Crown, it should not be left to the discretion of the department to say, "We are quite content with your "advice up to the present moment; you have told "us exactly what the point to be determined is. "We will now ask A.B. to take the case; we will "send him a brief, and we will not send you a "brief at all." Take, for instance, a revenue case. I think, in every single case where the Revenue Department proceeds in the Court of Exchequer, the Attorney General ought to have a brief. I do not care what the amount is, or whether the question be one (for instance, a question of domicile) which you might think that some other counsel might argue better than he would, or not.

614. Mr. *Pemberton.*] When you say the Attorney General, do you think that the Solicitor General ought always to have a brief too, in every case?—Yes, I think so. If the Crown chooses to have the onus of law officers at all, it is bound to employ them in these cases.

615. Sir *H. Holland.*] Would not that lead to complimentary briefs?—No.

616. *Chairman.*] Do you not think that that would be a great disadvantage to the Crown, sometimes, in the present day?—No.

617. In former days the Crown was able to select its law officers freely, and then it was quite certain to have for one at least of its law officers a good lawyer and a good advocate; but that is not so now. The Crown may be compelled to take two gentlemen, neither of whom have held the first position as advocates; they may be selected for other reasons; it would never do to deprive the Crown of the services of the best lawyer to argue its cases?—I do not say that you ought to deprive the Crown of the best man, but I say you should give the Attorney and Solicitor General briefs in that case, and get A.B. to argue the case.

618. But that could not be; if the Attorney General and the Solicitor General had briefs, they would be there, and they would have to argue it; and therefore the man who was best fitted to conduct the case would not be the man who would actually conduct it?—Up to the present time that difficulty has not been found.

619. Do you not think it is more likely to arise in the future than in the past?—I think if the Attorney General and the Solicitor General really saw their weakness in any case, they would give it up to somebody else. You must take it with all the risks, looking at the matter all round. I think it would never do to snub the law officers in that way. If you select men for that position at all, you must take the chance of getting the first man at the bar, or the third, or the tenth, or the twentieth; but, whoever you get, it would be most unfair to the law officers to preclude them from holding a brief on the other side, and not being employed to represent the Crown in revenue cases; that would never do. I think myself it would be *pessimi exempli.* However, my notion is, that if an alteration is to be made, there ought to be a strict definition of what is to be the obligation on the part of the different departments to deliver briefs to the Attorney and Solicitor General for the time being in cases in which the Crown is concerned; and I think it would make a great difference to the opinion of any person who, except for the mere honour of the thing, was thinking of taking the office, to know what would be the right of the Post Office, or of any other department of the Government, as to sending or withholding from him briefs. It is a hard thing upon the law officers to let them advise upon a case up to the last moment before it goes into court, and then to tell them they shall not hold a brief, or even to tell them at the beginning that they shall not advise at all. In that case they would, in fact, be no longer the law officers of the Crown, if it was left for each department to say whether they would send to a private counsel or to a law officer. I think myself, when that matter is settled, if the patents are to be taken away, I should give a certain retaining salary to the Attorney General, and I should give him ample fees upon all other business that comes into his hands, and I should have a very strict provision as to what other business is to come into his hands. I do not think the law officers would have the least objection to get rid of mere so-called favour briefs, those Mint cases and favour briefs to advise upon.

620. Mr. Justice *Archibald.*] Do you think that the difficulty you have stated with regard to the report business could be met by an increase of salary?—No, I do not; because I think that would operate very hardly indeed upon different law officers, as I have already pointed out.

621. I am speaking only of the report business?—If there happens to be a war going on, or if a war has just closed, the number of cases which come before the law officers as to matters of breaking blockade and things of that sort is infinitely greater than it would be when there had been no war for some time past. Even in 1867 and 1868, when I was in office, although things were comparatively quiet, then the cases

we

we had as to breaking blockade in America were very numerous and very troublesome.

622. *Chairman.*] In my time we had the remains of the American War cases, and cases arising out of the German War besides?—Yes. I do not know how I can suggest anything more upon the subject. I have said all that occurs to me upon it. I remember one other matter in consequence of something Mr. Lingen said. I must say I was very sorry myself when the office of Queen's Advocate was abolished. I think that an officer of that sort, who was acquainted with a particular branch of the law upon which he was generally consulted, had great weight.

623. But the bar which supplied the Queen's Advocate has been abolished; the thing has ceased altogether?—I do not mean to say that you have the great men of that bar now that you used to have, but the acquaintance with the special subject which the Queen's Advocate used to possess was very valuable.

624. Sir *H. Holland.*] It seems to be a question whether you should not supply that, to a certain extent, by having a permanent counsel at the Foreign Office who would entirely devote his attention to that particular branch of law which the Queen's Advocate was specially acquainted with?—If there is a prize open to a man in a particular department, there are still plenty of means of educating men for it; perhaps more than ever there were practically. I cannot help thinking that it would be a great advantage to the Government for the time being to have some legal officer in the Foreign Office, who on a change of Government, or a change of law officers, would be able to come and say, when an immense bag of papers was placed before them, "You will find that the real ques- "tion here is this." You could trust that man to a certain extent, but a mere *précis* of papers which had been tied up in a bag and shuffled like a pack of cards before they came to the law officers is worthless.

Sir *J. Karslake,* Q.C., M.P.

10 June 1875.

625. A few minutes' conversation with a lawyer would very often save an immense deal of trouble in such a case?—Yes, certainly. I think in 1867 there was no counsel to the Colonial Office; I believe you were the first.

626. Have you found any inconvenience from not having some place where former law officers' opinions were recorded and stored up?—If I recollect rightly, the Attorney General for the time being almost always had a number of volumes sent to him in which there were those opinions.

627. They were very badly kept, were they not?—Nothing could be worse; still, very often the Foreign Office used to refer to a law officer's opinion of such and such a date, and then you could turn to it.

628. But I think you could not always get hold of it?—Often, if it was not in print, it would be sent to you from the Foreign Office.

629. Mr. *Lingen.*] Those opinions were sent with the remainder of the papers?—Yes.

630. And you sent them back?—Yes. I am reminded that the Queen's Advocate kept them for years back. You could ascertain the exact facts about this from former law officers of the Crown, but I believe those opinions were part of the papers you had to get through.

The Witness withdrew.

[Adjourned to Thursday next, at 4 o'clock.

Thursday, 17th June 1875.

PRESENT:

The Right Hon. THE MASTER OF THE ROLLS, in the Chair.

The Hon. Mr. Justice Archibald.	Mr. Lingen, C.B.
Sir Henry T. Holland, Bart.	Hr. Henry Leigh Pemberton.
	Mr. E. W. Hamilton, *Secretary.*

MR. AUGUSTUS K. STEPHENSON, Solicitor to the Treasury, further Examined.

631. Mr. *Lingen.*] WE have been discussing this question, whether the counsel to departments should be appointed by the solicitors of those departments, in the same way as a private solicitor would appoint any other counsel, quite independently of any control by the Attorney and Solicitor General, or whether the Attorney and Solicitor General should have the nomination of the counsel who were to act for the different departments; do you see any practical difficulty, or have you encountered any difficulty which would occur, or which would be avoided, according as the one or the other of those courses was taken?—No; I cannot attribute any difficulty that I have encountered to the practice which has hitherto prevailed of the Attorney General having the power of appointment.

Mr. *A. K. Stephenson.*

17 June 1875.

632. Would you extend that answer equally to the counsel who might be nominated for a given suit, as to those who were permanently annexed to the departments?—I have never found any evil arising from the power being exercised by the law officer. Possibly in one or two instances, if I had had the choice, I might have appointed another counsel; but then it would only have been my opinion against the opinion of the law officer. He had exercised his discretion in one way, and I might have exercised

Mr. *A. K. Stephenson.*

17 June 1875.

mine in another; but I have never found any practical evil arising from the practice which has prevailed.

633. Has your experience of the criminal business brought you much into contact with the counsel that are permanently attached to the different departments?—I have some difficulty in answering that question. First of all, I should say, with respect to the Treasury I have never found any difficulty. With respect to the Home Office, the state of things is somewhat altered at present from what it was when the appointments of the present counsel to the Home Office were made. The alteration is in this respect, that there is a considerably larger amount of criminal business done by the Treasury solicitor now than there was formerly. The present staff of counsel for the Home Office, I think, is not sufficient. I think we have not enough permanent counsel for the Home Office work. I should like, if I had the power, to have three or four counsel, nominated by the Attorney General, to whom I might, as Treasury solicitor, when cases came from the Home Office to be conducted before metropolitan police magistrates, at the Old Bailey, or at the Middlesex Sessions, deliver the briefs according to the amount of business and the description of business which at any particular time might have to be done.

634. There being no such counsel now, how are they selected?—There are two counsel at present, but I think the two counsel are not sufficient. I think Mr. Poland, the senior counsel, has at times too much business.

635. Sir *H. Holland.*] Who is the other counsel?—Mr. Beasley is the other counsel; but when successors to Mr. Poland and Mr. Beasley have to be appointed, I would say, give me two or three, to whom I might go according as the amount of business to be done might render it necessary. At present I do not like to ask for another counsel whilst there are permanently appointed counsel, but what I wish to point to is this, that at the time when those two counsel were appointed there was not such an amount of business sent from the Home Office to us as there is now, particularly police-court business.

636. Mr. *Lingen.*] Are you perfectly satisfied with the present mode of appointment of these *quasi* standing counsel by the Attorney General?—I would rather have had it that the Attorney General of the day should have consulted either the Home Secretary, or somebody else, before he made the appointment. I do not want to say anything personal, because I think it would be perfectly impossible to get a better man for the work than Mr. Poland is, and I have never found any fault from the quantity of work he has had; but it would certainly be better if we had two or three, I think, so that I might go to a second man when Mr. Poland was overburdened.

637. Mr. Justice *Archibald.*] Have you found a difficulty occur at the Old Bailey, for instance, from the fact of there being four courts sitting there sometimes, and cases from the Home Office coming on in each of those courts?—Yes, I have found that difficulty.

638. So that neither of the two counsel would be able to attend to all those cases?—That is just the difficulty that I have found.

639. *Chairman.*] As I understand it, all you want to ask the Attorney General to appoint a couple more counsel?—Yes, I should like to ask him to do that.

640. Sir H. *Holland.*] But you would like to couple with that the suggestion that he should appoint them in consultation with the head of the department?—Yes.

641. Mr. *Lingen.*] His present practice, or rather his present power, would be to appoint them without the slightest reference to you or to the Home Office?—Yes, but I have never had any difficulty with the law officer of the day; when I have heavy cases I apply for another counsel, and he gives me a Queen's Counsel to lead. But the difficulty arises also with respect to the preliminary inquiries before the magistrates.

642. It is not the number of counsel who are required, but rather the mode of selecting and appointing them, that we are discussing now?—It is the number of counsel that is important in this point of view. I have only these two counsel for this work, and I should like to have more to select from. If the Attorney General would say, "Take Mr. A. B., Mr. C. D., or Mr. E. F. as you "may need," so that I should not be obliged to go with three or four cases to one counsel at the same time, but might take whichever of them I liked, for each particular case.

643. Perhaps you are more in contact with the law officers than the solicitors of the other departments. We rather wanted to extend our experience to those departments, and to know whether the present mode of appointing these standing counsel is perfectly satisfactory, or whether it should be modified, either to the extent of giving *carte blanche* to the departmental solicitors, or of giving them, at all events, a voice in the matter?—I think it would be well to modify it to this extent, to give either the head of the department or the solicitor of the department a voice in the appointment made by the law officer of the day. I should put it thus: Allow the Attorney General of the day, as usual, to appoint the standing counsel of every department, but let that be subject to a veto by the head of the department for whom the counsel were appointed. The head of the department might consult, and probably would consult, the solicitor of the department on the matter, but I think it would be better to give the veto upon the appointment by the Attorney General to the head of the department.

644. Would it not be enough to say that the Attorney General should appoint in consultation with the solicitor of the department?—I think that would depend upon the terms upon which the Attorney General and the solicitor of the department happened to be at the time.

645. *Chairman.*] You would prefer that there should be an absolute veto given to the head of the department?—Yes.

646. Do you not think that that would put the head of the department at a great disadvantage as compared with consultation? They could not talk it over together. On the other hand, if it were done in consultation, the Attorney General might suggest A.B.; the solicitor of the department might say, "I do not think he is quite up "to the mark; what do you say to C.D.?" You must bear in mind that if a man is actually named for appointment, and is afterwards vetoed, that is a slur upon him, and consequently the head of the department would be very slow to do that?—I do not see why it need be known that the Attorney General had appointed him at all. In fact, he would not be appointed until the nomination was approved by the head of the department.

One

One difficulty that I see with regard to the other mode of appointment is this. If the solicitor of the department had a real objection to a gentleman who was mentioned, and if the Attorney General were to overrule him, then, if anything went wrong in the next case the solicitor of the department would say, "You appointed the man. "I told you what would happen, but still you "appointed him against my wish, and you must "take the responsibility of it."

647. Mr. *Lingen.*] So far that would be fair, if he had any reason for what he said?—Yes; personally I have never had any such difficulty, and I do not anticipate any.

648. *Chairman.*] But you would rather have the appointment made subject to the approval of the head of the department?—Yes.

649. Then the name would be submitted to the head of the department by the Attorney General before the appointment was made?—Yes.

650. Mr. Justice *Archibald.*] Do you think it would be beneficial if the tenure of the appointment of standing counsel was restricted to two or three years, subject, of course, to reappointment?—I do not think so myself.

651. Sir *H. Holland.*] Would not that give you an opportunity of getting rid of a man who you might see had fallen off his work, without any trouble at all?—It is almost like dismissing him.

652. Surely it is not the same thing as dismissing him; you simply do not reappoint him?—The appointment is not renewed; it comes to the same thing.

653. Not renewing an appointment is easier at all events than dismissing a man, is it not?—Yes; another mode of attaining the same object would be by making him go out with the law officers of the day.

654. *Chairman.*] That is very risky?—Yes, it is.

655. Mr. Justice *Archibald.*] I imagine it is only by custom and practice that the appointment continues after a change of law officers?—Yes.

656. *Chairman.*] Mr. Lingen has suggested that the appointment should be limited to five years, following a military precedent; what should you say to that?—I should not object to that; there are different positions which the different counsel hold, and I do not quite understand to which of them you propose that this rule should apply. Do you mean it to apply to the Attorney General's junior, because that is a personal appointment; he is an assistant to the Attorney General? These other counsel that we have been speaking of, the departmental counsel, are representatives of the Attorney General.

657. Practically the Attorney General's junior goes on from one Attorney General to the other?—Yes, I know he does.

658. Sir *H. Holland.*] The Attorney General's junior is not a departmental officer?—No. I understand then that you are only referring to the departmental counsel, who are the representatives of the Attorney General. They are in quite a different position from the Attorney General's junior, who is really his assistant.

659. *Chairman.*] The suggestion is entirely confined to the departmental counsel who represent the Attorney General. I understand that you are of opinion that the arrangement which has been suggested should be carried into effect?—Yes.

660. Sir *H. Holland.*] Which time would you say should be the limit for the tenure of the appointment, five years or seven?—I should say five years. I should like to ask one thing further, and that is, whether you would make it apply not only to the departmental counsel, but also to another class, namely, the circuit counsel? There are certain counsel who represent the Attorney General on circuit, in the Mint and Post Office prosecutions.

661. *Chairman.*] We intend it to apply to all of those, both the leaders and juniors?—I only wished to understand that.

662. The fact is, in all these cases, when a man is a good man he would find a five years' tenure quite long enough to induce him to take the office, because it would get him on in the profession?—Yes; a man has had capital opportunities in five years of the Government business, if he can take advantage of his position.

The Witness withdrew.

[Adjourned.

Appendix A.

Memorandum by the Attorney General as to the suggested Modes of Remunerating the Law Officers.

The two suggestions to which my attention was directed, and upon which I understand my opinion was desired, were the following:—

1. The substantial continuance of the present system, but with a clear explanation of what is to be deemed non-contentious business.

2. The adoption of a fixed salary, which should cover all business connected with patents for inventions, but leave all other business, as well non-contentious as contentious, to be paid for on the usual professional scale.

If the first suggestion be adopted, I think that the salary should not cover any fees paid to the law officers by third parties. If it be thought desirable that the fees in respect of patent oppositions and disclaimers should be included, they should be made payable at the Patent Office, as I think it highly undesirable that the law officers should be made collectors of fees for the Treasury. But I doubt whether it would be expedient to consider these fees as covered by the salary, and for this reason, that the Treasury have really no control over the fees paid by third parties. The fees payable to the law officers for patent references and warrants are placed, by the Patent Act of 1852, under the control of the Treasury; but those payable in respect of oppositions and disclaimers are, under the provisions of the same Act, regulated not by the Treasury, but by the Lord Chancellor and the Master of the Rolls.

A more important question, however, for consideration, in the event of the first suggestion being adopted, is the satisfactorily defining of what is to be treated as contentious and what as non-contentious business; and this question becomes the more important by reason of the course adopted by some of the departmental solicitors, acting, as I am given to understand, under directions from the Treasury, and which has resulted in a large amount of business being placed before the law officers, and treated as non-contentious business which I venture to think should be treated as contentious. I do not think that I can better illustrate my meaning than by adopting a suggestion made by Sir Henry Holland on the 3rd of May (see Question 279), and I consequently proceed to enumerate a few instances in which this course has been adopted:—

1. Briefs to the Attorney General to appear in the Court of Probate and apply for grants to the Treasury Solicitor of administration to the estates of intestates (see Questions 153, &c., and the answers thereto). There have been about 40 or 50 such briefs in the year. This is, in my opinion, clearly contentious business, and whether these briefs are held by the Attorney General himself, or by some junior nominated by him, there should, I think, be a fee.

2. The commanding officer of a militia regiment retained in his hands considerable regimental balances; a case was laid before the law officers to advise whether the Crown could, under the circumstances, maintain a suit, and the filing of an information was advised.

3. The information having been filed and an answer put in, the papers were laid before the Attorney General *en masse*, to settle two bonds for securing the payment by the officer and a surety of upwards of 6,000 *l.* by instalments; by approving the bonds, the compromise was itself approved.

4. After letters of administration of the estate of a supposed intestate had been granted to the Treasury Solicitor, a third party set up a will and took, or threatened to take, proceedings for recalling the grant; the surrounding circumstances were very suspicious, and a case was laid before the law officers to advise whether the proceedings could be successfully resisted.

5. Damage done by an adjoining owner to pipes by which water was conveyed to Government property; a case was laid before the law officers, who

who advised that there was sufficient to support either an action for damages, or an injunction information, and the latter was adopted.

All these cases, and there have been several others of a similar character, have, though I think improperly, been treated as non-contentious.

Of a somewhat similar, though, I admit, more doubtful character, were the following:—

6. Cases laid before the Attorney General to advise whether the circumstances were sufficient to put Post Office servants on their trial.

7. Case to advise whether the circumstances were sufficient to support a prosecution against the owner of a ship for sending her to sea in an unseaworthy condition.

8. Similarly as to a prosecution against the captain of a ship for not staying by a vessel with which he had been in collision, and which foundered with great loss of life.

9. Whether a claim upon the estate of an intestate, based upon an alleged *donatio mortis causâ*, could be successfully resisted.

Upon the whole, it appears to me that business having relation to actual or contemplated litigation in a court of justice, whether civil or criminal, or before an arbitrator, is contentious business within the meaning of the Minute of 14th December 1871.

As regards the second of the suggested modes of remunerating the law officers, the chief advantage of having recourse to it appears to be that no question could arise as to what was contentious and what non-contentious business, as all would be paid for except that derived from patents for inventions.

The difficulty in the way of adopting this mode would be the determination of the fixed salary. Having regard to the probable great reduction in the amount of business that would be sent from the Government departments, I do not think that the salary should be less than 4,000 *l.*, if the present estimate of income is to be maintained.

If, however, this course was adopted, I would suggest that 3,000 *l.* only should be called salary, and the remaining 1,000 *l.* should be treated as 300 *l.* or 400 *l.* for a secretary, and 700 *l.* or 600 *l.* for office expenses. And here I would observe that whereas, under the old system, the clerks' fees were sufficient to provide the salaries of all the clerks whom it was necessary for the Attorney General to retain, the cost to him for clerks alone under the present arrangement is upwards of 600 *l.* per annum. The official correspondence also of the Attorney General is very extensive.

I have thus dealt with the two suggested modes of remunerating the law officers for the future, but it has occurred to me that there is another mode which is worth consideration, and that is to increase the salaries of the law officers slightly (say to the extent of 1,000 *l.* per annum), and let such salaries then cover all business whatsoever, contentious as well as non-contentious, except briefs in court or before an arbitrator, which should be marked according to the usual professional scale.

In this view also I would appropriate the additional 1,000 *l.* per annum to secretary and office expenses.

There remains one subject in connection with the remuneration of the law officers, to which, in the interests of those who may succeed me in the office of Attorney General, I think that I ought to advert, though I need hardly say that nothing is more distasteful to me than to appear to be endeavouring to make a good bargain, either for myself or others, and it is this:—

In my opinion, any Attorney General who desires to fully discharge the duties of his office must be prepared to sacrifice the emoluments to be derived from private practice, at any rate during that portion of the year in which Parliament is sitting; and, if the Government "non-contentious" business (including under that head the constantly increasing and, as I think, necessary and important personal communications between the several departments of the Government and the Attorney General) continues to increase as it recently has done, it will be almost equally necessary for the Attorney General to entrust to other counsel a large proportion of the Government "contentious" business, which under other circumstances he would be able to transact, and from which he at present derives emolument.

I need hardly say that from these two causes a very large reduction must be expected from the amount of remuneration heretofore received by the Attorney General.

The present salary of the Attorney General, after the deductions above alluded to, and others of which the Committee are aware, does not amount to 6,000 *l.*; I do not think that his fees from Government contentious business can be estimated as exceeding 2,000 *l.* to 2,500 *l.* per annum. Now, I think it may be assumed that few barristers succeed to the office of Attorney General whose fees from private practice have not been as much as 8,000 *l.* per annum, and this with 10 or 12 weeks' rest in the Long Vacation, to say nothing of shorter vacations at Christmas, Easter, &c. The law officers have substantially no vacations. In my first year of office there were but seven days on which I had not Government business to attend to, and I never but once had two consecutive days to myself. The Attorney General, again, is expected to be, and ought to be, in the House of Commons from its sitting to its adjournment. Many matters occur in the first and last hours of the sitting which more or less require his attention. I should also observe that, in the event of an Attorney General abandoning his private practice during his tenure of office, his prospects of successfully following his profession on his retirement from office would be materially diminished. Now, I readily admit that to many men, and certainly to myself, the question of the amount of salary would have but little influence as regards the acceptance or refusal of such an appointment, if offered. As regards an appointment so honourable as that of Attorney General at present is, the honour must remain the chief inducement to accept it; but, at the same time, I doubt whether the office would be regarded as equally honourable if its emoluments were reduced below those of a leading barrister in private practice. Of one thing, however, I am certain, that nothing would operate so effectually to lower the dignity of the office as to place the holder of it in the position of a law clerk to the Treasury, a result which I fear that some of the recent changes have a tendency to precipitate.

Appendix B.

Appendix B.

(1.) Treasury Minute appointing the Committee.

Treasury Chambers, Whitehall,
14 March 1875.

The Chancellor of the Exchequer submits to the Board that it is desirable to institute an inquiry into the system upon which the legal business of the Government is conducted.

The cost and extent of this business are very great, including the payments made to the law officers of the Crown, and to various departmental officers under the titles of solicitor, counsel, &c., to their respective offices.

The Chancellor of the Exchequer adverts to the Board's Minute dated 14th December 1871, wherein it is stated that Her Majesty's Government has agreed to the following resolutions respecting the terms on which the law officers of the Crown shall in future be remunerated for their services, that is to say:—

1. The Attorney General shall receive 7,000 *l.* a year for non-contentious business, and the Solicitor General 6,000 *l.* a year.

2. All fees payable for non-contentious business shall be paid into the Exchequer.

3. The law officers shall receive fees for contentious business, and for opinions connected with it, according to the ordinary professional scale.

4. All complimentary briefs, and payments for services not intended to be given, shall be abolished.

5. The salaries above mentioned shall be voted by the House of Commons.

He states to my Lords that, in pursuance of this minute and of instructions founded thereon, complimentary briefs, and all payments in the nature of them, have been discontinued; that the fees which used to be paid to the law officers by the Clerk to the Commissioners of Patents for Inventions, and by the Clerk of the Patents for Appointments, are now paid into the Exchequer; and that fees are no longer paid to the law officers upon the references made to them from the public departments for advice (only), whether such advice be given in the form of Opinions upon cases, or in the form known as Reports upon original papers.

The Chancellor of the Exchequer explains to the Board that, according to returns prepared by the Solicitor of the Treasury in 1871, the Attorney General's salary of 7,000 *l.* was to replace fees for non-contentious business amounting to 11,092 *l.*, leaving a balance of 4,092 *l.*; and that the Solicitor General's salary of 6,000 *l.* was to replace fees for non-contentious business amounting to 9,755 *l.*, leaving a balance of 3,755 *l.*; but that the amount of the fees replaced by these salaries would apparently have been greater, had not the solicitor confined it to such sums as he could ascertain without direct inquiries of the law officers themselves.

The Chancellor of the Exchequer states that no information has at present been obtained as to the difference of cost between the complimentary briefs abolished and the higher scale of fees allowed on briefs for substantial duty.

The Chancellor of the Exchequer, having so far explained the position in which the Attorney and Solicitor General at present stand to Her Majesty's Government, goes on to inform the Board that the situation of Queen's Advocate was not filled up when it last became vacant, but that in May 1872, in pursuance of a Minute of my Lords, dated the 22nd of January then last preceding, Dr. Deane was retained, on an appointment by the Attorney General, "to advise the law officers in all matters connected with the Foreign Office, and to fill in some measure the position of the late Queen's Advocate; in which position he was to do the work previously performed for the Foreign Office by the Queen's Advocate alone, and also the work which the Queen's Advocate was used to do in connection with the Attorney or Solicitor General; he was to be the assistant of the Attorney General in these matters, and to do all the work of advising and reporting on cases sent from Foreign Office." His salary for the performance of the duties thus described was to be 2,000 *l.* a year; he was to be paid, like the Attorney and Solicitor General, the usual fees for any contentious business he might be employed upon, in addition to his salary, and he was to retain his private practice.

The Chancellor of the Exchequer states that upon the interpretation of these terms, which are quoted from letters of the late Attorney General (Sir John Coleridge) appointing Dr. Deane, serious differences of opinion have arisen between my Lords and Dr. Deane, who is understood to contend that his salary includes no service except such as the late Queen's Advocate might have claimed *ex officio*, or, at any rate, no service which it was customary for the Foreign Office to assign, sometimes to the Queen's Advocate, and sometimes to other counsel. The dispute makes it doubtful whether the engagement with Dr. Deane results in any saving to the public.

The Chancellor of the Exchequer further observes, that while the remuneration of the Attorney and Solicitor General, and of the Queen's Advocate, has been thus far dealt with, there remains to be considered, before coming to the strictly departmental solicitors and counsel, the position of the Queen's Proctor, through whose hands a very serious annual expenditure is made by the Treasury Solicitor in administration cases (intestacy), divorce interventions, and legitimacy declarations, &c. The estimate for divorce interventions alone in 1875–76 is no less than 9,000 *l.*; the other business is paid for out of the Crown's Nominee Account, and, on an average of the last five years, amounts to 5,815 *l.* per annum. The fees paid to counsel form but a small part of this expenditure. The Chancellor of the Exchequer calls the attention of the Board to the absence of all effective control over it, and to the probability that much of it might be saved if the Treasury Solicitor were directly entrusted with the same business, and had liberty to employ agents upon it as he now has in Chancery and Common Law (including both civil and criminal) cases, where the Crown is concerned, but where no *ex-officio* agency, such

such as that of the Queen's Proctor, is interposed.

The facts thus far examined relate to the remuneration of the principal law officers of the Government, and to the position of the Queen's Proctor; but the Chancellor of the Exchequer has also had before him some account of the various legal officers and departments, forming parts of many of the public offices, and discharging, relatively to the special business of their own several offices, duties similar to those which the Solicitor of the Treasury performs relatively to this Board and the Home Office, as well as to those public offices which have no legal departments of their own. The number and cost of these departmental solicitors and counsel, with their respective establishments, is already very considerable; they have recently been increased in number, and applications for further additions may be anticipated.

Looking to the foregoing circumstances, as well as to the impending legislation for the Public Prosecution of Offences, the Chancellor of the Exchequer advises the Board to take steps for inquiring into the arrangements connected with the entire conduct of the legal business of the Government.

Two main points appear to him to require attention. One is the mode adopted for the remuneration of the law officers, should the change introduced by the Minute of 14th December 1871, and partly confirmed by "The Law Officers' Fees Act, 1872," be maintained and completed; the other is the sufficiency or redundancy of the various solicitors' departments attached to different public offices. He thinks there may be cases in which new appointments of special solicitors are desirable; but he apprehends that, more commonly, there may be reason to doubt whether so many separate departments are necessary, and whether it might not be better to suppress some of them, and to give their business to the Treasury Solicitor, with liberty to employ agents, as the business from time to time might require.

With these objects in view, the Chancellor of the Exchequer advises the Board to appoint a committee to inquire into the premises.

My Lords approve, and are pleased to name the Right Honourable the Master of the Rolls, the Honourable Mr. Justice Archibald, Sir Henry Thurston Holland, M.P., Mr. Lingen, Permanent Secretary of the Treasury, and Mr. Henry Leigh Pemberton, Official Solicitor to the Court of Chancery, to be a committee as aforesaid, with Mr. Edward W. Hamilton, second-class clerk of the Treasury, as their secretary.

My Lords have ascertained that the Master of the Rolls, Mr. Justice Archibald, Sir Henry Holland, and Mr. Pemberton are willing to accept this Commission; and they desire that a copy of this Minute, and of the papers prepared by the Solicitor* of the Treasury on which it is founded, be furnished to each of them.

My Lords think it desirable to commence the inquiry in England; but, as certain questions are also pending relative to the remuneration of the Lord Advocate, and to the conduct of the Government's legal business in Scotland, my Lords propose to refer the inquiries connected with this subject also to the same Committee.

It will be seen, upon the Committee's Report, whether it is necessary, and in what degree, to extend the inquiry to Ireland.

* 13 June 1871. 4 August 1871. 13 Sept. 1871. 22 January 1875. 2 February 1875.

(2.) LETTER addressed by the Treasury to the Attorney and Solicitor General, with Enclosures.

Treasury Chambers,
Sir, 24 April 1875.

I AM directed by the Lords Commissioners of Her Majesty's Treasury to transmit to you herewith, for your information, the enclosed extract from a minute of this Board, dated the 14th December 1871, fixing the terms upon which the law officers of the Crown should thenceforward be remunerated for their services; and I am to add that the following further explanation of these terms was communicated to Sir George Jessel, Master of the Rolls, at the time of his being offered the appointment of Solicitor General, he being the first law officer appointed on a salary, viz.:

"That for the performance of all his official duties which are non-contentious, as distinguished from those requiring or connected with his attendance as a barrister in court, he should receive a salary of 6,000 *l.* per annum, to be annually voted by Parliament, in lieu of the fees hitherto payable to the Solicitor General for such duties.

"That so far as such fees had been hitherto paid out of public moneys, and charged to the accounts of the several establishments of Her Majesty's Service, such payments should be discontinued, and so far as he might receive such fees through other channels, he should account for them to the Lords Commissioners of the Treasury, and pay them over as the said Lords might direct.

"That as regards the contentious duties of his office, and as regards his official attendance in the House of Lords, no briefs should be delivered or fees paid to him, unless he is expected to perform actual service, and for such service performed his fees should be paid according to the ordinary professional scale."

Sir Hy. James and Sir W. Vernon Harcourt took office upon the terms set forth in the same Extract A., and the accompanying copies of accounts (Enclosure B.) rendered by them and by Sir George Jessel of fees payable by the law officers themselves into the Exchequer in pursuance either of the Treasury Minute above referred to, or of the Law Officers' Fees Act, 1872 (35 & 36 Vict. c. 70), are also sent for your information.

Enclosure A.

Enclosure B.

As regards the fees which used to be paid to the law officers by the Clerk of the Patents for Inventions, and by the Clerk for the Patents for Appointments, they are now paid directly into the Exchequer by those clerks.

My Lords desire me, however, to request that you will be kind enough to favour them with an account of all such fees received by you since your accession to office, down to the present time, as in your opinion come under the Law Officers' Fees Act, in order that their Lordships may give the necessary directions for carrying the fees to account as required by that Act.

Upon receiving such a return, their Lordships will communicate with you upon the subject of rendering these accounts in future, at such intervals and in such a form as may best suit your convenience.

I have, &c.
(signed) *R. R. W. Lingen.*

Enclosure A.

Appendix B.

EXTRACT from the Treasury Minute dated 14th December 1871.

"The Chancellor of the Exchequer informs the Board that Her Majesty's Government has agreed to the following resolutions respecting the terms upon which the law officers of the Crown (except Sir John Duke Coleridge, in whose case no change is to be made) shall in future be remunerated for their services, that is to say:—

"1. Except as aforesaid, the Attorney General shall receive 7,000 *l.* a year for non-contentious business, and the Solicitor General 6,000 *l.* a year.

"2. All fees payable for non-contentious business shall be paid into the Exchequer.

"3. The law officers shall receive fees for contentious business and for opinions connected with it, according to the ordinary professional scale.

"4. All complimentary briefs and payments for services not intended to be given shall be abolished.

"5. The salaries above mentioned shall be voted by the House of Commons."

ACCOUNT rendered by Sir *Henry James.*

On the 20th October 1874, Sir Henry James, then late Attorney General, sent a cheque for 102*l.* 13*s.* 4*d.* to the Secretary to the Treasury, with the following letter:—

"Dear Sir, "New-court, Temple, 20 October 1874.

"It was only yesterday, when referring to my bankers' book, that I became aware that, during the time I was Attorney General, the Patent Clerk had paid into my account certain fees which appear to me to belong to the Crown.

"Those fees amount to 102*l.* 13*s.* 4*d.*, for which sum I now beg to inclose my cheque.

"I am, &c.
(signed) "*Henry James.*"

This cheque was handed over to the Accountant of this Department; and the following letter was addressed to Sir H. James:—

"PATENT FEES."

"Dear Sir, "Treasury, 4 November, 1874.

"The cheque forwarded to the Treasury in your letter of the 20th October has been handed over to me and sent to the Paymaster General, in order that the amount may be placed to the credit of the Vote for Law Charges (viz., 102*l.* 13*s.* 4*d.*).

"It will be necessary, however, that a list of the fees received by you, making up the above amount, should be furnished for the purposes of public audit.

"Will you, therefore, be good enough to direct your clerk to prepare and forward to me such a list?

"I am, &c.
(signed) "*J. Gray.*"

"Sir Henry James, Temple."

(3.) LETTER from the Attorney General to the Treasury.

10, Old Square, Lincoln's Inn,
Sir, 26 May 1875.

THE heavy pressure upon me of Parliamentary and official business has caused some delay in my reply to your letter of the 24th ult., in which you request me to favour the Lords Commissioners of Her Majesty's Treasury with an account of all such fees received by me since my accession to office as, in my opinion, come under the Law Officers' Fees Act (35 & 36 Vict. c. 70), in order that their Lordships may give the necessary directions for carrying the fees to account, as required by that Act.

In now replying to your letter, I cannot but express my regret that the attempts made by me in the course of last year to arrive at an understanding upon the subject of the law officers' remuneration were rendered ineffectual by the withholding of assistance from the only quarter which was capable of affording it to me; and I the more regret it, as the subject to which your letter refers is not the only one in connection with the remuneration of the law officers which requires adjustment, inasmuch as by or under the directions of the Treasury a course has been pursued with reference to the law officers which appears to me to have been at variance both with the letter and with the spirit of the Treasury Minute of the 14th December 1871, a copy of which is annexed to your letter. Not only has business, which appeared to me to be clearly "contentious," and as such not covered by the salary, been treated by several of the Government Departments as "non-contentious," and any payment in respect of it refused, but, in respect of business admittedly "contentious," and which, according to the 3rd paragraph of the minute, should have been remunerated upon the usual professional scale, has been in several instances remunerated at a rate far below what was usual in like cases. In addition to this a large amount of "non-contentious" business, which, before the date of the minute, was either not attended to by the law officers at all, or as to which they had the assistance of junior counsel, has, since the date of the minute, been imposed upon the law officers exclusively.

I propose, however, in the first instance, to confine my observations to the subject referred to in your letter.

In it you state that Sir Henry James and Sir William Harcourt took office upon the terms set forth in the Minute of the 14th December 1871, and you enclose certain copies of accounts which you describe as having been rendered by them and by Sir George Jessel; but you must be in error as regards the account attributed to Sir Henry James, for he was not in office until more than two years after the last date mentioned in that account; it would appear to be a second account rendered by Sir George Jessel.*

The effect, however, of the accounts is that, in addition to certain fees paid in respect of complimentary briefs, as to which no question could arise, both Sir George Jessel and Sir William Harcourt returned fees paid to them in respect of oppositions to patents and disclaimers. I also observe that one fee was returned in respect of a Royal Charter.

Now I may at once say that, had I been aware that it had been the practice of my predecessors in the office of Solicitor General to return such fees, I should not only as Solicitor General, but also as Attorney General, have followed the precedent set by them, whatever might have been my own view upon the subject.

The accounts, however, which have been furnished to me by no means show a continuous practice by my predecessors in the office of Solicitor General, nor do they afford any information as to the course pursued by my predecessors in the office of Attorney General, though it is possible that

* Sir Henry James' account was omitted to be sent to the Attorney General in the first instance. On the receipt of this letter the omission was rectified.

that you have the means of supplying these omissions.

I understand that the substantial question raised by your letter is, whether the fees paid to the law officers on account of oppositions, disclaimers, and amendments in relation to patents for inventions and those paid in respect of Royal Charters should be accounted for by them to the Treasury. I am not aware that there is any other class of fee the repayment of which is claimed by the Treasury.

Now, the fees to which I have just alluded are not paid by any Government department, but by *third parties*, and it appears to me that, according to the only fair construction which can be given to the Minute of 14th December 1871, that minute has reference only to business transacted by the law officers for Government departments, and that the salaries fixed by it were in respect of, and to compensate for, fees theretofore paid to the law officers by the Government departments.

This view is entirely borne out by the Treasury Minute of the 14th of March 1875, in which the following passage occurs:—"According to returns prepared by the Solicitor to the Treasury "in 1871, the Attorney General's salary of 7,000*l.* "was to replace fees for non-contentious business, "amounting to 11,092*l.*, leaving a balance of "4,092*l.*; and the Solicitor General's salary of "6,000*l.* was to replace fees for non-contentious "business, amounting to 9,755*l.*, leaving a balance "of 3,755*l.*" Now, the first observation which this paragraph suggests is, that a reference to the figures by which the totals 11,092*l.* and 9,755*l.* were arrived at will at once show of what classes of fees they were made up; but, though I had on several occasions asked whether there were not materials in existence from which the nature of the fees intended to be covered by the salary could be ascertained, it was not until after the House of Commons had risen for the last Easter recess that I obtained a copy of the table prepared in 1871.

From this it appears that the fees which made up the sums of 11,092*l.* and 9,755*l.* respectively, though they were taken on an average of five years, did not include any fees paid by third parties, but were confined to fees paid by Government departments. Had it been intended that the salary should cover the fees paid by third parties in respect of patent oppositions and disclaimers, the number and amount of these could have been as easily ascertained at the Patent Office as the number and amount of the references and warrants which were included in the account at the sum of 5,525*l.*

In further support of the view that the salaries were originally fixed to cover fees previously paid by Government departments, I may mention that, as far as regarded fees paid by the Government departments, the Treasury could exercise a control, but that the Treasury had no control over fees paid by third parties.

The case of patents for inventions will illustrate my meaning. The Attorney General's fees in respect of what were, and are, commonly called "references" and "warrants" were taken in the table of 1871, upon the average of five years, at the sum of 5,525*l.*; and these fees, which were payable out of the Consolidated Fund, were placed under the control of the Treasury by the 48th section of the Patent Law Amendment Act, 1852; but the fees payable by third parties, in respect of oppositions, disclaimers, and memoranda of alteration, were regulated, not by the Treasury, but by the Lord Chancellor and the Master of the Rolls, under the 47th section of the same Act.

It appears from your letter that, in addition to the Treasury Minute of the 14th March 1871, some memorandum of explanation was communicated to Sir George Jessel at the time of his appointment, but which I have been since given to understand was not communicated to any of his successors. If no weight is attached by the Treasury to this document, as affecting the construction to be put upon the minute, I do not understand for what purpose it is so prominently put forward in your letter; and, if weight is to be attached to it, the withholding any communication of it to Sir George Jessel's successors is equally inexplicable. The impression conveyed to my mind, upon reading your letter, was that you intended me to understand that the Treasury considered me bound by that further memorandum, but the explanation which you were so good as to give me when before the Committee on the 3rd of May would imply that you consider me in no way affected by it.

I pass on to a consideration of the Act of 1872. Now I certainly understood, and I think that most persons who at all gave it their attention understood, that it was introduced and passed for the purpose of carrying into effect the arrangement which had been made in December 1871, and to enable the Treasury to deal with the fees, which would otherwise have been paid to the law officers, as part of the Consolidated Fund; it was distinctly so stated by the Lord Chancellor, in the House of Lords, on the 5th of August 1872 (*vide* Hansard). I understand, however, that it is now contended, on the part of the Treasury, that, whatever may have been the intention of those who introduced the Bill, its words are more extensive in their operation than the language of the Treasury minute, and that the Treasury claim the benefit of the amplified language.

I at once admit that the words in the Act, if read according to their literal construction, and without regard to the previous arrangement of December 1871, are large enough to cover the fees paid in respect of patent oppositions, disclaimers, and amendments, and I care not to consider whether the larger words were introduced into the Act by accident or design.

I readily admit that I, in the first instance, and when not aware of the circumstances under which the arrangement of December 1871 had been come to, was under the impression that the Treasury would probably treat the fees for patent oppositions and disclaimers as fees in respect of which the law officers were accountable; but at my first interview with Mr. Gray, though I could obtain no information from him as to the basis upon which the arrangement was arrived at, he distinctly stated to me that he considered that the law officers were entitled to retain any fees which were paid to them. It was in consequence of my surprise at a demand made upon me in a very singular manner by a messenger from the office of the Treasury Solicitor in the month of December last that I wrote a letter in that month to Mr. Gray, again pressing for an explanation, but which equally failed of eliciting any useful information.

I have, however, now entered into a full explanation

Appendix B.

nation of all the circumstances of the case, so far as they are known to me; and if the Treasury still think that their claim to these fees should be asserted, I certainly shall not resist it.

The amount of fees received by myself and my clerk, in respect of these matters, down to the end of the month of April 1875, was about 150 *l.*; the precise amount can be supplied.

The amount of fees received by myself and my clerk, *from third parties*, in respect of charters, to the same date, amounted to 87 *l.* 10 *s.*; the fees in respect of charters (viz., *on the warrants*), which were formerly paid by Mr. Johnston, have not been paid since I have been in office. I know not whether the Treasury claim a return of the fees paid by third parties in respect of charters or not; they are not like the fees on patents for appointments, which are for signature merely; the charters require very careful consideration, and not unfrequently occasion much trouble.

I proceed now to comment upon the other questions which remain for consideration, and to which I have alluded in general terms in the earlier part of this letter.

My criticisms upon the course pursued by the Treasury, or under the directions of the Treasury, may, I think, be conveniently arranged under three heads:

1. The treating as "non-contentious" business which was really "contentious."

2. The remunerating the law officers, in respect of business admittedly "contentious," after a scale much below the usual professional scale.

3. The imposing upon the law officers exclusively business which previously to the minute was, as to some portion of it, not regarded as business to be attended to by the law officers at all, and as to other part to be attended to by them with the assistance of junior counsel.

I do not propose to enter into details in respect of these subjects, but will content myself with a few illustrations.

1. Under the first head I may mention—

a. Briefs to the Attorney General to appear in the Probate Court and apply for grants to the Treasury Solicitor of administration to the estates of intestates. These briefs were formerly held by the Queen's Advocate, who received the usual fees in respect of them; but since the abolition of the office of Queen's Advocate, the briefs have been delivered to the Attorney General, who has either to appear in court himself, or to find some other barrister to hold them for him. There have been 40 or 50 such briefs in the course of the year, but no fees have been paid upon them, by direction of the Treasury; at least it is so stated by the Queen's Proctor. I think that it is quite unnecessary to deliver these briefs to the Attorney General, as they might be well attended to by a junior with (say) a guinea fee; but to whomsoever delivered, they ought, in my opinion, to be paid for as "contentious" business.

b. Cases to advise as to proceedings to be adopted by Government departments to enforce contracts or redress injuries on the one hand, or as to the course to be adopted with reference to similar proceedings commenced or threatened against Government departments on the other.

c. Cases to advise whether the circumstances are sufficient to support Government prosecutions under particular statutes. Under this head were included cases to advise whether the Post Office should continue proceedings after the prisoners had been committed for trial. These latter have been discontinued since I stated that I considered them quite unnecessary, but that, if sent to the Attorney General, they ought to be paid for. Payment, however, has been refused in respect of those which were sent.

With regard to the subjects classed under sub-heads *a*, *b*, and *c*, I may observe that the professional gentlemen attending to them have, upon several occasions, stated that they considered that such cases came under the head of "contentious" business, but that they had received instructions from the Treasury not to allow any fees in respect of them.

Upon one occasion a letter was shown to me, dated as long back as 1872, and written by an officer of the Treasury to the solicitor of a department, in which was the following passage:—"When the advice is taken of a future Attorney "General with respect to a prosecution, his attendance in court not being given or intended, "such advice is non-contentious business, and no "fee is payable." So that, however troublesome and difficult the matter may be, and however "contentious" in reality, the question whether it is to be deemed such is made by the Treasury to depend on whether it is intended to retain the Attorney General to conduct the proceedings in court.

2. I pass on to head 2. Under this head I will mention two cases which have occurred:—

a. In a patent case in the Privy Council, which lasted four days, I, appearing for the Crown, received from the Treasury five guineas on my brief, with 10 guineas further for each of the four days; my colleague, the Solicitor General, appeared for the patentees, and had 100 guineas with his brief, and 50 guineas further for each of the three days after the first. I may mention that a few days ago I succeeded in defeating the application of a patentee for an extension. No fee was marked on my brief, but the usual five guineas will, in all probability, be marked by the Treasury Solicitor at the end of the quarter, whereas the leading counsel for the patentee had 50 guineas, and his junior 30 guineas.

b. In a House of Lords appeal, advised by our predecessors, the briefs as made up for the hearing, and exceeding 300 printed quarto pages, were laid before the Lord Advocate, the Solicitor General, and myself, to advise whether we thought the chance of success was sufficient to make it worth while to risk an adverse decision. I need hardly say that this involved a careful consideration of the whole case, at least equal to what would be required to have opened and argued the case in the House, for we were criticising the course adopted by our predecessors. We advised the abandonment of the proceedings. No fees were marked upon the papers when laid before us, but we were eventually paid 10 guineas each. Had the

the case come before the House, the brief would, or should, have been marked with at least 100 guineas, and certainly not less than half that amount should have been marked upon the papers when laid before us for advice.

These are certainly extreme cases, but, as a rule, I think I may say that, in the majority of cases other than those in the Court of Chancery, the fees marked for the law officers do not exceed one-half of those on the briefs of the opposing counsel. In Chancery I have for the most part found that the fees approximate to the usual scale, omitting, of course, the special fees paid to leading counsel for leaving their own courts.

3. In illustration of head 3, I may mention—

a. That a very large proportion of the non-contentious business other than Foreign Office business which previously to the abolition of the office of Queen's Advocate was discharged by that officer, and for which he was remunerated at an average rate, as appears by the Table before referred to, of from 1,500 *l.* to 2,000 *l.* per annum, has since such abolition been imposed exclusively upon the law officers, and treated as covered by their salary. It is true that, as regards a large proportion of such business, the law officers were formerly associated with the Queen's Advocate, but they are now deprived of his assistance, and the additional labour cast upon them is very great.

b. That the business which previously to the date of the Minute of December 1871 was attended to by junior counsel has, and substantially by reason of the increased business imposed upon the law officers, been materially reduced, to the extent of, at least in the case of one such counsel, 1,000 *l.* per annum.

I might almost treat as falling under this head a large amount of non-contentious business which, were it to be paid for, would, from its trivial nature, never be sent to the law officers at all, but which, as it has not to be paid for, is sent to them in relief of the executive. Many of these cases involve no questions of law at all, but a large amount of paper has to be read through to arrive at this conclusion. Having myself been a law officer under the old as well as under the new system, I can state that, to the best of my belief, the general non-contentious business sent to the law officers is at least double under the new system to what it was under the old.

I have now adverted to all the matters which I deem it right to bring under the consideration of the Treasury, but the whole subject is so distasteful to me, who, in a professional life of upwards of 30 years, never had a difference with a client upon the subject of fees, that I shall not again allude to it, but shall accept and act upon the determination of the Treasury.

I should not have referred to it now, had it not been for the suggestion made in the first draft which was forwarded to me of the Minute of March 1875, that I and my predecessors in office had failed to account for fees which it was our duty to pay over. To some extent also I feel that I am bound to protect the interests of my successors in the office which I have the honour to hold, and that I might be considered as having failed in my duty to them had I not drawn attention to the subject.

That duty is, however, now discharged, and I shall be prepared to forward a cheque for the fees which I understand to be claimed by the Treasury, upon hearing from you that the claim is persisted in. I will only add that in my first interview with Mr. Gray I offered to be entirely bound by what he considered to be the views adopted by the Treasury, and I am equally at a loss to understand why I was then placed at arm's length by him, as I am to appreciate the reasons for withholding from the law officers in 1871 the basis upon which the arrangement was made.

As thewhole question of the future remuneration of the law officers is now under the consideration of the Treasury, I most sincerely trust that steps will be taken to avoid a similar misunderstanding for the future.

I am, &c.
(signed) *Richard Baggallay.*

(4.) Letter from the Solicitor General to the Treasury.

6, Crown Office Row, Temple, E.C.
Sir, 7 June 1875.

I regret to say that, owing to a multitude of matters which have lately engaged my attention, your letter of the 24th April, informing me of the terms on which the law officers of the Crown hold office, and requesting a return of all fees received by me since my accession to office which in my opinion come under the Law Officers' Fees Act, has been overlooked. I now beg to enclose a return of the fees which have been received by me from my accession to office to the present time in respect of patents and charters which appear to me to have been treated by some of my predecessors in office as coming under the Law Officers' Fees Act.

I am, however, informed that a correspondence has recently passed between the Treasury and Sir Richard Baggallay, in which the latter has expressed doubts whether the whole of the fees in question should properly be considered as within the operation of that Act; and you must, therefore, be good enough to treat the return as a provisional one only, and liable to modification when a decision is arrived at in the question now pending between the Treasury and Sir Richard Baggallay. Besides the fees included in the return, I have received no other fees which in my opinion come under the Law Officers' Fees Act.

I have, &c.
(signed) *John Holker.*

LETTER from the Treasury to the Comptroller and Auditor General.

Treasury Chambers,
24 April 1875.

Sir,

I AM desired by the Lords Commissioners of Her Majesty's Treasury to refer you to the Minute of this Board of the 14th December 1871 (No. 19,601), of which a copy was forwarded on the 27th December 1871 for your information and guidance, fixing the terms upon which the law officers of the Crown should be, from that time forward, remunerated for their services; and I am to state that my Lords would be glad to know whether any difficulties have arisen in the audit of the Public Accounts respecting payments made to the law officers in pursuance of that minute.

If any difficulties have arisen, their Lordships request you to be good enough to inform them, further, of the nature of such difficulties, and whether they have been settled to your satisfaction.

I am, &c.,
(signed) *R. R. W. Lingen.*

LETTER from the Audit Office to the Treasury.

Exchequer and Audit Department,
Somerset House, London, W.C.,
Sir, 31 May 1875.

I AM directed by the Comptroller and Auditor General to acknowledge the receipt of your letter of the 24th ultimo, referring to Treasury Minute of the 14th December 1871, whereby the terms upon which the law officers of the Crown should be remunerated for their services were fixed, and requesting that the Lords Commissioners of Her Majesty's Treasury may be informed whether any difficulties have arisen in the audit of the Public Accounts respecting payments made in pursuance of that minute, the nature of such difficulties, if any, and whether they have been settled to the satisfaction of the Comptroller and Auditor General.

I am to acquaint you, in reply, for the information of their Lordships, that some difficulty has been experienced in the examination of the Accounts with respect to fees paid to the law officers of the Crown.

In the first place, it has been found impossible to ascertain satisfactorily whether all fees received for non-contentious business, which under the minute referred to are payable to the Exchequer, have been brought to account as extra receipts. These fees are received by Mr. Johnstone, clerk of the patents to the Attorney General, and are paid over by him quarterly to the Treasury Solicitor, in whose account they are duly brought to credit as extra receipts; but the quarterly return of the fees received by Mr. Johnstone, who is not a public accountant, cannot be checked in this department, and is unsupported by any declaration or certificate.

In the second place, some difficulty has occasionally been experienced in determining whether the business for which fees have been paid was, or was not, included in that for which salaries were assigned. Although in the Minute of the 14th December 1871, which refers to the Attorney General and Solicitor General only, the terms upon which salaries were assigned are clear and explicit, yet cases of doubt have sometimes arisen, as when business purporting to be contentious has appeared to the Comptroller and Auditor General not to belong to that description of business, owing to proceedings having been dropped before the cause was carried into court.

If, however, your letter is intended to include the Queen's Advocate, I am to state that very serious difficulties have been experienced, and much correspondence has taken place respecting the fees which this officer may properly appropriate to himself, a point which is not yet settled to the satisfaction of the Comptroller and Auditor General.

I have, &c.
(signed) *H. Treherne.*

SECOND REPORT

OF

THE COMMITTEE APPOINTED TO INQUIRE INTO THE SYSTEM UPON WHICH THE LEGAL BUSINESS OF THE GOVERNMENT IS CONDUCTED.

May it please your Lordships,

WE have the honour to state that, in accordance with the instructions of the Treasury Minute of the 14th March 1875, we have been instituting inquiries into the various Solicitors' Departments attached to public offices; and though we are not in a position as yet to lay before your Lordships the general result of those inquiries, there are special circumstances connected with the Solicitors' Department of the Office of Works, which in our opinion make it desirable that we should report separately upon this office, and make our recommendations respecting it without further delay; for, besides the considerations connected with the work of the department which are set forth later on in this report, we have received the following letter from the Solicitor, Mr. P. H. Lawrence, viz.:—

Reasons for reporting separately on Solicitor's Department of Office of Works.

" My dear Sir, " 12, Whitehall Place, 13th July 1875.

" The inquiries made by the Committee of which you are the Secretary into " my office arrangements seem to point to the conclusion that some important " changes may be proposed with reference to my official status.

" If the result of those changes should be to leave me a freer disposal of my " time, with a diminished income, it would be my desire to practise at the Bar;

Letter from Mr. Lawrence.

" and I trouble you with this letter in the hope that the Committee may, if I " have rightly guessed the drift of their inquiries, do me the favour of taking " into consideration my personal case, to the extent of letting me know some- " thing of the intentions of the Government towards myself, if possible, before " the approaching vacation.

" You are aware that in Michaelmas Term next the New Judicature Act will " come into operation, and that is the time when, if at all, I could contemplate " such a step as I have indicated with any reasonable prospect of success.

" As concerns the Government, therefore, I am now more able fully to meet any " new plans which may be contemplated than I might be at a later period.

" Consequently, far as it would otherwise be from my wish to hurry the " deliberations of the Committee, it seemed to me right to lay before them the " considerations I have mentioned.

" I will only add that, owing to the pressing engagements of the First Com- " missioner, I have been prevented from showing him this letter (as I could have " wished) before sending it; but I have reason to think he feels assured that I " shall, under any circumstances, gladly render him or the office at all times any " assistance in my power.

" I am, &c.

" E. W. Hamilton, Esq. (signed) " *P. H. Lawrence.*"

Numbers and cost of the establishment.

The legal business at the Office of Works is conducted by one Solicitor and four Clerks: and the establishment, as at present existing, and the cost of it, is as follows, viz.:

Name.	Rank.	Salary.
		£.
Mr. P. H. Lawrence - -	Solicitor - - - - - - - -	1,500
Mr. Frere - - - -	Chief clerk, 400 *l.* by 15 *l.* to 500 *l.* - -	1,400
Mr. Davies - - - -	Clerks - 300 *l.* by 15 *l.* to 400 *l.* - -	
Mr. Golden - - - -	200 *l.* by 15 *l.* to 300 *l.* - -	
Mr. Salmon - - - -	100 *l.* by 10 *l.* to 200 *l.* - -	
	Messenger, 80 *l.*; after five years, 85 *l.* - -	85
	Fees to counsel, witnesses, &c. - - - -	2,500
	Travelling expenses - - - - - -	100
	Incidental expenses - - - - - -	155
	Total Cost - - £.	5,740

Work of the staff, and duties of Solicitor.

In the annexed memorandum prepared by Mr. Lawrence, in answer to certain questions which we directed to be addressed to him, will be found an account of the nature and amount of the work of the department, of the duties of the Solicitor, and of the mode in which the current business is conducted.

From the information contained in this memorandum, and from the personal inquiries made at the Office of Works by three members of our Committee, we have satisfied ourselves that, though the time of the clerks is not insufficiently occupied, there is not enough work to employ the Solicitor for more than half his time.

The duties, moreover, which he has to discharge do not appear to require any special departmental experience. His work, in fact, closely resembles, and

is

is analogous to, the ordinary work which solicitors are in the habit of undertaking, and a knowledge of it can be readily acquired by anyone conversant with legal business.

Retention of separate department unnecessary.

We are of opinion, therefore, that the retention of a separate solicitor and legal staff for the Office of Works is unnecessary, and that the best and most economical arrangement that could be effected would be to transfer the business of the department to the Solicitor of the Treasury. We are induced the more readily to make this recommendation, inasmuch as we have reason to think that the ordinary departmental work is not of such a nature as to render the presence of the solicitor under the same roof as the Office of Works essential. We do not, therefore, apprehend that any material inconvenience would arise from the change, which we would suggest could best be effected by the adoption of the following arrangement, viz.:

Proposals in lieu of present arrangement:

(1.) Retirement of Solicitor.

(1.) That Mr. Lawrence should be relieved from his duties as Solicitor to the Office of Works, and that the First Commissioner should for the future have direct recourse to the Treasury Solicitor for such advice and assistance as may be required by the Department.

(2.) Transfer of staff to Treasury Solicitor.

(2.) That the clerical staff should be transferred to the Solicitor's Department of the Treasury. A short experience of the new system would enable the Treasury Solicitor to judge whether it would be desirable or not to retain the services of the whole staff thus transferred.

(3.) Treasury Solicitor to be allowed to have recourse to outside assistance.

(3.) That discretion should be given to the Treasury Solicitor to employ, by payment of fees on the ordinary professional scale, the conveyancing counsel to the Treasury upon the conveyancing work which comes from the Office of Works; and as it appears that the present staff of the Solicitor's Department of that office, while often too numerous for the necessities of the ordinary and current work of the department, is not adapted to meet any pressure that may arise from an exceptionally heavy and special business (as in the case of the acquisition of the New Law Courts' Site, Epping Forest, &c.), he should further be empowered to employ agents from outside, as necessity occurs.

Result of these proposals, which will not interfere with recommendations to follow.

Besides the administrative improvement that will be gained by dispensing with the services of a highly-paid official, whose time is insufficiently employed, the adoption of such an arrangement as we have indicated will result in an evident saving, which will be eventually increased when the compensatory allowances, which will have temporarily to be made, cease to be payable.

We would add that, should our recommendations with regard to the Office of Works meet with the approval of your Lordships, and should your Lordships be of opinion that it is expedient that steps should be taken with a view to give effect to them at an early period, the proposals which we may have to make respecting the other Solicitors' Departments will not, we believe, be in any way interfered with.

4th August 1875.

THIRD REPORT

OF

THE COMMITTEE APPOINTED TO INQUIRE INTO THE SYSTEM UPON WHICH THE LEGAL BUSINESS OF THE GOVERNMENT IS CONDUCTED.

May it please your Lordships,

In our Second Report we have already made our recommendations respecting the Solicitor's Department of the Office of Works; and we have now the honour to lay before your Lordships our proposals with regard to the other Solicitors' Departments attached to public offices, into which we were instructed by the Treasury Minute of the 14th March 1875 to inquire.

That minute, in directing our attention to the question of the sufficiency or redundancy of the various Solicitors' Departments, seemed to point to the possibility of concentrating the legal business of the Government into one office, or, at any rate, of sensibly reducing the number of separate legal departments, by transferring to the Treasury Solicitor the business of some of them.

Though the work in all the departments, no doubt, is to a certain extent analogous, we may state, at the outset, that we do not propose the establishment of a central office, nor recommend any further or more general transfer of business than that which is suggested below. The difficulty, in some instances, of separating the work of the Solicitor's Department from the public office to which it is attached prevents us from recommending such a change, which otherwise might seem desirable. This is particularly the case in the Revenue Departments, where the presence of solicitors and their staff on the spot is essential for the proper conduct of business, and for the prompt action which the nature of the business demands.

But although we are not prepared to recommend the establishment of a central office, in which all the legal business of the Government might be conducted, we think it both possible and desirable that the departmental solicitors should have a common head, and, to a certain extent, form a single body. We think that such a system would facilitate transfers when they are expedient, and would check divergences of practice. We are of opinion, therefore, that as vacancies occur, the title of Solicitor should be confined to the Solicitor of the Treasury, and that all the other Solicitors of Public Departments should be appointed with the title of Assistant Solicitor, and assigned to the several departments in which the Government may find it most convenient from time to time to employ them. We do not contemplate that the Solicitor of the Treasury would in any degree interfere between the departmental solicitors and the chiefs of their several offices, but simply that he would be the head of their class, who would act as a referee in all matters of practice, and would be the adviser of the Government in all that concerned the organisation of the legal departments of its offices.

With these preliminary remarks, we now proceed to lay before your Lordships the proposals which we recommend for adoption, consequent on the general consideration we have given to the subject, and on the personal inquiries which three members of our Committee have instituted at the different solicitors' offices.

These proposals we divide under two heads—

First, those having reference to each solicitor's office separately; and

Secondly, those which relate to certain general considerations applicable to the conduct of legal business throughout the public service.

The

I.

The Public Departments (in addition to the Office of Works, already reported upon) to which are attached legal establishments are the following:—

(1.) The Office of Woods.
(2.) The Board of Trade.
(3.) The War Office.
(4.) The Admiralty.
(5.) The Board of Inland Revenue
(6.) The Board of Customs.
(7.) The General Post Office.
(8.) The Treasury.

(5.)–(7.) } The Revenue Departments.

In speaking generally of these legal departments, we have the satisfaction to inform your Lordships that, so far as we have been able to judge, the business is, on the whole, diligently and ably conducted in all of them, and the establishments are worked with a proper regard to economy as well as efficiency.

(1.) *The Office of Woods.*

The staff and cost of the legal branch (as per Civil Service Estimates of 1875 76) is as follows:—

Number of Officers.	Salary of Office.	Cost.
		£.
1 Solicitor	1,500 *l.*, by 300 *l.* after 5 years to 1,800 *l.*	1,800
3 Clerks	400 *l.*, by 15 *l.* per annum to 500 *l.*	550*
	150 *l.*, by 10 *l.* per annum to 220 *l.*	250†
	120 *l.*, by 15 *l.* per annum to 180 *l.*	210†
Allowance to Solicitor of salary paid by him to a clerk		250
Fees to Counsel		1,550
Incidental Expenses		2,150
	Total Cost £	6,760

* Including special allowance of 50*l.*

† Including special allowance of 30*l.*

It should be mentioned that, by way of repayment of these legal expenses, there is carried to the Exchequer, on an average, 2,000 *l.* per annum, which is realised from costs of leases paid by private individuals, costs recovered in suits, &c.

There will be found (page 71) in the Appendix to this Report a short account of the nature and amount of the work of this department, as well as the mode in which the legal business is conducted, and with regard to which we have no change to recommend. It is true that the legal assistance which the Office of Woods requires is, in a great measure, such only as is rendered to private persons having large estates. It might, therefore, seem to be a question whether it would not be more economical to place the work in the hands of a solicitor in private practice, rather than in those of a Government solicitor with an established staff. We question, however, whether this would be advisable or feasible, for, in addition to the ordinary routine business, there is a considerable amount of miscellaneous and extraneous work, such as personal communications with the heads of other Government offices, the watching and criticising of Bills in Parliament, &c., which would render it almost impossible for a solicitor in private practice to give the time and attention required by the business of the Crown.

As regards the clerical staff, we would observe that though it does not appear to us to be insufficient, this may be attributed in a great measure to the remarkable efficiency of the two principal clerks in the Office of Woods, who, although not in the Solicitor's Department, have made themselves familiar with the law involved in the business of the office. Indeed, it seems to be very desirable to select for promotion to the higher situations in the office those clerks who have acquired a certain amount of legal knowledge.

The only other observation we have to make with regard to the Solicitor's Department is, that the two junior clerkships, as vacancies fall in them, should not be filled up, but that a sum should be allowed to the Solicitor for providing himself with the kind of assistance which these clerkships are meant to represent, according to the general recommendation made in the second part of this (our third) Report.

(2.) *The Board of Trade.*

The legal business of this department has, as your Lordships are aware, been until quite recently conducted by the Solicitor to the Board of Customs.

From the concluding paragraphs of the memorandum of this officer, appended to the Report (page 84), and from the memorandum of the newly-appointed Solicitor to the Board of Trade (Mr. Walter Murton), likewise appended (page 72), some idea can be formed of the nature and amount of the work which has been, or is in course of being, entrusted to Mr. Murton.

Looking to the fact that the outport business of the Board of Trade, which forms, and will continue to form, so considerable a portion of the business of that office, must be largely entrusted to and conducted by officers of the Customs, we should have hesitated, had no such appointment as that of solicitor been made, to recommend a change in the arrangements so long in force, which have hitherto, as far as we can judge, worked satisfactorily.

Under the circumstances, however, the proposals which we have to make in regard to this office may be confined to the staff which the solicitor will require.

It appears to us that, instead of assigning to the solicitor a regular establishment, it would be better, in this instance also, to give him an annual sum of money, with which to procure for himself such clerical assistance as may be found necessary, beyond a chief clerk, who would be a member of the permanent establishment. Our reasons for making this suggestion will be found in the general considerations we submit to your Lordships hereafter.

Should it be decided, however, to create a regular establishment in the Solicitor's Department of the Board of Trade, we think that some such staff as that proposed by Mr. Murton in his memorandum would, in all probability, amply meet the requirements of the office, but that it would be premature to make any permanent appointments, except perhaps that of a chief clerk, before the Royal Commissioners on Railways have reported, and before it has been ascertained by experience whether any part of the business which it is now proposed to transfer to the Board of Trade would not, practically, be better conducted by the Solicitor to the Board of Customs.

(3.) *The War Office.*

The legal staff of the War Office has of late consisted of—

	£.
1 Solicitor, with a salary of - - - - - - -	1,500
Additional allowance - - - - - - - -	100
1 Assistant - - - - - - - - - -	1,000
1 Clerk - - - - - - - - - -	250
To this should be added "Law Charges," amounting to -	3,000
	£. 5,850

The duties of this staff and the character of the work are set forth in the annexed memorandum prepared by the solicitor for our Committee, and the memoranda likewise written by him at different times, which he has also submitted to us (*see* page 74).

The

The Assistant Solicitorship is now vacant, and we think that this vacancy affords a favourable opportunity for introducing an improvement in the arrangement of the work of the legal branch of the War Department.

The proposals which we have to recommend are these:—

a. That the Assistant Solicitorship should not be filled up, and that the office should be abolished.

b. That the conduct of all legal business should be assigned to the Solicitor of the Treasury, with liberty to employ agents when necessary.

c. That the Solicitor, being by such an arrangement relieved of a considerable portion of his present work, should henceforward act as the adviser of the Department of the Secretary of State upon all questions of law, including under this head what Mr. Clode terms "the constitutional law relating to the department" (which appears now to occupy a considerable part of his time and attention), and upon all Parliamentary business. He should also be prepared to undertake such other work in the general business of the department as the Secretary of State may from time to time think fit to assign to him. In consideration of this alteration in his position and work, we suggest that his title might with advantage be changed to that of "Legal Secretary," which more accurately describes the duties we propose should be assigned to him. For appointments to this office of Legal Secretary, we recommend a salary of 1,200 *l.* per annum, to rise after five years to 1,500 *l.* per annum.

Although by this change the purely legal business would be conducted outside the War Office, we do not apprehend that any practical inconvenience would result therefrom, inasmuch as, by the retention of a legal officer in the buildings of the War Department, legal advice would be always at hand.

(4.) *Admiralty.*

The legal business of this department has hitherto been conducted by a solicitor at a salary of 1,600 *l.* a year, to whom there has been assigned an annual allowance of 1,300 *l.* for clerical assistance, which, together with fees to counsel, expenses of law agents, &c., amounting to 5,500 *l.*, and other sundries amounting to 138 *l.*, bring the cost of the legal branch to a total of 8,538 *l.*

The solicitorship is, as your Lordships are aware, now vacant, the duties attached to the office having been, since the death of Mr. Bristowe, temporarily discharged by Mr. Bristowe, jun., from whom we have obtained a memorandum on the general work of the office, hereafter appended (page 77). We are of opinion that a change similar in principle to that which we have proposed for the War Office might advantageously be effected in the case of this Legal Department, namely:—

a. That the office of solicitor should be abolished.

b. That the conduct of all legal business should be assigned to the Solicitor of the Treasury, with liberty to employ agents when necessary.

c. That the Permanent Secretary, who has of late invariably been, and who (we assume) will continue to be, a barrister, should be charged with the duty of advising the Board of Admiralty on all questions having any legal bearing, and of attending to the Parliamentary business of the department. There would, therefore, as in the case of the War Office, be a professional adviser always at hand, and under the same roof with the Board of Admiralty.

We offer no opinion upon the necessity of retaining the appointment of Judge Advocate of the Fleet, which rests with the First Lord; but, looking to the proposed change in the distribution of the legal work of the Admiralty, we see no reason for continuing to retain special counsel for Admiralty business.

(5.) *The Board of Inland Revenue.*

The organisation of the Solicitor's Department to this Revenue Board, and the duties of the solicitor and his staff, are detailed in the memorandum on the office which is to be found in the Appendix (page 79).

The numbers and cost of the establishment are as follows:—

	Minimum.	Increment.	Maximum.	1875–76.
				£.
1 Solicitor	- -	- -	- -	2,000
1 Assistant Solicitor	- -	- -	- -	1,000
Additional allowance to present Assistant	- -	- -	- -	200
4 Chief Clerks	600	50	800	2,950
5 First-class Clerks	450	20	550	2,550
5 Second-class Clerks	350	20	450	1,990
6 Third-class Clerks	200	10	300	1,530
1 Clerk of the old establishment	90	10	200	190
1 Supplementary Clerk	- -	- -	- -	100
Additional allowance to 1 Chief Clerk as Registrar of Land Tax.	- -	- -	- -	100
Additional allowance to 1 First-class Clerk as Deputy Registrar.	- -	- -	- -	50
1 Cashier	10 *s.* per diem		- -	150
4 Copying clerks	6 *s.* „		- -	360
3 Writers	5 *s.* „		- -	225
TOTAL SALARIES			- -	13,395
Add Law Expenses			- -	9,000
TOTAL COST			- -	22,395

This is the largest of all the Legal Departments, and the business of the office is essentially of a special character. Moreover, the duties of the legal branch being closely connected with the working of the whole department of Inland Revenue, and constant communication necessarily taking place between the officers of the legal branch and the various other branches, it is indispensable that a solicitor and his staff should be accommodated in the same building with the other officers of the Board.

The only special recommendation we have to make with regard to this office has reference to the present assistant-solicitorship, which, on the occurrence of a vacancy, should, we think, be merged in a chief-clerkship, under an assistant solicitor, who would be the principal legal officer of the department, according to our previous recommendation.

(6.) *Board of Customs.*

The legal business of this Board is conducted by the following staff, at the following cost:—

	£.
1 Solicitor - - - - - - -	2,000
1 Assistant Solicitor - - - - - -	800
6 Clerks (with salaries varying, according to rank, from 150 *l* to 600 *l*. per annum) - - -	2,520
2 Writers (1 at 10 *d*. and 1 at 1 *s*. 4 *d*. an hour) -	200
Total - - - £.	5,520

The duties which this establishment has to perform are fully set forth in the memorandum prepared by Mr. Hamel, the present solicitor, and annexed hereto (page 81).

Experience will show whether the present staff may be further reduced now that the Board of Trade business has been detached. We are not at present in a position to make any more special recommendation relative to this department than is contained in our general recommendations. (*See* page 69).

We may, however, add that we recommend that the appointment of counsel to the Board of Customs, when a vacancy next occurs, be not filled up.

(7.) *General Post Office.*

The legal business of the Post Office and Telegraph branches of this Revenue Department is conducted in the same establishment under one solicitor, though the staffs are separated in the Civil Service Estimates.

The united staffs, with the cost of them, are as follows :—

Officer.	Salary.	Cost.
		£.
1 Solicitor		1,500
1 Assistant Solicitor (200 *l.* additional to present holder of office).	800 *l.*	1,000
3 Clerks at	350 *l.*, by 15 *l.* to 450 *l.*	1,280
3 Clerks at	200 *l.*, by 10 *l.* to 300 *l.*	715
2 Clerks at	100 *l.*, by 10 *l.* to 180 *l.*	225
2 Writers		300
1 Messenger at	21 *s.* a week, by 1 *s.* to 40 *s.*	67
	Total	5,087
	Law Charges	5,000
	£.	10,087

A reference to the memorandum supplied to us by the solicitor, Mr. Ashurst, and to be found in the Appendix (page 84), will enable your Lordships to judge of the nature and amount of the current work.

Here, again, we do not see our way to recommend any material improvement, in the conduct of business.

In consequence of the arbitrations arising out of telegraph matters (which will probably not be concluded for some years), the working powers of the department have been of late somewhat overtaxed. The existing staff, therefore, will certainly not admit of a reduction at present, nor, looking to the growing business of the department, do we think it probable that the numbers can be materially lessened even when the special work connected with the telegraphs is completed.

We understand that your Lordships have at present before you an application from the Postmaster General for a permanent adddition to the salary of the solicitor of his department; and that our opinion is desired on the proposal. The salary now assigned to the office is 1,500 *l.* a year, though, in consideration of his special duties in connexion with telegraph matters, we are informed that the present holder of the office has for the last few years had a temporary increase allowed him. Looking to the important duties he has to perform, we are of opinion that the salary of this office should commence at 1,500 *l.* a year, and be raised after five years to 2,000 *l.* We desire to add that we propose this scale on the distinct understanding that no claims shall be henceforth made for extra payment on account of special services.

The present assistant solicitor is retiring from the public service, but partly owing to the amount of current business, though more particularly on account of

the necessity of the constant attendance at Quarter Sessions and Assizes, as well as at the Central Criminal Court, of a solicitor to conduct the Post Office prosecutions, which are very numerous and technical, we are of opinion that, although the successor of the present assistant solicitor will, if our general recommendation is approved, be called a chief clerk, yet that he must not have an inferior salary; and we should suggest a salary commencing at 800 *l.* a year, to be raised after five years to 1,000 *l.*

We do not think it necessary to retain the appointment of a special pleader for drawing indictments. It appears to us better, as a general rule, that counsel who are to conduct the prosecutions should themselves prepare the indictments which they are to support; and in the case of the absence from town of any one barrister, there can be no difficulty in finding some other barrister, who has had experience in drawing this class of indictments.

(8.) *Treasury.*

The present solicitor, Mr. A. K. Stephenson, has furnished us with a detailed account of the work of his department, which we append to the Report (page 86). The establishment, according to the estimates of the current financial year, is as follows:—

Officer.	Salary of Office.	Cost.
		£.
Solicitor	2,000 *l.*, and after 5 years 2,500 *l.*	2,000
Assistant Solicitor	1,200 *l.*, and after 5 years 1,500 *l.*	1,500
1 Principal assistant		950
2 Assistants	600 *l.*, by 25 *l.* to 900 *l.*	1,477
1 Clerk in charge of accounts		500
2 First-class clerks	350 *l.*, by 20 *l.* to 500 *l.*	973
2 Second-class clerks	150 *l.*, by 15 *l.* to 300 *l.*	317
3 Supplementary clerks	100 *l.*, by 10 *l.* to 200 *l.*	425
1 First-class messenger	130 *l.*, by 5 *l.* to 145 *l.*	136
1 Second-class messenger	100 *l.*, by 2 *l.* 10 *s.* to 110 *l.* †	103
1 Third-class messenger	85 *l.*, by 2 *l.* 10 *s.* to 100 *l.*	85
1 Writer		130
Writers (occasional)		200
	Total for Salaries	8,796
Cost of prosecutions, fees to counsel, &c.		15,000
Revision of Statute Law		2,500
	Total Cost £.	26,296

We have no change to recommend in the status of the solicitor himself beyond that already suggested; but, looking to the increase of business and duties which will necessarily be imposed on the department should our recommendations be adopted, we think that there should in future be two assistant solicitors, at salaries of 1,200 *l.* a year, to rise after five years to 1,500 *l.* (which is the scale already

* Including an allowance of 10 *l.* per annum in lieu of fees to Senior Assistant.
† The Senior Supplementary Clerk rises to 210 *l.*

already fixed for this office). We are of opinion that one, at least, of these assistant solicitors should be a solicitor as distinguished from a barrister, and that, considering the character of the business which will devolve upon both these officers, they should be men in the vigour of life and in good practice.

We recommend that the title of Assistant be changed to that of Chief Clerk, of whom, therefore, in this Department, there will be three. We think that the clerk in charge of accounts should be clerk of the ordinary Treasury establishment. With regard to the other clerks, and to such further clerical assistance as the Solicitor of the Treasury may require, we think that he should be allowed a fixed sum to provide himself with it, as we have recommended in other offices.

II.

Having thus laid before your Lordships the recommendation we have to make in regard to the various Solicitors' Departments *seriatim*, we propose to offer a few suggestions of a general character on the subject that has been referred to us.

(1.) We repeat our recommendation that the principal legal officers of all the Public Departments, except the Treasury, should, as new appointments have to be made, bear the title of Assistant Solicitor, and stand in the relation we have defined, to the Solicitor of the Treasury.

Subject to due consideration of vested interests in the case of existing establishments, we recommend the introduction into all Departments requiring legal assistance of a system whereby each Departmental Solicitor, or as he would be, if our recommendation were carried into complete effect, except in the Treasury, Assistant Solicitor, should be assigned a given sum, for providing himself from outside the service with such clerical assistance as he may require in addition to a Chief Clerk. The Chief Clerk should not only have had a legal training, but should be a person capable of taking the Assistant Solicitor's place in his absence, and should be a member of the permanent Civil Service. In certain departments, such as the Treasury and the Revenue Departments, we contemplate that the heads of important legal branches should have the status of Chief Clerks, one of the body being selected as the substitute of the Assistant Solicitor in his absence. This scheme would obviate the necessity of all legal *establishments*, beyond solicitors and chief clerks; and would give that controlling power over subordination in the shape of appointment, promotion, and dismissal, which prevails in private practice. Considering the special character of the work required from legal branches of public departments, this plan would, we think, conduce to increased economy and efficiency, and would have the further advantage of relieving the Government of the difficulty of recruiting legal establishments of public offices, and of laying down scales of pay for professional work. There may be some difficulty in introducing this system into offices where another system is now in force; but we recommend that the experiment be made in the case of the recently established Legal Department of the Board of Trade, for which a clerical staff has not as yet been provided.

We make this recommendation with the distinct understanding that, in all cases, the expenditure of the sum allowed to the Departmental Solicitor will be strictly audited, and that credit will be given to him for such an amount only as he has actually expended.

(2.) Assuming that the present *legal establishments* are retained, we are of opinion that the system for filling up vacancies in them, which is already in force, and which we have reason to believe is working satisfactorily, should be continued. That system is open competition limited to *experts*, by which term persons are meant to have served for not less than three years in the office of a solicitor in private practice.

In making these recommendations, we have not forgotten the possible appointment of a Public Prosecutor. We are unable to say what changes such an appointment might require to be made in the Legal Departments of the State. None of our recommendations are specifically intended to meet such a contingency; but, so far as we can foresee, they seem to us to be likely to facilitate the introduction of a Public Prosecutor, should such a measure be hereafter decided on.

III.

The Foreign Office has no legal establishment of its own, and therefore we have not visited it. But, in the course of our inquiries, it was brought forcibly to our notice that unnecessary trouble and inconvenience are occasioned by the present system under which references are made by the Foreign Office to the Law Officers for their opinion and advice. This appears to be chiefly due to the want of some permanent legal officer in that Department. We think that this want might be supplied by the appointment of a Legal Assistant Under Secretary. Such an officer already exists in the Colonial Office, whose services the Law Officers have recognised as a material assistance to them; and it is with this view that we have made our recommendations for the War Office and Admiralty. We think that each Department consulting the Law Officers should be held responsible both for submitting to them a properly drawn case, and for keeping on record, with all needful indices, &c., the opinions of the Law Officers as they are from time to time received.

We would only add that, if such an appointment were made in the Foreign Office it would become unnecessary upon a vacancy to fill up the salaried office now held by Dr. Deane.

IV.

Before concluding this Report, we desire to lay before your Lordships the results of our inquiries into the office of *Queen's Proctor*, to which our attention was also directed by the Treasury Minute of the 14th March 1875.

With regard to this office, we have taken the evidence of the Queen's Proctor, which will be found appended to our First Report (page 23).

Though we do not suggest any immediate change in the conduct of the business which belongs to this appointment, so long as Mr. Hart Dyke continues to hold it, we are of opinion that it will not be desirable, on the occurrence of a vacancy, to appoint another Queen's Proctor as a separate officer, seeing that the Ecclesiastical Courts have been abolished, and that the business, formerly confined to advocates and proctors, has now been thrown open to the legal profession generally. We propose that the business should be transferred to the Department of the Solicitor to the Treasury, with liberty to employ agents when necessary. This transfer, without involving any serious addition to the staff of that Department, would, we think, secure a more effective control over the expenditure incurred in Administration Cases, and effect a considerable saving of expense.

(signed) *G. Jessel*, M.R.

R. R. W. Lingen.
Henry Leigh Pemberton.

E. W. Hamilton, Secretary,
3 December 1875.

APPENDICES.

Appendix 1.

The memoranda below on the different solicitors' departments were written in reply to the following questions addressed to each solicitor, viz.:—

(1.) The duties of the solicitor under the principal heads into which the business divides itself, *e. g.*, contracts, conveyances, prosecutions, &c., distinguishing, as far as possible, between such parts of the work as are special to the department, and such as ordinary solicitors are in the habit of undertaking?

(2.) In what form does the solicitor receive instructions?

(3.) In what form does he advise his department, *e. g.*, whether by reports, minutes on papers, or ally, &c.?

(4.) What number of references were made to the solicitor in the three years ending 31st March 1875? In how many instances did he consult the law officers or other counsel during the same period, and in what class of cases?

(5.) Does he employ agents? If so, how many, and for what business? Do the agents hold fixed appointments, or are they retained from time to time, and does the solicitor select them on his own authority?

(1.) Office of Woods.

1. These answers are accompanied by a tabular statement of the business of my department (so far as conducted in writing and under written instructions) during the 20 years between the date of my appointment, at the beginning of 1855 and the end of 1874.* The statement will, I trust, furnish the information desired so far as it can be supplied at all. It is, however, quite impossible for me to give any estimate of the time occupied in attendances on the Commissioners of Woods, at other Government offices, on Parliamentary agents, or on solicitors, engineers, surveyors, architects, and private landowners, and other persons having business to transact with the Crown officers. Neither can I give any notion of the time occupied in what may be called *quasi* diplomatic negociations; such for instance, as those which related to the passing of the Thames Conservancy Act, 1857; the Durham County Palatine Jurisdiction Act, 1858; the Crown Lands Act, 1866; and the Thames Embankment (Land) Act, 1873; or in such Parliamentary inquiries as that as to the Thames Embankment in 1871; that as to Dean Forest last year, or that in progress as to the New Forest. I should say generally that the Parliamentary business of my department would be found very onerous by any person who was not in the habit of perusing and criticising Bills in Parliament. For instance, I look at nearly every public and local Bill which is introdueed into Parliament, with a view of seeing if the rights of the Crown are effected thereby; and I do so whether notice of the Bill has or has not been given to the Commissioners of Woods, although in going over many thousands of the Bills I have doubtless inadvertently passed over some objectionable provisions which might possibly have been detected. I could give many instances of the adoption of amendments for the protection of the interests of the Crown and the public, *e. g.*, in a Brighton Improvement Bill (of which no notice was given to the Office of Woods, &c.), which proposed to vest the soil of "streets" in the corporation, and the interpretation clause enacted that the word "street" should include the sea shore between high and low water marks adjacent to the borough.

The forms of proceedings on the revenue side of the Exchequer, and generally speaking the nature of the questions involved in suits connected with this department, are also often special, although facility in the conduct of such proceedings could soon be acquired by practice.

Then I should add that, in regard to arbitrations and commissions for determining the nature and value of the Crown's rights in particular cases, much time and labour must often be bestowed. As an illustration I transmit a print of the notes of the proceedings in an arbitration as to the rights of the Crown in a part of Dean Forest, called "Abbotts Wood." These notes will show the nature of some of the cases which arise in the department of the Solicitor to the Office of Woods.

2. I receive instructions from the Commissioners of Woods sometimes by letter, sometimes by minute, and sometimes by word of mouth.

3. I sometimes advise the Commissioners of Woods in a report, sometimes by minute, and sometimes verbally. If my instructions are in writing so is my opinion or report thereon.

4. The number of references made to me by the Commissioners of Woods in the three years ending the 31st March 1875, was 2,937, irrespective of advice given in pending suits. I consulted the law officers of the Crown in 30 cases, and other counsel in 53 cases during that period. I cannot specify any particular classes of cases as being those in which I am in the habit of consulting the law officers of the Crown or other counsel. I do so when I am directed, or when I think it necessary. I may, however say, that I very seldom consult the law officers of the Crown, unless with a view to the institution of a suit, or unless I think the facts may lead to a discussion in Parliament in which it may be desirable to have the sanction of the opinion of the law officers.

5. I have authority to employ agents with the sanction of the Commissioners of Woods. As a matter of fact, I have only exercised that authority in one case during the last three years. That case relates to the title to mudlands in Portsmouth Harbour, and the question affects the interests of the Admiralty, the War Office, and the Board

* The analysis of business being in great detail, it is thought hardly necessary for present purposes to print it.

Appendix 1.

Board of Trade, as well as those of the Office of Woods. The agents who act for this office do not hold fixed appointments, but are retained from time to time. I think it would be objectionable that there should be any fixed appointments as agents. I select my agents on my own responsibility.

Office of Woods, 7 June 1875. *Horace Watson.*

(2). Board of Trade.*

1. Mr. Hamel informs me that the Committee requested a statement of such of the business of the Legal Department of the Board of Trade as was not embraced in the return furnished by himself of the work heretofore done in his department.

2. Mr. Hamel also informs me, that he promised to furnish in conjunction with myself, for the information of the Treasury, a memorandum of the staff which will be required for the conduct of the business of the Board of Trade.

[By way of supplement to his former statement, Mr. Hamel begs me to mention that during the three years ending 31st March 1875, there were 5,560 Board of Trade references made to him as acting solicitor to the Board in the special branch then under Mr. Hamel's direction, in addition to 11,154 Customs references made in his own department. This would give an average of the Board of Trade cases of upwards of 1,850 in each year.

1. As to the additional business referred to the Solicitor of the Board of Trade by the several departments other than the Marine Department.

The Committee is aware that I speak upon this subject from the information of others rather than from my own very brief experience.

I have been furnished by Mr. Trevor with a return of papers referred to the Solicitors of the Board in England, Scotland, and Ireland, from January 1871 to March 1875. Dealing only with the English references, the following is a summary of the subjects out of which the questions arose which required the advice or assistance of the solicitor:—

1. Foreshores	5. Tidal waters.
2. Harbours.	6. Lights.
3. Navigation.	7. Registry of ships.
4. Sea fisheries.	8. Wreck.

I have attempted to analyse the nature of the business comprised under the above descriptions, and I find it may be arranged under the following general heads. The numbers placed against them denote the number of the references made under each head:—

Actions - - -	5
Claims - - -	195
Contracts - - -	17
Conveyances - -	9
Detentions - - -	4
Leases - - -	65
Prosecutions - -	97
Miscellaneous - -	206

The references from the Marine Department are no doubt fully detailed in the return already made by Mr. Hamel.

A return similar to that supplied by Mr. Trevor is being prepared in the Finance Department under the direction of Mr. Hamilton. When this is completed, I will beg leave to transmit an analysis of it by way of supplement to this statement.

I may mention that among the matters already referred to me, certain individual cases from the railway, harbour, and finance (life insurance) department, have each demanded a great many hours of research into authorities, and the collection of necessary facts before I have been able to write my opinions.

Instances of this kind appear among the following:—

Finance (*Life Assurance*).—Questions of difficulty in regard to the financial position of life assurance companies, and the principles which should govern their returns under the Act of 1870.

Railways.—The relations between companies and owners of minerals beneath railways.

The control of the Crown over the companies and the mine owners in reference to dangerous workings beneath railways.

I have also corresponded with 84 railway companies for the purpose of Parliamentary Returns. This has been followed in many instances by personal communication with the companies.

Proceedings (successful) against a leading railway company for neglect to make returns of signal arrangements.

Harbour.—Claim of the Crown to foreshore referred from the War Office. The Papers in this case are extremely heavy and can only be grappled with by complete isolation from other work, probably for two days or longer.

Admiralty question under the Sea Fisheries Act, and the incomplete convention with France.

Salvage claim, conducted through the harbour-master at Ramsgate.

Harbour and Finance.—Investigation of claim for upwards of 5,600 *l.* for repairs to a steam tug at Ramsgate Harbour, and demand of large reductions.

The above are a few of the matters which have been referred to myself, and they may serve with the more detailed statistics given above to indicate the wide field into which the business may develope. While Mr. Hargrave Hamel has been engaged at Greenwich, I have been obliged personally to perform services in connection with the above cases which greatly interfered with the other current work, and which I might more usefully have delegated to Mr. H. Hamel.

2. In order to form a judgment as to the staff which my department will require, I have grouped together the practical duties which will devolve upon us in connexion with the subjects above described, and I submit these details in the following tabular form:—

* *See* also end of Memorandum of Solicitor to Board of Customs (page 84).

Description of Duties.	Remarks.
Solicitor.—The solicitor's duty will be the superintendence and conduct of the whole, consisting of the business stated in the return made by the Solicitor for the Customs, and the additional duties to which I have already adverted.	
Assistant Solicitor.—To assist the solicitor in every branch of his duties, as each day's state of work may require. To represent the solicitor, and carry on the management of the department during his absence from sickness, on leave, or on service. To perform services which, though mechanical in themselves, involve constant interruptions, which seriously break in upon the time of the solicitor, *e.g.*, the signature of very numerous formal letters, notices, &c., which are daily dispatched.	By arangement between the Board of Trade and the Solicitor for the Customs some two years ago, Mr. Hargrave Hamel, under the extreme and increasing pressure of business, was transferred from the Board of Trade to the office of the Solicitor for the Customs to assist him, and by Treasury letter to the Commissioners of Customs dated 28th December 1874, Mr. Hargrave Hamel was directed to return to the Board of Trade to assist the solicitor. Adverting to his experience and competency for the office, the ratification of this step by a formal minute of his appointment as assistant solicitor, with a proper salary, is highly desirable. Certainly, every day's experience, even during the existing provisional arrangements, has convinced me of the absolute necessity for such an appointment. The whole time of the solicitor is occupied in the perusal of papers referred to him for his opinion, and the research which they involve into books and authorities, in interviews with persons who come to see him on official business, in continual directions to his staff upon points which they bring before him for decision, and in the preparation and settlement of opinions and important letters. It will be impossible for the solicitor to keep under the numerous cases of all kinds which are daily referred to him, unless he can depute to a skilled assistant solicitor such duties in connection with them as may be at the moment necessary.
To settle and revise the draft briefs in inquiry cases before they are copied for delivery, and to discuss with the solicitor the points of difficulty or importance arising thereon. To have interviews at the Board of Trade (when the solicitor is engaged) with solicitors, passengers, masters, &c., upon the various subjects arising on inquiries.	
Efficient Clerks.—To investigate the large number of cases arising from inquiry into the cause of wreck. To consider, in conjunction with and subject to the decision of the solicitor, the points which call for particular attention in each case, and the class and number of witnesses who shall be called. To take down the depositions of the witnesses, and to make arrangements for the detention of those selected for the inquiry. To direct the preparation and dispatch of the necessary letters and notices for that purpose, and the issue of summonses when necessary. To determine where the inquiry may be most conveniently held, and to make the necessary arrangements with the magistrates, assessors, and others for the purpose.	The services under this head are very important, and make a considerable demand upon the intelligence, discretion, promptitude of decision, and memory of the clerk. These frequently involve considerations of public safety and interest which lie outside of the strict limits of the particular inquiry, but which cannot be overlooked or neglected. All this requires the utmost care and diligent dispatch. A shipwrecked crew upon arrival becomes immediately dispersed to the several ports in the United Kingdom, to which the sailors may belong, and they of course seek a re-engagement in another vessel. To trace out and to detain them involves a great amount of telegraphing of a troublesome kind to and from the solicitor's office, and the dispatch of a large number of letters and notices, sometimes between 20 and 30 in a day. The management of the witnesses with a view to elicit from them the real history of the particular disaster demands a good deal of tact and judgment Sailors are a peculiar class of people, and if not judiciously handled they will speedily refuse to give any information and seriously obstruct the inquiry.
To prepare the briefs for the several inquiries.	The importance of this duty is sufficiently obvious. It involves too no small amount of technical knowledge of matters connected with ships and shipping. The pressure of the work may be imagined when it is stated that several inquiries are frequently being held in different parts of the country on the same day. This is a responsible duty, and demands considerable judgment.
To regulate the scale of payment to the witnesses, according to their status, nature of employment, &c. To certify as to correctness of claims made by the various receivers of wreck for taking statements. In London cases, to issue prompt and correct directions to officials for the due securing and payment, say every two or three days of seamen, to prevent them leaving for their homes, or to join a new ship. In certain cases, say of unseaworthiness, to see officials at Lloyd's Salvage, and Lloyd's Register Office, and others resident in the City, with a view to obtain evidence for inquiries. *N.B.*—The new Act will probably involve still further increase of business to this branch, inasmuch as in certain cases a second court will sit to re-hear the case after the first formal investigation, but at present I am unable to say to what extent the business will increase.	In many cases there are no means of keeping the men, and they therefore require tact and temper in their management.
To conduct the minor inquiries in or near London. To conduct the numerous prosecutions before magistrates under the Merchant Shipping Acts and under the Railway Acts, &c. To record the letters, instructions for inquiries, and each succeeding stage of the inquiries, depositions from receivers as to casualties, to copy letters of instruction and telegrams to the out-parts, to secure further evidence, to copy minutes, and attend to the routine work of the office generally. *Messengers.*—To serve summonses on witnesses, &c., to search out witnesses when the inquiry is held in London, and keep them together, both before and on the days of hearing, and to ensure each witness being at hand when wanted. This is harassing work for all concerned, but it may perhaps be done by a messenger in the way in which it has heretofore been done at the Customs. Even this, however, must be done under the direction of the solicitor or assistant solicitor, or a competent clerk.	

Appendix 1.

In considering the question of the staff which will enable me to perform the duties of the new department, I have to bear in mind that, during about four months in the year the business arising out of shipping casualties becomes much less, and I do not wish to have any permanent clerks who will not always be fully occupied. It will be a less evil to feel some pressure during the rest of the year, and to obtain temporary aid in emergencies.

At present I should prefer to carry on my work at Whitehall without any greater assistance than I have hitherto had, substituting Mr. Bateman at the Board of Trade for Mr. Daniell, who will necessarily remain at the Customs.

In that case there would be:—

1. Mr. Hargrave Hamel as assistant solicitor.
2. Mr. Bateman.
3. Mr. Strong (who is likely to be of great service to me).
4. Mr. Gough, at present at the Customs, who has been very efficient, and whom Mr. Hamel has kindly consented to transfer.

W. Murton.

(3.) War Office.

1. The duties of the solicitor and assistant solicitor to the War Department are laid down with accuracy in the three several reports (sent herewith), dated the 30th November 1870, 1st December 1873, 2nd February 1874, which reports were made for the information of the Secretary of State and submitted for his consideration.

A., B., and C.

The work of the branch, so far as it has been recorded, is shown in the returns for the three years ending 31st March 1875, also sent herewith. These returns are not, I fear, exhaustive.

2. The solicitor has charge of all legal matters, and they are sent to him in every form as they arise, *i.e.*, by oral reports from officials (including the police), or by minutes sent from the official or political chiefs of the several departments into which the Secretary of State's Department is divided.

He is the official who has statutory authority* to give or receive writs, notices, &c., in the name of the Secretary of State; and in these matters he would act at his discretion, either with or without the express sanction of the Secretary of State, as he deems it right for his own protection and that of the Secretary of State whose authority is used. If the advice of the law officers be needed he takes it; and as a rule the Secretary of State is seldom troubled with legal business. When contentious proceedings are likely to involve the department in a doubtful controversy, then express sanction would be obtained from the Secretary of State through the Surveyor General or other responsible officer.

3. The solicitor advises the department by minutes on papers submitted, and by oral instructions given to any of the civil and military servants of the Crown acting under the order or authority of the Secretary of State or Commander in Chief.

Not unfrequently, printed papers have to be prepared in the nature of reports, which involve a large amount of time, and some investigation and research into legal and Parliamentary authorities.

4. None but the law officers are consulted, except counsel in conveyancing matters.

All the cases for the law officers are printed and bound up, so that they remain for reference and use thereafter. They are, I hope, never troubled needlessly, and seldom without all the official information which the department contains being laid before them.

5. Soon after my appointment in 1858, the subject of agents came under my notice.

The practice of the branch was for the solicitor to appoint in England any agent he selected for departmental work; that is, a salaried could appoint an unsalaried solicitor. The firms mentioned in the report of 1870, were then employed at my recommendation; but they hold no appointment, and I do not think that the agent for criminal matters has been employed for 10 years. The Ordnance Board held their solicitor responsible to them for all the legal work of their department, and under the Ordnance Acts the Board had the power to sue without reference to the Attorney General. (*See* the remarks of the Court in Doe and Leigh *v.* Roe, 8 Mec. & Wels., p. 580.)

Agents have only been employed when I deemed their employment essential for the public service, and since the services of the assistant solicitor have been withdrawn, this has occasionally become so.

C. M. Clode.

War Office, 5 January 1875.

A.

1. The solicitor to the War Department, from the fact that the Under Secretary is a soldier, not a lawyer, is charged with the minuting, and often with the decision of questions, constitutional and legal, which, in another department, would be dealt with by the Under Secretary of State.

2. The instances in which the law officers have been consulted are recorded in the solicitor's branch, and by a reference to their opinions, and to those of the solicitor previously given on the office minutes, the Secretary of State can (if so disposed) readily ascertain the competency or incompetency with which this special duty of the solicitor has been discharged.

3. For the same reason, the solicitor has taken charge (until 1868) of the legislation emanating from the department. All the Parliamentary Bills from 1858 to 1868, as framed by the solicitor or by counsel instructed by him, are recorded in volumes in the solicitor's room, and a reference to these will also enable the Secretary of State to judge of the manner in which this special duty has been discharged.

4. Circumstances have therefore obliged the solicitor to direct his attention to general questions of army administration, and to the constitutional history of the several old departments out of which that of the Secretary of State has been formed. The printed matter is also recorded and can be referred to (if needed) by the Secretary of State. If, therefore, for the ordinary duties of a contentious solicitor, he is not so competent as the assistent, or as the Secretary of State would desire, allowance will perhaps be made

* Defence Act, 1860, s. 45.

made (if credit be not given) to him for having studied (as the necessity has been laid upon him to do) other subjects which were more important to the public service, and which only some permanent (if not legal) official in the department could do.

5. The "ordinary" professional duties of the branch are those which the Solicitor to the Treasury, or of any other public department has to discharge, bearing in mind that no other department (save the Office of Woods) holds or acquires such landed possessions throughout the dominions of the Crown as the War Secretary. For these duties, official and professional, the solicitor's staff is the same now as it was in 1858, with these exceptions:—(1) that in 1858, an extra clerk was paid as a writer in the law stationer's bill; (2) that the assistant solicitor (Mr. Foreman) was paid as a 1st-class clerk, and the present one (Mr. Clulow) at 800 *l.* to 1,000 *l.* a-year; and (3) that a 2nd-class clerkship has been left vacant with a clerkship at a less salary (now under notice) substituted.

This addition to the assistant's salary was made with the express sanction of the Treasury in 1861–2, and upon the condition of his relinquishing *all private practice*, which has been strictly adhered to.

6. Now, the contentious business of the department has been permanently increased since 1858 by legislation:—

1st. Prior to 1860, a suit against the Crown, in the form of a petition of right, was so rare that the practice had almost become obsolete (*see* Carl Von Frantzous Case, 2 De Gex & Jones, 126). To remedy the supposed injustice, and to facilitate proceedings against the Crown, the 23 & 24 Vict. c. 34, was passed. The War Department has already come in for a fair share of litigation, and of references to arbitration to avoid litigation under this Act.

7. The registers of suits, &c., will show that already 17 cases of petition, &c., involving 235,823 *l.* 15 *s.* 5½ *d.*, and of references involving 87,258 *l.* 11 *s.* 5 *d.*, have arisen, and it is not probable that these cases will become less frequent as the operation of the Act becomes known.

8. 2ndly. In 1863, Parliament passed the jurisdiction in Homicides Act, under which the Solicitor to the War Department has the conduct, before the Central Criminal Court, of all cases of military murder. Three of such prosecutions have already arisen, and no moment may pass when the solicitor may not be called upon to act immediately under this statute; indeed, the last cases (2) arose simultaneously in the long vacation.

9. Until the case of Piper *v.* The Queen, in October 1864, all contentious business (including legal references) was done out of the department by agents nominated by the solicitor with the sanction of the Secretary of State, Messrs. Humphreys & Co. being agents in matters criminal, and Mr. Park Nelson in matters civil. At the date given above, Mr. Clulow undertook to conduct Piper's case without an agent, and with the express sanction of the Secretary of State. In later cases, the same course was sanctioned by the Secretary of State, and for some time past it has become the practice of the branch to conduct contentious business without asking the sanction of the Secretary of State on each occasion, and when costs are recovered paying them to the credit of the Exchequer. Appendix 1.

10. It was no part of Mr. Clulow's original agreement with the Secretary of State to conduct contentious business; on the contrary, even the jury cases under the Defence Act, 1860, were to be done by agents when the special staff was engaged.

11. The labour—and what is not less important, the responsibility—which the petitions of right, arbitrations, and prosecutions involve may be appreciated by the Secretary of State, if he pleases to see the volumes that are bound up in the solicitor's branch. Certainly, any litigation with the Crown as prosecutor or defendant involves the collection of documents and the preparation of instructions far exceeding in bulk any ordinary suit in which a private person is concerned; indeed, this fact affords the justification for the number of counsel that are so frequently retained to represent the Crown in court. If the briefs, &c., in Armstrong's prosecution (1859), the actions of Colonel Dawkins, the defence of Colonel Nelson, were printed in octavo volumes, they would go far to fill a large shelf.

12. Now, this work is done without once coming under the notice of the Secretary of State, who has authorised the prosecution or defence, though it may have engaged the solicitor's branch for many days or weeks. No warrant of arrest is issued by a magistrate at the instance of the War Office which may not ultimately involve a trial before a jury. For illustration, any post may bring intimation that proceedings must be instantly taken against offenders arrested in more jurisdictions than one for offences under the Army and Militia Reserve Acts. No doubt if cases are or had been misconducted, the Secretary of State would have been frequently troubled; but, as a rule, he has known nothing of what, by his own or the orders of his predecessor, has involved the legal staff of the department in no inconsiderable amount of labour (as the records of these cases and the registers of suits will prove).

13. The contentious work, therefore, undertaken in the branch is plus that which was undertaken in the solicitor's branch prior to the year 1864; and by this work alone, besides the careful revision of all law charges submitted to the department for payment, the addition made in Mr. Clulow's salary over that of his predecessor, has been amply recouped to the public.

14. The general distribution of work between the solicitor and the assistant is this: the solicitor is the responsible officer to the Secretary of State, and the assistant is the executive officer under the solicitor. As a rule, the solicitor does the official, and the assistant the more strictly professional, work of the branch.

15. In departmental actions against, say, the Commander in Chief and other officers, the solicitor prepares the legal and official part of the case for the briefs, &c., and the assistant in all other respects conducts the case. In other actions and references, the assistant often takes the entire charge of them with the assistance of the clerks in the branch.

16. The distribution of clerks (*only three in number*) is this: Mr. Condonne has the general charge of the registry of papers, the journals of

Appendix 1.

property and of (deeds which the Secretary of State should know involve several millions sterling in value). Mr. Hawkins has the special charge of all bonds and securities given to the Secretary of State. Besides these duties these two gentlemen do all the office as distinguished from the professional work of the branch. Mr. Mackenzie (whose office is now vacant) does professional work other than that which is executed by the solicitor or the assistant.

17. The employment is of necessity fluctuating; but with so small a staff it is only fair to say that Mr. Clulow and the others have very rarely got the admitted leave which the regulations of the service entitle them to. Whatever has been the pressure of work, I am not aware that the Secretary or Under Secretary of State has ever been troubled with complaint, nor that he has ever heard from the solicitor's branch that any work he wished to be undertaken could not be done in the office. Every endeavour has been made to diminish cost and to economise labour, by the adoption of forms and the use of printing in place of writing by law stationers.

18. The registers of work (so far as it can be recorded) and of suits, kept in the solicitor's branch, are open for the inspection of the Secretary of State. Of course they are not exhaustive for attendances, conferences, and consultations—no small part of a solicitor's duty—cannot be noticed. In September 1869, the solicitor suggested that the 2nd-class clerkships in the branch should be, as it has been, left vacant; but I am bound to say that it would be simply impossible for the conduct of contentious business to be continued by Mr. Clulow if the present vacancy in the branch is not filled up in due course.

C. M. C.

30 November 1870.

B.

FURTHER MEMORANDUM ON LEGAL BRANCH.

1. With reference to the decision on $\frac{7,969}{1,722}$, and to the serious condition of Mr. Clulow's health, I am obliged to ask that, if the Secretary of State sees fit, an investigation may *at once* be instituted into the duties and staff of the solicitor's branch by a committee (professional and official) appointed by the Secretary of State, and competent to appreciate the responsibility of professional work.

2. The subject came under notice or consideration at the time of my own appointment in 1858, and of Mr. Clulow's appointment in 1862 (by the late Sir George Lewis), in 1866 from Captain Galton the Financial Secretary, in 1869 when a 2nd-class appointment was abolished, in November and December 1870, when Mr. Mackenzie resigned and—after a full report and explanation had been submitted to Lord Northbrook—Mr. Hayden was appointed $\left(\frac{\text{—}}{1,488}, \frac{\text{—}}{1,496}, \text{and } \frac{\text{—}}{1,518}\right)$.

3. It will be seen from other papers that, prior to Mr. Clulow's appointment (besides the two present established office clerks), the solicitor had for the professionel work of the department the assistance of,—

1stly. An assistant solicitor - - - Paid as a 1st-class clerk.
2ndly. Another assistant from Dublin - Paid as a 2nd-class clerk.
3rdly. A conveyancing clerk - - Paid at 200 *l.* to 250 *l.*
4thly. Two firms of solicitors employed, and paid the usual professional costs as solicitors and agents, to conduct the technical business of the department in the civil and criminal courts.

4. It will also be found that since Mr. Culow's appointment, I have (*ex mero motu*) advised the Secretary of State to abandon items 2 and 4 of the above heads of expenditure, and that the only aids now given to the solicitor for the same work are,—

1. An assistant solicitor, paid as such, 1,000 *l.*
2. A conveyancing clerk, paid as such, from 160 *l.* to 250 *l.*

5. I have explained at some length in the papers referred to what my duties have hitherto been in this department. Those of the assistant solicitor I am neither qualified nor able to undertake; but if both qualified and able, the Secretary of State could not, I submit, rightfully impose them upon me, unless by agreement, and for a fair pecuniary equivalent.

6. No one can deny that, in ordinary official and professional life, each man acquires increasing skill with increasing years; which, in the official, is justly rewarded by deparmental advancement, and in the professional man, by larger practice and emolument. To the legal adviser of a department, no such rewards would appear to be open; but surely his income is fixed with regard to the work and staff of his office. As his income so his work is limited; but to throw increased labour for increased competency upon any official would be, not to reward, but to punish him for the successful service of his life; and against this principle I respectfully protest.

1 December 1873. *C. M. C.*

C.

1. I gathered as the result of the interview which I had with Mr. Cardwell, on the 20th ultimo, upon the subject embraced in this memorandum, that he wished me to place, in a definite shape, the suggestions I had to offer upon (should circumstances facilitate) the re-distribution of the legal work and staff of the department. This I will do as briefly as possible, referring (for detail) to the reports which have been previously submitted to the Secretary of State, upon the solicitor's branch of the department.

2. It must, however, be first noticed that, in this department (as distinguished from others) of the State, all the legal work (ultra that of the Judge Advocate, which comes before the solicitor only incidentally) is centred in the solicitor, and that the assistant has been hitherto rather his assistant (selected by him) than an independent officer of the department.

3. To enable the Secretary of State to form some opinion as to the organisation which should be hereafter adopted, the general outline of the professional work of the solicitor branch must, for convience, be dealt with under three divisions, as, 1st, conveyancing; 2ndly, litigation or contention; 3rdly, advising; because each of these

(as

(as every professional man would admit) differs very essentially from the other, as well in difficulty as in responsibility.

4. 1st. The conveyancing business, which came from the Ordnance Department, and was conducted by the solicitor to that Board and his clerks, comprises the purchase and sale of real property (the former under compulsory powers), the investigation of title, the preparation of conveyances, leases, agreements, bonds, contracts, and other documents. This is generally business which it is the least difficult to conduct; because the aid (more or less) of conveyancing counsel may be obtained on each set of papers; though, as incidental to the possession of such large landed estates as the War Department holds, questions of trespass and tenancy frequently arise. Private Bills, which in each session are introduced affecting these possessions, have also to be dealt with.

5. 2ndly. As to the contentious business, comprising—(*a*) criminal prosecutions; (*b*) civil actions; and (*c*) petitions of right. This business, so totally distinct from that in Class 1, is a speciality, and came, as to (*a*) from the old War Office, and as to (*b*) from the Treasury (as to the commissariat contracts), the War and Ordnance Departments, while (*c*) is an entirely new class of business, which since 1860, has arisen under the Petition of Right Act (23 & 24 Vict. c. 34).

6. The litigious or contentious business is, and always must be, the disturbing element in every small professional branch. Its possible occurrence at any moment that either crime is committed, or a contentious litigant appears, suggests the analogy of an establishment framed both for peace and war. As the solicitor's staff came from the Ordnance in 1855-56, these gentlemen were never selected for contentious business, and until (indeed, for some time after) Mr. Clulow's appointment, this work, though small in amount, was done out of the solicitor's office by agents whom he appointed to represent him.

7. The contentious is more important and responsible than the conveyancing business. It needs greater skill and experience in the attorney acting for and protecting departmental interests. In my judgment it is better that this business should be carried on by public servants than by solicitors acting as agents only. Public or State prosecutions involve departmental, if not more than such, responsibility. Petitions of right are frequently brought for large amounts, and if they end, as often is the case, in compromise, it is (I venture to think) a great protection to the Treasury, that the advisers of the compromise are responsible public servants inside, rather than general agents outside the walls of the Department.

8. Before 1860 a petition of right was unknown; but to the War Department (though often arbitrations are yielded to avoid litigation) 15 such petitions have been assigned, and five are still undecided. This (and every other) department must therefore always be prepared to defend such proceedings, and a waste of labour, more or less, is incident to this obligation. It lies beyond my province to urge the suggestion, but it has often occurred to me as worthy of consideration by the Treasury, whether all the contentious business of the Crown, prosecutions and petitions of right, should not be conducted in *one* instead of being scattered about in *several* departments, whether, in fact, both efficiency and economy would not result from this consolidation. Certainly, if this class of business was removed from the War Department, the difficulty of arranging the proper strength of the legal staff would cease.

9. As to the third class of business, giving legal advice to the Secretary of State *in extremis*, this, as the highest function of an official, should (as suggested by Lord Northbrook's Committee) be withdrawn from the solicitor's branch, and be restored to the Under Secretary of State. In the old Secretary of War's Office, this function was discharged by his deputy, Mr. Sulivan, till his retirement; and in the Home Office (until the War Deparment was constituted, and this work transferred to it) all militia and constitutional questions were dealt with by Mr. Waddington, as Under Secretary of State.

10. Some *permanent* official must be charged with this duty, and with the responsibility of acquiring the traditions, and of recording the constitutional law relating to the department, "for (if a quotation from Lord Bolingbroke may "be permitted) a wise minister considers his "administration as a single day in a great year "of government; but as a day that is affected by "those which went before, and that must affect "those which are to follow." The practice of the Secretary of State's office determines in many instances the rule of constitutional law, and always should be identical with it.

11. When of necessity discharging this higher function, I have pointed out, not unfrequently, that it is most invidious for a person to be brought in, as a solicitor, where law officers of the Crown or Judge Advocate err, as they do sometimes err, to say what in the given circumstances that have been presented to their notice is the course of action which the rule or practice of the department (in connexion with the higher constitutional law of the realm) acquires the Secretary of State to adopt. The highest public interests are often very seriously imperilled, if not injured, by such an arrangement.

12. The definite recommendations that I have to make to the Secretary of State are:—

1st. That the conveyancing business should be confided to a law clerk, with the present legal staff.

2ndly. That the contentious business should be transferred to the Treasury.

3rdly. That the advising business should be transferred to the Under Secretary of State.

3 February 1874. *C. M. C.*

(*Confidential.*)

(4.) ADMIRALTY.

1. The duties of the solicitor of the Admiralty are of so miscellaneous a character that it is almost impossible to classify them in their entirety. They comprise:—

(1.) Contracts for building Her Majesty's ships in those cases where the ships are constructed by private firms or companies instead of in the Government yards. Contracts for the engines and machinery required for such ships. Contracts for transports to convey troops or stores.

Appendix 1.

stores. Contracts for the conveyance of naval and other stores and supplies in ships which remain in the possession and under the control of their owners or charterers. Contracts for the supply of victualling and stores of every kind and description required for the ships, dockyards, arsenals, hospitals, and offices attached to and connected with Her Majesty's navy.

(2.) The conveyances, leases, agreements, &c., of land required for coastguard purposes, and all such business in connection with the coastguard or preventive service as was formerly performed by the solicitor of the Customs, but has passed to the Admiralty solicitor by the Coast Guard Service Transfer Act, 19 & 20 Vict. c. 83.

(3.) All conveyances, leases, agreements, &c., connected with the transfer of land required for dockyards, victualling yards, arsenals, hospital, offices, stations, or any purpose whatsoever connected with the Admiralty.

(4.) Prosecutions of all offences committed by and against officers, sailors, marines, clerks, and other persons under the control and jurisdiction of the Admiralty which their Lordships may consider of sufficient importance to take up. Also the defence of such sailors or officials as above mentioned who may be prosecuted by individuals, and whom their Lordships may think proper to protect. To these may be added the prosecutions under the Naval Stores Act and Contagious Diseases Act.

(5.) The legal conduct of all actions or suits which may be brought by the Lords Commissioners of the Admiralty in their official capacity, and the defence to all petitions of right which may be brought against them in that capacity.

(6.) The discharge of all those duties which were formerly performed by "the solicitor and "controller of Greenwich Hospital," but which by the Greenwich Hospital Acts of 1866 and 1869 were transferred to the solicitor of the Admiralty. These comprise, *inter alia*, the sale of such portions of the northern estates of Greenwich Hospital as their Lordships think proper to dispose of, the investment of the moneys arising from such sales, the assignment of leases and other legal business connected with the Hospital property at Greenwich. The custody of the title deeds of the Greenwich Hospital estates, the advising the Admiral Superintendent of the Royal Naval College, the Receiver of the Northern Estates, and the other officers connected with the institution. These duties have also involved the prosecution of the so-called Countess of Derwentwater, who laid claim to the estates, and of the Whittonstall rioters.

(7.) The legal conduct (in conjunction with the Parliamentary draughtsman and Parliamentary agent) of such Bills as may be introduced by the Admiralty into Parliament, and the insertion of such clauses into other Bills as are deemed necessary for the protection of Admiralty interests.

(8.) The duties attaching to the office of Registrar of Public Securities which was conferred upon the late Admiralty solicitor, and which include the custody of the title deeds of all Naval and Admiralty property throughout the world, and also of the bonds, guarantees, &c., given either by contractors with the Admiralty for due performance of their contracts, or by paymasters and their officials for the proper discharge of their duties.

(9.) The advising the Lords of the Admiralty and their secretaries, either verbally or by writing, whenever required to do so, and the conferring with the heads of the different departments, such as the Accountant General, the Controller of the Navy, the Director of Works, the Director of Transports, the Superintendents of Coastguard and Victualling, the Medical Director General, the heads of pay, prize, and pension branches, &c., whenever they require legal assistance or advice.

(10.) The attendance upon courts martials whenever their Lordships should desire him to watch the trial or to take part in the proceedings. Many of these duties are, as will be inferred from a perusal of the above, special to the department. The Government contracts, the custody of public securities, and the prosecutions under the Naval Discipline, Marine Mutiny, Naval Stores, and Contagious Diseases Acts, may be instanced as work not falling within the province of an ordinary solicitor, but every duty which such ordinary solicitor might be called upon by his clients to perform, comes within the scope of the Admiralty solicitor's business.

2. The solicitor receives instructions from the Admiralty in almost every conceivable form. For instance, he receives formal instructions from the Board signed by the Permanent Secretary, "to "report his opinion upon a case of which the "necessary papers are enclosed." He receives official minutes of transactions taking place in the department, with directions either to concur with or advise upon the course proposed. He is constantly summoned by the individual members of the Board, the Permanent and Parliamentary secretaries, and the different heads of departments, to give oral advice upon any matter upon which they may require it. He is sometimes summoned to attend the Board, and he is in the constant receipt of letters, not only from the departmental chiefs above mentioned, but from subordinate officials upon business connected with the department.

3. The answer to Question 2 practically gives the information required by Question 3, but I may briefly state that the solicitor advises the Admiralty in all the forms mentioned.

4. The number of official reports written by the Admiralty solicitor (and his assistant) during the three years specified amounted to 2,596. These, however, by no means supply even an approximate idea of the number of references to him, and I am quite unable to calculate the number of times he has been referred to for verbal advice. The number of instances in which counsel has been consulted during that period appear by the fee book to be 655. The class of cases in which they have been consulted is so miscellaneous that I have appended a list to this report giving examples of the different cases submitted to them recently.

The counsel employed include the Attorney and Solicitor General for the time being, the counsel to the Admiralty, the Admiralty Advocate, the junior common law counsel to the Admiralty, the conveyancing counsel to the Admiralty, and the different counsel employed on circuit for prosecutions and other matters.

5. The Admiralty solicitor employs law agents in those towns (34 in number), which contain or are in the vicinity of a naval station.

These agents are selected by the solicitor, with the

the exception of those employed for Portsmouth and Plymouth, in which the business is of considerable magnitude and importance, and who are appointed by their Lordships. The law agent for Plymouth is the only one holding a fixed appointment. The others are retained from time to time as their services are required.

6. The solicitor instructs the Admiralty counsel in the same manner, and they occupy the relative positions of solicitor and counsel employed by private individuals, with this exception, that, owing to the amount and continuity of the business between them, all their accounts are settled quarterly instead of at the termination of any particular suit or matter in which they may be engaged. The appointment of Admiralty counsel, which is always combined with the office of Judge Advocate of the fleet, rests with the First Lord of the Admiralty. The Admiralty solicitor has no official relation with either the Admiralty proctor or the registrar of the Admiralty Court. The Admiralty advocate is employed by the solicitor as counsel in those courts to which he confines his practice.

Should the Committee of Inquiry desire any further information with reference to this office I shall be most happy to afford it.

A. R. Isaac Bristow.

List of Cases submitted to Law Officers.

Pay and Pension of Coastguard.
Prize Money. Davis Bankruptcy.
Speculative Claim. Henwood and Harrison.
Rights of Conservancy.
Commutation of Pensions.
Loans to Dock Companies.
Loans to Corporations.

Smuggling and Fishery Acts. Questions.
Summary Imprisonment. Question.
Claims on various parties. Advise as to recovery.
Imprisonment in Consular Gaols.
Gunpowder Regulations.
License to Local Boards to carry pipes through Government Property.

(5.) Board of Inland Revenue.

1. The work of the department is divisible into four branches, which were formerly under the superintendence of separate heads, but are now united under one solicitor with an assistant and staff.

(1.) *Stamps;* (2.) *Probate, Legacy, and Succession Duties;* (3.) *Taxes;* and (4.) *Excise.*

(1.) *Stamps.*

The general work of this branch consists of the following particulars:

(a.) *Adjudications* (under the 18th Section of the Stamp Act, 1870), which have largely increased in numbers of late from an average of about 700 a year before 1870 to more than 2,000.

This is the course of an adjudication:—1. An abstract of the instrument is produced and examined with the original, reference being at the same time made if necessary to any other instrument, upon the stamping of which the chargeability of the instrument under adjudication may depend. The application is then registered and the instrument is returned to the applicant, who is required to produce it again in two days. This duty is generally performed by the junior establishment clerk.

2. The abstract is perused, and if it is found to supply sufficient materials for an assessment of duty such an assessment is at once made, and the application stands over for further information. This is done in the first instance by the senior clerk below the chief clerk, to whom all assessments and requisitions are afterwards submitted. The requisitions frequently lead to long discussions on matters of law and fact, carried on partly by interviews and partly by correspondence, and are either conducted by, or ultimately referred to the chief clerk, by whom again any matters of special difficulty are brought to the notice of the solicitor. When the matter is completed, the instrument is sent down together with a certificate of the assessment to the stamping department. Provision is made by the 19th section of the Stamp Act, 1870, for appeals to the Court of Exchequer from adjudications under the 18th section; but although there have been since the passing of the Act over 8,000 adjudications, there has been but one such appeal. Such cases, however, may of course arise, and would involve special cases and briefs for counsel.

(b.) *Applications under the 14th and 93rd sections* of the Stamp Act, "for stamps on duplicates, &c., denoting the payment of duty on original or primary instruments." These applications

Appendix 1.

cations are in number about 40 per diem, and although many of them are of a simple character, they are all subjected to a very careful scrutiny, and often give as much trouble as the adjudication cases. They are dealt with, in the first instance, by the second establishment clerk; but all cases of difficulty are referred to the chief clerk, and by him again, if necessary, to the solicitor.

(c.) *Proceedings for Penalties, &c.*—These average about 250 per annum. They involve a considerable amount of correspondence, though they seldom proceed further than the preliminary stage, the issue of a writ. They chiefly refer to requirements about receipt stamps, &c., not being complied with.

(d.) *Reports* on papers sent by the Board for the opinion of the solicitor.

(e.) *The preparation of Securities*, chiefly consisting of stamp distributors' bonds, are of a simple and uniform character, averaging about 120 a year.

(f.) *Miscellaneous Work.*—Inquiries made personally and by letter, &c.

	1873.	1874.	1875.	To 8 May. Total.
Adjudications - -	2,079	2,081	869	5,029
Prosecutions - -	176	173	102	451
Letters (2) - - -	362	314	187	863
Reports (1) - - -	93	103	43	239

The clerical staff, conducting this branch of the business, is composed of—1 chief clerk, 1 first-class clerk, 1 second-class clerk, 1 third-class clerk, 1 writer.

(2.) *Probate, Legacy, and Succession Duties.*

The duties performed in this branch are—

(*a.*) The conduct and management of various *legal proceedings* for the recovery of duties and penalties, viz.:—

English informations (equity side), Latin informations (revenue side), special cases stated without pleadings under 22 & 23 Vict. c. 21, s. 10.

Summary proceedings for account and payment of duties under Crown Suits Act of 1865 (28 & 29 Vict. c. 104).

Rules of court under 13 & 14 Vict. c. 97, s. 8, to enforce payment of moneys received, for duties on legacies and residue and not appropriated.

Appeals against assessments of succession duty.

(*b.*) The defence of *Petitions of Right*, English, Irish, and Scotch.

(*c.*) Appeals to the *House of Lords.*

(*d.*) Errors in the Exchequer Chamber.

Supporting the interests of the revenue in the Courts of Equity, and upon petitions, motions, and summonses wherever the liability to probate, legacy, or succession duty is involved.

(*e.*) Placing and removing restraints on funds in Chancery, and the public funds at the Bank of England to protect the rights of the Crown.

(*f.*) The perusal of wills, settlements, &c., to ascertain if claims are well founded.

(*g.*) Giving advice to applicants generally on matters appertaining to the law and practice of this branch of the revenue.

(*h.*) Reports on papers sent by the Board for the opinion of the solicitor.

(*i.*) Preparing bonds to secure the payment of stamp duty on probate and letters of administration where the stamps have been issued on credit under 55 Geo. 3, c. 184.

(*j.*) Preparing bonds, mortgages, &c., to secure the payment of duties under special Act.

(*k.*) Drawing cases for the opinion of the law officers.

(*l.*) Correspondence with the Board's solicitors in Scotland and Ireland, on removal of accountable persons from one to another part of the United Kingdom.

The clerical staff in this branch is composed of one chief clerk, one first-class clerk, one second-class clerk, two third-class clerks, one fourth-class clerk, one supplementary clerk, two copying clerks, one writer.

(3.) *Taxes.*

This work consist of—

(*a.*) Reports on papers sent by the Board for the opinion of the solicitor.

Cases stated for the opinion of the Court of Exchequer, under 22 & 23 Vict. c. 21, and cases for the opinion of that court stated under 37 & 38 Vict. c. 16.

(*b.*) Proceedings for the recovery of arrears of income tax and inhabited house duties, and for the recovery of penalties in relation thereto.

(*c.*) *Extents.*—Proceedings for the recovery of the consideration money due under contracts for the redemption of land-tax.

(*d.*) Preparing bonds and other securities given to the Board by the collector of taxes, examining title-deeds deposited, &c.

(*e.*) Preparing notices and distress warrants for the recovery of drainage rentcharges under the "Public Moneys Drainage Acts," and certificates of redemption of such rentcharges under the same Acts.

(*f*). Issuing warrants for the recovery of moneys due from defaulting collectors.

(*g.*) Proofs of Crown's claims for arrears in bankruptcy, proceedings, administration suits, &c.

(*h.*) Advising inspectors, surveyors, assessors, and collectors of taxes.

(*i.*) Drawing cases for the opinion of the law officers.

(*j.*) Correspondence on tax matters generally; an average of about 1,800 letters written per annum.

Land Tax Redemption Office.—As the chief clerk and first-class clerk in the tax branch are registrar and deputy registrar of land tax, that department and its work necessarily follows here.

The duties of the Land Tax Redemption Office (formerly a separate office) are of a responsible and intricate character.

Upwards of 1,000 contracts for the redemption of the land tax are entered into per annum.

Besides these contracts, the register contains a record of the titles of numerous sums of land tax purchased, or redeemed and not exonerated, and these sums are constantly changing hands, the registrar having to examine and register the fresh title on each occasion.

There are also questions of law arising as regards the tax.

The staff which conducts the *tax* and *land redemption* business consists of one chief clerk, one

one first-class clerk, one second-class clerk, one third-class clerk, one copying clerk, one writer.

(4.) *Excise.*

The business conducted in this branch is very multifarious; it (*a*) consists in a great measure of *proceedings for the recovery of penalties*, taken either in the Court of Exchequer, or before metropolitan police courts and justices of the peace in the country.

When cases are referred to the solicitor for proceedings, they have first to be considered with reference to the question whether any offence has been committed, and secondly, whether there is sufficient evidence to support an information. If these questions are answered in the affirmative, the information is drawn in the office. The number so drawn in 1874 was 1,700, or thereabouts.

(*b.*) This branch has also the direct conduct of the cases before the Court of Exchequer, and the metropolitan police magistrates, and of special cases in the country.

The matters in relation to which proceedings are taken are the following:—To each of them a separate and particular law, or code of laws, is applicable.

Articles liable to Duties.—Malt, spirits, tobacco, railway passengers.

Licenses required upon which Duties are payable.—Appraisers, auctioneers, brewers, beerhouses, cards, dogs, distillers, game, guns, hawkers and pedlars, patent medicine, plate, pawnbrokers, refreshment houses, tobacco dealers, wine sellers, establishment licenses (carriages, servants, and armorial bearings).

(*c.*) Reports to the Board on cases submitted for the solicitor's opinion, and answering letters direct.

(*d.*) Preparing malt credit bonds, and other bonds and legal documents required in the course of excise business.

The staff conducting this business is, one chief clerk, two first-class clerks, two second-class clerks, two third-class clerks, one copying clerk.

(5.) Besides these four branches, which are each superintended by the solicitor with his assistant, there is the duty, by no means light, of drafting Bills for Parliament. All Inland Revenue Bills are drawn by himself, and he has the task of overhauling all public and private Bills touching on revenue matters, to see that they do not affect the revenue prejudicially.

With the exception of leases, contracts, and such like, no part of the solicitor's work is the same as that which passes through the hands of an ordinary solicitor.

2. The solicitor usually receives instructions by minute on the Papers, such as "refer to solicitor," "solicitor to advise."

3. He advises the Board by written and oral opinion.

4. The number of references made to solicitor by the Board in the three years was,—

1. Stamps	2,149
2. Probate, Legacy, and Succession Duties	2,636
3. Taxes	7,531
4. Excise	6,377

The law officers were consulted 10 times during the last three years upon cases submitted to them for their opinion. In contentious business a junior counsel is employed, together with the law officers. There are two junior counsel appointed by the Attorney General for Inland Revenue purposes; namely, Mr. Karslake (equity), Mr. Pinder (common law).

5. The solicitor has an agent in almost every provincial town, to whom are paid the ordinary professional fees. He appoints these agents himself, and is able at any time to take the business out of their hands, and transfer it to somebody else; but he has rarely, if ever, exercised this power.

W. H. Melville.

(6.) Board of Customs.

1. The business of the Solicitor for the Customs is very diversified, and for the most part of such a character as to render it difficult to distinguish between what is special to the department, and what part of it is such as ordinary solicitors habitually undertake.

There is scarcely any kind of legal business that the Solicitor for the Customs has not to deal with. First, of course, that connected with the pure business of the revenue, that is to say, such as relates to the establishment, the preparation of leases, contracts, &c., for custom houses, docks, stations, watch and boat houses.

Leases. Contracts.

The preparation of bonds as security for the Crown, in reference to the duties of customs on goods deposited in warehouses, approved by the Commissioners, for the warehousing of goods without payment of duty until delivery for home consumption or exportation.

Bonds for warehouses.

The disposal of various questions arising in daily practice as to official dealing with goods in the warehouse; such, for example, as the packing, re-packing, bottling, mixing, fortifying, and warehousing or re-warehousing of wines, under the laws and regulations which govern such operations, whether the goods are for future delivery, for home use, for exportation, for ships' stores, &c. The manipulation of tobacco, and manufactures of cavendish, &c., in bond, under the provisions of the Tobacco Act.

The allowance of drawback on tobacco, snuff, &c., on exportation or for ships' stores, and divers other operations in the warehouse.

Drawback.

The removal under security by bond of bonded goods from one port to another, or from one warehouse to another.

General removal and export bonds.

The removal under special bond of goods landed from one part of the county to another in transit by rail across the country, in furtherance of the voyage.

Transit bonds governed by circumstances.

Dealing with spurious imitations of goods bearing the brands or marks of British manufacturers, which, for the protection of the character of British manufacturers at home and abroad, are forbidden to be imported or exported in transit.

Brands and marks.

The protection of the revenue against irregularities in the importation of goods.

Revenue.

Reports of ships inwards and entry of goods to be maintained according to law, the time and manner varying according to circumstances.

The enforcement of the laws and regulations for the compulsory landing and depositing goods in the Crown's warehouse when not duly cleared inward or retained on board, in the lighters, or on the quays, longer than is consistent with economy in supervision and safety for the revenue.

Warehousing regulations.

Appendix 1.

Prosecution of smugglers.

The prosecution of persons for evading the law by landing goods without entry and payment of duty, concealing goods on board ship, on the person or ashore.

Detention of smugglers, assaults, &c.

Dealing with persons caught *in flagrante delicto*, prosecuting smugglers and others for assaulting and obstructing officers in the execution of their duty, or for carrying, conveying, or concealing smuggled goods, illegally removing goods from ships, quays, wharves, warehouses, or other places of deposit (permanent or temporary), for security of duties.

Forfeitures.

The detention, seizure, and prosecution of ships, boats, carriages, or other means of conveyance used in smuggling.

Prosecutions in Exchequer suits, &c.

The prosecution before justices, or in the superior courts, of offenders against the Customs laws. The prosecution of offenders against the Quarantine Acts.

The prosecution of officers and persons holding situations of trust under the Crown for embezzlement of moneys and Crown stores, collusion with smugglers, &c.

The prosecution of British subjects for piratical proceedings on the high seas.

Officers' bonds.

The preparation of collectors, bankers, and officers' bonds required as security for moneys, goods, and chattels intrusted to their care, and for general good conduct.

Copyright.

Protection of copyright, British, Colonial, and International.

Prosecution of masters and owners of vessels for non-compliance with the law; departing without clearance and without proper certificates from emigration and Board of Trade officers that the laws and regulations as to lifeboats, medical stores, breathing space on passenger ships, stowage of goods, &c., had been complied with.

Detention of ships for non-compliance with the provisions of the Passenger and Emigration Acts, with which, although considered Board of Trade Acts, the Customs and their solicitor must be fully cognisant, that they may be consistent with the law in the refusal of clearance and detention of sea-going ships.

Officers' misconduct.

Charges against officers for fraudulent or improper conduct, prosecutions for theft, perjury, &c.

Mode in which solicitor receives instructions.

2. The solicitor receives his instructions generally in the shape of references to him on the papers from the Board.

References.

3 and 4. The number of references to the solicitor during the last three years on customs matters was about 11,154, the majority of these implying so many legal opinions given on matters *pro re nata*.

Solicitor consulted on references.

Out of these, according to the advice given and the decision of the Board thereon, informations may or may not be laid or proceedings instituted. The solicitor is consulted throughout as to the facts and evidence, and by the time that the order of the Board is made for prosecution, the work is nearly all done.

Proceedings before justices conducted by officers.

The informations to be laid are sent to the port with the requisite instructions to the Collector to prosecute, which he does in 99 cases out of 100 in person or by one of his officers, and almost always with complete success.

Exceptions.

In very few cases where special matter arises as to the construction of the statute, the Collector is allowed to call to his aid a local solicitor, or has a clerk sent to him from the solicitor's office in London.

The business departmental.

In these prosecutions the whole business is departmental in its progress until it arrives at what an ordinary solicitor might be required to do, viz., to conduct the case before the magistrates, where, for the reasons given, he would be seldom wanted, consequently this would only create an unnecessary expense in 99 cases out of 100.

Superior court business.

Where other proceedings in the superior courts arise out of the current business of the solicitor's office, and which might perhaps be transferred from his hands to those of an ordinary solicitor, by the time that such transfer could be made, the solicitor would be so full of the subject that it would be less trouble to him to carry it through and instruct counsel, than to put another solicitor in possession of, and so imbue his mind with, the facts as to enable him to convey, second-hand, those instructions to counsel, or in other words, prepare the brief and give the requisite explanations in consultation before trial and in court, where there is little doubt the Customs Solicitor or his common law or prosecution clerk would still be expected to attend, and he might as well do it himself.

The fact is, the Solicitor for the Customs masters the whole case, marshals the available evidence, and ascertains that it is a proper case for prosecution or suit before he advises that step and receives the Board's order thereon, and by that time the real work is done.

Cases stated for superior courts.

Again, where there is ground to appeal against the decision of a magistrate, and for that purpose demand is made, *sec. stat.*, for a case to be stated for the judgment of a superior court, and when that case is stated, the Crown's case resolves itself as to the rest into instructions to counsel to argue the question of law; and it is just as easy to give these instructions direct to counsel in the shape of a brief, as to give them to some other attorney to convert into a brief. The probability is, that the Customs Solicitor would do it better and save the expense attendant on handing it over to another.

Letters.

The general business already alluded to has in the last three years necessitated 2,500 letters.

Number prosecutions.

The proceedings before justices have amounted in the three years to 3,629 cases, of which about 3,480 were conducted by the officers. Solicitors were called in occasionally at distant ports, in cases where legal assistance was thought desirable by the Board.

A clerk from the solicitor's office has attended in very special cases at the outports as well as in London.

Bonds.

The number of bonds prepared in the solicitor's office, being special, were about 300. The bonds at the outports were chiefly filled up by the collectors, who see to their due execution on printed forms and instructions prepared in the solicitor's office. These forms are occasionally revised to meet the exigencies of trade and progressive changes in the administration of the law. They are, when completed, submitted to the solicitor to report whether they are properly filled up, executed, and attested. Besides the special bonds above referred to, there are many hundreds of ordinary bonds every year.

Setting o ports, &c

It devolves upon the solicitor to prepare all warrants for the setting out, altering, and varying the limits of ports, and the appointment of legal quays, formerly done by Exchequer commission and now by Treasury warrant. About 30 in the last three years.

Reportin on Bills.

He has to report upon all railway, harbour, and other local and private Bills, to see whether they affect the Crown's premises, custom houses, watch

watch and boat houses, quays, &c. About 806 in the last three years. And also to peruse and report upon all Colonial Acts or Ordinances submitted for the approval of the Home Government.

He has to prepare all Customs Bills and special clauses, pursuant to the directions of the Treasury and Commissioners of Customs, for giving effect to proposed changes in the law.

onds, various. He prepares warehouse, sufferance, general removal, and export bonds, and also Collectors' and other officers', bankers', carmen's, and lightermen's bonds, which are numerous and sometimes special.

He has to issue extents where the Crown's debts are in danger, and this business brooks no delay.

isoners' turns. He has to furnish monthly returns of all prisoners committed for offences against the Customs laws, with comments thereon for the consideration of the Treasury.

efences. It is a part of the solicitor's duty to defend actions against officers for alleged wrongful acts, illegal seizures, &c., for which the law provides special protective machinery to guard against vexatious actions, &c., but of these there are now none, not having been more than two during the last 20 years, a tolerable proof that they are not ill-advised or indiscreet in the performance of their duties.

pinions of ounsel. one. It is the duty of the solicitor to prepare cases for the opinion of counsel; of these, however, the return for the last three years is *nil*.

Indeed the same may almost be said of the last 25 years, the Board having been so far satisfied with the opinion of their solicitor, that they have frequently declined to take any other when he has proposed it, and perhaps with reason, as they have not failed in one case in 1,000 during that period.

It is scarcely necessary to observe that the registers of cases passing in and out of the office,—

The records of prosecutions;
The gaol books, in which every prisoner committed is recorded;
The letter books, &c.,

are troublesome to keep, and require extreme care. The discharge of prisoners at the proper times, ordered by the Treasury, is entrusted to the solicitor, who prepares, signs, and dispatches the warrants to the gaolers for that purpose.

He has to keep the cash accouuts of the department, involving the entry of many thousands of payments per annum in various businesses, demanding great care and attention.

There is yet another branch of business of very considerable importance, that connected with the registry of British ships, for which the Collectors of Customs are by the Act constituted registrars, under the management of the Commissioners of Customs, although the machinery by which it is governed forms Part II. of the Merchant Shipping Act.

Very complicated and difficult questions continually present themselves under this branch of the law, with which, however, the legal department of the Customs is, from long practice, familiar. The registry law, until embodied in the Merchant Shipping Act, 1854, always formed part of the Customs code, and it is very questionable whether, as this business cannot be managed without the Customs, it would not be expedient to replace it once more under the exclusive management of the Commissioners of Customs and their officers.

It is obvious that the whole of these matters are so purely departmental, that with the exception of an occasional criminal prosecution, perhaps, at the assizes, &c., the foundation for which is laid by the preliminary examination before magistrates, scarcely any part of the business of the solicitor could be handed over by him without detriment to the interests of the Crown.

Formerly the Court of Exchequer was more frequently resorted to for the prosecution of smugglers than of late years, but cheap and speedy justice was found to be easy of attainment, by resorting to justices for the recovery of both penalties and forfeitures, and that has proved advantageous to all parties.

There have not been more than three prosecutions in the Court of Exchequer during the last 15 years.

5. As regards the employment of agents, it has already been stated incidentally that in special cases at the outports the Collectors are permitted to call in the aid of a local solicitor, if the distance is so great that the cost of subsistence and travelling expenses attendant on sending a clerk from the solicitor's office would exceed the fees payable to an attorney on the spot.

The only port in England in which there is at present a recognised agent for legal business is Liverpool. This has been the practice for many years, in consequence of the magnitude of the business of the port and the advantage resulting from having a solicitor at hand who is by experience fully acquainted with Customs' laws and practice.

Mr. Tyndall has filled this office for nearly 30 years. His predecessor held it for nearly half a century before him, and both have been paid by fees for the business intrusted to them.

The same practice prevails at Dublin. Formerly there was an Irish assistant solicitor there, with one clerk, borne on the Customs establishment at fixed salaries.

The office of assistant solicitor was abolished above 20 years ago, and the clerk only remained, but it was found that his duties had dwindled to almost nothing, and as it was found cheaper to call in a local solicitor for the occasional business of the court, that course was adopted, and the clerkship abolished.

At Edinburgh there is and always has been a writer to the signet borne upon the establishment at a fixed salary. He is solicitor for Scotch law, and advises on all business in Scotland which it is found necessary to refer to him, either on account of Customs or Board of Trade, and travelling expenses and subsistence are allowed him when he is required to attend to business at any other port than that of Leith.

With reference to the outports generally, the practice has always been to find out when necessary an able attorney who is ready to serve the Crown at reasonable charges. This is done by instructing the Collector, when in any case professional aid is allowed, to secure the services of a respectable solicitor, and if he does the business intrusted to him satisfactorily and at fair charges, a note is taken of it, and the same solicitor is thenceforth employed for the Crown as long as he gives satisfaction; for instance, Messrs. Kelly of Plymouth

Appendix 1.

Plymouth have been so employed for nearly half a century.

The occasions, however, are very few in which local professional assistance is required or resorted to for Customs business, the Collectors being generally well informed upon and equal to the duty of conducting such cases. Such, however, is not the case with Board of Trade business, which is novel, diversified, and increasing daily.

The one year's return (a copy of which is sent herewith) illustrates the diversity and extent of Board of Trade* business heretofore conducted by or under the direction of the Solicitor for the Customs, the rapid increase of which cannot be better shown than by the fact that the average number of inquiries into casualties at sea was, until three years ago, about 37 per annum. In 1872 they rose to 50 in the year. In 1873 to 195, and in 1874 to 208 (the number given opposite Head 18 in the Return).

The business arising out of the detention of unseaworthy ships is comparatively modern and increasing.

It will scarcely fail to be observed that there are many heads of business enumerated in the list of Board of Trade business so inseparable from the Customs as regards their conduct and management, that it will be almost impossible to detach them from the office of the Solicitor for the Customs.

Every day's experience (now that the intended transfer is in progress) illustrates the difficulty of severing from the Customs much of the work which the Board of Trade decided to transfer from the Solicitor for the Customs to their newly appointed solicitor. Experience will soon decide the question.

With regard to the question of economy, I do not think it could be carried much further than it has been in the department of the Solicitor for the Customs. It appears by a Return to the House of Commons, and ordered to be printed 11th August 1854, that by changes in the establishment, management, and expenses of the solicitor's office during the five years ending 1853, as compared with the preceding five years, a saving of 22,400 *l.* was effected, although a larger amount of business was transacted.

The figures in that return stand thus:

	£.	£.
Total salaries and emoluments for the five years ending 1848 - -	35,590	
Total salaries and emoluments for the five years ending 1853 - -	27,690	
		7,900
Total supplies disbursed in the five years ending 1848 - - -	42,000	
Total supplies disbursed in the five years ending 1853 - - -	27,500	
		14,500
Total saving in last five years in comparison with the preceding five years - - £.		22,400
Number of convictions and prosecutions in the five years ending 1848 - - -		7,722
Number of convictions and prosecutions in the five years ending 1853 - - -		9,169
Difference in favour of last five years - -		1,447

The savings have gone on increasing ever since, the disbursements in Customs business of the solicitor's office not amounting now to more than one-fifth of the expenditure of the last period shown above.

Those results have been atributable to the systematic dispatch of business and the continual watchfulness observed as to expenditure, and upon no other hypothesis does it appear possible to account either for the large progressive savings or the extraordinary amount of business that has been accomplished in the solicitor's office with a continually diminishing staff.

If the whole were not under the supervision of one responsible head it is more than probable that a very much less satisfactory result would ensue.

F. J. Hamel.

11 June 1875.

* *See* also Memorandum by Solicitor to Board of Trade, p. 72.

(7.) General Post Office.

In answer to the questions of the Committee accompanying their letter of the 28th April, referred to me on the 2nd June instant, I beg to say that the duties of the solicitor may be divided into the following heads:—

No. 1, A.—Arbitrations arising out of telegraph matters, involving the investigation of the claims of the telegraph and railway companies for compensation under the Telegraph Acts; the perusal of voluminous papers and numerous Acts of Parliament, the preparation of the proofs of witnesses and of the briefs used in these cases, and the consideration of and taking up awards and carrying them out, notices of appointment, attendance at the sittings on references, preparation of deeds of grant and conveyance of the undertakings of the companies, cases for the opinion of the law officers of the Crown, and of other counsel. Attending consultations and conferences with them, and the carrying on of a large correspondence with railway companies, solicitors, arbitrators, engineers, actuaries, and other persons which these arbitrations involve, and personal attendance on the persons named.

This class of business seems special to the department, arising under special Acts of Parliament.

B.—Criminal prosecutions, necessitating the examination of witnesses in criminal cases, and the preparation of the instructions for indictments and briefs in such cases, and attending at the Old Bailey Sessions, assize towns, quarter sessions, Middlesex Sessions, and police courts, conducting criminal prosecutions and consultations with counsel. Also a large number of official investigations into the conduct of officers of the establishment not ending in criminal prosecutions.

This class of business seems special to the department, arising under special Acts of Parliament, and requiring special knowledge of the working of the department.

C.—The preparation of a number of cases for the opinion of the law officers of the Crown and other counsel. Consultations with them on questions arising out of the Post Office Telegraph Acts and other statutes, and also on criminal questions arising under the former Acts, and on questions of patents, and the consideration of and advice on many cases of the like nature not requiring counsel's opinion.

This also is, to a considerable extent, special to the department.

D.—Conveyancing. The perusal and examination of abstracts of title to land, the preparation of requisitions thereon and of draft conveyances, deeds of covenant, and declarations and other documents used in effecting the transfer of land, and attending at

This branch of business is such as ordinary solicitors are in the habit of undertaking, but requires some spe-

various places throughout the country examining abstracts of title with the deeds.

The preparation and perusal of hundreds of deeds of grant, deeds of arrangement with railway companies, leases, underleases, licenses, assignments, surrenders, contracts, agreements, bonds, the drawing of abstracts of title, abstracts of leases, notices, and other documents.

cial knowledge of certain Acts of Parliament affecting the Post Office.

The deeds with railway companies arising out of the Telegraph Acts are very special.

E.—Contentious business unconnected with criminal business. The defence of petitions of right, the conduct of actions at law, and the preparation of declaration, affidavits, pleadings, Bills, answers, demurrers, judgments, and other proceedings used in conducting and defending the actions of ejectment, trespass, contract, and others, Chancery suits, proceedings before the Railway Commissioners, extents and other Crown proceedings, &c., which are frequently being brought by and against the department, and the preparation of legal arguments used in showing cause against rules for writs of mandamus, the preparation of special cases, &c. Part of this work arises directly or indirectly out of telegraph business, part out of Parliamentary Post Office business. They involve also many attendances on and consultations with counsel, and at the courts of law and equity.

So much of the business comprised under this "head" is special as involves Crown proceedings, petitions of right, extents, &c.

The personal attention to, and conduct of cases in the county and police courts, or quarter sessions, where counsel are not employed, and attendance at Judges' and Vice Chancellors' chambers on interlocutory proceedings in actions and suits, also in Crown proceedings, and preparing affidavits in support of such proceedings.

F.—Parliamentary business. The perusal of Parliamentary Bills and the preparation of various clauses for insertion therein for protecting the interests of the department. Attending on Parliamentary agents and before Committees, &c. And although I do not undertake the drawing of Bills in Parliament, I have as much to do, or more, in instructing the Parliamentary counsel or his assistants, and attending them at Westminster, as formerly I had to do in aiding the Post Office counsel in work of the same character. I have also to consider and advise on the scope of, and the necessity of, new legislation. The class of matters last mentioned involve of course a considerable correspondence.

This business, though of course peculiar and special, is such as a solicitor of experience in ordinary practice of an extensive scope ought to be able to undertake.

G.—In addition to the above "heads," it will be evident to the Committee that the current daily business involves the perusal of all the official papers referred to the solicitor, and the preparation of minutes and reports upon the legal questions raised therein, and advising the Postmaster General personally, when required, and also through the medium of the secretary and his clerks. The preparation of Treasury Warrants, formerly settled by counsel, are now wholly prepared in my office.

A good deal of this work is special and not such as solicitors are in the habit of undertaking, *e.g.*, the perusal of minutes and reports, the dealings with savings bank matters, &c., but much of it may be done by any solicitor of ordinary ability, and all of it by any solicitor who will take the time and trouble to master it.

There are also necessarily new duties thrown upon the solicitor, arising out of the new departments of public utility undertaken by the Post Office. I have to attend meetings of creditors, to confer and correspond with engineers, accountants, actuaries, and directors of railway companies, depositors in savings banks, or their representatives, persons interested in Post Office annuities and life policies; and a much larger proportion of the public finds its way into my office than in former years.

H.—Accounts. In addition to the above I have to keep the cash accounts of the office, comprising payments to counsel and to large numbers of witnesses, examination of agents' accounts, &c., and the stamping of deeds, bonds, and Post Office contracts.

This is work any solicitor ought to be able to do.

2. The solicitor receives instructions from the Postmaster General, through the secretary generally, by means of minutes of the secretary, mostly short, on the official papers. In order to get at the facts and understand the instructions I have to peruse the official papers, often very voluminous, and often to consult the secretaries or their clerks personally. There is very rarely any attempt at condensing the materials, and though in some few cases this is done, and in some branches very well done, it is absolutely necessary to carefully peruse every paper in order to arrive accurately at the state of the facts, and the real requirements of the case. Sometimes I receive instructions from the Postmaster General direct. Not unfrequently my instructions come from certain heads of departments who are supposed to represent the secretary, and this is often convenient, and saves time in pressing matters.

In cases of immediate pressure, or where nice questions of policy are involved, I frequently receive instructions from the secretaries verbally, or from the heads of departments. In telegraph matters, for the first seven years of the work, this was constantly the case with Mr. Scudamore, and indeed without such communications business of urgent importance, involving large results, cannot be satisfactorily conducted.

3. The solictor generally advises the Postmaster General by means of written reports and opinions on the official papers referred to him by the secretary. In some cases the solicitor advises orally, and, as stated in the answer to Question 2, in important and pressing matters this often becomes imperatively necessary, especially in telegraph matters.

The solicitor's opinions and reports are addressed to "the secretary." The solicitor also advises the Postmaster General, through the heads of departments, orally, and in writing, and the solicitor advises the Postmaster General himself, orally, when required.

4. It appears from the register of papers in the solicitor's office that during the term named 13,580 references were made to the solicitor. Besides these there are references on criminal matters which are too pressing to admit of the delay incurred in registration in the secretaries' office, and others of too private a nature to be registered, and which are sent to the solicitor direct from the office where the business originated. I find from the officers of the Missing Letter Department that the papers so sent from that office alone may be fairly estimated at over 2,500 per annum, and if to this figure are added the papers that being pressing, or for other

Appendix 1.

reasons are sent in without registration, and which amount by estimate to another 1,000 or nearly per annum, we arrive at a gross total of upwards of 24,000 references to the solicitor within the time specified. This is irrespective of oral advice and conferences with secretaries, heads of departments, and others.

The written references are in the shape of minutes or questions on the official papers or simply references "to the solicitor."

During this period the solicitor consulted the law officers of the Crown on criminal matters 125 times, and the law officers and other counsel have been frequently consulted on other matters, by far the greater portion of such cases being on matters arising out of the acquisition of the telegraphs. I cannot now give the number of cases.

5. Agents are not employed except in the preliminary examinations before the magistrates in the country where the prosecutions are not of that importance as to require the personal attendance of a member of the solicitor's staff. All prosecutions at the quarter sessions and assizes are conducted personally from the solicitor's office.

When agents are employed, it is left to the discretion of the postmasters of the town to select the attorney, or to that of the travelling officer of the Missing Letter Department, who may be engaged in the case. Copies of the depositions are afterwards obtained, and the briefs and indictments are prepared in the solicitor's office. These agents do not hold fixed appointments, but are retained from time to time.

In consequence of the technicality of the evidence in some of the prosecutions, especially in savings bank frauds and embezzlements (where a personal knowledge of the mode in which the business is conducted is often essential), more cases than formerly are now conducted, even in their preliminary stages before magistrates in the country, direct from my office.

W. H. Ashurst.

9 June 1875.

(8.) Treasury.

The Treasury Solicitor's duties may be roughly classed under two principal heads, I., Civil; II., Criminal.

He conducts the legal business, both civil and criminal, for, and advises on all questions referred to him by, the following departments:—

Name of Office.	*Nature and Date of Authority.*
Treasury Foreign Office Colonial Office Home Office, including Police Commissioner's Privy Council Office Board of Trade Paymaster General's Office Privy Seal Office Stationery Office	Treasury Minute, 18 Mar. 1842.
Public Record Office	Treasury Letter, 4 July 1853.
Registrar General's Office	Ditto - 29 Jan. 1844.
London Gazette Office	Ditto - 23 Oct. 1848.
Commissioners of Chelsea Hospital	Ditto - 10 Feb. 1849.
Mint	Treasury Minute, 3 Apr. 1849.
Inspector of Prisons Lord Chamberlain's Office	Ditto.
Queen's Prison	Treasury Letter, 12 June 1851.

In the above list are not mentioned all the departments subordinate to the Treasury and the Home Office, whose business is referred to th solicitor through those departments, some officer having ceased to exist, and others more recently constituted have not been included in Treasury Minutes.

The Board of Trade has recently had a separate solicitor appointed, but the criminal business still comes through the Home Office to the Treasury Solicitor.

The Solicitor to the Treasury is also the Solicitor to the Home Office, this department referring all matters to him direct and not through the Treasury, while all the other departments above mentioned communicate with him through their Lordships, with the exception of the Paymaster General and the Gazette Office; the reason for this being that the questions arising in these departments are usually of a nature requiring immediate action, *e.g.*, whether a bill presented for payment should be honoured, and such like; whether a particular form of advertisement should be inserted in a forthcoming number of the Gazette.

The Attorney General also claims and exercises the right of giving instructions to the Treasury Solicitor without the intervention of the Treasury.

The civil business coming from the various departments above mentioned may be roughly classified and described as follows:—

(1.) Municipal corporation and burial boards work.
(2.) Deceased British subjects.
(3.) Peerage cases.
(4.) Patent cases.
(5.) Privy Council cases (appeals).
(6.) Felons' goods.
(7.) Assignment of pensions, &c.
(8.) Ecclesiastical Commissioners. Orders in Council.
(9.) Bank charters, renewals of.
(10.) Examination of bills of costs.
(11.) Certificates of exoneration.
(12.) Remission of jury fines and forfeited recognizances.
(13.) Bonds of indemnity, lost bills of exchange, &c.
(14.) Defence of civil actions brought against Government officials.
(15.) Metropolitan Board of Works, loans by.
(16.) Bonds given by railway companies.
(17.) Miscellaneous.
(18.) Administration of intestates' and bastards' estates.

(1.) In pursuance of the provisions of various statutes, municipal corporations cannot alienate their real estate without the sanction of the Lords of the Treasury. When that sanction has been obtained, the drafts of the several instruments (conveyances, mortgages, &c.) are approved in the Solicitor's Department on behalf of their Lordships. The main points to be noted are that no property other than that mentioned in the memorial is dealt with, that the stipulations as to price, rent, &c., are correctly embodied in the draft, and that in cases of mortgages the repayment of the mortgage money is duly provided for. The deeds are then executed by two of the Lords.

Corporations are also authorised under various Acts to charge borough funds and rates with loans for

for public libraries, prisons, washhouses, places of recreation, &c., and in all these cases the instruments effecting the charge are settled in the Solicitor's Department.

Burial boards moreover, raise money with *Treasury sanction* on charges of poor rates for providing burial grounds, &c., and these charges are also approved by the Treasury Solicitor on behalf of the Lords before execution by two of their Lordships.

(2.) Inquiries are made to ascertain the next of kin of any British subjects dying abroad, whose effects, having been realised by the British consul at the port or other place where such party has died, are by the consul remitted to the Lords of the Treasury and paid over by them according to the solicitor's advice.

(3, 4, 5.) Counsel are instructed by the Treasury Solicitor, and all necessary information and assistance furnished by the department. In Privy Council appeals (from the decision of English courts in India, China, Constantinople, and the colonies) the whole case is managed here by the Treasury Solicitor.

(6.) Previous to the Act abolishing forfeiture for felony, 33 & 34 Vict. c. 23 (1870), the forfeited property was recovered by the solicitor, and, as a rule, granted by the Lords, subject to deductions, by Royal Warrant or Treasury Letter, either to the felon himself or to his next of kin. The administration of the convict's property, as regulated by that Act, is not worked through the Treasury Solicitor, excepting so far as being called upon occasionally to advise the Home Office on applications on behalf of convicts. [It is believed that the Act does not work at all.]

The old law, however, continues in operation as to forfeiture before 14th July 1870, and some amount of correspondence still goes on.

(7.) It was at one time the practice for the question of the legal assignability of the pension to be investigated by the solicitor, and the rights of assignees to receive payment under the particular assignment determined. At present the solicitor advises their Lordships on all applications relating to the payment of pensions.

(8.) The schemes of Ecclesiastical Commissioners for the assignment of district or consolidated chapelries, for the division of parishes, &c., are examined by the Treasury Solicitor to ascertain that the Commissioners are in each case acting within their statutory powers, and that the documents themselves are properly prepared. This work was, till recently, done by the Attorney and Solicitor General, and the Queen's Advocate.

(9.) Draft supplementary charters to banks and other corporations are prepared or revised here, modifications in the original charters, suggested either by the Treasury or by the parties, are considered, and the draft charters finally corrected are submitted for approval by the Attorney and Solicitor General.

(10.) Costs incurred by factory and colliery inspectors and by public departments (Lunacy Commissioners, Board of Trade, Commissioners of Police, &c.), are referred to the solicitor and examined in his department; also costs for prosecuting fraudulent bankrupts. The future conduct of these last-named prosecutions is now under consideration.

(11.) These are certificates issued by the Treasury under Act of Parliament in respect of the property of Crown debtors which they have contracted to sell or mortgage. The certificate remedies the defect in the title of the vendor caused by the registration at the Common Pleas, of the bond to which he is a party.

(12.) The merits of applications for remission of jury fines are investigated by the Treasury Solicitor, and then reports made to their Lordships as to the mode of remission; reports are also made as to the remission of forfeited recognisances.

(13.) These are bonds prepared at the instance of the Paymaster General to indemnify the Treasury on authorising payment of Government bills which have been lost.

(14.) An alternative course is adopted in these cases; sometimes the defence is conducted by the Treasury Solicitor (through Messrs. Raven and Hare, the agents of the department), sometimes the defence is left in the hands of the private solicitor of the defendant, the Treasury undertaking to pay the reasonable costs.

(15.) The Metropolitan Board of Works are authorised to advance money with Treasury sanction, to vestries and district boards, for effecting drainage works, &c. The draft mortgages are approved by the solicitor on behalf of their Lordships.

(16.) Bonds given by railway companies. Until within the last five or six years, it was usual to insert in all Railway Bills a section enabling the company to obtain a transfer from the Court of Chancery of the deposit made by the company in accordance with the Standing Orders, on giving a bond, with sureties, to the satisfaction of the Treasury Solicitor. These bonds were prepared here. These bonds, however, are not now given. But we retain here several old bonds, and have occasionally to assign them to official liquidators and companies, who have obtained warrants of abandonment from the Board of Trade, and are in course of liquidation.

(17.) It is not easy to give within reasonable limits, a statement of that portion of the civil work which can only be classified as miscellaneous business. *There are about* 750 *references from the Treasury annually.* Many of them relate to the branches of business above enumerated, but the residue comprises such subjects as—construction of Acts of Parliament, especially as to loans of public money, questions as to treasure trove, preparation of cases for the opinion of the law officers, disputed claims of officers of courts to allowances settled by statute, distribution of sums awarded by foreign Governments in respect of losses sustained by British subjects. These investigations entail very considerable correspondence, and require the decision of the solicitor on questions of law and fact, *e.g.*, the payment of the Washington claims and the Virginius indemnity are now in the department. Preparation of warrants to be issued by their Lordships under Acts of Parliament, preparation of warrants for the grant of annuities to members of the Royal Family, &c.

These Treasury references, moreover, do not relate exclusively to work which is originated in the Treasury itself, but to a variety of matters which come officially under Treasury review in consequence of the relation of that department

Appendix 1.

to many other branches of the service; and owing to the power of control over many public bodies imposed on the Treasury by the Legislature.

18. While the business under other heads fluctuates considerably, the administration business is continuous and more considerable than that under any other single head.

A compendious abstract by Mr. F. Chance, of the procedure, will be found in the Appendix at page 42 of my Report of 13th June 1871, on Law Officers' fees which is in print, and before the Committee. Under 16 Vict. c. 3, Her Majesty, by warrant in each particular case, appoints the Treasury Solicitor nominee to administer the estate. The Solicitor, therefore, being the sworn administrator, cannot delegate his discretion, and therefore cannot receive material assistance from the Assistant Solicitor, and it has been the practice for many years for one particular officer of the department to take charge of this head of business under the Solicitor.

Mr. Bamford, who recently retired after nearly 50 years' service, did this duty under Mr. Reynolds and Mr. Greenwood. Since Mr. Bamford's retirement, Mr. Crispin, the senior assistant, has taken charge of this head of business.

The following are the amounts of the bills of costs in administration and escheats charge by the Treasury Solicitor for the work done by him as solicitor in the administration of the various estates, and which are credited to the public as "Exchequer extra receipts":—

	£	s.	d.
1871 - -	898	15	8
1872 - -	957	—	—
1873 - -	1,166	18	7
1874 - -	1,475	17	5

Mr. Crispin will be able, should the Committee think fit, to furnish full particulars and explanations on all questions connected with these administrations.

References.

In the three years ending 31st March 1875, there were 2,407 references from the Treasury and other departments, and 662 from the Home Office. During the same period there were 134 administration cases, 660 municipal corporation cases, in addition to the 2,407 mentioned above, and 202 cases laid before the law officers (exclusive of cases as to the disposition of escheated property), most of which arose out of the 2,407 and 662 mentioned above. But it should be stated that the practice which pravails in some public departments of registering under a separate number, *every* paper that is received, is not followed in the Solicitor's Department. The *original* reference or letter of instructions is registered, but not the subsequent correspondence with departments or individuals in connection therewith. This fact must be borne in mind to the extent to which the *number of references* is adopted as a criterion of the amount of business transacted.

In addition to the law officers other counsel are frequently referred to, both in civil and in criminal matters. In the latter the references comprise cases for opinion as to the nature of charges to be preferred, and for opinions on evidence, instructions to draw indictments. In the former, in which class of business the references to counsel are not so numerous, the cases relate to the sufficiency of evidence in support of escheats, to questions arisisg out of administrations, and occasionally municipal corporations business, assignments of leasehold property, &c., &c.

The references to the law officers, which are for the most part made only in pursuance of *express directions* from the Treasury or the Home Secretary, relate to every variety of business.

The last few cases, which may be regarded as average specimens, were as follows:—

Infanticide - -	(As to Bills in Parliament to amend the law relating to.)
Severn Fishery - -	(As to byelaws.)
St. Alban's - -	(As to grant of wine licenses.)
Mr. Pym Yeatman -	(As to charges brought against the Record Office.)
Trades Unions - -	(As to Registration of.)
Washington Claims -	(As to proposed Bill relating to certain disputed claims.)
Hillsborough Fort -	(Continuance of grant made by Charles II.)
Major Lumley - -	(Application to the Secretary of State to institute prosecutions under circumstances stated by him.)
Extradition Treaties -	(Many references within the last two or three years.)

Agents.

Messrs. Raven & Hare are the agents of the department in respect of all *Chancery* business, and also act as agents in respect of *Common Law* business connected with the prosecution or defence of civil actions, taking all technical steps, such as serving writs, filing pleadings, &c., on their own authority as agents, and acting, in other respects, under the instructions of the Treasury Solicitor and of counsel concerned in the particular case.

They accept service of all notices, &c., in Chancery proceedings, in which the Attorney General may be made a party, as representing the Crown, act under the advice of the Attorney General's regularly appointed counsel (his Chancery devil), and, for the most part, in respect of *Chancery* matters, conduct the business with only an occasional reference to the Treasury Solicitor.

Their remuneration in respect of Chancery business is arranged as follows:—

The Treasury Solicitor pays all their disbursements (including certain small allowances for office expenses, other than salaries) out of the vote for "Law Charges."

All sums received by them as costs out of court are paid over by them in full to the Treasury Solicitor, by whom they are accounted for as "Exchequer extra receipts."

They furnish a half-yearly account showing—.

(1.) All disbursements for the period in question:

(2.) All receipts from court for costs in respect of cases brought to a conclusion during the period in question;

(3.) The expenditure *out of pocket* in respect of the cases comprised under head (2); and

(4.) The difference, being the *profits*, between (2) and (3).

They retain one-*half* of these profits, the Treasury being credited with the other half.

The above account comprises only Chancery cases in which costs are received out of court.

In respect of *Common Law* business where Raven

Raven & Hare prosecute or defend actions, &c., they make out an account at *half* the usual professional charges, in accordance with the general practice of solicitors in *agency* cases, which account is paid under Treasury sanction. They include also in this latter account, their charges, on the agency scale, in those Chancery cases in which *nothing* is received from the court.

This arrangement is of very old standing, and is (in my judgment) advantageous to the public.

If no such arrangement existed, the court work now done by Messrs. Raven & Hare would have to be done in the Treasury Solicitor's Department, which would have to be increased to discharge it properly, and there is no sufficient constant work of this description to employ a staff of clerks such as would be kept by a private firm for this purpose, to keep them up to the practice of the day, which is constantly changing.

Books, Registers, &c.

The books kept in the Department are,—

1. *Report Book.*—In this all reports to the Treasury are entered.
2. *Treasury Letter Book.*—Containing the correspondence relating to all business referred from the Treasury.
3. *Administration Letter Book.*—For correspondence in administration, escheat, and felons' cases.
4. *Home Office Letter Book.*—For letters relating to criminal business undertaken by Home Office authority and for reports to the Home Office.

4*a*. *Mint Letter Book.*—For correspondence in Mint prosecutions.

5. *Treasury*, and
6. *Home Office Registers.*—In which references from Treasury and Home Office are registered.

6*a*. *Prosecution Register.*
6*b*. *Mint Prosecution Register.*
7. *Patent Register.*
8. *Municipal Corporation* - Sub-register. *Deceased* *British Subject* - } *Registers*, for the three classes of business named.
9. *Administration* -

10. *Case Book* } Being books for the entry of cases, &c., sent to counsel, and for recording all *counsels' fees.*
11. *Fee Book* }

12. *Opinion Book.*—In which opinions of law officers and other counsel are entered.
13. *Cost Book.*—Containing the costs in administration cases.
14. *Warrant Book.*—For the entry of Royal warrants granting *real* estate.
15. *Petty Cash Book.*—In which petty payments and receipts are entered, whether for *law charges* or for administration business.

These books are exclusive of the *Books of Account*, which are,—

16, 17. *Two Ledgers* { One for law charges. One for administrations.

18, 19. *Two Payable* and 20, 21. *Two Receivable* } *Order Books*, in which all payments and receipts for both services are entered.

II.—Criminal Business.

The Solicitor, as a rule, attends to the civil business and that coming from the Treasury; the Assistant Solicitor to the criminal business and that coming from the Home Office; Mr. Hodgson, the Principal Assistant, to the coin prosecutions. He assists also in all the other business both civil and criminal.

With respect to the criminal business I would refer to my Report of 31st May 1872, "On Coin "Prosecutions and Criminal Business of the "Solicitor's Department," which is in print and before the Committee.

At pages 5, 11, and 14, will be found particulars with respect to the employment of agents by the Treasury Solicitor.

None of these agents (with the exception of Messrs. Wontner, the London agents,) hold fixed appointments, but are retained from time to time as occasion requires by the solicitor on his own responsibility.

When the solicitor is satisfied with the way in which the business is done, he sends all his cases to the same agent at a particular town, but not otherwise. He has recently discontinued to employ his Birmingham agent, and now sends the Mint and other business to a different firm in that town.

The Solicitor to the Treasury is authorised to employ Messrs. Wontner & Sons, Solicitors, of Cloak-lane, City, as his agents in all police prosecutions within the metropolitan district where he thinks it requisite.

Messrs. Wontner allow him one-half their charges as agency.

The costs are made out as if to a private client, one-half of each charge being carried into an inner column, and the total deducted from the gross amount of the bill.

This is an advantageous arrangement for the public, for the following reasons:—

In *Common Law and Chancery* proceedings the town agent of a country solicitor allows him half his charges, *i.e.*, the client whose business is in hand pays the full charges, half of which (if transacted in town by the town agent) are received by the country solicitor, half by the town agent; but in *criminal* matters in London (in which only a small number of solicitors are engaged, who act in many cases as the agents of other London solicitors), it is customary to allow one-third as agency, two-thirds of the charges paid by the client being received by the criminal law solicitor, one-third by the solicitor bringing the business. Messrs. Wontner conduct such of the Treasury business as is placed in their hands at half charges, and it would not be possible to make a *cheaper* arrangement.

Their bills are carefully taxed in the Solicitor's Department before being reported for payment.

The arrangement was communicated to the Treasury by my reports of 30th January and 15th February 1871.

The Home Office letter referring to the arrangement is dated 26th March 1870.

A copy of the correspondence respecting the appointment of Messrs. Wontner is sent therewith for reference. I would refer especially to my reports of 15th February and 11th April 1871, as containing a full explanation of this arrangement.

Other particulars respecting the criminal business will be found at page 11, and relating to the present constitution and staff of the Solicitor's Department, at page 4 of the printed report to which I have above referred.

A. K. Stephenson.

26 June 1875.

* From 1853 Monts de Piété ceased to exist connected with Loan Funds.
From the gross amount of yearly net profits by the 44th section of the Loan Fund Act, one-tenth of that amount was required to be applied annually to a reserve fund for the security of the Debenture holders.

The number of Loan Funds in 1876 on Board's Register was 82, being 1 more than in the preceding year.

The circulation of Loan Funds throughout the country connected with the Board in 1876 amounted to £517,010; it fell short of that of the preceding year by the sum of £349.

The capital of Loan Funds actually working in 1876 amounted to £140,175; it fell short of that of the preceding year by the sum of £2,703.

The number of loans made in 1876 was 102,639; it fell short of that of the preceding year by 1,221.

The number of Notes sold by the Board in 1876, at 2*d.* each, was 102,900; it fell short of that of the preceding year by 5,500.

The produce of the sale of Notes in 1876 was £857 10*s.*; showing a decrease, as compared with that of 1875, of £45 16*s.* 8*d.*

The number of Debentures sold in 1876 by the Board, at 1*s.* each, was 149; the produce of the sale of which was £7 9*s.* There was a decrease in the number sold, as compared with 1875, of 26, and in the produce of the sale, of £1 6*s.*

The Gross Profits derived by Local Societies from Discount, Fines, Sale of Application Papers and Cards, in 1876, amounted to £15,737 2*s.* 4*d.*; they exceeded the amount derived from the same sources in 1875 by £48 8*s.* 9*d.*

The amount of Fines (one of the above-named items) in 1876 was £3,788 17*s.* 5*d.*; showing an increase, as compared with the same item in 1875, of £209 10*s.* 3*d.*

The amount of Surplus Profits applied to charitable or useful purposes in the several localities of Loan Funds, in 1876, was £2,140 18*s.* 10*d.*; showing an increase of such grants in that year, as compared with 1875, of £706 11*s.* 3*d.*

The Board's Income in 1876, derived from ordinary sources of Revenue, was—

Sale of Notes, Debentures, and Cards,	£865 5 2
Interest on Funds invested in Government Stock,	99 5 8
Total,	£964 10 10

The Ordinary Income of 1876 fell short of that of the preceding year by the sum of £33 0*s.* 2*d.*

The Board's Expenditure in 1876 was £830 9*s.*; it exceeded that of 1875 by the sum of £11 10*s.* 10½*d.*, caused by increase of Income Tax on Salaries of Board's Officers, and also of law costs.

The total Income from above-mentioned sources being	£964 10 10
The total Expenditure	830 9 0
Excess of Income over Expenditure	£134 1 10

It is to be observed that the decrease in Board's income necessarily follows the decrease in the operations of Loan Funds for many years past, as will be seen by the following table:—

Amount of Loan Fund Circulation throughout Ireland from the year 1843, the date of passing of Act 6 & 7 Vic., cap. 91, to 1876:

1843	£1,681,841
1844	1,708,719
1845	1,870,337
1846	1,778,591
1847	867,115
1848	719,134
1849	651,327
1850	664,032
1851	713,585
1852	740,506
1853	844,011
1854	870,024
1855	883,321
1856	917,686
1857	929,653
1858	930,170
1859	936,217
1860	917,737
1861	826,774
1862	719,400
1863	692,951
1864	636,331
1865	615,786
1866	597,491
1867	582,216
1868	581,437
1869	586,468
1870	565,422
1871	542,295
1872	524,821
1873	520,714
1874	523,048
1875	517,359
1876	517,010

The falling-off in the circulation of Loan Funds in the course of 33 years from the commencement of the Institution in 1843 to the end of 1876,

Amounts to no less than £1,164,831

The most remarkable diminution in the circulation of Loan Funds was—

From the year 1845, when it amounted to . .	£1,870,337
To the year 1847, when it fell to . . .	867,115

So that a falling-off of upwards of One Million sterling may be fairly attributed to the famine year in 1845, and its results, largely increased mortality and extensive emigration, in the two succeeding years.

The diminution in the circulation of Loan Funds in the past quarter of a century to the lowest amount it reached, in 1876, which was £517,010, may be attributed partly to alteration for the better in the circumstances of that portion of the industrious agricultural

poor of Ireland which constituted the borrower class of Loan Funds; but largely it must be ascribed to the practice which has been adopted by the Branch Banks throughout the country to a large extent, issuing loans so low as £10, and even £5, to borrowers of the class of small farmers and dealers on a small scale, who could only heretofore get loans of such small amounts from Loan Funds.

APPENDIX (B) No. 1.

AUDIT of the COMMITTEE of the NOTE and DEBENTURE ISSUE for 1876, and of RECEIPTS from all sources during same year.

The Committee to audit the above met on the 5th day of March, 1877, for that purpose.

Your Committee find that there were . . 50,500
Notes in Stock on 1st January, 1876.
That on the 21st January, 1876, were ordered, 120,000

Making to be accounted for, . . . 170,500
Of these were issued during 1876, . . 102,900

Leaving in Stock on 1st January, 1877, . 67,600

Your Committee having examined the Stock at date of audit, and taken into account the Notes issued since the 1st January last, find the above number were actually in Stock at that date.

It will be seen by the annexed account, that £857 10*s.* for the 102,900 Notes issued in 1876 at 2*d.* each has been duly lodged to your credit at the Bank of Ireland.

Your Committee find that the number of the last Debenture issued in the year 1876 was 16,210
Deducting the number issued to 31st December, 1875, ... 16,061

It will appear that 149
Debentures were issued during 1876.

It will be seen by the annexed account, that £7 9*s.* for the 149 Debentures issued at 1*s.* each, has been duly lodged to the credit of the Board at the Bank of Ireland.

Your Committee find there were . . . 1,477
Deposit Cards in Stock on 1st January, 1876.
Of these were issued during 1876, . . . 148

Leaving in Stock on 1st January, 1877, . . 1,329

Your Committee having examined the Stock at date of audit, and taken into account the Cards issued since

APPENDIX (B) No. 1—*continued.*

the 1st of January last, find the above number were actually in Stock at that date.

It will be seen by the annexed account that 6*s.* 2*d.* for the 148 Deposit Cards issued at ½*d.* each, has been duly lodged to the credit of the Board in the Bank.

Your Committee find the April and October dividends on your Funded Stock have been duly lodged to your credit, amounting to £99 5*s.* 8*d.*

These several sums, added to the balance in Bank on 1st January, 1876, give a total of £1,562 17*s.* 1*d.*

Your Committee find that drafts to the amount of £1,280 9*s.* were signed by the Board, in conformity with your minutes, of which particulars are annexed.

From the total, then, of	£1,562	17 1
Is to be deducted drafts for . .	1,280	9 0
Which should leave a balance in Bank, on 1st January, 1877, of .	282	8 1

Your Committee find that the Bank gives you credit for this balance.

(Signed) JAMES POWER, BART.,
Chairman.

NEW FOREST.

RETURN to an Order of the Honourable The House of Commons, dated 15 May 1877;—*for*,

COPY "of any REPORT made by the COMMISSIONERS of WOODS upon the Recommendations of the SELECT COMMITTEE of 1875 on the NEW FOREST."

Treasury Chambers, 16 May 1877.

W. H. SMITH.

My Lords, Office of Woods, 16 October 1875.

BY Mr. Law's letter of the 13th August last, I was directed by your Lordships to furnish you with any observations which I might desire to make upon the Report of the Select Committee of the House of Commons, which was appointed during the last Session, "to inquire into and report on the present condition of affairs in the New Forest, into the operation of 'The Deer Removal Act, 1851,' and particularly into the exercise and effect of the powers of inclosure given by that Act."

As desired by your Lordships, I beg leave to submit the following statement upon the subject of the above-mentioned Report.

In order to explain the intention and operation of the Deer Removal Act of 1851, it is necessary that I should state concisely the rights and interests which existed in the New Forest when that Act received the Royal Assent, and that I should refer very shortly to the circumstances under which it was passed, and to the events which have since taken place.

Extent of New Forest.

The New Forest is, and was in 1851, a district containing in all about 91,000 acres. But of that area, about 2,000 acres, which are the absolute property of the Crown, and about 26,000 acres, which are the property of private landowners (although within the forest, and therefore *primâ facie* subject to the forestal rights of the Crown), may for the present be dismissed from notice. It is the remaining area of about 63,000 acres to which the Report of the Select Committee relates. This portion will, for the sake of convenience, be here referred to exclusively as "the Forest."

Rights and interests in forest.

When the Bill of 1851 was introduced into Parliament the Crown was entitled to the soil and freehold of the forest, and to forestal rights over it. It had also certain powers of inclosure for the purpose of planting, and powers of management (including limited powers of sale) exercised by the Commissioners of Woods over the New Forest as part of the Crown lands. Subject to the forestal rights of the Crown, numerous persons were entitled to rights of common over the forest. The Crown also had rights of pasturage, &c. (though not in legal parlance "rights of common") in respect of the lands which were its absolute property.

Nature of Crown forestal rights.

The nature of the forestal rights of the Crown has been clearly and succinctly described in an opinion given by the law officers of the Crown in 1810, to which frequent reference has been made in the course of previous reports on, and inquiries, into the New Forest; but its importance is sufficient to justify its repetition here.

"It appears to us that a false view has been taken of this subject for want of distinguishing between those rights of common which are mixed with no other interest but the lord's right in the soil, and those which are mixed also with the King's forestal rights. In the former case, the rights of common, being

limited either by a stated number of cattle or by levancy and couchancy, must be satisfied before the lord can take any part of the pasture, because he, or his predecessors, have subjected their own interests in the soil to these qualified rights of pasture; but the case is very different where the King has not only the right of soil, but also forestal rights over the land in which a right of common is claimed. The forestal right has in its nature no limits; the exercise of it varies with the number of beasts which the King may at different times see fit to support. He seldom stocks it to the full, but there is nothing, as we conceive, to prevent him from doing it if he pleases, and the rights of common must be so exercised as to leave a sufficiency of pasture for such beasts of the forest as the King may please to keep thereon. All rights of common which can be legally exercised are limited either to a stated number of cattle, or to the number which can be levant or couchant upon the land; but the forestal right has no such bounds; nor do we find the least vestige of any restriction ever put upon it, or any rule by which it has ever been or can be limited. When an admeasurement takes place, a sufficiency of pasture is to be provided for the beasts of the forest before any allotment is made to the commoners, which must necessarily mean for the beasts then fed upon the forest; but if they should afterwards be increased in number, a larger provision must then be made for them. This we understand to be the nature of His Majesty's forestal rights.

"23 May 1810. "(signed) *V. Gibbs.*
T. Plumer."

Searches among ancient records have brought to light the fact that, in the 16th and 17th centuries,—if not at an earlier period,—it was the custom for the Crown to encoppice land in the forest for the protection of young trees.

Crown rights of inclosure.

The statutory powers of the Crown to inclose for the protection of plantations were before 1851 exercised under two Acts of Parliament, of which one was passed in 1698 and the other in 1808.

9 & 10 Will. 3, c. 36.

The Act of 1698 is entitled "An Act for the Preservation and Increase of the Timber in the New Forest, in the County of Southampton."

Its preamble recites that the woods and timber, not only in the New Forest but in the kingdom in general, had of late years been much wasted and impaired, and that the said forest, which might be of great use and convenience for supplying of His Majesty's Royal Navy, was in danger of being destroyed if some speedy course were not taken to restore and preserve the growth of timber.

After this recital the Act authorised the Crown to inclose 2,000 acres within the next two years, and 200 acres more yearly during the succeeding 20 years.

The inclosures were to be set out by Royal Commissioners out of such part and places in the forest as they might deem most convenient to be inclosed, and most apt and meet to produce wood and timber for the future benefit of the kingdom, and as might be best spared from the commoners (*sic*) and highways of the county.

The inclosures were to remain in severalty in the actual possession of the Crown for ever, freed and discharged from all manner of right, title, and pretence whatsoever, and to be called, made, and reputed a nursery for wood and timber only.

S. 3.

Whenever the Treasury were satisfied that the woods and trees growing in the inclosures were "past danger of browsing of deer, cattle, or other prejudice," they might lay them open, and "then and so often" the Crown was empowered to inclose, in lieu of the parts laid open, a like quantity, to be set out, held, and applied in like manner as the former inclosures.

The powers of inclosure conferred on the Crown by the Act of 1698 not having been exercised so fully as was contemplated within the time limited for that purpose, another Act was passed in 1808.

48 Geo. 3. c. 72.

By the Act of 1808 the Crown was empowered to inclose from time to time, out of the waste lands of the New Forest, such quantity of land as should, together with the quantity already inclosed, or to be inclosed as in the Act mentioned, make up the quantity of 6,000 acres, so that there should be not more

more than 6,000 acres in the New Forest inclosed and held in severalty at the same time.

The Act contains provisions as to the mode in which the inclosures were to be set out, held and used, and as to the throwing them open and inclosing like quantities in their place.

Crown powers of management and sale.

The powers of management and sale exercised by the Crown over the forest were derived from the general Acts relating to the Crown lands, of which the most important was the Act of 1829 (10 Geo. 4, c. 50, s. 98). In addition to the general powers of sale conferred by this Act, the Crown had powers of sale conferred on it for particular purposes by various special Acts, of which the only one to which it is necessary to refer in this place is the Southampton and Dorchester Railway Act of 1845 (8 & 9 Vict. c. 53). Under this Act the Commissioners of Woods were authorised to sell portions of the forest to the railway company, and were directed to apply the proceeds of the sale in draining or otherwise improving the forest in such manner as might best conduce to the mutual benefit of Her Majesty and the commoners.

Rights of commoners.

The rights of commoners over the forest as they existed in 1851, and as they exist now, may be stated under four heads :—

(1.) Rights of common of pasturage, *i.e.*, the right of taking pasture by the mouths of the commoners' cattle;

(2.) Rights of pannage, *i.e.*, the right of feeding the commoners' pigs on the mast of the forest;

(3.) Rights of common of turbary, *i.e.*, the right of cutting turf; and

(4.) Certain rights of fuel, and of getting marl.

But these rights were then, and still are, subject to important limitations which distinguish them from the rights ordinarily exercised by commoners of manors. They were and are limited in point of amount, and (as regards common of pasture and of mast) they were and are limited in point of time.

In the first place, they were and still are subservient to the paramount forestal rights of the Crown, which rights, as appears from the opinion already cited, might legally be exercised in such a manner as greatly to impair the value of the interests of the commoners.

In the next place, they could not be exercised over the parts of the forest for the time being under inclosure for the protection of plantations.

And finally, as regards rights of common of pasture and of mast, they could only be exercised during certain times of the year.

The Act of 1698 expressly saved the forest laws (s. 8), and, whilst recognising and continuing the rights of the commoners over the forest, directed (probably in affirmance of the existing law) that the right of pannage should only be exercised between the 14th of September and the 11th of November (O. S.), and excepted from the periods during which the right of common of pasturage might be exercised, the fence month, *i.e.*, 15 days before and 15 days after the Feast of St. John Baptist (O. S.), and the time of the winter heyning, viz., from the 11th of November to the 23rd of April (O. S.), and finally declared that the right was to be exercised "under and subject to the forest laws."

59 Geo. 3, c. 86.

By an Act passed in 1819 (59 Geo. 3, c. 86), the observance of the time of winter heyning was enforced by the imposition of additional penalties.

Thus it appears that the most important rights of the commoners were, under the law as it existed in 1851, exerciseable only during about one-half of the year.

Circumstances preceding passing of Act, 1851.

Such being the nature of the rights of the Crown and the commoners respectively when the Act of 1851 was passed, the circumstances which immediately preceded the passing of that Act may be shortly noticed.

In the Session of 1848 a Select Committee of the House of Commons was appointed to inquire into the management of the Crown property, and much evidence was given as to the evils which resulted from keeping a stock of deer in the New Forest.

12 & 13 Vict. c. 81.

In the year 1849 an Act was passed authorising Her Majesty to issue a Commission

Commission to inquire into and report upon rights or claims over the New Forest and Waltham Forest.

A Commission was issued accordingly, and the Report* of the Commissioners, Lord Portman and Messrs. Dampier and Daly, was laid before the House of Commons in 1850.

In that Report the Commissioners stated that they saw no objection to the proposal which had been made for the removal of the deer from the New Forest, provided some proper agreement were made for an allotment to the Crown.

In the sub-report of the secretary to the Commission, mention is made of the damage and prejudice to the landowners—in, and adjoining, the forest—occasioned by the trespassing and depredations of the deer; of the heavy expense of fencing out the deer; of the fact that notwithstanding that expense and fencing, the deer committed such depredations as to constitute a serious bar to the improvement and better cultivation of private property in the forest; and notice was taken of the demoralisation of the poor population in the neighbourhood, the tempation to deer-stealing, the cost of prosecutions thrown on the ratepayers, and consequently the wish which might be said to prevail throughout the forest and its neighbourhood to have the deer destroyed or removed.

Under these circumstances, after the usual notice had been given, a Bill was introduced in the Session of 1851 to extinguish the right of the Crown to keep deer in the forest, and to give compensation in lieu of such right.

The Deer Removal Act of 1851. 14 & 15 Vict. c. 76.

This measure (which eventually became law as the Deer Removal Act of 1851) met with strenuous opposition in its passage through Parliament, and was considerably modified. In particular the quantity of land which it allowed the Crown to enclose as a compensation for the relinquishment of the right to keep deer was reduced from 14,000 acres, the amount originally proposed, and (in the first instance) sanctioned by the Select Committee to which the Bill was referred, to 10,000 acres, and it was provided that no inclosure should be less than 300 acres in extent, exclusive of roads.

The preamble of the Act recited that all persons having rights of common or other rights in or over the New Forest, as well as all persons having estates within or adjoining to the same, would be greatly benefited by the removal of the Royal deer within the forest, and that Her Majesty had been graciously pleased to signify Her intention to give directions for the extinction or removal, with all convenient speed, of Her deer within the forest, and to consent to the extinguishment of the important and valuable vested right of the Crown to stock, and keep the forest stocked with deer in consideration of the compensation hereinafter provided in lieu of such right; and then proceeded to refer to the powers of inclosure conferred by the Acts of 1698 and 1808.

The Act then enacted (ss. 1, 2), that the deer should be removed within two years, and that when they were removed, Her Majesty's right to keep deer in the forest should cease.

The compensation for the right thus relinquished was provided by s. 3. By this section it was made lawful for Her Majesty, Her heirs and successors, from time to time to enclose, sever, and improve, and plant with trees of any kind, within and out of the waste lands of the forest, in whole or in part, any quantity of land not exceeding 10,000 acres, in addition to the 6,000 acres already in inclosure, or which should be inclosed, under the Acts of 1698 and 1808, and so that there should not be more than 16,000 acres (inclusively of the said 6,000 acres) inclosed and held in severalty at one and the same time.

The inclosures were to be made by virtue of a Commission granted by Her Majesty, and directed to six or more persons, of whom two were to be justices of the peace for the county of Southampton, and not forest officers, and they were to be set out and made from and out of such parts or places in the forest (except lands drained with tiles by money received by the Crown from the Southampton and Dorchester Railway Company in compensation for a portion of the forest taken by the Company) as should be found by the Commissioners to be most convenient to be inclosed, and to be best adapted for the growth and produce of timber or other trees, and as might be best spared from the commons and highways of the forest.

The

* Parliamentary Paper, House of Commons, Sess. 1850, No. 707.

The Act provided that the inclosures should remain in severalty in possession of the Crown, freed from all rights of common and other rights (s. 4); and that when the trees within the inclosures were past danger of browsing of cattle, or other prejudice, and the inclosures were thrown open, new inclosures might be made in lieu thereof (s. 5).

The expenses of making and maintaining the inclosures were to be defrayed by the sale of decayed or other trees (not being ship timber) (s. 5).

It may be here conveniently mentioned that doubts have been entertained as to the proper legal construction which ought to be placed on the powers of inclosure conferred on the Crown by the Acts of 1698, 1808, and 1851.

On behalf of the commoners it has of late been argued that the power of throwing out and taking in an equivalent quantity could only be exercised once, and when thus exercised would be exhausted; and the commoners in 1868 obtained the opinion of counsel to this effect.

On the other hand, the view taken not only on behalf of the Crown, but also by the learned counsel who appeared for the noble lords and gentlemen who, as commoners, were petitioners against the Bill of 1851, has been, that the power that can be exercised *toties quoties*, or is what is termed a "rolling power;" and it is urged on behalf of the Crown in support of this view that the whole scope, not only of the Act of 1851, but of the earlier Acts, is inconsistent with any other supposition; and, further, that the right which the Crown had, up to the year 1851, to keep an unlimited stock of deer in the forest, being a right exerciseable in perpetuity, it cannot reasonably be supposed that as a compensation for that perpetual right the Legislature had substituted powers of inclosure and planting which would be exhausted and cease to exist in a limited period, viz., when the set of inclosures were thrown open.

By section 7 of the Act of 1851, it was provided, that, notwithstanding the removal of the deer, and the extinguishment of the right to keep them, the forest should to all intents and purposes whatsoever remain vested in Her Majesty, her heirs and successors, in like manner and to the same extent as it was immediately before the passing of the Act; and that nothing in the Act contained, or which might be done in pursuance thereof, should be held to alter, take away or affect any rights or privileges whatsoever of Her Majesty, her heirs or successors, in, over, or upon the forest (other than the right of keeping deer), or to take away, alter, or affect the right of Her Majesty, her heirs or successors, to any lands already inclosed within the forest, by reason that the same might be alleged to have been continued and preserved for the producing hay for the use of deer, or otherwise.

By section 43, it was provided that every inclosure should be of the extent of 300 acres at the least, exclusive of the site of any public roads, ways, or paths which might intersect such inclosure.

The rest of the Act is mainly concerned with providing machinery for ascertaining the rights of the commoners over the forest. Claims and objections were to be sent in to the verderers and entered by them in a register, and disputed claims were to be adjudicated on by the Judge of the County Court at Southampton.

This machinery was found insufficient, and under an Act passed in 1854 three Commissioners were appointed with full power to hear and determine the commoners' claims over the forest. 17 & 18 Vict. c. 49.

These Commissioners investigated and finally settled all claims referred to them, and made the following decision with respect to the commoners' rights, viz.: Decision of Commissioners as to Commoners' rights, 5th November 1857.

That the rights of pasturage are subject to the payments to the Crown, mentioned in the register, and that they do not exist during fence month, *i.e.*, from the 20th of June to the 20th of July; or during the winter heyning, *i.e.*, from the 22nd of November to the 4th of May.

That common of mast is to be exercised (subject to the payments to the Crown in the register mentioned) only from the 25th of September, to and on the 22nd of November.

That rights of turbary and of fuel wood are to be exercised by the view and allowance of the foresters, and that the turf and fuel is to be burnt in the messuages mentioned in the register; and

That marl is only to be taken from accustomed pits by the view and allowance of the foresters for the marling of the lands in respect of which the marl is allotted.

Summary of events since passing of Act of 1851.

The other events which have happened since the passing of the Act of 1851 may be very shortly summarised.

The deer were removed from the forest, and as has been seen, the rights of the commoners have been finally settled and ascertained. On the other hand, of the 10,000 additional acres of plantations which were to be first made as a compensation to the Crown for the relinquishment of the right to keep deer, about 5,000 acres only have been planted.

In the meantime various attempts have been made on the part of the commoners to modify the terms of the Act of 1851, or to restrict the Crown in the exercise of the rights by that Act conferred or reserved.

In 1867 Lord Eversly presented seven petitions to the House of Lords complaining of the mode in which the provisions of the Act of 1851 had been carried out, and the Duke of Buckingham promised that the subject should receive attention, and that a report on it should be laid before Parliament.

In accordance with that pledge I made a report to the Treasury, which was laid before the House of Lords in the Session of 1868.

On the 22nd May 1868 Lord Eversly presented a further petition to the House of Lords, and a Select Committee was appointed to inquire into the operation of the Act of 1851.

Report of Select Committee of House of Lords, 9th July 1868.

The Committee met and after hearing evidence made their Report, dated 9th July 1868.

The Report concludes with these words:—

"Under the Act 14 & 15 Victoria, only 3,090 acres have as yet been inclosed, in addition to the 6,000 acres inclosed under other Acts; if then this extent of inclosure, limited as compared with the undoubted rights of the Crown, has given rise to so much dissatisfaction, the Commissioners will meet with great difficulties in giving effect to the Act, and to the undoubted intentions of the Legislature. The interests of the Crown and of the commoners are at variance, and there must be a perpetual struggle of conflicting interests. The Committee are of opinion that the effective remedy for this unsatisfactory state of affairs will be found in the adoption of the course pursued in regard to other royal forests."

"This course consists in the appointment of a Commission for the purpose of allotting to the Crown certain portions of the forest in fee, freed from all common rights, and leaving the residue to the commoners to deal with in such manner as they may think best. The subject is one of a difficult and delicate nature, and full opportunity should be given to all parties interested to make representations, which should be fairly and impartially considered.

"It is desirable in the interest of the commoners that the Crown should take all existing inclosures as a portion of the allotment for the rights of the Crown, and that the allotments for the Crown should be made in such portions and situations as may least interfere with the convenience of the resident commoners."

In the Session of 1871, a Bill was introduced to give effect to this report, but owing to the pressure of other business was withdrawn, and no further legislation has since taken place.

On the 20th June 1871 the House of Commons resolved:—

"That in the opinion of this House, pending legislation in the New Forest, no felling of ornamental timber, and no fresh inclosures should be permitted, and that no timber whatever should be cut, except for the purpose of thinning the young plantations, executing necessary repairs in the forest, and satisfying the fuel rights of the commoners."

Under your Lordships' directions the terms of this resolution have since been adhered to, but the difficulties between the Crown and the commoners have not ceased.

In these circumstances the Select Committee of 1875 was appointed by the House of Commons. After hearing a good deal of evidence the Committee agreed

agreed upon the following resolutions, to which, for facility of reference, I have ventured to prefix numbers.

Resolutions of Select Committee of House of Commons, 16th July 1875.

1. "That the New Forest shall remain open and uninclosed, except to the extent to which it is expedient to maintain the existing right of the Crown to plant trees."

2. "That the ancient ornamental woods and trees shall be carefully preserved, and the character of the scenery shall be maintained."

3. "That powers of inclosure conferred by statute shall be exercised only on that area which has hitherto been taken in at various times, and been either kept or thrown out, under the Acts 9 & 10 Will. 3, c. 36, 48 Geo. 3, c. 72, and the Deer Removal Act, 1851."

4. "That the Crown should retain the power of keeping 16,000 acres of growing timber and trees planted under the Acts of William III. and 1851 at all times under inclosure, and that the Crown be entitled to inclose and throw out at will any portion of the area over which the powers of planting are to be exercised, with a view to its unrestricted use in such manner as may be deemed expedient for the most profitable growth of timber and trees, but that the rolling power over the open portion of the forest not now planted or inclosed under the Acts William III. or 1851 should cease."

5. "That a nominal quit-rent be charged by the Crown to the commoners for the exercise of the right of common during fence month and winter heyning; provision may be made, if possible, for the payment of such quit-rent by somebody representative of the commoners."

6. "That the verderers' court shall be reconstituted so as to better represent the commoners, and to have power to regulate the exercise of the commoners, rights over the forest, and to appoint officers to prevent incroachments upon them."

7. "That all the rights of the Crown reserved under the Acts of William III., and 1851, except as it is herein suggested that they should be modified, be maintained."

8. "That provision be made that in the event of any future severance of interests in the forests between the Crown and the commoners, the limitations now proposed to be placed on the exercise of rights of the Crown should in no way prejudice the claims of the Crown."

In considering these resolutions it is important to bear in mind that the property of the Crown in the New Forest is in fact the property of the State, and that the interest of the Crown is therefore the interest of the State.

On the first and second of these resolutions, which may be taken as embodying the principles on which (in the opinion of the Committee) the forest ought for the future to be managed, I have no observations to offer further than to assure your Lordships, if such an assurance be necessary, that should the Legislature determine to adopt those principles, I shall endeavour, to the best of my ability, to give effect to the intention of Parliament.

Observations on 3rd, 4th, and 5th Resolutions.

But with respect to the third, fourth, and fifth resolutions, which may be regarded as suggesting the means or machinery by which the objects expressed in the first two resolutions are to be attained, I conceive it to be my duty to submit, for the consideration of your Lordships, reasons why, as it appears to me, the proposals contained in the third, fourth, and fifth resolutions are not only inconsistent with the attainment of the objects mentioned in the first and second resolutions, but are inequitable as between the Crown and the commoners, are inexpedient on public gronnds, and cannot be carried into effect without serious detriment to the State.

The third resolution, which it may be observed was only carried in the Select Committee, on a division, by a majority of one vote, proposes to restrict the powers of the Crown for making plantations to the area which either is now, or has formerly been, under inclosure, and the substance of this resolution is repeated in the fourth resolution, by which it is proposed to confine the rolling power of inclosure to the same area.

By the fifth resolution it is proposed that the commoners shall be entitled to exercise their rights of common during the whole year, subject to the payment of a nominal quit-rent for its exercise during the fence month and the period of winter heyning.

Now the total area of the forest is, as has been already stated, about 63,000 acres, and of this total somewhat less than 18,000 acres are, or have been, inclosed and planted under the powers of the Acts before mentioned. The old woods are estimated to cover about 5,000 acres, but this extent may be annually reduced by the felling of trees to satisfy the fuel rights of the commoners. Setting aside these woodlands, however, there would at present remain about 40,000 acres of land uncovered by woods or plantations. The effect, therefore, of the third and fourth resolutions of the Committee, if they become law, would be to extinguish valuable rights of the State over from 40,000 to 45,000 acres of land; for, with the extinction of the right of keeping deer, and of the right of inclosing and planting, the most profitable rights which can be exercised by the Crown would vanish; and the effect of the fifth resolution would be to extend the period during which the commoners' rights of pasture over the forest can be legally exercised, from about six months to the whole year.

This enormous surrender of rights by the State, is proposed to be effected without the payment of any compensation, except a nominal quit-rent, and would be made for the benefit of those owning land in, or in the neighbourhood of, the New Forest, who have rights of common.

For it cannot be too carefully borne in mind, that the real conflict of interests on the subject of the New Forest, is not between the Crown and the public, but between the State on the one hand, and the commoners, that is to say, the local landowners, on the other hand.

It is important to bring out this point clearly, since serious misapprehension has been caused by the studious, and, as events have shown, hitherto successful, efforts of the New Forest commoners to represent their cause as identical with that of the public at large.

The fallacy which underlies this view of the subject appears to derive its support mainly from two sources, a mistaken analogy between the case of the New Forest and the case of other lands over which commoners' rights are claimed, and a confused remembrance of a time when the relation of the State to the Crown lands, and its powers over them, were widely different from those which exist at the present day.

During the last few years public attention has been called to numerous disputes between lords of manors and commoners. In almost all these disputes, the legal rights of the commoners have been used as a shield to protect claims set up on behalf of an indefinite number of persons, and assailed by an individual, claims which, although they rested on long usage, and although their assertion and vindication might be defensible on grounds of public utility, were destitute of any strict legal sanction. The most famous and important of these disputes has been the case of Epping Forest, where, owing to the intervention of a powerful municipality, the lords of the manors within that forest have been defeated in their attempt to inclose the open lands within their manors. It is, perhaps, not surprising that, under these circumstances, public sympathy should be enlisted in favour of the commoners, and that they should be looked upon as the natural champions, and lords of manors as the natural foes, of the public.

But it must be remembered that, in the first place, the class of persons whose claims are protrcted under the shield of commoners' rights, are not the public at large, but really that section of the public who reside in a particular neighbourhood, and in the next place, that the coincidence between the interests of the commoners and the interests even of this limited and local public, is indirect and accidental only.

Commoners are simply individuals entitled to certain proprietary rights, and resemble other private proprietors in having interests which are often more or less inconsistent with the interests of the public. In disputes between lords and commoners, as such, neither the general public, nor the local public, have any direct interest. It is only so far as the rights of the commoners are capable of being utilised for the purpose of protecting interests, which would otherwise be destitute of protection, that their assertion can be deemed to be requisite or defensible on public grounds. In the ordinary dispute between a lord of a manor

manor, and the local public, the lord is a private landowner, and the complaint against him is, that he is exercising his private rights in a manner inconsistent with the general interests of the neighbourhood. As, however, the neighbourhood have no direct remedy against him, they are obliged to resort to the indirect, and circuitous method, of setting up other private rights, which are inconsistent with the unrestrained exercise of those claimed by the lord.

Now in the case of the New Forest, the condition of things typified by ordinary disputes between lords and commoners is entirely reversed. The owner of the soil, the authority having the right to inclose (a right be it observed not asserted on private grounds, but conferred by the Legislature for public purposes) is not a private individual but the Crown, or in other words, the State. Thus, the element which is absent in the other cases, and to the absence of which is extensively due the accidental and limited coincidence between the interests of the commoners and the interests of the public, is present in this. The inclosing authority is directly amenable to the will of the State. If the State deem it expedient to prohibit or restrict the inclosure of Crown lands, there is no need to resuscitate obsolete rights, or to raise fictitious issues of law.

All that is required is an Act of Parliament.

The existence of private rights over the Crown lands forms an obstacle in the way of giving full and complete effect to the will of the State with respect to the management of those lands, and in proportion to the extent and value of such rights, the State is fettered in such management. So long as the private rights exist, they must be respected, and if their existence is found incompatible with public interests, the persons entitled to them must be bargained with, and bought out at the expense of the State. Thus, in the case of the New Forest, it is the rights of the commoners, and not the rights of the Crown, which clash with the interest of the public.

The property of the Crown in the forest is, as I have mentioned, the property of the State, and that property is administered, by a public department, in accordance with the policy from time to time prescribed by the legislature.

In endeavouring to give effect to that policy my department has hitherto necessarily been guided by two leading principles.

In the first place, in dealing with the New Forest as part of the Crown lands, it has been my duty to observe what may be termed the constitutional compact entered into at the commencement of the present reign, under which Her Majesty relinquished Her right, as tenant for life, to the income of the Crown property, in consideration of certain fixed allowances in lieu thereof. In accordance with this compact, the duties of the Commissioners of Woods, to whose charge the Crown lands were confided, have been of a twofold character, first, to secure such an income as, having regard to the nature of the property, is consistent with good management, for the benefit of the nation as tenants for the life of the Sovereign; and second, to preserve intact the *corpus* of the inheritance of the Sovereign's successors as reversioners.

And in the next place, in its particular dealings with the New Forest, this department has had regard to the policy prescribed by the Acts of Parliament specially relating to that forest, namely, that the forest should be treated as a nursery for navy timber, and for the growth of timber and other trees.

If, and so far as, the Legislature deem it expedient to modify the policy indicated by those enactments with reference to the New Forest, either in the sense of the first two resolutions of the Select Committee, or in any other sense, it is competent to Parliament to do so, but I submit that in that event it is not necessary to hamper the existing statutory powers, by multiplying and enlarging private interests over the property of the State.

Looking then at the present controversy, as I venture to think that I am entitled and bound to look at it, as a controversy between the State on the one hand, and the commoners, that is to say, the local landowners, on the other hand, and looking at the Act of 1851 as embodying an arrangement for settling the disputes between these parties, it remains to examine shortly the more important of the reasons which have been urged on behalf of the commoners for setting that arrangement aside.

But, in the first place, I feel it my duty to submit that it would be inequitable

to reopen, in favour of one of the parties to it, an arrangement confirmed by an Act of Parliament passed nearly a quarter of a century ago, which has been fully carried out by one of the parties without yet receiving the prescribed compensation, and under which the other party has already obtained all the benefits secured by the Act.

It is, however, argued on behalf of the commoners, that the Act of 1851 cannot be described as a contract, since, as it is said, one of the parties to the contract was not represented. And, in support of this, it is alleged that the rights of the commoners had not then been ascertained. But it seems impossible to maintain that because the particular rights of each individual commoner had not been ascertained and defined, therefore the commoners' rights as a whole were unknown, or that the commoners as a body were incapable of being represented, although the Acts of 1698 and 1819 had defined the periods in which their rights of common of pasture and of mast were exerciseable, and made provision on the subject.

The commoners' rights had not been ascertained at the time of the passing of the Act for making plantations and for abolishing the right of the Crown to keep deer in Woolmer Forest, and that Act was not, so far as I know, ever objected to on the ground that a previous ascertainment of rights should have taken place.

And a further answer to the argument now used as regards the New Forest is to be found in the history of the circumstances which attended the passing of the Act of 1851. Having regard to the strenuous and influential nature of the opposition to the Bill, to the skill and eminence of the professional advisers by whom that opposition was conducted, and to the importance of the concessions which were obtained, it can hardly be argued, either that the commoners were not in fact represented, or that they misapprehended the nature of the arrangement then effected. The compensation awarded to the Crown by the Act of 1851 for the right of keeping deer was, in proportion to the total area of the forest, much less than has been allotted to the Crown in Woolmer Forest.

Again, it is urged that the commoners were not only led to believe, but were justified in believing, that with the surrender of the right to keep deer in the forest, the commoners' rights would be enlarged so as to become exerciseable through the whole year, and that the observance of fence month and winter heyning would cease to be part of the forest law.

The decision of the Commissioners under the Act of 1854 that, notwithstanding the removal of the deer, the commoners' rights of pasturage were still, as formerly, exerciseable during about six months in each year, seems in itself to be a sufficient answer to the complaints of the commoners in this particular. On the allegation that either of the parties to the Act of 1851 misapprehended the nature of the bargain, I do not think it necessary to dwell. It is sufficient to say that the memorials and petitions from time to time presented by several of the commoners after the passing of the Act of 1851, praying that in consideration of a money payment their commonable cattle might be allowed to be in the forest during the winter heyning, and the absence of any complaint on the ground of misapprehension up to the year 1867, furnish evidence that the commoners did not conceive themselves to have acquired, or to be entitled to claim, enlarged rights of common in consequence of the passing of the Act of 1851. But the argument that the observance of the fence month and winter heyning was merely ancillary to the right of keeping deer, and ought to disappear with that right, may fairly be met by another argument.

The origin of commoners' rights over Royal forests is doubtless involved in much obscurity, but not the least probable explanation of their origin was that they were in many cases granted during a limited period in each year by way of compensation for the burdens and restrictions imposed upon the commoners by the forest laws, or were acquired by some other agreement. This was the view propounded by the commoners themselves in the Epping Forest case, and was apparently recognised by Lord Justice Mellish in his judgment in that case. (*See* Commissioners of Sewers *v.* Glass, 7 Law Report, Chancery Appeals, pp. 457, 459, 467.)

Over the New Forest it appears that some rights of common are exerciseable in respect of lands which were outside the boundary of the forest at the time of its afforestation, as defined in a perambulation made in the eighth year of the reign of King Edward the First. What was the origin of these rights it seems

seems now impossible to ascertain. They may have originally been granted to owners of other lands within the forest boundary, or they may have, in the first instance, been merely rights of agistment, revocable at the pleasure of the Sovereign. But neither the Act of 1698 nor the decision of the Commissioners under the Act of 1854 makes any distinction beween the rights of common exerciseable in respect of lands lying within the ancient metes of the forest and the like rights of common exerciseable in respect of lands lying without those metes. All the rights of pasturage are declared to be exerciseable during about six months of each year only, and, as I am advised, must be deemed to have been of that limited character at the time of their creation.

In point of fact, therefore, the observance of fence month and winter heyning are not so much to be regarded as restrictive of the rights of the commoners as the rights of the commoners, during the other six months, are to be considered as restrictive of the Crown's absolute right to the entire freehold of the forest.

Yet it is urged that because the Crown has given up its right of keeping deer, a right which was considered to be burdensome and injurious to the property of the commoners in and adjoining the forest, therefore the commoners' rights of pasturage should not only be maintained intact, but should be doubled as regards the period during which they are exerciseable. And at the same time it is proposed to deprive the Crown of the greater part of the compensation secured to the State in 1851 for the right which it then relinquished. It is at least as reasonable to argue that, because the deer have been removed, the commoners' six months' right of pasturage ought to cease altogether, as to argue that, because the deer have been removed, those rights ought to become exerciseable throughout the whole 12 months.

Passing now from the arrangement embodied in the Act of 1851 to the mode in which effect has been given to that arrangement, I shall venture to repeat some expressions which I used in a report addressed to your Lordships in 1871, and which are as applicable now as they were then.

"The provisions of the Act" (of 1851) "have not been fully carried out. "So far as the commoners are concerned they are in the full enjoyment of "all and more than all the benefits secured to them by the Act. The deer "have been removed, and their rights have been investigated, but the Crown "is not yet in the enjoyment of the compensation secured to it by the Act. "The Act gave the Crown (in compensation for the extinguishment of its right "to keep an unlimited stock of deer) power to inclose and hold in severalty "10,000 acres of the waste land of the forest, and from time to time to throw "open the inclosure and to inclose a like quantity of the waste in lieu thereof. "Of the 10,000 acres which the Crown was thus authorised to hold inclosed "and discharged from all rights of the commoners, only about 5,000 acres "have as yet been inclosed, so that the Crown is at present in the enjoyment "of only one-half of the immediate compensation awarded to it by the Act.

"The immediate compensation was the right to inclose 10,000 acres of the "waste. The full compensation which was awarded to the Crown was not "only the right to inclose 10,000 acres, but the right to throw open those "inclosures from time to time as the trees planted in them were past danger "from cattle, &c., and to inclose and plant other portions of the waste of the "forest in lieu thereof."

It is under these circumstances, and after the Act of 1851 has been for 24 years in operation, that a modification of its provisions is now proposed, which, whilst it takes away from the State at least three-fourths of the compensation awarded to the Crown by that Act, extends the commoners' rights, and doubles the time during which they may be exercised.

The additional powers of inclosure for the purpose of planting conferred upon the Crown by the Act of 1851 were given as a compensation for the paramount right of keeping deer. Without restoring the right then surrendered, it is now sought to impose material restrictions on the corresponding rights of inclosure for protecting plantations of young trees. It has indeed been stated that the natural beauty of the forest cannot be preserved unless inclosure and planting is prohibited. But with reference to this statement I would

venture to point out that the satisfaction of the fuel rights claimed by the commoners over the forest in itself necessitates the cutting down of from 250 to 300 trees on an average in every year, so that if inclosure and planting were entirely stopped, the woods in the forest would, from this cause alone, be in time considerably diminished. Independently of this, trees die from natural causes and require to be replaced, and therefore, even if the Crown were absolute owner of the forest, unfettered in its management by the co-existing interests of private individuals, it is very questionable whether the absolute prohibition of planting in any particular part of the forest would be conducive to the preservation of the beauty of that portion.

It is true that some evidence was given before the Select Committee "that if "fern is not allowed to be cut, nor the brambles or thickets interfered with, "nature will produce an ample crop of timber to replace the trees as they are "felled." That opinion was met by other evidence to a contrary effect, and I have no hesitation in stating that—except in some isolated cases and under special circumstances—I think it hopeless to expect that young trees, whether newly planted or the produce of self-sown seed or acorns, should thrive on land subject to the rights of common of several hundred landowners and their tenants, unless the seedlings or young trees are for some years protected by a fence from injury by the cattle and pigs of commoners. The whole course of legislation with respect to the production of Navy timber in the New Forest, and other Royal Forests, is evidence that Parliament has hitherto recognised the fact that a fence is necessary for the protection of young plantations from injury by the exercise of rights of commoners. And this legislation as to the New Forest virtually continued the system of encoppicing land in the forest for the protection of young trees which existed in the 16th and 17th centuries, and to which it is very probable that a large portion of the old and picturesque woodlands owe their existence.

Whilst the property in the forest remains in its present condition, any such restriction on inclosure and planting as has been proposed would involve a serious sacrifice of public, to private, interests. The result of the proposed restriction would be that, although the commoners would retain their rights over the uninclosed part of the area of somewhat less than 18,000 acres (within which the Crown is to be allowed to make new plantations, a power which must be so exercised as always to leave nearly 2,000 acres open), the remaining area of from about 40,000 to 45,000 acres would be subject to the exercise of the rights of the commoners, not restricted as they were before 1851 by the Crown's right of keeping deer, non-restricted by the observance of the seasons of fence month and winter heyning, and not restricted by any statutory right of inclosure for the protection of plantations.

I submit to your Lordships that it cannot be to the interest of the public that new or enlarged private rights should be created over the property of the State.

It could not, for instance, be to the advantage of the public that rights of common should be granted over Hyde Park or Kensington Gardens in favour of the owners and occupiers of houses fronting those properties of the Crown.

As evidence, if evidence be needed, that such is the case, I may mention that, with a view to the complete dedication of Battersea Park to the public, a special Act of Parliament (16 & 17 Vict. c. 47) was passed for the purchase and acquisition by the public of rights of common which existed over the sight of that park, and that, at Aldershot and Portland, large sums have been paid by the public for the purchase of rights of common. The larger and more valuable such rights are, of course so much larger would be the compensation payable for them.

Nor would the reduction from the rights of the Crown in the New Forest involved in the restriction of its power to make new plantations, and the surrender of its rights to enforce the observance of the fence month and of the period of winter heyning, be less substantial than the addition to the rights of the commoners. From the right to keep deer, whilst it existed, no actual revenue was derived, but that right was declared by Parliament itself in the preamble of the Act of 1851 to be "important" and "valuable." Similarly, the rights now belonging to the Crown, irrespective of the revenue derivable from them, and irrespective of the question whether it is desirable to abandon the

the production of Navy timber in the forest, are important and valuable—first, because so long as the interests of the Crown and the commoners in the forest remain undivided, they secure to the State the preponderance in those interests; and secondly, because, in the event of any division of interests taking place, they are capable of being commuted for a substantial eqivalent either in money or in land.

So long as the Crown had the right of keeping an unlimited stock of deer in the forest, it had the great preponderance of interest in the whole area, and this preponderance was preserved under the Act of 1851, by means of the system of inclosure and planting prescribed by that statute. If, however, effect be given to the third, fourth, and fifth recommendations of the Committee, the existing balance will be to a great extent turned in favour of the commoners, and the prepondernce of interests will, as regards from about 40,000 to 45,000 acres of land, be taken from the State, and be given to a body of local proprietors.

And looking to the possibility of a partition, the solid and substantial value of the rights which it is suggested that the State should surrender, as shadowy and worthless, is shown by the extent of land awarded to the Crown, under the Acts for the planting of Woolmer Forest, and for the disafforestation of Hainault, Wychwood, Wittlewood, and Woolmer Forests, and of parts of Dean Forest. In the case of the New Forest the Crown acquired, upon the surrender of the right to stock and keep the forest stocked with deer, the power (in the first instance) to inclose and plant 10,000 acres out of about 63,000 acres, while in Woolmer Forest, by the Act 52 George the Third, Chapter 7, the Crown, upon the surrender of the right to deer, obtained the power to inclose and plant (in the first instance) 2,000 acres out of about 5,000 acres. As regards the disafforestation of Royal forests, in Hainault 1,917 acres were alloted to the Crown and 969 acres to the commoners. In Wychwood 2,737 acres were allotted to the Crown and the ranger, and 760 acres to the commoners. In Whittlewood the Crown and the ranger obtained 3,183 acres, and the commoners 680 acres. In Woolmer the Crown had 3,415 acres, and the commoners 1,218 acres. In the case of Walmore and Bearce Commons in Dean Forest there were allotted to the Crown 242 acres, and to the commoners 92 acres. Yet, in the case of the New Forest, it is proposed that the exercise of the principal rights of the Crown should be limited to an area of less than 18,000 acres, out of about 63,000 acres.

Having regard to the unsatisfactory relations which arise from the intermixture of rights over the New Forest, it is, to say the least, doubtful whether such a state of rights can be permanently maintained. The Select Committee of the House of Lords in 1868 thought that it could not. So long as there is a possibility of such modifications being made in the respective rights of the Crown and the commoners as will result in an addition to the rights of the latter, it is obviously not for their interest to press for a partition. But if a partition ever takes place it will be found, unless I am mistaken, that whatever has been surrendered in the meantime by the State, has accrued for the benefit, not of the public, but of the local landowners.

In the case of Epping Forest complaint was made against the officers of the Crown for selling forestal rights, although the Crown had been advised that, apart from the ownership of the soil, those rights could not be made available for any useful purpose. It would seem that the officers of the Crown would lay themselves open to far juster complaint if, where the rights are coupled with the ownership of the soil, the Crown surrendered to private landowners some of the most substantial of such rights, without an equivalent.

It is true that the report of the Committee concludes with a recommendation that, in the event of any future severance of interests in the forest between the Crown and the commoners, the limitations proposed on the exercise of the rights of the Crown, should in no way prejudice its claims. But it may well be doubted whether such a provision would have any practical value. For, in the first place, it may be assumed that the commoners, having once obtained a material extension of their rights and interests, would strenuously resist any proposal to restore the balance of interests as it existed before that extension, and, in the next place, it is probable that the court or commission by which the partition would be effected, would be inclined to have regard rather to the

value of the rights as theretofore actually enjoyed, than to a state of things which did not exist, and had not for many years existed.

If I am at liberty to assume it to be the desire of Parliament that effect be given to the first two resolutions of the Select Committee, as to the keeping of the forest in its existing state, except to the extent to which it is desirable to plant trees, it appears to me that (unless the Crown's right to keep deer is restored) the only way by which that object can be attained, without detriment to the interests of the State, is a preliminary severance of the interests of the Crown and of the private landowners having rights of common, and the preparation, for the consideration of Parliament, of a complete scheme for the appropriation and management of those portions of the forest which may, by virtue of such severance, be allotted to the Crown and to the commoners respectively. This is the course which, as has been seen, was recommended by the Committee of the House of Lords in 1868, as the best and most practical solution of the difficulties attending the subject. If such a severance were effected, on the basis of the rights as they now exist, or on the basis of the rights as they would have existed but for the passing of the Act of 1851, restrictions might be placed, without detriment to the public interests, on the powers of the Crown to plant and inclose. But until such a severance is effected, every limitation of the powers of the Crown necessarily involves a corresponding, and indeed more than a corresponding, extension of the rights of private proprietors, and loss by the State.

Should a severance take place, and should Parliament think fit to prescribe a scheme for the management of a portion of the forest awarded to the Crown, either in the same way that Windsor Forest and Park are now managed by my colleague Mr. Gore, or in any other way, I can only repeat my assurance to your Lordships that I shall use my best endeavours to give full effect to the intention of the Legislature, as indeed has been hitherto my aim in carrying out the provisions of the existing Acts of Parliament.

It is scarcely necessary to point out that adequate provision could also be made by Parliament for compensating and extinguishing the rights of the commoners to have wood supplied to them for fuel. It would then become unnecessary to cut down any more trees to satisfy such rights.

The only other course, by the adoption of which, the rights of the State can be preserved, without further land being inclosed and planted, as compensation for the right of keeping deer, appears to me to be, the repeal of the first six sections of the Act of 1851, except so far as regards the 5,000 acres already inclosed, which, however, could be substituted for the like quantity of land inclosed under the Acts of 1698 and 1808, and which could be thrown out. By this means the right of the Crown to keep deer would be restored, and the power to inclose and plant, in substitution for that right, would be abolished. Looking, however, to the evidence given before the Committee of 1848-9, as to the injurious effects upon adjoining property and the morality of the district, which formerly resulted from the keeping of deer, this course is one which I only mention as an alternative to that which I have already suggested. I ought, however, to state that in the scheme for the disafforestation and future management of the waste lands in Epping Forest, lately deposited by the Commissioners of Sewers for the City of London, it is proposed that the Conservators shall have power to keep, upon Epping Forest a herd of deer, and to make regulations for preserving the deer and their fawns.

On the sixth resolution, as to the reconstitution of the Verderers' Court, it would be premature for me to offer any observations until it has been determined what course should be taken in reference to the three preceding resolutions.

To sum up—The conflict of interests, which has hitherto existed in the New Forest, has been, not between the Crown—and the public,—but between the Crown, as representing the State, on the one hand,—and a number of private landowners on the other hand. That conflict was temporarily settled by the Act of 1851, which embodied a compact, or arrangement, between the Crown and the commoners. It is now proposed to vary this compact by taking away from the State the greater part of the compensation allotted to it in 1851, for the rights then surrendered, and by granting to the commoners, without any equivalent,

equivalent, new and valuable rights. These proposals cannot be sustained on the ground that the arrangement of 1851 was in itself inequitable to the commoners, for, has as been shown, that arrangement was arrived at after full and fair discussion, and not without material concessions on the part of the Crown, and was more advantageous to the commoners than another somewhat similar arrangement as to Woolmer Forest. Nor can the proposed variation be supported on the ground that the commoners have been unfairly treated in the mode in which the arrangement of 1851 has been carried out. So far from this being the case, while the commoners have obtained all that they bargained for, the Crown has, up to this time, not obtained more than about half of the immediate compensation allotted to it. Still less can the proposals be sustained on public grounds. In order to preserve the natural beauty of the forest, it is not necessary to maintain or extend the commoners' rights over it, for the officers of the Crown are directly amenable to the will of the Legislature. On the contrary, it is for the interests of the public that the rights of the commoners should not be enlarged, for, to the extent to which private persons are interested in the forest, to that extent is Parliament hampered in considering exclusively the advantage of the State, as regards the management of the forest.

A large, and gratuitous transfer of the property of the State to private land-owners, is a measure which,—I venture to submit,—can neither be supported by precedent, nor be founded upon principle.

I have, &c.

REPORT

OF THE

COMMITTEE OF INQUIRY

INTO THE

MONEY ORDER SYSTEM OF THE POST OFFICE,

INTO THE

PROPOSED SCHEME OF POST OFFICE NOTES,

AND AS TO

POSTAL DRAFTS PAYABLE TO ORDER;

TOGETHER WITH

MINUTES OF EVIDENCE, APPENDIX, AND INDEX.

(*Mr. William Henry Smith.*)

Ordered, by The House of Commons, *to be Printed*,
25 *June* 1877.

REPORT

FROM THE

COMMITTEE OF INQUIRY

INTO THE

MONEY ORDER SYSTEM OF THE POST OFFICE,

INTO THE

PROPOSED SCHEME OF POST OFFICE NOTES,

AND AS TO

POSTAL DRAFTS PAYABLE TO ORDER.

To the Lords Commissioners of Her Majesty's Treasury.

My Lords,

In compliance with your Lordships' Minute of April last, the Committee have the honour to report that they have carefully inquired into the existing money order system and the proposed system of post office notes, and also into the question as to the expediency of the issue of postal drafts payable to order.

Impressed from the first with the difficulties surrounding the questions with which they were called upon to deal, they have endeavoured to acquaint themselves with all the principles and details of the system of money order business, and have carefully examined the new projects which have been submitted to them.

I.—The Existing Money Order System.

The Committee have satisfied themselves that the principles on which the business is conducted are sound; and there are but few of the details as to which they can suggest any improvement.

The chief features of the existing system may be stated as follows:—

A.—The filling up of a requisition form by an applicant for a money order.
B.—The account into which the particulars of the requisition are entered.
C.—The issue of the order.
D.—The making out and despatching of the advice.
E.—The payment of the order.
F.—The account in which the paid order is entered and claimed.
G.—The system of daily check on the accounts at the Chief Office.
H.—The final check on the accounts.
J.—Commission.

A.—*The Requisition Form.*

This inexpensive form cannot be dispensed with. It is useful, because it gives the issuing clerk all the needed particulars in a form which, unlike oral instructions, cannot well be misinterpreted, and it is valuable as evidence in cases of dispute as to name or amount, and as a substitute for an

expensive and practically useless journal which has been abolished. (Appendix No. 5.)

B.—*The Account of Orders issued.*

The form and method of working this account seems to be perfect, although it has been suggested that the name of payee, and place where payable might be omitted. The Committee, however, think these particulars essential. (Questions 460 to 469.)

C.—*The Issue of the Order.*

In respect to the form of the order (Appendix No. 13), the Committee suggest that the portion "B.," used for the transfer of payment, be expunged, as they consider such a form as that set forth in Appendix No. 16 would much simplify the system of transferring the place of payment when desired; they would add that, in their opinion, the document is altogether too much crowded with elaborate instructions, which tend to confuse the public.

D.—*The making out and despatching of the Advice.*

The Committee consider that the manifold writing system now being universally introduced at Money Order Offices is not only economical, but a great improvement on the old plan of making out the advices: they think the attention of the Post Office authorities might be directed to the method of folding the advice, which, from the evidence before them, seems to give rise to frequent delays and loss of advices.

E.—*The payment of the Order.*

The Committee have satisfied themselves that the precautions taken in respect to this important part of the business are in the main essential to safety, but they are of opinion that a wider discretion might, with advantage, be allowed to the postmasters in paying orders to persons well known to them, or who can satisfy them as to their being the payees, although their signatures may not be in strict accordance with the advices.

F.—*The Account of Orders paid.*

This form and the method in which it is prepared for the Chief Office seem to be altogether satisfactory.

G.—*The System of Daily Check on the Accounts at the Chief Office.*

This appears to the Committee, so far as they have seen, very simple and complete.

H.—*The Final Check on the Accounts.*

The Committee have carefully considered this check on the money order accounts, and they are of opinion that although perfect accuracy is not attained, it has been found in practice that the system is sufficiently good for the purpose, and is useful in establishing an approximate balance between the accounts of orders issued and paid, and they are not prepared to recommend any more efficient system, having regard to the great expense which would necessarily be incurred.

J.—*Rates of Commission.*

The Committee have devoted much consideration to this important subject.

It is shown that each money order costs about 3 *d.*, and if a uniform rate were adopted it must necessarily be in excess of that amount; this, as respects money orders for small sums, would be practically prohibitory. The Committee therefore cannot recommend a uniform rate.

Neither are they prepared to recommend a return to the scale abolished in 1871, under which the rates advanced by sums of 3 *d.*, so that while an order for

for 2 *l.* was obtainable for 3 *d.*, one for 2 *l.* 1 *s.* cost 6 *d.*, thus in effect charging 3 *d.* for remitting 1 *s.*

An objection incident to this scale was the difficulty of checking the commission at the Chief Office, which the present system of charging 1 *d.* extra for each pound has removed, making the check more rapid and simple and the scale more equitable.

The Committee have therefore decided to recommend the continuance of a gradually progressive rate; and they are of opinion that the initial rate should henceforward be 2 *d.*

In recommending an alteration in the present scale of commission on money orders, the Committee have had regard to the proposed scheme of postal notes, and impressed with the necessity on the one hand of not only protecting the Department from loss, but of providing a fair profit, whilst on the other hand the public should have no reasonable ground for complaint, they have had certain estimates prepared, which are submitted herewith. (Appendix No. 15.)

Under these estimates a profit is shown respectively as follows:—

	£.
No. 1	36,050
No. 2	23,204
No. 3	33,966
No. 4	17,370
No. 5	71,625

Numbers 1 and 2 are based on the assumption that the postal note had been in operation; numbers 3, 4, and 5 have no reference to the postal note.

Whether the postal note system be approved or not the Committee recommend the adoption of the scale of commission shown in estimate No. 1, viz.:— 2 *d.* for sums under 10 *s.*, 3 *d.* for sums of 10 *s.* and under 2 *l.*, 4 *d.* for sums of 2 *l.* and under 3 *l.*, and so on, 1 *d.* being added for every complete 1 *l.* up to 10 *l.* The Committee have decided also to recommend a trial of the postal note system, and they are guided in their decision as to the propriety of adopting the above scale by the results shown in estimate No. 1.

Under this estimate a profit is shown on "inland orders" of about 36,000 *l.* per annum, while there is the further present profit of 4,500 *l.* per annum on Foreign and Colonial orders, besides some 5,000 *l.* a year accruing from lapsed (or void) orders, making in all about 45,000 *l.* per annum as the total estimated annual profit; but it has to be borne in mind that the present scale of commission which was introduced in 1871 has failed to secure a profit, and is probably now resulting in a loss to the Department, and in reconsidering the question of commission, care should certainly be taken to guard against the possibility of loss for the future.

The Committee were at one time favourably impressed with the results shown in estimate No. 2, but after careful consideration they are of opinion that the estimated margin of profit shown therein is not sufficient.

The idea, no doubt, obtains largely that no profit ought to accrue to the Post Office on its working, but this view can scarcely under existing circumstances be applied to the money order system. The returns of the Post Office show that an annual profit of some 1,500,000 *l.* is made on the work incident to the delivery of letters, of which business it has a monopoly; it would therefore be unreasonable to suppose that for the money order service, which it is optional with the public to use, and which is largely used, it is to derive no profit whatever. There are other modes of making remittances, though there is no doubt occasionally some difficulty in using them; it seems only right, therefore, that the public should pay a remunerative charge for the accommodation of which they voluntarily avail themselves.

Besides, if the profit derived from foreign and lapsed orders be left out, the margin is not very large: the estimated profit of 36,000 *l.* represents a commission of only 2 *s.* 8 *d.* per cent. on 27,000,000 *l.* comprised in the 16,000,000 orders, averaging about 1 *l.* 13 *s.* 0 *d.* each, issued in 1875.

The Committee do not include the foreign and void orders in their calculation of profit, for if the foreign orders at present yield a modest profit, this may at any time be affected by causes beyond the control of the Post Office,

subject as the arrangements are to conventions. Void orders can hardly be regarded as a strictly legitimate item of profit, for although the amount they will yield is no doubt one which can be fairly estimated, yet as the Government admits of their re-vivification, they may be called for at any time, and perhaps, therefore, they should be treated as miscellaneous receipts rather than as part of the revenue of the Post Office proper.

Finally, there is the question of labour which constantly disturbs calculations of probable profits. The tendency of cost in this respect is usually an ascending one, and with so large a staff as is necessarily employed on money order work, a fair margin should be left to meet this contingency.

II.—Postal Notes.

The Committee have had some hesitation in arriving at a definite opinion on the scheme of postal notes proposed by Mr. Chetwynd, the Receiver and Accountant General of the Post Office, because officers of great practical experience have insisted with much show of reason not only that the postal note as a remitting medium would be less secure than the money order, but that if it should come largely into circulation it would tend to increase letter stealing, and to the consequent demoralisation of Post Office servants.

It is also urged that if stolen or lost the proper owner would have no redress.

The Committee think that these objections may be removed by giving to the holder of a note the power of filling in the name of the person to whom, and of the money order office at which, he wishes payment to be made; a note so "localised" would only be paid at the office indicated thereon; they would also recommend that every note, whether made nominal or not, should bear the endorsement of the presenter. These precautions would, in the opinion of the Committee, sufficiently protect the public, while the comparatively small sums for which these notes would be issued, at any rate for the present, would offer but slight temptation to theft.

It might, however, be a matter for consideration whether lost postal notes might not be replaced under some such conditions as those applied in the case of void money orders, and which might hereafter be determined.

The Committee subjoin a pattern of the "Post Office Note" which they recommend for adoption:

INLAND REVENUE STAMP.
POST OFFICE NOTE.
ONE PENNY.

Post Office Note.

ABERGAVENNY
B 0001

To the Postmaster *in charge of the* Money Order Office *at**_____

PAY TO*_____, at any time within Twelve Months from the month of issue, the Sum of **FIVE SHILLINGS**, on Account of Her Majesty's Postmaster-General.

Paying Office Stamp.

Cancelling this Note.

Five Shillings.

Postmaster.

Issuing Office Stamp.

* The Holder of this Note may fill in the Name of the Person to whom, and of the Money Order Office at which, he wishes the Amount to be paid, and the person so named must sign his name on the back hereof. If the blanks be not filled up, the Amount will be paid to the Signature of the Bearer at any Money Order Office in the United Kingdom.

1.—If the Note be crossed "& Co." payment will only be made through a Banker.

2.—After once paying this Note, by whomsoever presented, the Postmaster-General will not be liable for any further claim.

The Committee are of opinion that the postal note as a remitting medium would

would be safer than postage stamps and more convenient than a money order, and that it will supply a public want, and there can be no doubt that to thousands of persons residing in places where there are no money order offices it will be a great boon.

Rates of Commission on Postal Notes.

In considering the question of the rates which should be charged to the public for postal notes, the Committee have borne in mind the principles which guided them in their recommendation as to commission on money orders.

Mr. Chetwynd proposes that the following should be the rates of charge, viz. :—

On postal notes for 2 *s.* 6 *d.* - -	½ *d.*
„ „ 5 *s.* - - -	1 *d.*
„ „ 10 *s.* - - -	1½ *d.*
„ „ 1 *l.* - - -	2 *d.*

The Committee fully concur in the desirability of providing the public with a cheap and ready mode of transmitting small fixed sums, especially in view of the proposed increase in the lower money order rates, but they cannot recommend the adoption of the ½ *d.* rate, inasmuch as, in their opinion, it would not afford a sufficient protective margin against loss to the Department.

It is quite possible also that the demand for postal notes at the lowest rate might, like that which arose and is growing for money orders at the penny rate, far outrun the estimate ; and if equal rates were paid for the trouble of issuing them, there might be a loss to the Department, the extent of which cannot be foreseen.

The Committee recommend, therefore, that the rates should be fixed at 1 *d.* for notes under 10 *s.*, and 2 *d.* for notes of 10 *s.* and not exceeding 1 *l.*

This arrangement will in no way conflict with the money order rates ; thus,

For sums under 10 *s.* the charge would be -	For a postal note, 1 *d.* For a money order, 2 *d.*
For sums of 10 *s.* and not above 1 *l.* - - -	For a postal note, 2 *d.* For a money order, 3 *d.*

With regard to Mr. Chetwynd's proposal that the commission on sales, to be allowed to postmasters, should be 20 *s.* per 1,000 on notes under 5 *s.*, and 40 *s.* per 1,000 on notes of 5 *s.* and upwards, the Committee do not know that it lies within the scope of their inquiry to report upon Mr. Chetwynd's suggestion as to the scale of allowances to postmasters, but they venture to think that whatever rate of commission may be adopted the rule which applies in the case of money orders, viz., that of payment by number, regardless of amount, should apply in the case of post office notes.

III.—Postal Draft payable to Order.

A postal draft in the view of the Committee would be an order for any amount payable without advice. (Question 299.)

It may be well to state briefly the leading advantages which follow on the use of the advice. The advice enables the paying postmaster to retain, or, if necessary, to apply for funds to meet his liabilities ; the consequent localisation of payment at the time of issue enables the Chief Office, by means of the postmasters' daily accounts, either to send funds to or to restrain remittances from the offices on which orders are drawn.

The advice ensures payment, with rare exceptions, to the proper person. It is in evidence that out of 16,000,000 orders not more than 120, or one in 133,000, were paid through fraud, whilst it is equally manifest that, without the advice as a safeguard, not only is there greater risk of the money being paid to wrong persons, but that frauds on the Department would be easily perpetrated.

As to the facility with which frauds might be committed in the absence of the advice, the Committee would refer your Lordships to Questions 239 to 249 and 302 to 309.

The Committee have had submitted to them a scheme for postal drafts payable to order without advice, and a modification thereof, prepared by Mr. Beaufort, postmaster of Manchester, which they have printed *in extenso* in the evidence, at pages 23 and 50.

After prolonged consideration, and having heard Mr. Beaufort in support, they have come to the conclusion that they cannot recommend the scheme for adoption.

A proposal of Mr. Bradfield, of the Money Order Office, which likewise contemplated the abolition of the advice, was also submitted to them, but it was considered impracticable.

The Committee have now the honour to lay before your Lordships the whole of the evidence, together with a comprehensive index, and to report the conclusions at which they have arrived:—

They are unanimously of opinion that the existing money order system affords a secure mode of remittance, and that it would not be desirable, having regard to the safety of the Post Office as well as of the public, to alter the conditions under which orders are issued, beyond the suggested re-adjustment of the scale of commission.

They are further of opinion that it would be desirable to issue, concurrently with money orders, postal notes, under conditions set forth in this Report, which would afford additional facilities for the safe and rapid transmission of small fixed sums at a reduced cost to the public.

The Committee cannot separate without acknowledging the valuable assistance which they have received from the officers of the Post Office. They have been equally impressed with their ability and thorough knowledge of the details of the business of their respective Departments, and with the courtesy and readiness with which this knowledge has been placed at the disposal of the Committee for the purpose of this inquiry.

We have the honour to be,
My Lords,
Your very obedient servants,

George Moore, Chairman.
A. Earnshaw.
F. May.
A. Christie Thomson.
S. Walliker.
J. W. Weldon.

J. W. Hyde,
Secretary to the Committee.

General Post Office,
22nd July 1876.

COMMITTEE OF INQUIRY

INTO THE

MONEY ORDER SYSTEM OF THE POST OFFICE,

INTO THE

PROPOSED SCHEME OF POST OFFICE NOTES,

AND AS TO

POSTAL DRAFTS PAYABLE TO ORDER.

Wednesday, 3rd May 1876.

MEMBERS PRESENT:

MR. GEORGE MOORE (Messrs. Copestake, Moore, Crampton and Co.), IN THE CHAIR.

Mr. Alfred Earnshaw (Bookkeeper and Chief Clerk, Paymaster General's Office).
Mr. Frank May (Chief Cashier, Bank of England).
Mr. Alexander Christie Thomson (Controller of Post Office Savings Banks).
Mr. Samuel Walliker (Postmaster of Hull).
Mr. James Walter Weldon (Manager of London and Westminster Bank, St. James's Square Branch, and Superintendent of Branches).

3 May 1876.

Chairman.] IT has been suggested that we should read the Treasury Minute which gives us our instructions before we enter fully into our inquiry, so that we may know exactly what it is that we have to do. The Minute is dated 11th April last, and is as follows:—

"Write to the Governor of the Bank of England that the attention of my Lords having been drawn to the considerable expense attaching to the present arrangements under which money orders are issued and paid, they think it desirable that further information should be obtained as to the form and condition of money orders which will meet the convenience of the public, combined with proper provisions against the risk of loss either to the Post Office or the public. They therefore propose, with the concurrence of the Postmaster General, that a committee should be appointed, consisting of an officer of the Bank of England, to be named by the Governor, a clerk from the Paymaster General's Office, a gentleman to be named by the Directors of the London and Westminster Bank, a gentleman to be named by the house of Messrs. Copestake, Moore, Crampton & Co., and two experienced officers of the Post Office, such committee to report their opinion as to the existing system of money orders, and also on a scheme of postal notes suggested by the Receiver and Accountant General of the Post-Office, and whether it would be expedient to provide, either as a substitute for, or in addition to, the present system a postal draft payable to order, and if so, under what conditions.

"Request, therefore, that he will be so good as to nominate a gentleman to act on such committee, and instruct him to put himself in communication with the Secretary to the Post Office, who will be requested to make the necessary arrangements for the meeting of the committee."

Mr. *Walliker.*] We appear to be required to inquire into and report upon three points. The first is the existing money order system; secondly, we have to report upon a scheme of postal notes suggested by Mr. Chetwynd, the Receiver and Accountant General of the Post Office; and, thirdly, we are asked whether it would be expedient to provide, either as a substitute for, or in addition to, the present system, a postal draft payable to order.

Chairman.] Yes, that appears so.

Mr. *Walliker.*] The first point is, as I have said, the existing money order system. I think it would be very desirable to have some information on that point first. Mr. Chetwynd has kindly prepared a paper for us, briefly showing the history of the Money Order Department down to the present time, and perhaps it would be well that I should read it at once, as it will, I think, form a very good introduction to our inquiry. It reads as follows:—

"The following historical sketch of the Money Order Department of the Post Office may, perhaps,

3 May 1876.

haps, be useful as well as interesting to the Committee recently appointed by the Treasury to inquire into the money order system, and into the proposed scheme of Post Office circular notes.

"Before the year 1792 the public had no special facilities afforded to them for transmitting small sums of money through the Post Office, but in that year a system was introduced by three officers of the Inland Department of the Post Office under which such facilities were for the first time given to the public. The original intention was to enable the friends of soldiers and sailors to forward small sums of money to them, but the general public soon availed themselves of the advantages of the scheme. The system was carried on at the expense and risk of the three persons above referred to, who provided for themselves a chief office in the neighbourhood of the General Post Office, and they made their own arrangements with the postmasters as to the extent of the work to be done by them, the mode of doing that work, and the remuneration to be paid for it. The chief advantage afforded by the Post Office to the adventure was the privilege of free postage. Under this early system the amount of a money order was limited to five guineas, and the charge levied on the public for commission was eightpence in the pound. The system under this scheme was never very extensive, for the profit derived by the three persons who originated it amounted to about 240 *l.* a year for each. The extension of the system was, no doubt, greatly retarded by the high rates of postage then charged, as separate pieces of paper enclosed in a letter increased the postal charge upon such a letter quite irrespective of its weight.

"In their 18th Report the Commissioners of Revenue Inquiry, after referring to this private enterprise, recommended that if it should be deemed expedient still to sanction an establishment of this description annexed to the General Post Office, its management should be directly controlled by proper officers of this department, and its produce be appropriated to the revenue. Acting on this suggestion, the Earl of Lichfield, then Postmaster General, obtained the sanction of the Government for converting the private Money Order Office into an official establishment, forming a branch of the General Post Office, and the business was commenced on account of the State on 6th December 1838. Under the State plan the limit of a money order was fixed at 5 *l.*, and the commission charged to the public for the issue of a money order was 1 *s.* 6 *d.* for any sum over 2 *l.*, and 6 *d.* for any sum of 2 *l.* and under.

"In 1839, the first year after the establishment of the Government Money Order Office, the business transacted was as follows, viz.:—

"The money orders issued in the United Kingdom numbered 188,921, and amounted to 313,124 *l.*, the commissions charged being 6,652 *l.*, while the number of orders paid was 188,635, amounting to 311,727 *l.*

"The penny postage commenced in January 1840, and the greatly reduced rates of postage naturally had a very important effect on the money order business. In that year the number of orders issued increased to 587,797, and the amount to 960,975 *l.*, while the commission received from the public reached 17,203 *l.* The number of orders paid was 569,888, and the amount paid was 944,287 *l.*

"In November 1840 the charge to the public was reduced from 1 *s.* 6 *d.* to 6 *d.* for orders over 2 *l.* and up to 5 *l.*, and from 6 *d.* to 3 *d.* for orders of 2 *l.* and under. This reduction was intended to remove all inducement to send coin by post. In 1841, the first complete year of these reduced charges, the business was nearly thrice as large as it was in the previous year, the number of orders issued being 1,552,845, and the amount 3,127,507 *l.*, while the orders paid numbered 1,560,210, and the amount reached 3,140,096 *l.*

"In 1854 increased facilities for obtaining money orders were afforded to the public by dispensing with certain precautions which experience had then shown to be unnecessary, the result being that the number of orders issued rose to 5,466,244, and the amount to 10,462,411 *l.*, while the number of orders paid was 5,459,482, and the amount 10,452,680 *l.*

"In 1856 money order business commenced with the Colonies.

"In 1857 further relaxations took place as regards inland orders, and the records of the business of that year show that 6,389,703 orders were issued for 12,180,273 *l.*, and 6,387,423 orders were paid, amounting to 12,178,309 *l.*

"In 1860 money order business commenced with foreign countries.

"On 1st January 1862 the sum for which a money order might be drawn was increased from 5 *l.* to 10 *l.*, and notwithstanding the distress in the cotton districts, and a reduction in the fee for registering letters, the increase in the amount of money which passed through the Money Order Office increased to the extent of more than a million sterling.

"Up to 1868 there was a continuous increase of business in each year over the preceding year, but the amount of orders issued fell from 19,282,109 *l.* in 1867 to 19,079,162 *l.* in 1868, a decrease of about 1 per cent., which was due to the distribution of the Parliamentary grant for education by the Privy Council Office being no longer made by means of money orders. Only 115,827 *l.* of this grant was thus distributed in 1868, as against 502,960 *l.* in 1867.

"On 1st May 1871 the rates of commission on money orders were greatly reduced, as will appear from the following Table:—

Old Rates.		New Rates.	
Not exceeding 2 *l.*	3 *d.*	Under 10 *s.*	1 *d.*
Above 2 *l.*, but not exceeding 5 *l.*	6 *d.*	10 *s.* and under 1 *l.*	2 *d.*
„ 5 *l.*, „ 7 *l.*	9 *d.*	1 *l.* „ 2 *l.*	3 *d.*
„ 7 *l.*, „ 10 *l.*	1 *s.*	2 *l.* „ 3 *l.*	4 *d.*
		3 *l.* „ 4 *l.*	5 *d.*
		4 *l.* „ 5 *l.*	6 *d.*
		5 *l.* „ 6 *l.*	7 *d.*
		6 *l.* „ 7 *l.*	8 *d.*
		7 *l.* „ 8 *l.*	9 *d.*
		8 *l.* „ 9 *l.*	10 *d.*
		9 *l.* „ 10 *l.*	11 *d.*
		10 *l.*	1 *s.*

"Under

"Under these reduced rates the number of orders increased from 10,200,000 in 1870 to more than 12,100,000 in 1871, or more than 18 per cent. The increase arose mainly in orders of the lower denominations, viz., those under 2 *l.*, and the like result has followed in every succeeding year. 3 May 1876.

"The following Table gives particulars of the money order business in each year from 1870 to 1875 inclusive:—

Year.	Orders issued in the United Kingdom.		Orders paid in the United Kingdom, including orders issued abroad and in the Colonies.		Commission received.	Expense Estimated at 3 *d.* per Order issued.	Estimated.	
	No.	Amount.	No.	Amount.			Profit.	Loss.
		£.		£.	£.	£.	£.	
1870	10,244,667	19,984,013	10,346,801	20,423,424	178,968	128,058	50,910	—
1871	12,102,394	21,949,086	12,175,069	22,382,141	176,928	151,279	25,649	—
1872	14,033,772	24,191,770	14,163,941	24,785,357	186,307	175,422	10,885	—
1873	15,180,370	25,820,125	15,355,820	26,542,680	199,923	189,754	10,169	—
1874	15,976,873	26,559,031	16,153,964	27,234,538	207,764	199,710	8,054	—
1875	16,577,670	26,794,053	16,724,785	27,388,877	211,776	207,220	*4,556	—

"In the 10th Annual Report the Postmaster-General said that 'The Money Order Office, which 'was at first established for the purpose of facili-'tating the transmission of small sums for poor 'persons, has gradually become the bank of the 'whole trading community. It affords an almost 'absolute security to those who use it for remit-'ting money from one part of the country to 'another or to many foreign countries and all 'the British Colonies. Money orders are often 'lost and often stolen, but the departmental 'check is so complete that not more than one in 'every 100,000 of the orders issued is paid to 'another than the lawful owner. For orders 'which are lost or stolen, but not thus fraudulently cashed, duplicates are issued on application by the lawful owner.'

"These remarks are perfectly accurate, but the fact still remains that the inland money order service which affords such accommodation and such security to so many, is now carried out without paying its expenses, and this is a state of things which calls for an effectual and a speedy remedy."

I would suggest, now that we have read this paper, that Mr. Hawkes, the Acting Controller of the Money Order Office, should be called in and asked to explain to us the money order system at present in operation.

Mr. HAWKES, called in.

Mr. *Hawkes.* 3 May 1876.

1. *Chairman.*] WE shall be glad, Mr. Hawkes, if you will give us an explanation of the present money order system?—When a person wishes to take out a money order he fills up a requisition form. On the requisition form he states the amount for which the order is required, the name of the office at which payment is to be made, the name of the payee, and his own name and address. He then hands it to the postmaster, or to the postmaster's clerk, who counts the money paid for the order and the commission, and prepares the order and its advice by the manifold writing process, afterwards inserting in the advice the names of the remitter and payee. The amount and other particulars of the order are entered in the postmaster's account, and the advice is despatched to the paying office by the next post. The requisition forms are numbered and put on one side for further reference, if required. When an order is presented for payment, the paying postmaster sees that he has the corresponding advice, and that the particulars of the order and advice agree. The person presenting the order is then asked the name of the sender, and, if the reply is satisfactory, payment is made. If the advice has not reached the office of payment, the person presenting it is informed accordingly, and the advice is at once applied for direct to the office which issued the order, and the circumstances reported at the same time to the Chief Office. The order, when paid, is entered on the credit side of the postmaster's money order account. At the close of the business of the day, the amount of orders issued and paid and the commission are cast, the totals entered in the postmaster's cash account, with which the money order account is forwarded to the Receiver and Accountant General's Office. A docket containing entries of the amount of the orders issued and paid, and the amount of the commission upon the orders issued, accompanies the accounts. (*See* Appendix 13, Form No. 1 H.) Upon reaching the Receiver and Accountant General's Office with the cash account, the money order account is withdrawn and sent to the Money Order Office. The docket is subsequently compared with the entries in the cash account in the Receiver and Accountant General's Office, and in case of error is made to agree. The following day the docket is sent to the Money Order Office and compared with the money order account, and any discrepancy is reported to the Receiver and Accountant General, in order that it may be adjusted.

2. Mr. *May.*] The system which you are describing is in operation throughout the United Kingdom?—Yes; but orders are paid to any signature and without any advice, provided they are presented through a bank. At the Chief Office, orders drawn on any Money Order Office in the United Kingdom are paid, if presented through a bank, without the advices, which are subsequently written for.

3. That principle is not in force at Liverpool, or at any other large town?—No.

4. What course is adopted in the event of anything being wrong in regard to an order paid to a banker?—We obtain the money which we have paid

* The profit is now derived entirely from Foreign and Colonial Orders.

Mr. *Hawkes.*

3 May 1876.

paid from the banker, and the matter is settled between the banker and his customer. In some cases, however, we have put up with the loss. I hand in copies of letters to the London bankers, which describe the conditions under which this system is carried out. (*See* Appendices Nos. 1 and 2.)

5. Mr. *Earnshaw.*] I understand that you had a case in which an order was disputed three months after it had been paid?—I have no knowledge of that case. I know that, as a rule, the bankers will repay the money if any error be discovered within a reasonable time.

6. Mr. *Weldon.*] You pay the order without reference to the advice?—Yes, provided that it is presented by a banker.

7. Do you have the advices copied into books?—No; we simply have them arranged for reference.

8. Mr. *Thomson.*] With regard to the payment of orders to bankers in large towns. Would it be possible to extend the London system to large towns?—The matter has been under consideration, but nothing has yet been settled. I should mention that the payment of orders drawn on other offices but presented by bankers at the Chief Office involves considerable trouble, as it renders necessary the withdrawal of the advices of the orders from the postmasters who have been instructed to pay.

9-10. Mr. *Walliker.*] When a town receiver or sub-postmaster has a number of advices sent to him he must take care that he has the money to meet payment of the orders when they are presented. When necessary, he must write to the Chief Office for funds, and if the advices, therefore, were not withdrawn, he could not have an accurate knowledge of his actual liabilities?—Yes, that is so.

11. *Chairman.*] I understand that when a postmaster requires funds he must obtain a cheque from the chief office in London?—Yes, he receives a remittance either by cheque or in bank notes or gold.

12. Mr. *May.*] What is the course in the case of a village postmaster?—He applies for funds to the chief office of the country in which his office is situated.

13. Mr. *Walliker.*] If considerable sums are required by a postmaster for the payment of money orders it is known at the chief office and the money is sent down to him so that the public may not be inconvenienced?—Yes; and a postmaster often retains for this purpose the money which he receives from the public for the purpose of meeting his liabilities. Having the means of limiting the balances held by the postmasters, the risk which the department runs is very small.

14. Mr. *May.*] It does, I suppose, happen that a postmaster has no money to meet the payment of an order?—Yes it does, no doubt, happen occasionally, but we do not get many complaints.

15. It appears to me that the expense of the money order system is chiefly caused by the advices. Is there an absolute necessity for the advices; the orders might be made payable in London or at some of the large towns?—We should not then know whether an order had been paid, and we should, therefore, be unable to issue duplicates.

16. Have you any paper which would show us the total amount of the money orders issued?—The total amount for 1875 was about 26,000,000 *l.*

17. Can you tell us how many were paid through bankers at the chief office in London?—The total number of orders paid in the United Kingdom was about 16,000,000, and of that number there were paid at the chief office about 2,000,000 to bankers, and 126,000 to the general public.

18. Mr. *Weldon.*] You issue orders for any amount?—For any amount up to 10 *l.*

19. Would it not be well only to issue orders for 2 *s.* 6 *d.*, 5 *s.*, 10 *s.*, 15 *s.*, and so on?—That would not sufficiently accommodate the public.

20. But you might accommodate the public and yourselves too. People would learn to adapt their wants to what you issued, and so far as accounts are concerned the orders would come to you just as a bag of silver from a bank sorted into 2 *s.* 6 *d.*, 5 *s.*, 10 *s.*, &c.?——

21. Have you many instances of the robbery of letters containing money orders?—Yes, we have about 7,000 cases a year.

Chairman.] Perhaps you will now continue your explanation of the money order system.

Mr. *Hawkes.*] When the money order accounts reach the Money Order Office for examination, they are divided amongst the examining officers. The payment side of the account is checked with the orders paid, and cast, and the debit side is then cast and the commission checked. When this has been done the orders paid are handed to messengers, by whom they are sorted to the offices of issue; and, after being placed numerically, they are used to check the relative entries in the accounts of the issuing offices. About four months after that of issue, the orders, which in the meantime have been sorted into perfect numerical sequence, are entered in a register and cast, the total amount added to the amount of outstanding orders being brought into agreement with the books of the Receiver and Accountant General. This constitutes a perfect check upon the postmaster's issues. The register and the books of the Receiver and Accountant General do not absolutely agree, but they are reconciled by means of error balances.

22. Would it not tend to economy to use the original sheets, instead of copying the orders into the register?—No; some years ago the sheets were used for this purpose, but the use of registers was found to be more economical, and in every way more satisfactory.

The Committee subsequently visited the Aldersgate-street Money Order Office, and saw the present system of issuing and paying money orders practically illustrated. They then, accompanied by Mr. Hawkes, the Controller, went through the various rooms of the Chief Money Order Office, examining in their order the various checks brought to bear on the accounts rendered by the postmasters and others, from their first arrival in the Chief Office, up to the application of the final test on their accuracy. Subsequently a set of the principal forms used in conducting the money order business was handed to each member of the Committee.

Thursday, 4th May 1876.

PRESENT:

MR. GEORGE MOORE, IN THE CHAIR.

Mr. A. Earnshaw.
Mr. F. May.
Mr. A. C. Thompson.
Mr. S. Walliker.
Mr. J. W. Weldon.

Mr. CHETWYND, Examined.

Chairman.] As it appears that no member of the committee desires to make any inquiry with regard to the proceedings of yesterday, we will ask Mr. Chetwynd to give us any explanations which he may have to offer on the matter under consideration.

23. Mr. *Walliker.*] Would it not be well to request the Controller of the Money Order Office to attend, in order that he may be in readiness to answer any question that may be put to him?—It is, perhaps, hardly necessary; but it might be well to have him here.

Chairman.] He had better be called.

24. Mr. *Weldon.*] There is one question which it might be desirable, perhaps, to have for our information as bearing on the question of yesterday: whether we could not have a classification of the money orders to show where the loss falls?—That will come out in my evidence.

25. *Chairman.*] The first question I will ask then is this: in the table given near the close of the historical sketch of the Money Order Office with which you supplied the committee, you state that there was a profit of 4,556 *l.* on the transactions of 1875, but that this arose from the foreign and colonial orders, the inland system resulting in a loss. Can you say how much was lost on inland orders, and how much was gained on foreign and colonial orders?—That was a rough estimate, but from a closer return now before me it appears that the estimated loss on inland orders last year was 1,356 *l.*, and the estimated gain on foreign and colonial orders 4,286 *l.* The cost to the department of inland orders is estimated at 3 *d.* per order, and that of foreign and colonial orders at something more.

26. Does this include forfeited orders, and, if not, what was the amount of such orders?—It does not include forfeited orders. The amount of these orders last year was about 5,300 *l.*, showing an increase of 200*l.* over the previous year. The average amount of each order is about 1 *l.* 12 *s.* 6 *d.*

27. Mr. *Weldon.*] Do you exhaust each year to see what is actually due; to see what will come in?—Yes, we exhaust each year, but before doing so we take off the orders to be renewed. By Act of Parliament the orders not paid within a year after the month of issue are forfeited; but the Postmaster General, with the consent of the Treasury, can renew them on application.

27*a*. Can you tell what it was 10 years ago?—In 1866 the forfeited orders amounted to 3,097 *l.*

28. *Chairman.*] Can you tell us the amount of the balances usually held by postmasters, and of what principal items that balance is generally composed?—The balances in the hands of postmasters, about 5,000 in number, on the 31st March last, amounted to 627,000 *l.* Of that sum 227,000 *l.* consisted of postage and telegraph stamps held on sale. These are the figures appearing as balances on the books. The Inland Revenue licenses and receipt stamps which we sell for the Inland Revenue Department represented a sum of 124,000 *l.*, and the actual cash in the hands of postmasters at the same time was 275,000 *l.* Whenever a postmaster has 5 *l.* more than his authorised reserve he is required to remit.

Mr. *Chetwynd.*
4 May 1876.

29. Mr. *May.*] How do you fix the balances to be kept at any given office?—By a close examination of the business transacted at that office. The ledgers show what the postmasters do every day, what their transactions are on savings bank account, and on money order account, with their supplies of stamps; in fact, the particulars of each service of which the account is composed.

30. Mr. *Weldon.*] The savings bank is a disturbing element, I suppose?—Yes, to some extent. A large amount is collected and a large amount paid, sometimes disturbing the normal balance, but after all this becomes a comparatively ordinary condition for which due allowance can be made.

31. *Chairman.*] Mr. Walliker, have you many branches in Hull, Yorkshire, which you serve; is Hull the head-quarters for several places?

Mr. *Walliker.*] Yes, Hull has 70 or 80 sub-offices, of which 29 are money order offices. When the latter remit to me they claim the amounts in their cash accounts to London, and I acknowledge to them the receipt of their remittances.

Mr. *Chetwynd.*] We see also that the amounts remitted to the head office are debited by the head postmaster in his account with the London office. We keep the control in London and balance these remittances every day.

32. Mr. *May.*] Is there a minimum balance for all post offices?—Yes, 10 *l.* is the lowest amount of reserve allowed.

33. *Chairman.*] Can you state the amount allowed to be held by postmasters as reserves to meet the payment of money orders?—The reserves allowed in England and Wales amount to about 134,000 *l.*

34. Mr. *Walliker.*] Money orders are paid early in the day and issued late, therefore the balance

Mr. *Chetwynd.* 4 May 1876.

balances that accrue after banking hours are at times rather heavy. The balances, therefore, are often in excess of the reserves?—That is so. In the cash account of the day the postmaster claims credit for the remittances he sends that day, so that there is nothing in transit included in the daily cash account balance, which is the balance in hand at the close of the day.

34*a*. *Chairman.*] You have got money order, telegraph, and savings bank business; then do you get three separate accounts?—Yes, we get a separate account for each branch, but the postmaster enters them in one general account and the cash in hand is shown in the account in one item.

35. *Chairman.*] In how many cases do the reserves amount to 10*l.* per office?—There are only four head postmasters whose reserves are as low as 10*l.*, but there are 1,531 sub-postmasters whose reserves are fixed at 10*l.*, so that the total is 1,535.

36. How does this bear on the question?—I think you will have to consider the question of postal notes, and a proposal which the postmaster of Manchester will put before you, when these facts will be useful to you.

37. In how many cases do the reserves amount to 15*l.* and to 20*l.*, and what is the highest amount of reserve allowed?—There are 12 head postmasters also 445 sub-postmasters, and 113 metropolitan receivers who are allowed 15*l.* There are 37 head postmasters, 445 sub-postmasters, and 55 London receivers who are allowed 20*l.* The highest reserve is 1,500*l.* There are seven cases of 1,000*l.*, but only one of 1,500*l.* I will put in a Table showing the reserves for the United Kingdom. (*See* Appendix, No. 7).

38. Has it ever been the case that a post-office order has been refused in consequence of the funds at the paying office being insufficient to meet it?—Yes, it happens occasionally.

39. Mr. *Weldon.*] The question of the Chairman is important. Can you tell the committee how the public take the refusal to pay an order on that account?—They sometimes write to the head office complaining of it; the postmasters puts them off with a general statement that he has not sufficient funds in hand.

40. Mr. *Weldon.*] Is no check put upon the issue of several orders to the same person?—There is no such check. Formerly, at what were called minor money order offices, the postmasters were not allowed to issue more than 50*l.* to one remitter in one day, but that restriction has long since ceased.

41. The refusal to pay would be fatal to bankers, but if the Government credit is such that they can afford to refuse payment, you can do a great deal more than if it were a banking operation like that of the Cheque Bank?—The refusal to pay money orders is provided for in an Act of Parliament. That Act gives the Postmaster General, with the consent of the Treasury, the power of refusing payment of any money order without any reason being assigned, and under the regulations made by the Postmaster General his officers are relieved of all liability to be proceeded against by the public for such refusal.

42. *Chairman*] That is an immense leverage upon the public. Suppose a postmaster has the advice and not the money, what happens, what is the routine answer?—"I have not enough money," "you must call again," "I may have money later in the day." In the case of savings bank withdrawals there is a statutory period of 10 days allowed for payment after demand.

Mr. *Walliker.*] In Hull the people make complaints against the sub-offices to me, and I think I can say with confidence that I have not two complaints a year of the kind in question.

43. Mr. *Earnshaw.*] I suppose that Act was passed to prevent litigation?—It was passed to protect postmasters from actions at law. The Postmaster General is exempt under the Act.

Chairman.] Do not postmasters in a small way say they have no advice when they really have an advice but not the money?

Mr. *Walliker.*] That might happen sometimes, but if it were made a practice it would be sure to be found out.

44. Mr. *Weldon.*] Have you no instance of a postmaster refusing on that ground when he had money in hand?—I believe it has been done. It also happens that postmasters who may have been short of money in the early part of the day, will send to persons whose orders have been refused, and pay them when their balance has increased later in the day.

45. Mr. *Earnshaw.*] What prevents a large number of 10*l.* orders being issued; is it the amount of commission on each?—Mainly; not entirely. I remember a case in the Money Order Office some years ago, when a sailor took out money orders for 50*l.* to be paid at Reading to himself; this he did for fear of losing the money before he arrived there.

46. Mr. *May.*] Suppose you gave one of 50*l.* still charging the same commission as would be charged on 10 separate orders of 5*l.*?—It would save paper and trouble, but we do not desire to encourage the transmission of large sums.

47. What is the highest balance that a postmaster has?—That depends upon circumstances. There are a great many things that swell the balances. In the month of January more than 1,000,000*l.* of money is deposited at post offices for the Post Office Savings Bank. In the same month we issued Inland Revenue licenses to the extent of perhaps 300,000*l.*, so that for these two services alone certainly more than 1,250,000*l.* is collected in one month. The highest reserve of a sub-postmaster is 250*l.*; there is but one who has that amount.

47*a*. *Chairman.*] What local records are kept of savings bank business?—Postmasters keep no permanent record of the details of savings bank business transacted at their offices. They enter the deposit or the withdrawal, as the case may be, in the depositor's book and affix their stamp to the entry, and the book is handed back to the depositor. The particulars are entered in the savings bank account sheet, which is a voucher on the daily cash account, and comes up to this office with the cash account. Here it is seen that the totals are properly entered in the cash account. The savings bank account is sent to the Controller of the Savings Bank. In his office the entries are posted into the proper accounts, and he makes a summary monthly, and agrees with us once a quarter as to the totals of the deposits and withdrawals at every office in the United Kingdom.

48. Mr. *Weldon.*] In point of fact the money paid in by depositors is used for supplying the balances, while depositors receive interest upon it?—The whole cash balance at any post office is applicable

applicable to the payment of any authorised demand. We are allowed to keep only 20,000 *l.* on savings bank account. If the balance due to the Savings Bank is 100,000 *l.*, we pay over to the National Debt Office 80,000 *l.* The account up to Saturday is made up to the following Wednesday afternoon. The 20,000 *l.* is left to meet demands for withdrawals. I think that 100,000 *l.* would be no more than sufficient for the purpose.

49. *Chairman.*] Do these reserves include provision for the repayment of savings bank deposits?—They include provision for savings bank withdrawals to the extent of about 5 *l.* In all cases where warrants are issued by the savings bank for repayment of sums over 5 *l.*, the Controller gives notice to the Receiver and Accountant General, who either sends money to the Postmaster, or, in the event of the Postmaster's account showing a sufficient balance, telegraphs to him to hold as much as may be necessary. We hold a large sum of money in bills not arrived at maturity. Mr. May knows that our bill account at the Bank of England is very large indeed, sometimes as much as 300,000 *l.* or 400,000 *l.* The bank only gives us credit for the cash upon the day on which the bills become due and are collected.

Chairman.] What notice do depositors give for withdrawals?

Mr. *Thomson.*] They get the money by return of post.

50. *Chairman.*] How do you provide for savings bank cases when the repayment exceeds 5 *l.*?—The Controller of the Savings Bank gives us notice of every warrant above 5 *l.* that he issues each day. We refer to the Postmaster's daily account—the account of the previous day—where we see his balance, and if that balance is sufficient to enable him to pay the warrant we telegraph to him to keep the necessary balance for the purpose instead of remitting it.

51. *Chairman.*] That shows the advantage of knowing what the Postmaster's liabilities are. Do you pay anything for the transmission of these telegrams?—No, the Telegraph Department gets nothing in respect of these messages, nor is it paid for the telegrams sent by it for other public departments.

52. *Chairman.*] Are there, in your opinion, any processes now in operation with regard to money orders either in the country offices or in the metropolitan office which can be safely abolished or modified, due regard being had to the security of the department and the public?—In my opinion there are no processes now in operation which could with safety be either modified to any great extent or abolished. I think that every process now in use is more or less necessary, not only for the security of the Post Office, but also for the security of the owners of the 16,000,000 money orders remitted annually. Since the commencement of money order business in 1838 the Post Office has always been amending and improving the system, doing away with unnecessary checks and giving facilities to the public. I think very little more, if anything, can be done with the existing money order system to give the public more facilities than they have; and the one great mistake that the Post Office made with regard to the money order system was the change introduced in 1871 under which the commission on the lowest class of orders was reduced to 1 *d.*; before that the lowest charge was 3 *d.* In May 1871 the commission was reduced to 1 *d.* for money orders under 10 *s.* to 2 *d.* for money orders of 10 *s.* and under 1 *l.*, and to 3 *d.* for orders of 1 *l.* and under 2 *l.*, and the result has been, as I have told you in the earlier part of my examination, a considerable loss to the Post Office. Whereas in 1870 the profit was over 50,000 *l.* a year, the business is now carried on at a loss on the inland service of 1,300 *l.* or 1,400 *l.* a year.

53. Mr. *Earnshaw.*] We noticed the very complete check on the accounts when we visited the Money Order Office yesterday, but we thought it gave a great deal of trouble; would it not be well if a simpler way were found of paying postmasters their commission, in the claims for which there are so many mistakes, by estimating the commission perhaps?—The commission in these accounts is not the commission on the work done, but the charge to the public for the orders. The calculation you saw was the calculation of the commission chargeable to the public; it is revenue, and not the amount paid to the postmaster for his services. That is computed quarterly, and is paid out of the vote of Parliament.

54. Mr. *Weldon.*] I should like to put a question or two on this subject. You say that you have looked into this system, and that you believe there is no part of the present money order plan that you could with any advantage abolish with safety, having regard more particularly to the safety of the 16 millions of the public who take advantage of it. Now, what is the bank note system? Do we pay any attention to the safety of the public when the Government issues 26 millions of notes?—Most decidedly not. When a man gets a bank note he is expected to take care of it.

55. How is it then that the Post Office assumes these functions?—The Money Order Office was established for the secure transmission of small sums of money through the post.

56. We carry down the bank note system to a 5 *l.* note, and if a man sends a sum in a letter he can get almost absolute security for the transmission?—When you have Mr. Jeffery before you, he is the gentleman who looks after the lost letters, he will furnish you with a statement of the number of letters that are lost.

57. Mr. *Weldon.*] Why do not you carry your system up to a larger amount?—Why should the Government leave one portion of the public unprotected, and be particular about another portion who give all the trouble and no profit. £. 5 is the lowest note you can send in England. Why is not a document payable to bearer issued by the Post Office authorities as well as 5 *l.* bank notes issued by the Government? I propose that we should issue, as a preliminary measure, four classes of postal notes for transmission by post or for circulation, viz., 2 *s.* 6 *d.*, 5 *s.*, 10 *s.*, and 20 *s.* payable to order or to bearer. It would be aiding the money order system in that part of its business in which it is losing money. It loses money where it issues orders, the commission on which is less than 3 *d.*

58. All the work I saw yesterday seems to me to be a machine for the safety of the public for the most part?—That is so to a large extent. I propose to substitute something quite different for certain classes of small remittances.

59. But you do not propose the same security to the public?—Not entirely. It will give much the same security to the Post Office and almost as much to the public.

Mr. *Chetwynd.*
4 May 1876.

60. Mr. *Earnshaw.*] Evidently the unprofitableness of the money order system is in consequence of the advice, of the checks and counter checks; and the expense of the syste is so heavy that from that cause it does not pay? —You cannot well alter the principle of the present money order system. That principle is to secure payment to a person named by the remitter. Practically this is always secured. There are cases where we pay an order a second time when the order has been paid wrongly in the first instance, and where the department is to blame.

Mr. *Walliker.*] Perhaps the Controller of the Money Order Office can tell us how many orders there are during the year, the amounts of which are obtained by fraud.

Mr. *Hawkes.*] Mr. Jeffery says there are not more than one or two hundred such orders in the course of the year.

61. *Chairman.*] You say that system cannot be improved?—I think that the system cannot be much improved as it stands.

62. You spoke about issuing notes of 2 *s.* 6 *d.*, 5 *s.*, 10 *s.*, and 20 *s.* in substitution for money orders?—Yes. I would say in addition to, rather than in substitution for, money orders.

63. How about a sum of 3 *s.* 9 *d.*?—I do not propose to issue postal notes for such sums as that. The loss now arises on small orders by the large amount of book-keeping and the payment to the postmasters for money order work. So long as that amount of book-keeping and the present rates of pay to postmasters, with the existing low rate of commission, are kept up, so long must the department lose money. No single order costs less than 3 *d.*, and of course when a 1 *d.* or 2 *d.* order is issued we lose money. The scheme of circular notes is framed with the view of doing away with the book-keeping, or rather reducing it to the minimum, and so being able to issue these notes at the very small charge of ½ *d.* for 2 *s.* 6 *d.*, 1 *d.* for 5 *s.*, 1½ *d.* for 10 *s.*, and 2 *d.* for 20 *s.* I have shown in the paper that, according to the scheme of working proposed, there would be a profit of about 30 per cent. I think that in starting a new business we must look for a good margin, because we run some risk. We hear little of the money order scheme now because we are giving great facilities to the public and almost absolute security, and we are working at a loss, but we shall yet hear a good deal about the loss, I have no doubt.

64. Mr. *Weldon.*] I suppose these answers will very likely get into print?—Yes, and they will certainly be sent to the Treasury.

65. The postal notes will be in a separate branch altogether, and quite apart from the Money Order Office?—Yes; that is the proposal.

65*a*. Mr. *Earnshaw.*] Many banks are in favour of perforated cheques up to 5 *l.*, instead of money orders; let them be made payable to bearer, and let them all come up to London?—This would hardly give satisfaction to the public.

Mr. *Thomson.*] It came under my notice lately, in visiting the Edinburgh Office, that while on the credit side of the money order account they had no absolute check as to accuracy, depending upon the casting of clerks engaged in checking the accounts as they came into the office, on the other side they had an elaborate system of registering and checking what is called the "paid issue." Now, the question which occurs to me is, if on the one side no loss is found to accrue, why should they have a check other than of the casting on the opposite side? The total of the receipts of the postmaster should be accounted for by the total payments and the outstanding orders. Now, why should one side be absolutely checked and not the other?

66. Mr. *Walliker.*] By the "paid issue" check which Mr. Thomson saw in operation, the paid orders or paid issues are made to perform a double function; a complete check is effected on the issues accounted for by each postmaster, and then the gross total of "paid issues" is compared with the relative gross total credited in postmasters' accounts for those orders, and the results have shown a marvellously close agreement?—I may say this, that the practical officers of the Money Order Office from the beginning have exerted themselves to get a more complete check upon the credit side of the money order account, but it has always been opposed by Mr. Scudamore. They have always considered that the absence of a better check on the credit allowed to postmasters for paid orders was the weak part of the money order system.

67. Mr. *Thomson.*] Is the amount of the loss incurred by the absence of that check such as to make it necessary to have a more minute check upon that side than on the other; my own feeling is that I should like a complete check upon the money order system?—That incomplete check on the credit side exists, as I have stated, against the opinion of the practical officers; but that after all is comparatively a small thing, which does not seriously affect the principles of the money order system.

68. Mr. *Weldon.*] You would make out a fresh register; but if you get a careless clerk, what then?—Of course we cannot entirely provide against that.

69. There is another principle in business. If the expense of instituting a check amounts to a larger sum than the loss on an average of years, they abandon the check and run the risk?—The Post Office would not, I think, be permitted to do such a thing. The Treasury would not be likely to consent to it.

Mr. *May.*] Directly it became known that the Post Office was not keeping this check the frauds would commence. It is no doubt a check of a very important kind, though it may not be absolutely perfect.

Mr. *Weldon.*] Does it involve the loss of money?

Mr. *Walliker.*] Yes. Large numbers of errors in amount are detected by this check.

Mr. *Weldon.*] I suppose not frauds?

Mr. *Walliker.*] No, mistakes in the amounts.

Mr. *Earnshaw.*] One thing occurred to me yesterday evening, after seeing this system of book-keeping, that all your business is very profitable where there is no system of book-keeping involved. You never hear of a penny stamp being forged. I do not hear that there are any such forgeries. I am speaking of the cheque system, and I suggest that the cheques shall be perforated, so that there should be no possible chance of altering them.

Mr. *Weldon.*] I think that that system would be more acceptable to the bankers.

70. Mr. *Weldon.*] What I suggest is to carry them up to 5 *l.* We must not pinch on the banks. Has the solicitor of the Post Office been consulted?—Yes. His opinion is that the postal note scheme cannot be introduced except by legislation

egislation as it would be inconsistent with cer-ain Acts of Parliament.

71. I think you make your note returnable t too remote a period?—We make the money order returnable within 12 months. We have bolished the lapsing of orders, and give now 12 months.

Mr. *Walliker.*] A poor person gets one of hese notes and loses it, in which case he also oses the money, but if he lost a money order a uplicate money order can be issued, and the mount would be paid to him.

Mr. *Weldon.*] There we come upon the ques-ion of the Post Office taking care of the public. The grand essential is that the public should be llowed to take care of themselves. With regard o the circulation of the country the public are eft to their own care.

Mr. *May.*] That is hardly so, I think. In the ase of Bank of England notes the securities and ullion against which they are issued are ear-narked, and can be used in no other way but for he payment of notes. The Post Office would ssue on the basis of a Government guarantee, ut not on a cash basis.

Mr. *Weldon.*] The Government will have to onsider whether the system you suggest will rench on the circulation of the country; there-ore these circular notes should be so distinctly narked as being for the convenience of the pub-ic, and not for ordinary circulation, and should e made returnable within a very limited time. But if not quickly returnable the department hould be very strict in issuing duplicates. Do ot pay them after six months.

Chairman.] Do you mean to suggest that if ersons do not present them within six mouths hey will lose their money?

72. Mr. *Weldon.*] They would be liable to do o. In every case the Post Office has been too onsiderate towards the public, too yielding?—We started the system for the purpose of giving oor people a safe means of transmission for small ums of money.

73. *Chairman.*] I was going to observe that a ost note would be forefeited entirely unless ap-lied for as a renewal?—No, it could not be enewed, it would be absolutely forfeited, if not aid within 12 months.

Mr. *Weldon.*] The same thing exists with the overnment circulation. There are many notes hich will never come in, the circular notes are levised for a special purpose.

Mr. *Walliker.*] We carry these documents or the public and our servants steal them. That s a point we have to consider.

74. *Chairman.*] What local records are kept, nd can these local records be simplified?—No ocal records are now kept of money orders that s, of the details, beyond the forms given in by he public. Up to the 31st January last every ostmaster kept an exact copy of the money rder account sent to London giving full parti-ulars of each order. We thought it was unne-essary to do this, and we have abolished the ocal records since the 1st February. No diffi-ulty, I believe, has been felt since the introduction f the new arrangement.

Mr. *Hawkes.*] There was a little trouble at irst, but there is none now.

Mr. *Walliker.*] I have heard sub-postmasters ay that it is not only an economy of time, but a reat convenience to them.

75. *Chairman.*] Is it not possible to reduce the particulars now required to be given by the public when they take out a money order?—I think that so long as the existing money order system continues it would be unsafe to make any considerable alteration with regard to these particulars. Mr. *Chetwynd.* 4 May 1876.

Mr. *Walliker.*] The requisition form shows what particulars are required.

Mr. *Thomson.*] Could not the telegraph be brought to bear for the purposes of advising where any question might arise?—Yes.

Mr. *Thomson.*] The principle here involved is the large amount of paper required and the large amount of writing on the part of the postmaster. In the case of any particular order you could refer to it by the number and amount; and any further particulars could be obtained by correspondence or by telegraph.

Mr. *Hawkes.*] Much time could not be saved there.

Mr. *Walliker.*] Do not many cases occur every day where a question arises about the names of the payees or remitters?

Mr. *Hawkes.*] Yes, several hundreds.

Mr. *Chetwynd.*] Is it the idea, then, that the only particulars required in addition to the number and amount and the commission taken, are the names of the offices of issue and payment, omitting the names of the remitters and those of the payees?

Mr. *Thomson.*] Yes.

Mr. *Walliker.*] We have frequently to refer cases from the country to London on account of inquiries by persons who are neither the remitters nor the payees; and we have occasionally to ask London to advise us to pay, which they are able to do having the particulars in the account before them.

Mr. *Chetwynd.*] I do not think it would be safe to reduce the particulars at present given. Large numbers of orders are paid at the head office from the particulars furnished in the accounts, and it would therefore be a great public inconvenience to do away with them.

Mr. *Walliker.*] Inasmuch as the chief office here pays one-sixth of the orders of the country, it would be unfortunate if the chief office had not the means of paying the money at once.

75*a*. Mr. *Thomson.*] A money order paid through a banker is payable in all cases irrespectively of where the advice may be.

Mr. *Chetwynd.*] No; only the chief office in London pays orders to bankers, the advices of which are at other offices. The advices go astray sometimes, being, perhaps, missent to Australia or America.

76. Mr. *Walliker.*] In your opinion, is the time saved by the non-entry of the names of payee and remitter at offices where the work is not continuous, of appreciable value?—I may mention that in February last we relieved postmasters of the labour of keeping copies of their accounts, but the department has not been able to reduce the sub-postmasters' allowances on that account. In some of the larger offices some slight reduction has been made in the time spent by clerks in the issue of money orders; but that has simply enabled the postmaster to use the hours or minutes thus saved in some other part of the service. The Post Office has not yet been able to effect any saving of money by the change.

76*a*. *Chairman.*] If you can reduce labour—labour is money—and as the postmasters are not well

Mr. *Chetwynd.*

4 May 1876.

well paid, it is well to reduce the work if you can.

Mr. *Chetwynd.*] I should be sorry to recommend any change which would deprive the public of any facilities which they now possess. I may say, as a matter within my own knowledge, that thousands of orders have been paid at the chief office for which we had received no advice, the payments being made from particulars furnished by the accounts.

77. Mr. *Weldon.*] Yesterday I suggested the printing of certain even amounts so that it would facilitate operations of account, and I was met by the objection directly, "What would you do if you wanted to remit 3 *s.* 2 *d.* or 2 *s.* 8 *d.*?" It struck me after that, could you not devise a remittance stamp like a postage stamp, and make it a misdemeanor for your men to be in possession of such stamps?

Mr. *Chetwynd.*] It certainly could be done, though not conveniently; but we could not know that a person had them in his possession without searching him. If a postman stole a letter he would get his wife, or some one he could trust, to realise the order for him. When Mr. Jeffery comes before you he will tell you much on this subject.

78. *Chairman.*] Can the advice be abolished without risk to the Post Office or to the public?—In my opinion, it certainly could not be abolished without serious risk to the department and also to the public.

Mr. *Weldon.*] Take the case of a letter of credit, pay so-and-so on being identified; very well, in most cases people who present post office orders are known to their neighbours and to the people in the locality, and if the postmaster has any doubt the persons presenting the orders can easily be identified. Take the case of Bagshot, for instance; there is not a person there unknown to the postmaster. The postmaster knows very well who "John Brown" is.

Mr. *Walliker.*] No doubt in localising payment you reduce somewhat the necessity for an advice.

Mr. *Chetwynd.*] The main value of the advice to the Post Office is, that it conveys to the paying postmaster information as to the amount to be paid, and secures the Post Office against having to pay a much larger amount. Many cases have occurred where persons have taken out a money order for 1 *s.* and have altered it to 10 *l.* Of course, when the order is presented the postmaster has the advice which is for 1 *s.* only, and he refuses to pay. Persons who try to commit frauds of this kind do not present the orders at the post office, but buy something at a shop and get the change for the orders from the shopkeepers.

Mr. *Weldon.*] Could not you restrict your orders to certain denominations; you would save your clerks' labour if you had your orders printed?

Mr. *Chetwynd.*] That is part of the plan of postal notes which I have proposed.

79. *Chairman.*] What are the uses and advantages of the advice?—It localises the payment, and thus enables the Post Office to provide money to meet the payment at the right place. The postmaster who receives advices knows that the corresponding money orders will be presented in a day or two. If he did not know that these money orders were to be presented he would remit the money to London, and the presenter of the orders might have to wait two or three days before obtaining payment. Another advantage is, that the postmaster is very distinctly informed how much was paid in by the remitter at the office of issue, and thus he is enabled to protect himself and the department against fraudulent alteration of the amount of the orders.

80. *Chairman.*] What cost as regards stationery would be saved by the abolition of the advice?—The advice forms cost 3 *s.* 4½ *d.* per thousand.

80*a*. *Chairman.*] Can you tell us the proportion which the several classes of orders bear to each other?—According to an estimate which we have made, about 95 per cent. are under 5 *l.* There are only about 5 per cent. left, and of these rather less than 2 per cent. are 10 *l.* orders.

Mr. *Weldon.*] I think the bankers would go with the Post Office far more if the Post Office kept down the limit to 5 *l.*

Mr. *Walliker.*] A man wants to send a sum of 10 *l.* to a small place where there is no banker. In that case there would be two entries, two forms to fill up, and two orders to pay, to claim, and to mark off instead of one.

81. *Chairman.*] How do you send your remittances to postmasters?—Remittances are sent to the postmasters in bank notes or in actual cash enclosed in canvas bags, which are put into special envelopes, and these are sent by post as registered letters, a receipt being given by everyone through whose hands the letters pass.

82. Mr. *May.*] Would it not pay the Post Office to charge a lower fee for registration, if the cost of money orders were saved?—I think not. The Controller of the Circulation Department can tell you that the system of registration is expensive, every man having to sign for the registered letters passing through his hands.

83. How many orders are under 10 *s.*?—Under 10 *s.* 25·1 per cent., and from 10 *s.* but under 1 *l.* 24·1 per cent. Of orders of 1 *l.* but under 2 *l.* there are 24·2 per cent.; about 50 per cent. of the whole issue of orders is worked at a loss.

Mr. *Walliker.*] The loss on orders under 10 *s.* is about 30,000 *l.* a year roughly, and on orders of 10 *s.* but under 1 *l.* about half that amount.

84. *Chairman.*] Is this inquiry for the sake of revenue, or for giving facilities to the public?—It is for both.

Mr. *Weldon.*] It appears to me that it is a question of revenue. You have gone to the utmost limits in giving convenience to the public.

Chairman.] There are three letters here, two from the Post Office and one from the Treasury, on this general question, which will probably enable us to define more particularly the scope of our inquiry.

The following letters were then read:—

General Post Office,

My Lords, 11 February 1876.

With reference to your Lordships' letter of the 27th March last, in reply to my report of the 18th December 1874, on the state of the Inland Money Order Revenue, and on the subject of issuing "Postal Notes," I have the honour to inform you that I have had the question raised in the last two paragraphs of that letter under careful consideration, with a view to ascertain whether any steps in the direction indicated by you could be safely taken in order to lessen the cost of the administration of the money order system.

I may

Mr. *Chetwynd.*

4 May 1876.

I may premise that certain arrangements that have been in contemplation for some time, viz., the abolition of money order journals, and the extension of the manifold writing process have been carried into effect, and that further measures relating to the simplification of the work at the Chief Office, now under consideration, will probably also be carried out, which, although they will not much reduce the present cost, will obviate to a certain extent the necessity for incurring increased cost in the future.

But these arrangements do not meet the question whether forms and conditions cannot be dispensed with, and I am compelled to say, after much discussion on the subject with those officers who are best qualified to advise me, that I am unable to discover any means of acting on your Lordships' suggestions consistently with due security.

The present system is in my opinion indispensable if the Department is to be guarded against loss, and all reasonable safety afforded to the public.

It devolves upon me, therefore, to place before you such proposals as will, if adopted, relieve the Departments from the loss which is on the point of being incurred, if not already actually incurred, by the transaction of money order business.

The first is to raise the initial rate of commission now charged on money orders, viz., 1 *d.* for sums under 10 *s.* to 2 *d.*, so that 2 *d.* will become the commission on all orders for sums under 1 *l.*

Your Lordships' will observe that this is a very slight modification of the existing scale of commission which for sums of 1 *l.* and upwards would remain undisturbed, and that the change is not a return to the former scale, such as that proposed in my Report of the 18th December 1874.

But, unwilling as I still am to adopt the retrograde step which even this modification would involve, and to deprive the public, more especially the lower classes, of the facilities which they have enjoyed for several years, of the cheap rate of 1 *d.*, for which sums under 10 *s.* can now be transmitted, I am bound to acknowledge that the retention of that rate can be recommended on no sound principle.

The Post Office is not justified in carrying on the business at a loss, or on a system inevitably tending to a loss; nor is it right to charge one portion of the community (that sending large amounts through the post) with the loss sustained by the performance of services for another portion of the community (that sending the lower amount) at a cheaper rate than that which they actually cost.

At the same time I am not disposed to press the application of this principle to its extreme logical conclusion, since it must be confessed that the results would tend to subvert the basis on which a great many of the arrangements of the Post Office rest.

A minimum rate of 2 *d.* would produce an estimated increased revenue of 16,390 *l.* a year, and taking into consideration the reduction in the cost of the money order business, which will, I hope, be effected by the alterations of the system to which I have referred as being either actually carried out, or possible to be made, an increased revenue of 16,390 *l.* would remove all fear of loss for at least some years to come.

I now come to my second proposition, and that is, the re-consideration of the postal note scheme, which was fully dealt with in my report to your Lordships of the 18th December 1874.

Bearing in mind the desire you have indicated in your letter of the 27th March 1875, that an endeavour should be made to introduce a simpler system of remittance, I have given my best attention to several plans which have been submitted to me by officers of the Department, having for their object the introduction of a measure of this kind, but although they reflect much credit upon their framers for the care and pains bestowed upon them, I am unable to recommend any one of them.

There only remains for re-consideration the postal note scheme, which was prepared by Mr. Chetwynd, the Receiver and Accountant General of this department, and which I have already recommended for adoption.

I need not repeat the arguments which have been urged in favour of this plan.

Your Lordships, it is true, declined in your letter of the 27th March 1875, to favour the scheme, but your decision was stated to have been arrived at on the ground that you were not prepared to undertake legislation on the subject. The fact, however, that there is a somewhat general demand upon the Post Office for the provision of an arrangement analogous to that hitherto afforded by the Cheque Bank which shall meet the requirements of the public, may render you more disposed to take up the question, and if satisfied of the suitability of the scheme, to introduce whatever legislation may be necessary.

I am unable to submit to your Lordships any plan which offers so many facilities as that of the postal note scheme, and I have every reason to think that it will commend itself to the public to a very great extent. I trust, therefore, you will take it into your favourable consideration.

As bearing upon the question, I enclose an extract from the "Bullionist" of the 22nd January last, approving and advocating a measure of the kind.

The only modification I have to recommend in my original proposal as laid before you in December 1874, is, that the charge for a note of 2 *s.* 6 *d.* should be ½ *d.* instead of 1 *d.*, in accordance, in fact, with Mr. Chetwynd's scheme, of which I again send a copy.

The scale of commission would then run thus :—

For a note of	2 *s.* 6 *d.*	-	-	½	*d.*
„ „	5 *s.*	-	-	1	*d.*
„ „	10 *s.*	-	-	1½	*d.*
„ „	20 *s.*	-	-	2	*d.*

It is no doubt true that a slight loss will be sustained by the Department on the issue of both the 2 *s.* 6 *d.* and 5 *s.* notes, but the proportion which they bear to the other two clauses, on which a considerable profit would be made, is so small as to render such loss of no great account; and unless the rate of 1 *d.* on money orders be raised to 2 *d.* it would be impossible to ask the same commission from the public on two transactions involving such very disproportionate trouble on the part of the Department.

I should also state that the Department has reason to modify the opinion expressed in my Report of the 18th December 1874, that the cost of a money order is 2⅔ *d.*, and not 3 *d.*

There now seems to be little doubt that if all the expenses are taken into consideration, the sum of 3 *d.* will be found to be as nearly as possible the real cost.

Should your Lordships entertain the "Postal

Mr. *Chetwynd.*

4 May 1876.

Note" scheme, it appears to me, taking into consideration the surrounding circumstances, that it may be better, on the whole, to defer the suggested alteration in the initial rate of money order commission until after that scheme has been carried into effect, and it be ascertained how far the profits accruing from it may neutralise the declining gain or actual loss (as the case may be) on the money order business proper.

But should you finally decide to negative the scheme, it will be absolutely indispensable to raise the rate of money order commission at once, if the Department is to be secured against actual loss.

I have, &c.
(signed) *John Manners.*

Treasury Chambers,
My Lord, 29 March 1876.

THE Lords Commissioners of Her Majesty's Treasury have had before them your Lordship's letter of the 11th February last, and, in reply, they desire me to state that my Lords felt it was necessary on so important a subject as a proposal to "provide a new and very extensive circulating medium," to consult the Governor of the Bank of England, and he has replied in a letter which is at present private, but which my Lords do not doubt they are at liberty to forward for your Lordship's consideration.

My Lords desire to give great weight to the opinions expressed by the experienced officers of the Department, who advise that the existing forms and conditions attached to the Post Office order cannot be varied or dispensed with without danger to the Department and the public, but in the face of a very general feeling which my Lords believe to exist outside the Post Office that some of these regulations are inconvenient and unnecessary, my Lords hesitate to sanction proposals to increase the present charges on the issue of money orders which are based on the assumption that the existing regulations are required in the public interest.

Your Lordship proposes that the minimum charge for a Post Office order shall be 2 *d.*, and it is estimated that the increased revenue of 16,390 *l.* which that rate would bring, would relieve the Department from any loss from the Money Order branch for some time to come, but your Lordship states that the cost of the issue and payment of every money order is 3 *d.*

Your Lordship further proposes that the commission to be charged on the postal notes should be ½ *d.* on 2 *s.* 6 *d.*, 1 *d.* on 5 *s.*, 1½ *d.* on 10 *s.*, and 2 *d.* on 20 *s.*, and it is anticipated that the notes of 10 *s.* and 20 *s.* will yield a considerable profit, as the amount of trouble they will involve will be very small as compared with the existing money orders.

Your Lordship does not, therefore, deem it to be unsafe either as regards the public or the Department to adopt a system for the remittance of money which will dispense with forms and conditions attached to the money order, which are so costly as to more than double the costs of the service contemplated for the postal note.

The money order and the postal note are intended to be facilities for the transmission of money in small amounts, and it is difficult to understand why regulations which are cumbrous and costly should be insisted upon in the money order, which can be safely dispensed with in the postal note.

Under all the circumstances, my Lords are of opinion that it would be very desirable that further information should be obtained as to the form and conditions of the "money order" which will meet the convenience of the public, combined with proper provisions against the risk of loss, either to the Department or the public, and my Lords propose that a committee should be appointed, consisting of an officer of the Bank of England, to be named by the governor, a clerk of the Paymaster General's office, a gentleman to be named by one of the principal London Joint Stock Banks, and one to be named by the house of Messrs. Copestake, Moore, Crampton, & Co., who, it is believed, have very large transactions in remittances of both small and large sums.

These gentlemen would be requested to confer with any two or three of the most experienced officers of your Lordship's Department, and the opinion of the committee would be asked as to the existing system of money orders, the scheme of postal notes suggested by Mr. Chetwynd, and whether it would be expedient to provide either as a substitute for, or in addition to, the present system, a postal draft payable to order, at any post office to be named on the order, or in London only, or in addition to London, at certain other large towns to be named on the face of the order, as a Bank of England note is payable in London or its branches. The committee would further be requested to consider both the existing machinery for the conduct of the business of remittance, and any other that might be suggested which would come fairly within the scope of the intention of the existing money order system, which my Lords understand to be limited to the affording facilities for the safe and rapid remittance of small sums of money.

My Lords trust your Lordship will concur with them in the importance they attach to an expression of the views of persons largely engaged in money transactions, as an aid to the Government in determining the course to be adopted on a matter of extreme difficulty.

They agree with your Lordship that the existing condition under which remitters of larger amounts pay the loss incurred by the department on the smaller amounts is not satisfactory, and they hope that the result of the inquiry they propose will be the simplification of the system and reduction of costs without withdrawing any necessary precaution against loss either to the Department or the public.

I am, &c.
(signed) *W. H. Smith.*

The Postmaster General.

General Post Office,
My Lords, 6 April 1876.

I HAVE the honour to acknowledge the receipt of your Lordships' letter of the 29th ultimo, having reference to the proposals which I had submitted for altering in certain respects the rates on money orders, and for introducing a system of "postal notes."

I am glad to find that so high an authority as the Governor of the Bank of England, with whom you have communicated on the subject, considers on the whole that the scheme of "postal notes" which has been laid before you is a satisfactory one, and that your Lordships appear not indisposed to take it into serious consideration.

I entirely concur with your Lordships in attaching great importance to an expression of the

the views of persons largely engaged in money transactions as an aid to the Government in determining the course to be adopted on a matter of such difficulty, and I think that an inquiry conducted by a committee composed of persons like those whom you have suggested, and having for its scope the objects named in your letter, cannot fail to be attended with great advantage.

I shall, therefore, gladly place at their disposal every facility to enable them to arrive at a solution of the question which your Lordships propose to submit to them.

As the whole subject will then be fully discussed, I do not propose at present to offer any remarks upon the observations which the Governor of the Bank has made upon the postal note scheme.

I only wish to say, with reference to your Lordships' observation that it is difficult to understand why the regulations which are considered necessary in the case of money orders can be safely dispensed with in postal notes, that it is not contended, as your Lordships appear to suppose, that the postal note will afford the same security to the public as the money order.

The increased facilities for remittance of small sums of money which the postal note will place at the disposal of the public will, without doubt, be attended by some additional risk to those who avail themselves of them.

The money order system is one which may be regarded as furnishing, by its various checks and safeguards, as complete security to the remitter as is practically possible, and as long as the same security is to be afforded, the forms and conditions now in use are considered indispensable.

The postal note scheme is devised to meet a public demand for increased facilities, and while it is hoped that it would not prove to be attended with a loss of any considerable magnitude in proportion to the convenience which it would afford, it is not urged for a moment that it would be unaccompanied by some increase of risk.

That risk would, however, be incurred by the persons taking advantage of the postal note as a simpler method of remittance, and not by the Department, which, under the scheme which has been proposed, would be rendered as safe as it is with regard to money orders.

It would, therefore, be always open to the public, so long as the two systems were in concurrent operation, to obtain the greater and almost perfect security of the money order by the slight additional payments which its use would involve.

I have, &c.
(signed) *John Manners.*

The Lords Commissioners of
Her Majesty's Treasury.

85. Mr. *Weldon.*] Can we have a statement of the proportion of orders paid in through bankers to the whole amount of orders paid, not only as regards number, but amount also. I mean for the whole country?—We cannot do that, but we can give you in the course of a day or two a statement of such proportion at the London Office and at several of the larger towns in the country. (See *Appendices* 8 & 9.)

86. If you introduce your circular note system they will go into circulation?—I rather doubt the circulation being extensive at first. The Cheque Bank started on that supposition, but they found that it was not so.

87. I do not think that analogy applies. In your case the circular note would be guaranteed by the Government; that makes a very different condition of things. Now the question is whether you should not modify your circular notes by making them payable at certain centres in the United Kingdom?—If you confine the payment to certain places only, you limit the convenience of the public. I think the money order analogy as to circulation before payment will be followed to a great extent at first.

Chairman.] They would be paid into the bank at once.

88. Mr. *May.*] How would you deal with the case of a small place?—At present provision is made at every money order office for the requirements of the business of that office, and in making provision for the lower class of money orders we shall have made provision for the lower class of circular notes. At all the watering places on the coast; Scarborough, Ramsgate and Margate, &c. we know what the demands will be at various periods of the year, and our reserves, in what is known as the season, are changeable. At Epsom there is a medical college, where at certain seasons there is a demand for the payment of money orders, and we have to keep feeding Epsom with money in accordance with the ascertained requirements of the corresponding period of the previous year.

Mr. *Earnshaw.*] I would suggest whether a circulation like that of the American greenback could not be adopted. You could do up a greenback in a letter and remit it.

89. *Chairman.*] In your opinion would you be able to provide for these circular notes with the same facilities as for money orders. How could you provide at small offices for the payment of circular notes?—We know and provide for the demands at certain offices now, and the small circular notes will simply displace money orders of the like amount for which provision is now made.

Mr. *Walliker.*] But in the case of a money order the postmaster has the advice on hand; in the case of the postal note there is no advice; the postmaster, therefore, knows nothing of his liability, and difficulties might arise at small offices. For instance, a man resides in the neighbourhood of a receiving office in a country town. The circular notes are drawn upon no office in particular, and he goes to the receiving office which is the nearest to him, but if he has circular notes for a large amount the receiver may not be able to meet payment. No doubt payment could be obtained at the head office if he went there, and as they are only to go up to 1 *l.*, we may perhaps assume that the difficulties in respect of their payment will be few.

89*a*. Mr. *Weldon.*] Why should these circular notes be made payable to order?—The first introduction of the Post Office system was not so much that a certain person should receive a certain sum at a certain place, but there was no medium of remittance except by coin and bank notes. The general public had no facilities for sending money into the country. If the Government had issued 1 *l.* notes you never would have had occasion for the money order system at all. Now why should these be made payable to order involving a presentation to any post office in the United Kingdom?—Why should they not be made payable to bearer in London and returnable within a very limited period, say a month? Every one would know what instrument he had in his hand and

Mr. *Chetwynd.*
4 May 1876.

Mr. *Chetwynd.* 4 May 1876.

that he would run the risk of losing his money if he did not get it cashed in time. I suppose robberies would be no greater than they are now. I think that 90 per cent. of letters bringing money are not registered. The mere fact of making a note payable to order involves the question of the signature.

Mr. *Chetwynd.*] My idea is that the transition from the present money order system would be too great if we adopted a system of open cheques payable to bearer. We must tread upon this ground very carefully. We may ultimately arrive at such a state as to justify us in adopting an open cheque system, but we must first adopt something giving greater security. Many robberies in the Post Office are discovered by means of handwriting, and to my mind it is very desirable to have some writing on these notes for the purpose of tracing the persons who cash them; and although the penalty is just the same for stealing letters as for forgery, still the letter carriers would hesitate to commit forgery in respect of the notes, as they now hesitate in the case of cheques payable to order. I will mention an instance which occurred in the savings bank. I was shown a warrant with a forged signature, and I was asked if I had any idea who was the writer of the signature. The question I asked was whether it was really a case of forgery, and after being assured that it was, I at once said that the signature had been written by a particular clerk in the savings bank whom I named, and this proved to be the case.

90. Mr. *Weldon.*] These are particular cases which do not enter into the matter of such wide transactions. You could not follow up a number of forged circular notes?—In the case I refer to the man had got away to Australia. We brought him back, tried, and convicted him. The letter in which a forged note is enclosed passes through the hands of certain persons, and the Post Office can frequently trace the letter through its whole course. In the Missing Letter Office a record is kept of the names of the sorters and letter carriers through whose hands letters reported to be lost would have passed, and thieves are often caught by means of the writing on stolen documents.

Mr. *Walliker.*] I can give you a case. The other day a man came to me and said, "I have a serious complaint to make, many of my letters have been lost through the post and the money obtained." (The public are always apt to lay the blame on the Post Office.) I said, "Well, I will do all I can to clear up the matter, and I will assist you in endeavouring to find the thief." I sent to London for the money orders which had been paid, and having satisfied myself that the writing was not that of any of my officers, I got the complainant to submit to me papers containing the writing of the persons employed in his own office. I said (selecting one specimen), "In my opinion that is the writing of the person who has committed the theft"; and pointed out various things as indicating that I had fixed upon the proper person. I then advised the complainant to have this person into his private room and challenge him with the theft and forgery. Although he was reluctant to do so, he took my advice. The boy at first denied the act, but afterwards he admitted that he had stolen the orders and committed the forgeries.

Friday, 5th May 1876.

MEMBERS PRESENT:

Mr. A. Earnshaw.	Mr. S. Walliker.
Mr. F. May.	Mr. J. W. Weldon.
Mr. A. C. Thomson.	

MR. GEORGE MOORE IN THE CHAIR.

Mr. CHETWYND, further Examined.

Mr. *Chetwynd.* 5 May 1876.

91. *Chairman.*] PERHAPS it will be as well for Mr. Chetwynd to explain generally his postal note proposition?—I will explain very briefly the nature of the plan, without going at all into detail. I think in the evidence which I have already given to the Committee, I have shown that the money order business is at present carried on at a loss in respect of all orders issued at a lower charge than 3 *d.*, and that the orders issued for less than that sum form nearly 50 per cent. of the whole. Of the whole number, 25·1 per cent. are 1 *d.* and 24·1 per cent. are 2 *d.* orders. The 3 *d.* orders amount to 24·2 per cent. of the whole number, and upon the issue and payment of the 3 *d.* orders we neither gain nor lose. (*Return handed in,* see *Appendix No.* 3.)

92. Mr. *Weldon.*] Then the only profit which you have is on the remaining 26·6 per cent.?—Yes: last year we lost 1,300 *l.* or 1,400 *l.* in respect of inland money orders, but we made a profit on the foreign and colonial orders.

93. You made a profit of about 3,000 *l.*?—Yes, including foreign and colonial orders.

94. Mr. *Earnshaw.*] Those figures are arrived at on the assumption that every order costs you 3 *d.*?—Yes; as a matter of fact, however, foreign orders cost us a little more. The loss last year on inland money orders was 1,356 *l.* and the gain on foreign orders was 4,286 *l.* The amount of the forfeited and unclaimed orders was 5,300 *l.*

95. That 5,300 *l.* is not taken into account in the table?—No, it is not. My statement is that so long as we issue money orders on the present plan at a less charge than 3 *d.*, so long shall we lose

lose upon those orders, and the inference I draw from this fact is that we appear to be bound to raise the commission if we continue the present money order system. I have put in evidence, Mr. Hawkes has I think confirmed me, and Mr. Walliker, from his experience, can also confirm me, that we cannot alter the money order system in such a way as practically to reduce the cost of the money orders, that is, we cannot do the work at a less cost than 3 *d.* per order.

96. That is under the present system?—Yes, I know of no means of altering the system except the introduction of such a scheme as I have proposed here.

My idea is to avoid not only the necessity for an advice of each order, but all detailed records whatever, and to use for this purpose a form which will require no writing on the part of a postmaster beyond his signature, and which will combine the simplicity of a postage stamp as the subject of an account with the advantages of a small bank post bill, a circular note, and a cheque issued by what may be called a Government bank, and payable at any one of 5,000 Government banks throughout the United Kingdom, to the order of any person named by the purchaser of the note, in writing, on the back of it.

A specimen of the form of note will be found at page 2 of my printed papers on Post Office Circular Notes. (See *Appendix*, No. 4.)

The form, it will be observed, is in the nature of a cheque for 5 *s.*, and purports to be issued by the postmaster of Abergavenny, who acknowledges having received the amount on behalf of the Postmaster General, and is to be made payable at any money order office in the United Kingdom to the person to be named on the back of it by the purchaser. It is not to be paid after 12 months from its date, and payment is to be refused if the signature of the payee be not in agreement with the written order of the remitter of the note. It it be not paid within 12 calendar months it will become forfeited. If it be lost or destroyed no allowance will be made for it by the Post Office. If it be crossed "——— & Co.," payment of it will not be made except through a bank, and, after once paying it, the Post Office will not be responsible for any loss whatever in connection with it. When it is issued it must be stamped and signed by the issuing postmaster, and when it is paid it must be stamped by the paying postmaster, this latter stamp cancelling it. The postmaster who pays it is forbidden to reissue it, and he is directed to claim the amount in his daily cash account and to forward it with that account to the Chief Office.

I would propose that these circular notes should at first be issued in four classes at the following rates of commission:—

Class A for	2 *s.* 6 *d.*	at a charge of	½ *d.*
„ B „	5 *s.*	„	1 *d.*
„ C „	10 *s.*	„	1½ *d.*
„ D „	20 *s.*	„	2 *d.*

These classes might hereafter be increased or altered as experience may suggest.

I would propose also that each form should bear an embossed or an engraved stamp of the Inland Revenue Department. This stamp may either designate the charge for commission, or that charge combined with the value of the note. I propose that this stamp should be cancelled at the Chief Office when the note has been passed to the credit of the paying postmaster in his daily cash account

The notes might be purchased in books by the public, to be used at their own convenience without any further application at the Post Office. In this case the purchaser would practically open an account at a Government bank, and the cheque book issued to him would enable him to draw upon any of the 5,000 Government banks to the extent of the amount deposited by him, but to no larger amount.

This scheme may perhaps be regarded as affording facilities for fraud which are not afforded by the money order system, but this view is one which cannot, I think, be successfully maintained. The letter containing a money order gives, in most cases, the name of the payee and the name and address of the remitter, and this information is sufficient to enable a dishonest person, who obtains possession of a letter, to obtain payment of the order. The proposed form of circular note certainly shows these particulars on its back, and gives dishonest persons the information necessary for obtaining payment. This objection, however, may with equal force be made with regard to any cheque payable to order, but this does not appear to have any great restrictive influence upon the issue of cheques payable to order, which are extensively used for payments of all kinds throughout the United Kingdom. As the laws relating to forgery appear to be sufficient to keep down this description of crime in respect of cheques of large amount, it will no doubt suffice for these small circular notes.

97. Mr. *Weldon.*] You say that to make the business profitable to the Government you must charge 3 *d.* per order?—Yes.

98. We are told that 95 per cent. of the money orders are for sums under 5 *l.* Can you tell us what per-centage of the orders are issued for sums under 10 *s.*?—Yes, I have the estimate here; 25·1 per cent. of the orders are under 10 *s.*

99. Taking the total number of money orders as 16,000,000, would you not effect a large saving by discontinuing the issue for such small sums?—No doubt we should, but we are largely accommodating the public. Twenty-five per cent. of 16,000,000 represents a large amount of convenience.

100. Could you not devise some other means of remitting the small sums which would save your book-keeping, the expense of which causes your loss. You see you have the same expense when you send small sums such as a 1 *d.*, 2 *d.*, 3 *d.*, or sums of that kind?—There are very few orders issued for sums under 2 *s.* 6 *d.* There are only 59,000 out of 16,000,000 issued for 2 *s.* 6 *d.*

101. That is, 59,000 out of 16,000,000 are issued for 2 *s.* 6 *d.* Can you state the number of orders is issued for sums under 2 *s.* 6 *d.*?—I think we have the figures.

102. The argument is that the withdrawal of the small orders would inconvenience the public, but it appears that out of 16,000,000 only 59,000 are issued for small sums, so that you have a system of book-keeping to accommodate 59,000 individuals?—The 59,000 are for 2 *s.* 6 *d.* each. I think I can give you some information with regard to the orders issued for sums under that amount. The figures given at page 11 of my printed paper were based upon the orders paid at Manchester, Liverpool, Leeds, Hull, and Leicester, on three days in June and three days in April 1873.

103. Mr. *May.*] All these places are somewhat

Mr. *Chetwynd.*
5 May 1876.

in the same part of England?—Yes, but the figures do not represent orders issued, but the orders paid at these places; the orders were issued in all parts of England, Ireland, and Scotland. At Manchester on 1st, 2nd, and 3rd April 1873 there were paid two orders for 1 *s.*, one for 1 *s.* 4 *d.*, one for 1 *s.* 6 *d.*, one for 1 *s.* 7 *d.*, six for 2 *s.*, two for 2 *s.* 1 *d.*, one for 2 *s.* 2 *d.*, one for 2 *s.* 4 *d.*, and six for 2 *s.* 6 *d.* out of 2,803 orders. At Liverpool there were paid one for 1 *s.*, one for 1 *s.* 3 *d.*, one for 1 *s.* 6 *d.*, three for 2 *s.*, two for 2 *s.* 2 *d.*, one for 2 *s.* 3 *d.*, one for 2 *s.* 5 *d.*, and two for 2 *s.* 6 *d.*, out of 2,240 orders. At Leeds one was for 1 *s.* 4 *d.*, one for 1 *s.* 7 *d.*, one for 1 *s.* 11 *d.*, 10 for 2 *s.*, one for 2 *s.* 1 *d.*, two for 2 *s.* 3 *d.*, and one for 2 *s.* 6 *d.*, out of 1,311 orders. At Hull one was for 1 *s.*, one for 1 *s.* 2 *d.*, five for 2 *s.*, and seven for 2 *s.* 6 *d.*, out of 985 orders. At Leicester one for 1 *s.* 11 *d.*, six for 2 *s.*, and three for 2 *s.* 6 *d.*, out of 518 orders. These five offices are the offices mentioned at page 11 of my printed paper. (See *page 62 of these Proceedings.*)

104. Could we see the paid money order account of some large town for yesterday, or a few days ago?—Yes, we can have them sent for. (*Account brought in, and examined.*)

Mr. *Weldon.*] It seems to me that a very expensive system of book-keeping is preserved for the transmission of these small sums. It is, I think, hardly the work of the Post Office to ensure such perfect accuracy for this purpose. The poorer classes have, in point of fact, more security in regard to these small orders than a person who has drawn a cheque for 1,000 *l.*, and this at an enormous expense to the Government, there being a loss of 2 *d.* on all orders issued for sums under 10 *s.* But then again you cannot say that it is altogether for the protection of the poor man. You cannot tell that he is poor; it may be that many who are not of this class send orders for small sums by means of Post Office orders.

Mr. *Walliker.*] I think you would find if you saw the work at the counter in one of the large offices, that both classes deal largely with these small orders.

Chairman.] I cannot help thinking, as I have said before at a previous meeting, that the money order system goes to great lengths in carrying out checks and counter-checks against such small sums as we are told of. Might not some more simple form of money order be devised which would do away with these expensive operations of book-keeping? We are told that 2 *d.* is lost on 25 per cent. of the whole of the orders; if some restrictions were placed upon the issue of orders for the small sums, there might be a very considerable saving.

Mr. *Earnshaw.*] That points to the conclusion that something similar to the postal notes which Mr. Chetwynd has proposed should be adopted, and as there is a loss upon orders issued for less than 3 *d.*, no orders should be issued by the Post Office for less than that sum. Mr. Chetwynd's scheme appears to meet the difficulty. The Post Office would get rid of book-keeping up to a certain point, and that is one of the great difficulties. The postal notes, or an impressed cheque, would take the place of a large number of the money orders.

104*a*. Mr. *May.*] If that idea were carried out, would you not be doing away with a great advantage which poor people have at present. What I mean is, that a very large number of the small orders are not for the fixed amounts provided for under Mr. Chetwynd's scheme. If we take Liverpool we find 16 or 17 orders issued for broken amounts to every one issued for fixed sums.

Mr. *Walliker.*] It appears to me that the public require the convenience, and the question is, what is the best way in which we can let them have it. The question has been raised as to whether these small orders benefit the poorer classes. I can only say that it is but necessary to stand for a short time at one of the counters in a large office to be perfectly satisfied that that is so.

Mr. *Weldon.*] Well, I do not quite agree. If I want an order I do not go for it myself; I send a messenger, so that you cannot altogether judge of the class by whom the orders are used.

Chairman.] But a man in a good position can now, in consequence of the pressure of banking competition, draw cheques for very small amounts, and the question is really, therefore, to a large extent, the accommodation of the poor.

Mr. *Earnshaw.*] Mr. Chetwynd's proposition is that no money order should be issued for less than 3 *d.*, and he meets the order for sums under 1 *l.* by the issue of postal notes.

Mr. *Walliker.*] Mr. Weldon has suggested that we take too much pains to protect poor people using money orders for small sums, but I think we should remember the class of society with which we are dealing. Poor people have not the same power to protect themselves as men in good position have, and they are very often imposed upon. Orders for poor people not infrequently get into wrong hands, especially in maritime towns where there are a large number of sailors staying in lodging-houses and so on, who have money sent to them.

Mr. *Earnshaw.*] What a poor person wants is to go into a post office and ask for an order without being obliged to write anything or give any names; he simply pays his money, and wants something which he can negotiate. Besides, it must be an enormous labour to the Post Office to take down all the particulars which are at present required.

Mr. *Walliker.*] The public make out the requisitions themselves. You would, perhaps, be surprised to hear that out of every 140 or 150 orders issued only seven or eight or ten requisitions have to be filled up by the money order clerks.

105. Mr. *Earnshaw.*] At the Paymaster General's Office we pay the relatives of seamen small sums, such as 5 *s.*, 10 *s.*, and 1 *l.*, and we have a system under which no signature is required. There are three or four persons present, and we take a certificate that the amount has been paid; that is sufficient evidence when a person cannot write. With regard to the money orders it appears clear that there is a great loss, and we should put a stop to that loss by abolishing orders for sums under 1 *l.*?—I should like to say that by stopping the orders for sums under 1 *l.*, you abolish 8,000,000 of them, and that the postal note plan does not completely fill the gap.

106. You might modify your plan so as more completely

completely to meet it. The facts as to the number of orders for sums under 2 *s.* 6 *d.* show that a very large number of small orders are issued?—I propose that both systems should go on.

107. But you might modify the note plan?—It could not be modified so as to do away with money orders for sums under 1 *l.* altogether. The principle of the postal note plan is to have fixed amounts.

108. Mr. *Weldon.*] You do not propose to abolish money orders for sums under 1 *l.*, but you would not issue at a lower charge than 3 *d.*?—That is so; small orders are often taken out to pay balances of accounts, and if a person wishes to have the security of the money order he would have to pay 3 *d.* for it. If he were satisfied with a postal note he would have to pay less. My idea in suggesting the postal note plan is to avoid not only the necessity for an advice, but all detailed records whatever, simply using a form which will require no writing on the part of a postmaster beyond his signature. The form would combine the simplicity of a postage stamp as regards accounts with the advantages of a circular note or cheque. It would be issued at any post office, and be payable at any one of the 5,000 post offices in the United Kingdom. A specimen of the note I propose will be found in the paper which I have laid before you. It is in the nature of a cheque, and would be issued at any office, and made payable at any office in the United Kingdom to the person named on the back of it by the remitter. It would not be payable after 12 months from the date of issue, and payment would be refused if the signature of the payee were not in agreement with the written order of the remitter. If it were crossed to a bank it could not be paid except through a banker. When issued it would be stamped by the issuing postmaster, and when paid it would be stamped by the paying postmaster, this last stamp cancelling it. The paying postmaster would not be allowed to re-issue it, but would claim the amount which he had paid from the Chief Office in his cash account. (*Paper on "Post Office Circular Notes" handed in*; see *Appendix, No.* 4.)

109. *Chairman.*] I think we had better go through Mr. Chetwynd's paper. Let us take the first paragraph. Has any gentleman any remark to make with regard to that paragraph?—I think I have proved that paragraph in evidence.

110. Mr. *May.*] In the second paragraph (Appendix No. 4) it is shown that the average amount of an inland order is gradually lessening year by year; that would go to show that we ought not to discontinue orders for small amounts?—I think we ought not to dispense with them hastily.

111. In that respect I think your scheme scarcely goes low enough?—I should state that mine is simply an experimental scheme; it could be extended or altered as experience might suggest.

112. It would appear that, so far as convenience to the public is concerned, you might get rid of all orders above 2 *l.* rather than do away with those below 2 *s.* 6 *d.*?—No, because the public could remit the large sums by means of cheques.

113. Mr. *Weldon.*] But this paragraph indicates the necessity for post office orders for small amounts?—Yes, that is so. It should also be remembered that the commission upon the orders is decreasing also.

Chairman.] The next paragraph relates to the cost of every order to the department being 3 *d.* I think we are prepared to accept that.

Mr. *Chetwynd.*

5 May 1876.

114. Mr. *Walliker.*] Since your paper was written, the money order journals, &c. have been abolished; can you give us any idea of the probable effect of that abolition upon the cost of the orders?—My belief is that in abolishing the journals we have taken away from the sub-postmasters nearly one-third of their work, but the Department is not prepared at present to take away one-third of their pay.

115. Mr. *Walliker.*] What proportion of the orders are issued by the sub-postmasters?—About half the orders are issued and paid at sub-offices.

116. *Chairman.*] What is the nature of the relief?—We have relieved them of keeping copies of the money order accounts which they send up to the Chief Office, and we have substituted the manifold writing process in the preparation of the order and advice, by which both are produced at one operation, for the system of writing each of these documents separately. The nature of the relief and the reasons for it are described in this report. (*Report handed in*, see *Appendix* No. 5.)

116 *a.* *Chairman.*] But it is not the wish of the Government to reduce their salaries on that account?—No.

117. Mr. *May.*] It was probably a question of more pay or less work?—It was both.

118. *Chairman.*] The next paragraph describes the cause of the loss to the Post Office.

119. Mr. *Weldon.*] Is it not possible to reduce the expense of book-keeping so far as orders under 2 *s.* 6 *d.* are concerned, that is, to carry your scheme down to the smallest postal note you may choose to issue, which, I should say, ought certainly not to be lower than 1 *s.*?—Practically, I do not think it does go below 1 *s.*

120. If that be so, why not make it a rule; there is no reason why your postal notes should not go down to 1 *s.*?—I see no objection to their being issued for 1 *s.* I have already said that the scheme might be extended or altered as we gain experience.

121. Then I take it that if you issue notes from 1 *l.* to 1 *s.* you would be able to abolish book keeping up to that point?—Yes, if the public were satisfied with the postal notes alone.

122. Then you are prepared to carry on both systems at the same time?—Yes; at page 13 of my paper I have suggested two courses. The first suggestion is to leave the money order system as it now is, making no change in the rate of commission until some experience of the note plan has been obtained; and the second suggestion is that no money order should be issued at a lower charge than 3 *d.* The adoption of either of these suggestions would leave the money order system open to the public, and give them in addition the facilities afforded by the postal note.

123. Mr. *Earnshaw.*] But the small money orders would not be required?—I have seen an order for 1 *d.* when the commission for the issue of it was 3 *d.* In the early days of the money order system I have seen orders for sums below 2 *s.* when the commission charge was 6 *d.*, as was the case nearly up to the end of the year 1840.

124. Mr. *Walliker.*] A person taking out one of these small orders was asked what it was for,

Mr. *Chetwynd.*

5 May 1876.

and replied that it was in payment of the balance of an account?—It was required as evidence that the account had been paid, as we then kept the paid orders for six years, and could produce them when required.

125. Mr. *Weldon.*] Do you see any practical objection to the abolition of money orders for sums under 1*s.*?—No; it is only for the Postmaster General and the Treasury to decide that it should be done.

126. But do you think the public would suffer?—I think the moment we take away anything they will begin to grumble.

Chairman.] You see, Mr. Weldon, there are very few orders issued at these four or five towns (*referring to papers handed in*) for sums under 1*s.*, so that their abolition would not affect the result much?

Mr. *Weldon.*] I do not quite agree; there is a fair proportion of them.

127. Mr. *Earnshaw.*] I understand you propose that these orders should be treated as postage stamps?—Yes, up to the issue to the postmasters they would be treated simply as postage stamps. The postmaster would be charged with the notes sent to him, and would claim credit for the unissued portion of them as part of his balance.

128. Mr. *Weldon.*] Can you tell us what were the denominations of the money orders when the system was first established?—There were only two classes: 2*l.* and under, and from 2*l.* to 5*l.* For the orders of 2*l.* and under 2*l.* a commission of 6*d.* was charged, and 1*s.* 6*d.* for the orders above 2*l.* and under 5*l.* Towards the end of 1840 we reduced the commission of 1*s.* 6*d.* to 6*d.* and the commission of 6*d.* to 3*d.*, and the immediate result was a very large increase of business. These rates continued to 1871. If you wish it, I could put in a table showing the number of orders below 2*s.* 6*d.* paid at these five large towns.

129. *Chairman.*] Could you get out a return of all such orders paid throughout the kingdom for a year?—I am afraid not, as the number of operations is so enormous; but I will put in a table showing the information as far as I have stated, and an estimate might then be made for the whole 16,000,000.

130. Mr. *Weldon.*] You are of opinion that the money order system and the postal note system can go on side by side?—Yes.

131. Then a money order for 5*s.* would cost 1*d.* and a 5*s.* postal note would cost 1*d.*?—Yes; but we might have no charge less than 3*d.* for a money order.

132. But, taking things as they exist, a person would get a 5*s.* note for 1*d.* and a 5*s.* money order for 1*d.*?—Yes. The postal note will have some advantages. It can be more quickly purchased, no particulars are required to be given, and it is payable anywhere, but those who wished to have the greater security of the money order might take out a money order.

133. *Chairman.*] I see no objection to their working side by side, but I should be inclined to push the postal note?—The Post Office meets with great difficulty in attempting to force the public. We met with great opposition some years ago when we attempted to force the prepayment of postage. It would have relieved us of many million letter bills.

134. But the amount of postage not prepaid is very small?—A very small proportion of the people send letters without prepayment; we wanted to force them to prepay their letters, but, although there was only a small number who used the privilege, so much objection was raised in Parliament that the order for compulsory prepayment had to be withdrawn.

135. Mr. *Walliker.*] Do you think there is any objection to the person who takes out a note making it payable at any particular office?—No; on the contrary, I should be very glad that it should be done.

136. *Chairman.*] But the notes would be procurable and payable at any one of the 5,000 offices?—Yes; but the suggestion is that a purchaser might limit payment to one office if he wished. He might indicate on the back of the note at what office it should be paid.

137. Mr. *Weldon.*] Then the holder of the note would be bound to present it at a particular office?—I think there would be no objection to that course. It will be seen that I have also provided that if it be crossed to a banker it can only be paid through a banker.

138. Then, as to the transfer of the note from one person to another, is not the form of the note very elaborate; might it not run somewhat in this way; "Pay, at any time within 12 months from this date, to —— or order"?—I do not want to put the postmaster to any trouble beyond adding his name or initials to the form. I want to give the postmaster very little more trouble than he now has in selling a postage stamp.

139. Mr. *May.*] Could not the purchaser write in the name of the payee; one side of the form might belong to the Post Office, and the other to the remitter?——

140. Mr. *Thomson.*] But you cannot insure the signature of the payee, and why, therefore, have any endorsement; could not the note be payable to bearer?—Not with advantage; I endeavoured to explain to the Committee yesterday that in cases where the notes are stolen in transit, it is very important to have some writing on them. The experience of the Post Office with regard to matters of this sort goes to show that when letters containing cheques payable to order are stolen, and the cheques are cashed, in many cases the thief is discovered by the writing.

141. That is, if you localise the order, but if it is payable at any office the case is different?—I think I mentioned a case in your own Department in which a thief was detected by the handwriting.

142. Yes; but then we knew in that case that it was one of our own clerks; we knew that he was in the department?—I have already explained that the Post Office has the means of ascertaining the hands through which each letter has passed. The Post Office cannot undertake to find out thieves outside the department, but it can find out thieves within, and detection is facilitated by having the writing.

143. Mr. *Earnshaw.*] But this is simply a note for 5*s.*; it may not be sent by post at all?—No; but if it were sent by post, and were lost, the sender would complain. We should ask him to state when and where he posted it, and the postmaster would be able to state when it went, and by what bag it went. We could then trace the bag, and presumably the letter, through the various offices.

144. Mr. *Thomson.*] You would prove the delivery?—No, we do not attempt that, we only prove the delivery of registered letters.

145. A person

145. A person sends one of the notes to another, and the person to whom it is sent does not wish to acknowledge it; he wishes to commit a fraud, and writes to say that he has never been paid?—To do that he would require an accomplice to forge the signature and to cash the note, and it would not be worth while to do that for sums of 1 *l.* and under.

146. But if the notes were payable at any office, the postmaster who cashed one would have no grounds for suspecting anything wrong?—The notes might be localised if the sender wished it.

147. Do you not think it would be sufficient if the notes were payable to bearer?—No; I think the notes might be crossed to a particular post-office, or to a banker, and my idea is that if a cheque has any advantage in being payable to order (and I do not think it is necessary for me to argue that point), we ought to give the public the like advantage in regard to these postal notes.

148. But, considering that the notes would be payable at any one of 5,000 offices, I do not see what security you have in making them payable to order?—If a person chose to cross the note to a particular post-office and made it payable to order, he should have the same security as a person has who makes a cheque payable to order.

149. Mr. *Weldon.*] It appears to me you have invented a circulating medium which will do away with the expensive machinery of the present money order system, but that you cling to a part of the machinery of that system; you want to protect the public against your own officers. The question is, whether the notes should not be made payable to bearer, and the public obliged to take the risk. I do not think that an ignorant man would understand the elaborate form which you have devised; he simply wants a circular note payable to bearer, and all these instructions would be a dead letter to him?—I may mention that more elaborate forms are used with reference to the whole of the 16,000,000 of orders which we issue and pay annually, and that no difficulty has occurred in regard to their not being understood; but to meet the views expressed by yourself and Mr. Thomson, I may say that it might be left to the purchaser to make the note payable to order or to bearer.

150. Mr. *May.*] Could it not be done as it is with exchequer bills; the words "Pay to" are printed, and if the blank which follows is not filled in, the bill is payable to bearer?—Yes; that might be done.

151. I think, so far as the back of the proposed note is concerned, it may be very well for the Post Office, but it would create inconvenience to the public?—It should be remembered that the public do much more in the case of the money order.

Mr. *Walliker.*] Then the words would run, "Payable to ———— at ————;" and, if the name and office were not filled in, the note would be payable to bearer.

152. Mr. *Thomson.*] There is another question; the note is payable only within a limited period; how would you get a date which would be indisputable?—We should have the postmaster's stamp.

153. But the impression of that stamp might be rubbed out. Again, if a postmaster issues a number of the notes to a person, the person who takes them would be limited by the postmaster's stamp?—Yes.

154. Mr. *May.*] I think the notes might be dated with the month only, and not with the day of the month?—Yes; the postmaster's stamp would have the date, but the month only might be taken.

155. Mr. *Earnshaw.*] Why should not the stamp be an impressed stamp, or rather a perforated stamp?—These perforating machines cost about 20 *l.* apiece. Mr. Hawkes can give his experience of three or four in his office. They are costly to purchase, they get out of repair, and it costs 10 *s.* or 12 *s.* for each fresh figure, and one at least is required for each year. To supply 5,000 postmasters with one for each class of notes would be a very serious expense.

156. Mr. *May.*] Would not the application of this kind of stamp give the Post Office clerks much more trouble than a simple stamp such as is now used?—Yes.

157. *Chairman.*] We must leave the question of the stamp to the experience of the Post Office.

Mr. *Walliker.*] If an objection had been raised upon the stamping of documents which had only a short time to run, and of which there would probably be a great many outstanding at the limit of that time, it would be important; but inasmuch as these have 12 months to run, there would be few outstanding, and it would not be a difficulty which would cause much trouble.

158. Mr. *Thomson.*] My opinion is that if you limit the date you will expedite the return of the notes?—I think all we can do with regard to the proposed notes is to follow the course we have followed with money orders. The postmaster's stamp suits very well in that case, and gives a clear indication of the date.

159. But if any malicious person rubbed out the date with his finger?—The paying postmaster must refuse the document, and make inquiry.

160. Mr. *Weldon.*] With regard to the ordinary stamp of the Paying Post Office being used to cancel these notes, would it not be desirable to introduce the word cancelled in the stamp as well as the date?—My idea is that the stamp of the paying office should be the primary cancelling stamp.

161. I mean that you should make use of the word "cancelled" when you pay the note, instead of in addition to the date stamp?—It is *de facto* cancelled by the application of the paying office stamp.

162. You may know inside the post-office that this is a cancelling stamp; but if the postmaster were to issue the note again, no person would refuse it, at any rate no ignorant person would, because it bore a date stamp in one corner?—There is this fact, however, that the postmaster will have to claim the order in his account, and the claim would not be allowed unless the note accompanied the account.

Mr. *Weldon.*] But it is not expressed on the document that the stamp cancels it?—A space is specially provided for the stamp of the paying office, and at the head of it is printed the words, "Stamp of paying office cancelling this note."

162 *a.* *Chairman.*] What is the next point?

Mr. *Weldon.*] The question of the time during which the paper should circulate.

163. *Chairman.*]

Mr. *Chetwynd.*

5 May 1876.

163. *Chairman.*] Has any member anything to say to that?—I propose that the notes should have 12 clear months to run; that is, a note issued in January would be payable any time during the following January, so that, practically, the period would often be nearly 13 months. If they are not presented within that period they would be forfeited.

164. Mr. *Weldon.*] Then the limit of circulation is to be the same as that of money orders?—Yes; this is, of course, subject to the result of future experience. It can be altered if necessary.

Chairman.] The amounts of the notes are 2 *s.* 6 *d.*, 5 *s.*, 10 *s.*, and 20 *s.*?—Yes.

Mr. *Thomson.*] It would be for the Post Office to determine afterwards, by experience, what was necessary.

165. Mr. *May.*] We have to recommend what should be done at the commencement. I cannot make out in any way how a charge of ½ *d.* for a note of 2*s.* 6*d.* can pay. You say that for 1,000 of these orders the Post Office gets 2 *l.* 1 *s.* 8 *d.*, out of which you give the local postmasters 1 *l.*, leaving 1 *l.* 1 *s.* 8 *d.* for all your labour, you providing the money and cost of printing the documents. It seems to me out of all proportion to the remuneration which you give to the postmasters. If you say the postmasters derive 1 *l.* out of the commission, surely 1 *l.* 1 *s.* 8 *d.* is not enough for all the labour and cost at the Head Office?—May I ask your attention to page 14 where I show that, after providing for everything to the best of my knowledge, the annual income is estimated at 15,000 *l.*, and the expense at 10,000 *l.*, leaving a margin of 5,000 *l.* We shall not want more supervision, and we shall not want very much more room than we have provided for, even if the business increase largely over my estimated number of 2,264,000 transactions.

166. You see there is a difference of 2½ *d.* between the proposed commission under your scheme and the cost of money orders?—Yes. I am not going to work this plan on so expensive a system. I mean to work with a female staff, at least that will be so as regards the examining staff. We have already 50 female clerks in my office, and in the savings bank there are 65.

167. Mr. *Weldon.*] With regard to this ½ *d.* charge, I dislike very much going into small fractions in that way. Mr. Chetwynd recommends that the charge for money orders should be materially raised if not increased to 3 *d.* Now if the charge for money orders is increased, I do not see why the lowest charge for a postal note should be less than 1 *d.*, which would be much more convenient?—I think that if ½ *d.* will cover the expense we should not charge 1 *d.* The notes will be used mostly by poor people. A halfpenny is now an important item in post office accounts. We issue ½ *d.* postage stamps and ½ *d.* postal cards, and the ½ *d.* is not now a terror for us in our accounts. We would have only 60,000 halfpenny cases out of 16,000,000.

168. Mr. *May.*] A man wanting to send a pound's worth of these could take eight at 2*s.* 6*d.*, or four at 5*s.*, for the same commission. Now there must be more expense with eight than with four orders, as there would be eight payments instead of four?—A person may do the same thing in the matter as money orders. We cannot compel the public to take the article we desire to sell. I know many people who buy only ½ *d.* stamps. Two will do for a letter and one for a newspaper or circular, but a 1 *d.* stamp ought not to be used for a newspaper unless the loss of one half of it be unimportant to the sender.

Mr. *May.*] You should rather discourage giving several instead of a single note for one amount?—Yes, but we are powerless in this matter.

169. Mr. *Earnshaw.*] My notion is that the notes should be at two rates, viz., 1 *d.* and 2 *d.* We have, however, to hear what Mr. Chetwynd has to say?—My opinion is, after careful consideration, that these are fair and reasonable rates, viz., ½ *d.* for 2*s.* 6*d.*, 1 *d.* for 5 *s.*, 1½ *d.* for 10 *s.*, and 2 *d.* for 1 *l.*

170. Mr. *Weldon.*] You propose to raise your commission to 3 *d.* on every post office order now issued for 2 *l.* and under?—Yes, on account of the expense of keeping accounts, &c. It costs as much for an order of 1 *d.* as for one of 10 *l.*

171. *Chairman.*] I observed very small amounts in the money order sheet?—You will please to remember that these returns are taken from five different accounts for six days. I am going to give you a fuller table on Monday.

172. Mr. *Walliker.*] If we raise the minimum commission to only 2 *d.* we should still put the revenue in a fair way. We make a profit on void orders of 5,300 *l.* a year, and on foreign and colonial orders of 4,286 *l.*, together 9,586 *l.* We have a loss, on the other hand, of 1,356 *l.* on inland orders, which leaves a net profit of 8,230 *l.* Then if we made the 1 *d.* orders 2 *d.* we should make a further profit, as it appears to me, of 16,000 *l.*, which would make the total net profit above 24,000 *l.* Would not that put us in the position of being able to bear the loss on the 2 *d.* orders?—No; we should still be issuing those orders for less than they cost us.

Mr. *May.*] Do you think, Mr. Walliker, you have any right to consider the amount derived from lapsed orders in your calculation of profits?

Mr. *Walliker.*] Leaving that out it would make the margin of profit about 20,000 *l.*

Mr. *May.*] That is comparatively nothing on the total transactions of the year, viz., 27,000,000 *l.*

Mr. *Walliker.*] No; but it is nearly 10 per cent. on the cost of working, that is, on 207,000 *l.*

173. Mr. *Weldon.*] What is the amount of the balances in the hands of the postmasters?—They run from 120,000 *l.* to 240,000 *l.*; I am speaking of the money order balances.

173*a*. The difference between these amounts shows that there must be a considerable variation from month to month?—That is so.

174. Mr. *Earnshaw.*] You cannot rely on the use of more than 150,000 *l.*?—We cannot rely upon that. The postmasters use revenue money and indeed all post office moneys in their hands to enable them to pay money orders, savings bank withdrawals, salaries, or other claims properly payable at their offices.

175. Mr. *Weldon.*] This 3 *d.* rate is so much mixed up with the question of circular notes that it requires more deliberation; why do you propose 3 *d.* as the lowest rate for a money order?—My object in naming that rate is simply to repay the cost of the work that is absolutely necessary to de done with regard to these money orders.

176. Taking that in connection with the scale for your circular notes it will drive the money order out of the field altogether; you would charge 3 *d.* all round for any sum under 2 *l.*?—Yes,

Yes, because it costs the department 3 *d.* for every money order, no matter what the amount is.

177. You say you will not give the greater security unless you are paid the higher rate, but if the public like to take the circular note they can have it at the cheaper rate?—Yes.

177*a*. Then following up my remarks, I say, if you get 3 *d.* for every money order, why cannot you get a greater profit by charging more for your circular notes; for ½*d.* for 2*s.* 6*d.* is so small a charge that you might as well make a present of it to the public?—I consider the charge of ½*d.* for 2*s.* 6*d.* will suffice.

Mr. *May.*] The profit to the Government is not the only subject for our consideration.

178. Mr. *Weldon.*] When you come to estimates and you arrive at so small a point, I for one cannot place any faith in that item, for the 123 *l.* may disappear in actual working; it may come to be a loss altogether?—My object is not to deprive the public of the advantage of having small postal notes at a cheap rate.

179. My remarks come to this: of what use is it estimating what you get on small orders, because it is quite impossible to get a correct estimate?—If we do not sell the things there is an end of it, it is simply the cost of printing.

180. I know; but in this estimate you have taken the cost of printing and all other expenses, and you make your estimates come out 123 *l.* All these estimates are subject to rises of price in all sorts of things; paper, for example, may go up?—My estimate is simply this: 123 *l.* is the estimate of the income. If we sell 59,000 of these notes, they will, at ½ *d.* each, necessarily produce 123 *l.* Then we shall have to pay the cost of these notes, for clerks' services, for the allowances to the postmasters, for the rent and taxes, but 59,000 out of 2,260,000 would be a very small proportion to the whole. I have shown at page 13 that for these 2*s.* 6*d.* notes we should receive 2 *l.* 1*s.* 8*d.* per 1,000. We should pay the issuing and paying postmasters 1 *l.*, and there would be 1 *l.* 1*s.* 8 *d.* left for the chief office expenses; and my idea is that that is enough.

180*a*. Mr. *May.*] Surely the mere printing of these documents must be very great?—The printing is not expensive.

181. One hundred and twenty-three pounds is the whole income, is it not?—Yes, on the notes issued for 2*s.* 6 *d.*

182. Taking the items of expenditure, on what basis have you gone with regard to the number of clerks required, the messengers, female staff, and all the stationery and so on; have you done it upon averages?—I have gone through the whole thing, the class of persons to be employed, and the cost of the various items of expense.

183. Mr. *Walliker.*] I think that before the Post Office Savings Bank was established you estimated the cost of working it; will you tell the Committee with what result?—Mr. Scudamore and I estimated that the cost of each Post Office Savings Bank transaction would be 7 *d.*, and practically that estimate has been found accurate. That bank has received over 85,000,000 *l.* since 1861.

184. Mr. *May.*] In the estimate of expenditure you have not included printing?—That is included in the stationery. With paper specially prepared, with engraving of the same class as that used for banknotes, with a stamp of the Inland Revenue Office, Messrs. De la Rue & Co.'s estimate was from 8*s.* to 9*s.* per 1,000.

185. Your estimate is based on 2,260,000 at 9*s.*; 2,000,000 at 10*s.* would be 1,000 *l.*?—This estimate was prepared on the idea that the notes were not to be produced in the same costly way that banknotes are produced, and the cost will therefore be rather more on account of the improved class of work we propose to have.

186. You do not take the expense of the Inland Revenue Stamp into account?—Messrs. De la Rue & Co. include all that in their estimate.

187. Mr. *Walliker.*] I do not think we have quite threshed out the question of the 3 *d.* rate yet. There seems to be an impression that we should not leave a sufficient margin in having 20,000 *l.* of profit, and Mr. Chetwynd seems to think that if we continued to issue orders for 2 *d.* we shall eventually come to a loss. I have been putting the figures together, and find that without the void orders we should have a net margin of 20,000 *l.*; and we must remember that when circular notes are in vogue, they will go to reduce the class of money orders on which a loss occurs. Now, surely, if we have a margin of 20,000 *l.* we should hardly go before the public with a good case for doing away with the 2 *d.* rate. It seems to me very important that we should not go beyond the 2 *d.* rate if we can get on with it. An order does cost us 3 *d.*, it is true, but we charge 1 *s.* for 10 *l.*, though it costs us no more?—I must remind the Committee that there are less than 2 per cent of 10 *l.* orders.

Mr. *May.*] I think Mr. Walliker's suggestion is a very good one. It is not desirable to recommend an addition of 200 per cent. to the commission in respect of these small orders. We might recommend that the charge up to 1 *l.* should be 2 *d.*; from 1 *l.* to 2 *l.*, 3 *d.*; from 2 *l.* to 5 *l.*, 6 *d.*; and 1 *s.* for all sums over 5 *l.*, for the commission affecting the larger orders is a very small matter indeed; it is only the better class of people who use such orders.

188. Mr. *Weldon.*] You immediately come into collision with Mr. Chetwynd's scheme, for no man will take his postal notes and pay 2 *d.*, if he can get complete security for the same money; 3 *d.* would cover all his scheme, and drive the people to take his circular notes?—That is so. There has been an outcry for several years past for a scale ascending by 1 *d.* in the pound; and it was because of that outcry that we gave way to the scale of 1871, which has resulted in this loss. There will be the like outcry if we attempt to change the scale to 2 *d.*, 3 *d.*, 6 *d.*, and so on, as suggested by Mr. May.

188 *a*. Mr. *Walliker.*] It will create much clerical labour if you vary your rates as Mr. May has suggested. The check on the commission is now extremely simple. We check it in performing another part of the work, which must be done at any rate. For the other you must go over the whole account specially for the purpose.

Mr. *May.*] No doubt the present plan is extremely ingenious and simple, but the fact remains that the rates do not pay as a whole.

Mr. *Walliker.*] Because of the 1 *d.* orders.

Mr. *Weldon.*] I think, Mr. Chairman, it would be a fair thing to recommend to the Government that the 1 *d.* rate should be abolished, and that some other rate, 2 *d.* or 3 *d.*, should be substituted.

Mr. *Chetwynd.*
5 May 1876.

Mr. *May.*] I think 3*d.* is rather a large amount for the initial rate.

Mr. *Thomson.*] The thing would be to abolish the 1*d.* rate, and introduce the two systems concurrently.

189. *Chairman.*] Suppose you three practical men do not object to get rid of this 1*d.* rate, then do you want to get rid of the 2*d.* rate?

Mr. *Chetwynd.*] I should like the minimum commission on a money order to be 3*d.*

190. Mr. *Walliker.*] I decidedly think it should be 2*d.*?—But it costs us 3*d.* for every transaction. I do not see how you can make the 2*d.* rate pay in any way, unless you combine the sults of the money order system with the re-results of the postal note system. If you bring them together you may, perhaps, keep the commission down to 2*d.*

Mr. *Thomson.*] What is lost at the 2*d.* rate is gained on the higher rates of commission. The amount is considerable; the rates 4*d.*, 5*d.*, and 6*d.* are a very increasing scale.

Mr. *Walliker* (to Mr. *Hawkes*).] What is the proportion of orders on which commission above 3*d.* is paid?

Mr. *Hawkes.*] From an estimate made in 1874, 86,000 *l.* commission out of 175,000 *l.* was for orders on which the commission was 4*d.* and upwards.

191. *Chairman.*] I think we must leave that question for the present. Why could not the embossed stamp be applied in the one process of printing the postal note?—That will be done.

192. Mr. *May.*] I cannot believe that there can be a difference of 2½ *d.* in the cost of the two schemes?—As regards money orders, we give the postmaster who issues and the postmaster who pays 1*d.* each for each transaction. As regards the postal notes, I propose to give the postmasters who issue and pay 1 *l.* per 1,000 between the two, which makes all the difference. We now give them for money orders about 8 *l.* per 1,000 for issue and payment.

193. Mr. *Walliker.*] Mr. Weldon said that these circular notes would take the place to a large extent of money orders at 2*d.*; now I should like to see these circular notes at the first starting limited to sums of 10*s.* One reason is this, that they would supply to a large extent the place of the orders now issued for 1*d.*; and as the cost of a circular note for 10*s.* is 1½ *d.*, whilst the cost of a money order would be 2*d.*, the rates would not conflict.

Mr. *Thomson.*] I do not think the commission would have any influence on the public; they would treat money orders and postal notes as distinct things.

194. Mr. *Weldon.*] If you lower your rate to 2 *d.* you come into conflict with the circular notes. According to my idea it becomes prohibitory to take a money order?—But there is this fact, that if you lose a circular note or have it stolen it is gone for ever, whereas you can get a duplicate money order. That is worth something. There is almost absolute security with the money order, but not with the postal note.

Mr. *Weldon.*] The tendency becomes strong, then, to drive the money order into the circular note scheme? The public will, no doubt, take the risk in a large number of cases.

195. Mr. *Earnshaw.*] My idea is to get rid of the money order system up to 1 *l.*?—We cannot go very high with the circular note; we must continue to give security to the public by means of the money order, if they are willing to pay for that security.

Mr. *Thomson.*] I think, in talking to commercial men on this subject, that their view is that books of notes for small sums would save them the trouble and inconvenience of drawing small cheques on their bankers.

Mr. *Chetwynd.*] But remember that the money order system was established for securing to poor people the means of transmitting small sums safely through the post.

Mr. *Weldon.*] Was it really established for that purpose, or was it only for the transmission of small sums?

Chairman.] We will leave that for the present. What is the next step?

Mr. *May.*] We appear to have got to about the end of the postal note question.

196. Mr. *Walliker.*] At page 5 you speak of the advantages which your system of notes would afford at places where a money order office would not be established. A person can purchase these circular notes and take them home, whereas he might have to go for miles perhaps to get a money order, or wait for days until someone happened to be going to the market town?—Yes; there are about 8,000 post offices where the only post office business done is the collection and distribution of letters.

197. Mr. *Weldon.*] These circular notes might be purchased at any one of them?—Yes, arrangements might be made with that view. The postmasters could be authorised to get them, if desired to do so, just as they are required to get postage stamps of the higher denominations. I am not prepared to say that we should supply these notes to every village, but every person in every village could get the postmaster to obtain them from the head office for them.

198. Mr. *Walliker.*] We should not desire to encourage that very much, because the transmission of money through the post is objectionable; but a man going to the market town once a week or so could purchase these notes himself and take them home with him?—There are 13,000 post offices in the United Kingdom. About 5,000 of those are money order offices, and 8,000 are not money order offices. At the 5,000 I propose to issue these postal notes, but in the case of the other 8,000 anyone may get the postmaster to obtain a postal note for him. The sub-postmaster would be required to enter the amount in his letter bill, as in the case of remittances for postage stamps.

Mr. *Walliker.*] There is another advantage in the postal notes to a man travelling about the country, he has always the means of remitting money from any place where he may be.

Mr. *Thomson.*] They might also be used in a large way in making savings bank deposits where the people find it inconvenient to go to a savings bank office.

Monday, 8th May 1876.

PRESENT:

MR. GEORGE MOORE, IN THE CHAIR.

Mr. A. Earnshaw.	Mr. S. Walliker.
Mr. F. May.	Mr. J. W. Weldon.
Mr. A. C. Thomson.	

Mr. CHETWYND, further Examined.

Mr. *Chetwynd.*

8 May 1876.

199. *Chairman.*] HAVE you the returns you promised to prepare for us?—I have had a return prepared showing the number of money orders of the various amounts from 1*s.* to 2*s.* 6*d.* inclusive paid at Hull, Leeds, Leicester, Liverpool, and Manchester, in six days. It shows that at these five towns there were five orders at 1*s.*, and I may say that if you multiply these figures by 1,000, you would have about the average number of orders of that class paid during a year in the United Kingdom. This would give about 5,000 orders at 1*s.* throughout the United Kingdom, and we should, therefore, if the postal note plan were adopted for 1*s.*, probably issue about 5,000 at 1*s.* in a year. Upon the same principle the estimate gives 1,000 at 1*s.* 1*d.*, 1,000 at 1*s.* 2*d.*, 2,000 at 1*s.* 3*d.*, and 5,000 at 1*s.* 4*d.* In this return we have no orders at 1*s.* 5*d.*, but, of course, throughout the kingdom there would probably be a few. The estimate gives 6,000 at 1*s.* 6*d.*, 3,000 at 1*s.* 7*d.*, 1,000 at 1*s.* 8*d.*, 2,000 at 1*s.* 9*d.*, 1,000 at 1*s.* 10*d.*, 4,000 at 1*s.* 11*d.*, 39,000 at 2*s.*, 4,000 at 2*s.* 1*d.*, 4,000 at 2*s.* 2*d.*, 7,000 at 2*s.* 3*d.*, 2,000 at 2*s.* 4*d.*, 2,000 at 2*s.* 5*d.*, and 59,000 at 2*s.* 6*d.* (*Return handed in*, see *Appendix, No.* 6.)

200. Mr. *May.*] One shilling and eleven pence appears to be a favourite amount?—Only to a limited extent; the largest number is for 2*s.* 6*d.*, the next largest number being for 2*s.* The sum of 2*s.* 3*d.* comes next, but the number of orders at that figure, and at all the others referred to, is very small.

201. Have you a total of all the orders below 2*s.* 6*d.*?—There are altogether 89,000 orders below 2*s.* 6*d.*, as against 59,000 at 2*s.* 6*d.* There was another return you asked for, namely, a statement of the number of postmasters in Ireland and Scotland having certain classes of reserves allowed to them. I gave you the numbers for England, and they are now put in a tabular form. In Scotland the reserves amount to 16,325*l.*, and in Ireland they amount to 10,295*l.*, making, with England, a total of about 161,000*l.* (*Return handed in;* see *Appendix, No.* 7.) You also asked for a return showing the number and amount of money orders paid through bankers at certain post offices, and the total number and amount of orders paid at those offices. We have got this information for the chief office in London, and the offices at Manchester, Liverpool, Hull, Newcastle-on-Tyne, Bristol, Leeds, Edinburgh, Glasgow, Dublin, and Belfast. The total number of orders paid at these offices was 15,515, and the total amount was 27,977*l.* Of these, 10,684 orders, amounting to 18,575*l.*, were paid through bankers. Out of the 15,515 orders, 8,778 were paid at the chief office in London.

202. Mr. *Weldon.*] Eight thousand seven hundred and seventy-eight out of 10,684?—No; 8,778 out of the total number of 15,515. Out of the 10,684 orders paid through bankers, 8,339 were paid at the chief office, that is to say, about eight-tenths of the whole number.

203. Mr. *May.*] These orders were paid in one day?—Yes.

204. The result of this is, that the bulk of the orders paid in large towns are paid through bankers?—No; that is not quite so. It is so in London, at the chief office; but out of 1,056 orders paid at Manchester, 215 only were paid through bankers; at Liverpool, out of 1,019 only 73 were so paid; at Hull, 13 out of 393; at Newcastle-on-Tyne, 108 out of 326; at Bristol, 171 out of 535; at Leeds, 95 out of 500; at Edinburgh, 380 out of 594; at Glasgow, 526 out of 882; at Dublin, 731 out of 1,181; and at Belfast, 33 out of 251. (*Returns handed in;* see *Appendices, Nos.* 8 *and* 9.)

205. Mr. *Weldon.*] These figures do not seem to me to agree with the statements as to London; we were told that 2,100,000 orders were paid in London; this statement, as to 8,778 being paid in London, would give about 3,000,000?—These figures now given are for one day only, and refer to last Friday. The other statement was based upon figures of the year 1874. The proportion of orders paid through bankers goes on increasing.

206. *Chairman.*] Have you at present any further information to give us?—No, I think not, until after you have before you Mr. Beaufort's report.

Mr. *Walliker.*] This is Mr. Beaufort's report; it is dated 15th December 1874, and runs thus:—

"Manchester,

"The Secretary, 15 December 1874.

"Mr. Chetwynd's report on the circular-note plan explains that the loss of revenue in the money order system arises from the large amount of clerical labour which is involved in issuing, recording, accounting for, and paying orders in the various money order offices, the process of which he then describes.

"I may say here, that he has not, apparently, taken into calculation the cost of stamping, sorting, and transmitting the advices of money

Mr. *Chetwynd.*

8 May 1876.

orders; and the cost of the system, without including this item, is not completely given.

"Omitting, however, the cost of transmission, &c., it must be apparent at a glance that a great saving would be effected by the abolition of the advice, and the various forms which would disappear with it, and of the clerical labour connected with them, while its cessation would open the way for enabling the present system to afford the public nearly all the advantages offered by the circular-note plan, and others which that plan does not offer.

"There is nothing to prevent the two systems from working together, though it seems to me that if the suggested alterations can be made in the money order system, the circular-note plan would be almost uncalled for, either as a prop to the failing revenue of the former, or as an additional accommodation to the public; and there would be an advantage in having one uniform system, instead of two systems, with regulations to a certain extent conflicting, and therefore more liable to be misunderstood by some of the very numerous dull and ill-educated persons by whom the Post Office business is conducted in all parts of the kingdom.

"The plan which I am about to describe would enable the public, as under the present system, to transmit any variety of amount, and thus avoid the necessity for enclosing postage stamps as a supplement, which they are to be invited to do, in order to supplement the circular note when it is short of the required amount, and which I look upon as a most dangerous expedient, offering, as it will, to dishonest persons a distinct clue to the circular note which they accompany, and which can be cashed anywhere.

"It is well known that almost any clerk or letter carrier can detect the presence of postage stamps in a letter, and also that a very large number of letters, which contain them, are stolen in consequence of this facility.

"The plan which I suggest is, to issue money orders without advices, payable at any money order office in the kingdom, once only, not later than two months from the date of issue, and capable of being transferred, in the meantime, from one person to another, in the same way as a cheque drawn 'to order.'

"The person to whom the order is issued could have it made payable either to himself or to some one else, and the person to whom it is made payable, either at first or by endorsement, could either get it cashed at any office, or endorse it to some one else, and so on, until it is presented at a post office for payment, when the person so presenting it would obtain cash for it, after affixing his signature in the proper place on the face of the order, which would then become valueless, except as the postmaster's voucher for the amount paid, and to be claimed by him.

"I fix two months as the limit of circulation, because there is no real necessity for a longer period, and because it will, of course, be necessary to issue duplicates of orders which may be lost, and no duplicate could be granted until the original is no longer payable.

"By this plan the remitter of the order would himself, as it were, write the advice on the order by endorsing it, when it is not drawn in favour of some particular person; the person in whose favour it was either originally drawn, or afterwards endorsed, could make it payable to anyone else, and each person receiving it afterwards would only have to take care that it was endorsed by the person to whom it was last made payable, while the paying office would have to see that the signature of the person presenting it was that of the last endorsee.

"It would thus be necessary for a person who gets hold of the order improperly to commit forgery before he could get it cashed.

"The paying officer would have to see that the order had not been altered since its issue, and I believe that if proper paper of a very thin description be used, no alteration could be made without detection. If the paying officer should have any suspicion that the order had been tampered with, he would retain it, instead of paying it, until he could learn from the chief office for what amount it had been issued.

"The department would thus be as safe from the payment of a fraudulently altered order as any bank from a fraudulently altered cheque, and the public through whose hands it would pass may, I think, be left to protect themselves in the same way as they do now in regard to money orders handed from one to another, or to cheques 'to order' passed from hand to hand. The advice is supposed to afford a protection against payment to a wrong person of an order stolen or misdelivered, but that is simply a fiction, for the thief almost always obtains sufficient information as to the name of the sender; and the uselessness of the advice in this respect is shown by the number of orders which are paid to the wrong person. In fact, it is rather an assistance than otherwise to a thief, for if he can give the name of the sender he is not troubled with any further scrutiny.

"In order to show more clearly than I could by manuscript the proposed form of money order, &c., I have had some copies printed (at my own cost), and I beg to submit them for examination, not as a perfect form, but as sufficiently so to explain their intended use. (See *Appendix, No.* 10.)

"The form marked 'A' is the money order with the necessary instructions on the face and the back.

"The sheet marked 'B' shows a page of the book of orders, &c., which would be supplied to postmasters in the same way as the order and advice forms are now supplied. Each page would contain, say, five or six money orders, with the corresponding counterfoil. It is divided into three parts or columns, viz., part 1, which would remain in the book as the postmaster's permanent record; part 2, which would go up to the chief office every day as the postmaster's daily account of orders issued; and part 3, which is the order.

"Each order, and the sections of part 1 and part 2 referring to it, would bear the same recording number, and these consecutive numbers would be the check on the issues in the same way as under the present system.

"A postmaster in granting an order would first fill up part 1, then fill up the order (part 3), and afterwards, at leisure, copy part 1 into part 2, for his account for the chief office.

"In sending up the account he would detach part 2 in slips, having added up the columns; and fastening the slips at the top, he would send them up as his vouchers for orders issued, and as verifying the account in which he would debit himself with the amount. The orders paid by him

him would first be entered in his paid journal, which must be retained, and would be sent up to the chief office as his vouchers, as they now are.

"The two sets of vouchers would be accompanied by a printed form, simply specifying the total number of the issued and paid vouchers respectively, and the total amount.

"The form would be something like the enclosed manuscript form, marked 'H.'

"The money order, and the two counterfoils relating to it, would take less paper and much less printing than the present money order with its advice; and they would dispense with the present order and advice form, with the journal of orders issued, with the copy of such journal now sent to the chief office, and also with the copy of the paid journal now sent to the chief office, and with all the forms marked 'X' in the accompanying 'application for stores' form.

"It is plain that a large quantity of stationery will thus be saved, and also a large amount of clerical labour at every office, and that an order can be granted in rather less time than the transaction now occupies.

"In the sheet marked 'B' I have shown parts 1 and 2 to be filled up separately, as they would be at ordinary offices, and containing all the particulars necessary to be so entered; but it will be obvious that at large offices where the work is heavy, a still greater amount of clerical labour will be saved by having parts 1 and 2 identical, and both written at the same time on the manifold plan, as shown in the sheet marked 'C.'

"The slip marked 'D' is that which would go up in the daily account from each office, and that marked 'E' is the counterfoil or permanent record which will remain in the postmaster's book.

"As to the disposal of 'D' in the Chief Office, I can of course say nothing, except that all writing or entry there would be avoided by pasting the slips 'D' into a waste book, as shown on paper 'F.'

"The order corresponding to each counterfoil 'D' could be annexed to it by pasting the edge (leaving the back exposed for reference), after being credited to the paying office, by which means the book would show at a glance at the end of two months the number of outstanding orders, that is, orders not yet cashed.

"I am aware that many objections may be raised against this plan, but it would be waste of time for me to suggest them in order to meet them beforehand in the way in which I believe that they may be met.

"I think it is a pity that a system of such immense value to the public as the money order system should be either discarded or curtailed on account of its cost, without first trying whether the cost cannot be economised, especially when the economy can be accompanied by such advantages to the public as the proposed change would afford.

"I must again observe, although this plan is not necessarily subversive of the circular note plan, that it is free from two of the most objectionable features of that plan, because it will not involve an invitation to the public to send postage stamps along with their circular notes, which I look upon as a most certain temptation and plain invitation to dishonesty; and because it will not, as the circular note plan will, save the department from risk of loss by saddling postmasters, sub-postmasters, and receivers with a very heavy money responsibility which may result at any moment in a serious loss to them.

"As to the saving to be effected by this plan, it is not easy for me to give more than an approximate estimate.

"As regards stationery, a reference to the marked 'application for stores' form will show that out of 33 forms, books, &c., 18 will become useless, and I may say safely that one half of the present cost of stationery may be saved.

"As to clerical labour, the plan will enable me with the greatest ease to dispense with two clerks from the money order staff of eight. At this office the daily account is made out by the copying press, and not by hand; so that at all offices where it is made out by hand the saving will be greater, as this account will cease.

"After careful consideration, therefore, I think I am quite safe in calculating the saving of clerical labour generally at 25 per cent.

"The comparative simplicity of the proposed plan, and the ease with which it can be worked, together with the saving of labour, will fully justify a reduction of 25 per cent. in the commission to sub-postmasters and receivers, and this will amount to a large sum of itself. I think they would hail the alteration in the work with satisfaction, in spite of the accompanying reduction, while there is also a reasonable prospect that their actual receipts would soon recover the reduction of 25 per cent., by the increased business which will follow the establishment of a system offering such additional and valuable accommodation to the public.

"The saving of labour which would justify a reduction of 25 per cent. in the commission to sub-postmasters, &c., is quite besides the saving in the cost of stationery, and also the saving in the sortation and transmission of the advices.

"It will, therefore, be quite within the mark if I say that the cost of each money order will be 25 per cent. less than the present cost.

"Mr. Chetwynd states that the present cost is 3*d.* per order, which, less by 25 per cent., is 2¼*d.*; and taking the number of money orders to be 15,118,636, a reduction of 25 per cent., or of 3*d.* to 2¼*d.* on each order, would produce a saving of 47,245*l.* 14*s.* 9*d.* per annum.

"If the cost of stamping, sorting, and transmitting the advices has not been included in the calculation, making 3*d.* per order the actual cost, then the saving of all that work must be added to the above; and if the cost of the work can be estimated to be one farthing per order, or half the charge for a circular, the additional saving would be 15,748*l.* 11*s.* 7*d.* per annum, making a total saving of 62,994*l.* 6*s.* 4*d.*

"But if the saving of 47,000*l.* a year can be made alone, it will, I think, enable the money order system to be carried on without much loss to the revenue.

"*J. St. L. Beaufort.*"

Mr. *Walliker.*] I will now read Mr. Chetwynd's report on Mr. Beaufort's proposals:—

"For the Secretary.

"A. I have read and carefully considered Mr. Beaufort's proposal to introduce a system under which money orders would be payable at any money order office in the United Kingdom without corresponding advices, and I feel bound to state that I find it is impossible to resist the conclusion that this proposal would rob the money order system of that which is at once its simplest

Mr. *Chetwynd.* 8 May 1876.

and its greatest element of security, namely, the advice; and that this proceeding would render the money order system a most fruitful field for fraudulent enterprise.

"B. Under the proposed system it would be perfectly easy for a person who gave his mind to the work, and carried it out with a reasonable amount of care, to fix for himself the limit of the amount of the contribution which he might choose to levy on the money order offices throughout the kingdom.

"C. I will suppose that this fraud will be committed by a printer. It would be very easy for such a person to prepare, without any real risk of detection, a supply of blank forms matching exactly the forms which Mr. Beaufort proposes to use. These forms he would fill up for 10*l.* each, and he and a few accomplices could obtain payment of at least one of such orders at each one of the 500 offices in London. This could be done in a single day, and at least 5,000*l.* carried off without appreciable risk. The like could be done on the same day at Liverpool, Manchester, Birmingham, Glasgow, and other large towns where the money order offices are numerous, an increase in the number of accomplices being alone necessary to secure success. Counterfeit orders could also be passed off to tradesmen, and goods and money could thus be obtained to a large amount.

"D. Another field for fraud could be worked by persons who would take out an order for 1*s.* and who would carefully alter it to 9*l.* 1*s.*, and payment could either be obtained at any money order office, where there would not be, as there now is, an advice showing the amount actually paid for the order to the issuing postmaster; or such orders might be passed to tradesmen, who would pay them into their bankers, and the money would be collected by the bankers before the fraud was discovered. Here the loss would, of course, fall on the department, as the bankers would not refund, and their customers, being innocent holders, would of course decline to pay back the amount. This would equally apply to counterfeit orders in the like circumstances.

"It appears to me that these objections are fatal to Mr. Beaufort's proposition, and that it is not necessary for me to show that in other respects, even if this fatal blot could be got rid of, the plan is more clumsy, and would be more costly, and less efficient, than the existing plan. I may, however, point out here that Mr. Beaufort does not really get rid of the advice. He merely proposes to send it to the wrong place, viz., to the chief office, where it would simply be an incumbrance, instead of to the paying office, where it is absolutely necessary if the security of the department is to be duly provided for.

"G. As Mr. Beaufort lays great stress on the idea of reducing the cost of stationery, I may remark that this cost would be increased rather than diminished. For example, the Manchester account of orders issued now occupies one page for every 50 orders, whereas under Mr. Beaufort's plan one page would provide for only five orders. It therefore follows that 10 times the present quantity of paper would be required for the account, and 10 times the present space for stowage of the accounts would be required in the Money Order Office.

"It is, I think, unnecessary for me to demonstrate that the very worst way to economise the money order system would be to abolish the advice, as that document is, and must always be, the necessary safeguard of the department. I need scarcely point out that the right way to reduce the cost of the money order system is to abolish all work connected with that system that is not absolutely necessary. With this object, I submitted on the 19th October last a report, in which I showed that the local records of orders issued and orders paid, containing 30 million entries per annum, could be abolished without risk, and simple and costless substitutes provided for those records. In furtherance of this object, viz., true economy, I think that the manifold-writing system, as applied at some of the larger offices, to the preparation of the order and advice at one operation, should now be extended to all money order offices. In doing this now there will be little or no risk of failure, seeing that nearly every money order office is also a telegraph office, where the manifold-writing system is in use for obtaining copies of the telegraph messages delivered.

"I have no doubt also that there could be found ways of simplifying the work, and reducing the cost of it in the chief office.

"*Geo. Chetwynd.*

"11 January 1875."

Mr. Chetwynd's report having been referred to Mr. Beaufort, he rejoined as follows:—

"Manchester,

"The Secretary, "6 March 1875.

"I beg to return the enclosed report by Mr. Chetwynd, dated the 11th of January, and received yesterday, relating to my propositions for simplifying the money order system. I have not been directed to reply to this report, but I presume I may be allowed to do so, seeing that Mr. Chetwynd, though he has signed the report, could hardly have written it himself after even a cursory examination of my proposals.

"To facilitate reference to Mr. Chetwynd's report, and to save repetition of his words, I will refer to it by the letters A, B, &c., by which I have marked the paragraphs.

"A. This paragraph, and another marked A towards the end of the report, merely beg the question at issue, viz., whether the money order advice may safely be discontinued; and it is unnecessary for me to meet them with counter-assertions, the more so that Mr. Frederic Hill, who has carefully considered the question, agrees with me that the advice may be discontinued.

"For all practical purposes the advice is known to be simply a check on the amount of the order, as in almost all cases of fraudulent possession the thief can give the required information as to the names.

"B. The modes in which fraudulent advantage might be taken of the cessation of the advice, as described by Mr. Chetwynd, are of course perfectly well known; but the risk of the fraud being committed is more of a bugbear than a reality, and experience has shown more than once that the present system is not a sufficient safeguard when a man 'gives his mind' to the accomplishment of a fraud.

"C. The fraud by a printer, here described, is of course a possible one, as all frauds are; but it is a very improbable one, considering the various difficulties in the way. If otherwise, it it is strange that it has not been tried long since under

under the present system, as the advice could be printed as well as the order, and by the complicity of any dishonest clerk or other officer—persons unfortunately not difficult to find—it could obviously be practised with very much greater ease and certainty.

"Mr. Chetwynd can hardly fail to see that a printer could accomplish the same fraud with the proposed circular notes, and that any safeguard which can be applied to the notes can also be applied to my money order. As to the passing off of such counterfeit orders to tradesmen, it is obvious that this can now be done, and the advice is no sort of protection against it.

"D. The fraud here suggested of altering the amount of an order from 1 *s.* to 9 *l.* 1 *s.* would be rendered possible by negligence only on the part of the issuing officer and of the paying officer. It is easy to fill up a money order so that the amount could not be altered in the way described without erasure, and, as I have shown in my report, such paper might be used as would make it impracticable to erase without instant detection on holding the order up to the light.

"As to the passing of such altered orders to tradesmen, it can be done now just as easily, the advice being no sort of preventive. I do not understand Mr. Chetwynd's statement as to loss to the department by the paying of such altered orders into a bank. Of course when presented by a bank to a post office they would be refused payment if there was any symptom of having been tampered with. The objection in D is plausible, but very imaginary, and it applies equally well to bank cheques, which are drawn in thousands every day, and everywhere, with a carelessness which invites a fraud of this kind, and yet how few comparatively of such frauds are committed.

"The proposed money order has one advantage over the circular note in this respect, as any fraud would be discovered in two months at the latest, whereas a fraud with circular notes might remain undiscovered for 12 months.

"E. Mr. Chetwynd calls the cessation of the advice a 'fatal blot' upon the plan which I proposed, and I only refer to that expression to point out that it is, on the contrary, the cardinal feature of the plan, the very point upon which it turns. He then says the plan is more 'clumsy and costly' than the present system. Its clumsiness may depend upon taste, but I do not see how it can be more clumsy than the present, when it is, in fact, the present system entirely divested of the clumsiness which, in the shape of many useless restrictions and unnecessary forms, clogs its operation, limits its results, and, as he has himself shown, prevents it from being profitable. But when Mr. Chetwynd affirms that my plan will be more costly than the present, I can only infer that he has not made himself acquainted with even the least of its details. Nothing can be more obvious in the plan than that it is economical, nothing more certain than that it will be profitable, and it is needless for me to say more on this point than to refer to my original report.

"F. This is not fair. The form which Mr. Chetwynd calls the 'advice' is the counterfoil of the entry in the issuing office, and the checking voucher for each transaction; the sum total of the transactions being entered in the summary of each day's business, which would go up with the counterfoil.

"The check, by means of consecutive printed numbers on the counterfoil, is essential and, in fact, indispensable, as will be seen from my report.

Mr. *Chetwynd.*

8 May 1876.

"G. That my plan would increase rather than diminish the cost of stationery is a wonderful assertion to make, in the face of my report, at which I can only assume that Mr. Chetwynd has taken but a very cursory glance.

"The illustration which he has given is unfortunate. The 'account of orders issued,' which he states will require '10 times the quantity of 'paper, and 10 times the space for storage for 'the accounts,' is the same form which he alludes to above as the advice, and which, for explanation sake, I have termed the counterfoil. This form, including the counterpart of it retained in the issuing office, together with the money order itself, making a linear sequence in the issuing book, each bearing the same printed number, requires a smaller quantity of paper and much less printing than the present money order and its corresponding advice, both of which it supersedes.

"It therefore cost less than the present money order and advice.

"It also supersedes the issuing ledger at every office in the kingdom, and the daily account sheets which are copied from that ledger. This is all fact, as will be seen from my report, and not a matter of opinion; and I regret that it has been made necessary for me to show that the argument in paragraph G is so unfair, and the calculation so utterly incorrect. The statement that the 'stowage' will occupy 10 times the space is equally incorrect. Each money order, and its corresponding advice, are now stowed away. Under the new plan the counterfoil and the corresponding order will be stowed away; and as these forms are smaller than the money order and its advice, it follows that less room will be occupied instead of 10 times as much. But, further, the plan I proposed will not only dispense with the issuing ledger and the daily account sheet at every office, thus saving a large sum in stationery, but will also sweep away a quantity of other forms enumerated in my report, all of which will be perfectly useless, and will thus effect a still further saving, the extent of which I cannot estimate, but which could no doubt be estimated by the storekeeper.

"H. I quite agree with Mr. Chetwynd that the right way to reduce the cost of the money order system is to abolish all work not absolutely necessary, and that is the principle which I kept carefully in view in the recommendation which I made.

"I. But the saving in labour, referred to in this paragraph, would be but very insignificant as compared with that which would be produced by the plan I have put forward, and which I must again point out would entirely justify a reduction of 25 per cent. in the commission on money order business, producing, as it would, a saving of at least 25 per cent. in the labour of the work, besides an increase in the business.

"Estimating the saving in commission and in clerical labour and in stationery, coupled with the certain increase in the business which would rapidly follow the alteration I have proposed, I do not see why, at the end of (say) three or four years, the money order system should not bring in a clear net revenue of at least 80,000 *l.* a year, instead of being an almost losing concern as it now

Mr. *Chetwynd.*

8 May 1876.

now is, and any occasional losses arising from some accidentally successful fraud would be mere trifles in comparison.

"*J. St. L. Beaufort.*"

The following Supplementary Report was subsequently received from Mr. Beaufort:—

"Manchester,

"The Secretary, "10 October 1875.

"In reference to my reports upon a suggested alteration in the money order system, it has occurred to me that in calculating the gain to the revenue which would follow the adoption of my plan, I have omitted one important item.

"The Bank of England grants a bill payable in 14 days, without making any charge, upon the principle that all expenses are covered and a profit made by the interest accruing on the amount of the bill between the date on which cash is received for it and the date on which it is cashed by the holder.

"I presume that the same principle must apply to Government moneys, and that the longer the paper representative of the cash paid in for a money order continues to circulate before it is finally turned into coin by the paying office, so much more must be the profit which accrues upon the money which has been paid in.

"If I am right, it follows that the profits so accruing under my plan must be largely in excess of any that can accrue under the present money order system, because the holder of a money order now generally desires to obtain cash for it from the post office as soon as possible, whereas the proposed money order, being itself a circulating medium, like a Bank of England bill, will float about for a long time before it is presented for payment at a post office, in many cases not before the expiry of the two months which is the limit proposed for its circulation.

"I have no means of calculating what the value of the interest on these floating money orders would be, but as the amount of such orders may be reckoned by millions the interest must be something worth taking into consideration.

"*J. St. L. Beaufort.*"

Mr. Walliker's Report to the Secretary on Mr. Beaufort's and other Suggestions for improving the Money Order System.

"Hull, 17 December 1875.

"1. I have unfortunately had much to engage my attention since the accompanying papers came to hand, and one's mind does not run so glibly along the old road as when travelling over it daily; but for these drawbacks I would have sent an earlier reply.

"2. I will take up the points as they arise in your letter, and endeavour to deal with them as broadly as possible, referring you for minor details and suggestions chiefly to the special papers appended.

"*The Cheque Bank.*

"3. The declared cause of the failure of the Cheque Bank has not reached me, but I apprehend that the managers found that the public, although no limit was placed on the period of circulation, did not allow the money to lay on deposit sufficiently long to allow them to make a profit equal to their expenditure.

"4. The established bankers no doubt viewed the Cheque Bank with favour because its money was deposited with them, they of course paying only such interest as would leave them a profit.

"5. But if the Crown were to attempt to carry on a business similar in its relations to the public to those of the Cheque Bank, the bankers would be at once up in arms, because the Crown, as a rule, is its own banker, *i.e.*, at a large majority of money order offices the balances are kept in the tills of the agents, whilst the chief reserve is in the Bank of England.

"6. I would here refer to Mr. Beaufort's minute of the 16th October, in which he suggests that his orders would circulate as banknotes, and looks to interest on 'millions' of unemployed spare capital as a source of profit.

"With respect to this idea, it is not likely that such an enormous increase as Mr. Beaufort indicates would take place in our business with the public; and, in the second place, we should under his system have to allow the postmasters to hold larger balances than under the present system, even if no increase of business took place. (See *Appendix, No.* 11, *Part* 11, '*Reserves.*')

"7. But one of the strong points against Mr. Beaufort's plan seems to me to be that by adopting it we should change our system from one of transmission into one of circulation, bringing ourselves at once into direct antagonism with all banks of issue.

"8, 9, 10, 11. * * *

"12. I have no doubt whatever as to the practicability of the system proposed by Mr. Chetwynd, and I think that if the additional expenses which may arise in the shape of premiums on their increased bonds could be got rid of, the sub-postmasters would accept without complaint the scale of remuneration he has suggested.

"*Mutual Guarantee Association needed.*

"13. Some twenty years ago we should, but for the cold water thrown on the project by Sir Rowland (then Mr.) Hill, have had a mutual guarantee association throughout the Post Office; and if one could now be established, all fear of complaint on the part of sub-postmasters, &c. would cease.

"14. The advantage of such an association would be that every man would be looking after every other man, and we should have such checks on dishonesty as would be impossible under any other system.

"*Postage Stamps sent in Letters.*

"15. I do not think there is much in the first objection raised to the circular note, viz., 'that it would lead to a very large use of stamps to make up differences.'

"It is not likely that stamps of a greater aggregate value than, say, 4*s.* 11*d.* would often be sent with a circular note, and I have the testimony of a man who has received thousands of remittances in stamps from 2*s.* 6*d.* to 4*s.* 6*d.*, that he never lost any through theft, and that he only discontinued receiving stamps because money orders were cheaper and less troublesome.

"16. It is quite new to me and to the practised hands in my office that 'any clerk or letter carrier can detect stamps in a letter.' A quantity, clumsily packed, no doubt he can detect, but

but not a few. Besides, those of the higher value are often used.

"17. Speaking of stamps, I should be glad to see their purchase by the Post Office prohibited. The practice leads a great many office lads and others to rob their employers, as I have proved over and over again.

"*As to Abolition of Penny Money Orders.*

"18. If postal notes are issued, I should like to see the minimum charge for a money order raised to 2*d.*

"When I suggested the new scheme of commission to the late Controller of the Money Order Office, I knew that going down to 2*d.* meant a large decrease in revenue, and should certainly never have proposed the reduction to 1*d.*

"The check on the commission, without the 1*d.* orders, save when disturbed by the foreign and colonial element, is simple and straightforward; 2*d.* for the order, and 1*d.* extra for every complete pound. The whole of the amounts of orders issued have now to be looked over specially to pick out these 1*d.* orders before the commission can be proved.

"19. The collection of commission by stamps has often been suggested, but never considered practicable. (See *Appendix, No.* 11, *Part* 3, '*Commission.*')

"Mr. *Beaufort's Plan.*

"20. In every proposal to modify the money order system, regard must be had both to the effect of the proposed change in the business transacted between the public and the postmasters, and on the check to be maintained at the chief office on the correct transaction of that business.

"*Cost of Working at Chief Office.*

"21. In examining the proposals of Mr. Beaufort it is not necessary to consider at any length their effect on the work at the chief office, for they are so utterly and palpably impracticable in that respect, that it would be waste of time to enter into them. It may be well, however, to direct attention to one point. Let us assume that Manchester now issues 300 orders in a day. The whole of these would now appear on three sheets (six pages) compact for check and disposal in the guard book.

"Under Mr. Beaufort's plan there would be 50 or 60 pages in lieu of six, with 200 or 240 totals of issues and commission carried and brought forward in lieu of 24, and when these had all been checked there would remain, not the simple process of passing a cord through prepared holes, and so binding in the three sheets, but the work of pasting these 50 or 60 slips on as many leaves of paper. Subsequently, there would be the pasting in of the orders, day by day, as they came up paid from the country.

"22. A company of paperhangers and a regiment of clerks would have to be employed, while, as a preliminary step, an office about six times the size of the present one would have to be built, with 'unlimited power to add to its extent.'

"But Mr. Beaufort, in a marginal note on Mr. Prall's report of September 9th, page 5, says: 'the cost at the chief office also will be largely reduced.'

"23. It appears to me that no advantage can arise from pursuing the consideration of 'cost at chief office,' and I will therefore turn at once to the subject which is alone open to discussion, viz., the effect of the proposed change so far as the public and postmasters are concerned; and as the question of expense is that on which you are most desirous that I should offer my opinion, I will take that first, and afterwards offer a few remarks as to the safety and convenience of the plan.

Mr. *Chetwynd.* 8 May 1876.

"Of course, if the plan were taken as a whole, as it now stands, the question of expense would not bear discussion, but I will assume that some modification—reducing the chief office cost to that of the present system—has been devised, and that we have only to deal with the provincial work.

"*Cost of Work at Provincial Offices.*

"24. Mr. Beaufort claims for his plan a saving of 25 %, and on the face of his statements the claim seems, so far as provincial offices are concerned, a reasonable one; but such a saving could not be effected.

"*Issue of Orders.*

"25. In issuing orders there would be a clear saving of time if the present form of account were dispensed with, but that is impracticable; fewer particulars however would be required in the account under Mr. Beaufort's scheme of orders, but the difference would fall far short of 25 % on the whole work of issuing. It is not so much the mere writing as the taking the cash, giving change and information, and obtaining particulars, which take up the time.

"*Remitter to fill in Name of Payee.*

"26. I think that the foundation of much future trouble, in the cases of illiterate people, would be laid by leaving the order open for them to fill in the name of payee. This would be a fertile source of errors of omission or commission, and would often lead to refusal of payment on presentation.

"*Payment of Orders.*

"27. It would be in respect to the payment of an order that the trouble would really begin, and I have no hesitation in saying that what with the careful examination of the order—

"A.—To see that it appeared genuine;

"B.—That it had not been tampered with;

"C.—That it was properly signed, and if endorsed, that the signature was in harmony with the last endorsement (I presume all intermediate endorsements should be regular); and,

"D.—That it had not become forfeited;

there would be such an increase of trouble and responsibility (and the latter element must be considered and paid for) that it would not be fair to a sub-postmaster to pay him less on the whole for his work than we pay him now.

"28. But there is more in point 'D' than the simple trouble of examining the date. In Appendix, No. 11, section 5, 'forfeited orders,' I have pointed out what I hold to be a fatal objec-

Mr. *Chetwynd.*

8 May 1876.

tion to this important part of Mr. Beaufort's scheme.

"*Saving in Work at Head Offices.*

"29. I have said that I do not think it would be fair under the proposed plan to pay sub-postmasters a reduced rate of commission, and with respect to head postmasters the possible saving would be very slight, and would be practically confined to the issuing side of the account work. Mr. Beaufort's scheme of accounting for issues by means of 'slips' is unworkable, consequently accounts would have to be prepared, and the saving of work would be confined to not having to enter the names of payee and remitter in, and in the not having to fold and address the advice, and in the not having to enter the name of office and of payee in the account.

"It is only at large offices like Manchester, where the work is continuous, that this relief could be really felt.

"The folding and addressing advices is at most head offices done in spare minutes, which would otherwise be unemployed. (See *Mr. Beaufort's Plan, page* 38).

"As to the sorting and transmitting advices the saving would be inappreciable save in large offices.

"*Proposed Abolition of Paid Order Accounts.*

"30. On glancing through Mr. Beaufort's paper again, I find that at page 8 there is a side-note, which had escaped me, wherein a further saving in stationery is proposed, viz., the abolition of the accounts of the paid orders now sent to London.

"It is, however, proposed to keep on the journal of orders paid for the use of the post-master.

"Had it been proposed to abolish the journal and retain the account, as Mr. Chetwynd has done, a true piece of economy would have been suggested, but the abolition of the account would be an absurdity.

"31. * * *

"*Suggested Savings recapitulated.*

"32. Briefly to recapitulate the suggested heads of saving in connection with the work at provincial offices—

"*Stationery.*—At page 10 of his paper Mr. Beaufort says he would save half the stationery.

"He must use account sheets, and as journals of orders issued and paid will probably soon be dispensed with independently of his scheme, the effect this saving would produce is hardly worth consideration. An order issued for circulation and endorsement would have to be on more expensive paper than is now used.

"*Commission to Sub-Postmasters.*—It has been shown that the reduction proposed would be unjust.

"*Cost of Clerical Labour at Head Offices.*—It has been shown that this is susceptible of but slight reduction.

* * * *

"33. With respect to the safety and public convenience, or otherwise, involved in Mr. Beaufort's scheme, I trust you will excuse my placing my ideas before you in a somewhat disjointed manner. As I went through the papers I jotted down my ideas as they occurred to me, and it has seemed to me best to append separate papers on which these jottings are classified.

"The papers are as follow, viz.:—

1. Advices.
2. Circular notes.
3. Commission on orders.
4. Facilities.
5. Forfeited orders.
6. Fraud.
7. General.
8. Lost orders.
9. Order, form of.
10. Requisition forms.
11. Reserves.
12. Swiss money orders.

"34. The 'papers' embrace something more than the two questions of safety and public convenience, and contain one or two suggestions.

"In No. 3, for instance, I have dealt with the chief point in Mr. Prall's suggestions.

"Mr. Bradfield's scheme is, as you have suggested, impracticable.

"I fear that this letter will fall far short of your expectations, but I have done the best I could during the limited time at my disposal.

"(signed) *S. Walliker.*

"Hull, 17th September 1875."

(*For* "*Appended Papers*," see *Appendix, No.* 11.)

Mr. Beaufort, Examined.

Mr. *Beaufort.*

Chairman.] We think that Mr. Walliker will be able to put one or two questions to lead our minds to the points of your report.

207. Mr. *Walliker.*] I think, Mr. Beaufort, the chief points on which you base the claims of your plan are the promotion of economy and the convenience of the public?—Yes, the promotion of economy in the working, and convenience to the public; these are the two points.

208. Do you propose to continue the use of the requisition forms?—No, to abolish them.

209. On what ground would you wish to abolish them?—These forms would be useless to a certain extent, for they are the form from which the advice is drawn out; a part of my plan is to discontinue the advice altogether.

210. Mr. *May.*] How would you know that I wanted an order, for example, unless I gave you some such form as that?—Well, I say that the discontinuance of that form is not absolutely necessary, but it would be almost useless, because the information that I have to obtain from you would be so very little. You would say, "I want a money order for 2*l.*;" that is all you would say. If you wished to have it made payable to a particular person, you would say so.

211. Mr. *Walliker.*] Is it not a fact that in taking instructions from a person verbally mistakes

takes are apt to be made, and that there is advantage in having written instructions, and that these are more convenient?—It is when the requisition is properly made out, but there are many cases where it is not. It is much better to take the particulars verbally in many cases. Generally people can read and write who come to my office. If the requisition is imperfect, it causes a great loss of time.

212. *Chairman.*] Do you mean to say that you prefer a verbal application without any written document whatever?—That would be all that is necessary, and that is what was practically the case with regard to a large proportion of the money orders in past times. Before it became absolutely necessary to fill up a form, the orders were applied for over the counter, and the particulars were furnished verbally. We took them down on our advice forms.

213. Mr. *Weldon.*] What object is there in taking the name and address of the remitter, if these post-office orders are to be paid without advice?—They are to be paid without advice.

214. Is there any object in having a name at all?—You might do without it, but that would make the check still less. The objection to discontinue the advice was the loss of check, and then to do without the name would be to make the check still less.

215. It seems to me there can be no mistake in the number, but there may be a mistake in the name, and you appear to be taking particulars for the mere sake of taking a name and address which may be erroneous?—Precisely so.

216. Whereas, if I say give me a post-office order payable to So-and-so, you have got the number, and that is a sufficient advice to the head office; without a name that is of no use, and may be fictitious?—What I had in my mind when I thought of retaining the name of the remitter was the power of making any subsequent inquiry in the event of the order being stolen. I should want to know to whom the person who drew the order sent it.

217. There may be numerous cases in which the remitter does not want his name known; and where you cannot vouch for accuracy it is of no use?—These cases are very few in comparison to those in which persons wish it known.

218. Supposing it is a legitimate name and address, how does it assist the Post Office manipulation and regulations?—It would assist us in the case of inquiry; but the order would be complete without the name of the person who remitted it, and the number would be sufficient for all purposes of settling accounts between the local postmasters and the head office. I mean the number and the stamp.

219. That would save a great amount of trouble in the London office, where they would have to write up these particulars?—It never occurred to me that that would be questioned, but it does not appear to me at this moment that there is any particular objection to it.

220. Mr. *Walliker.*] I thought your answer was a very good one, that it would be useful in cases of subsequent inquiry about the order?—Yes, but further than that I cannot say.

221. Mr. *Weldon.*] If you would let people have a little more freedom of action, and not attempt to take so much care of them, you would get on better.

222. *Chairman.*] You are now getting away from the question of security.

223. Mr. *May.*] You have a strong opinion about the advice not being necessary?—Yes, I do not think it is necessary; practically it is next to useless.

Mr. *Beaufort.*

8 May 1876.

224. Mr. *Walliker.*] The requisition form is a very inexpensive element, and answers the purposes in the country of an issuing journal, and it seems to me that anything we might have in the shape of a book would be a more expensive record?—The requisition form with this order, whether the remitter's name is required or not, is perfectly useless for the granting of an order; it is not required at all.

225. In issuing your form of order there are two kinds of work; you write in the particulars into your counterfoil and then you draw out your order, whereas in the present form one operation completes both?—It can be done in duplicate by manifolding in the same way as money orders. The time that is taken to grant an order on my plan is less than the time required at present.

226. You say it would take rather less time to manifold the first part, write the second, and stamp them both, than to draw out the present order and advice?—You would have them stamped already in the morning, and if you do not enter the address, the filling-up of the order will be simplified. The whole work of the issuing office is very much simplified by this plan.

227. Mr. *Weldon.*] You do not see any objection to leaving out the name and address of the remitter; you are practically founding a system of circulation?—I do not think it is necessary.

228. If it is necessary at all, it would be an arrangement at the head office for their convenience, not for that of the post-offices generally?—As to subsequent inquiry, it would be useful as regards orders lost or stolen.

229. Mr. *Walliker.*] Is it not the fact that questions arise between the public and the issuing clerk as to the amount paid in, and that the requisition forms are produced by the clerk as evidence of the amount actually paid in?—There have been such cases, but very few.

230. Mr. *Earnshaw.*] Under the present money order system the advice is made out when the order itself is written?—The time would be as little with my plan, as under it you would have fewer questions to ask; you have not to ask the remitter who he is, where he lives, &c.; you have not to consult your list of money order offices, nor to perform various other little details necessary in granting a money order at present; you make the order payable anywhere.

231. Mr. *May.*] Still if you do away with the requisition form you might have difficulty with the person applying for the order; it might be difficult for the issuing clerk to take the details down unless he had the requisition form before him?—I do not think there would be much difficulty in that way. If the address of the remitter is of no use, then the requisition form will, if possible, be of less use than if the address be required.

232. Mr. *Weldon.*] Your plan contemplates the abolition of the advice altogether; could not it be worked by numbers entirely? Are you of opinion that if the Post Office were to supply you with books running from, say, 200 up to 300 and so on, and you were charged with these books, that would enable you to carry out your scheme without names at all?—That would be simply my plan with a number, but without the

Mr. *Beaufort.*

8 May 1876

name and address of the remitter; it would be simply that.

233. Is there any element of fraud against the Government in such an arrangement?—No, not consequent on using numbers only.

234. Mr. *Weldon.*] Would the name and address of the remitter prevent fraud in any way by the public or by postmasters: suppose a postmaster were to fill up an improper order, and advise that to the head office as a real one, do you see any probability of fraud being committed on the Government in that way?—Not in that way, because this account must be sent up every night, and it must show the numbers in consecutive order; if a number were missing the head office would be able to detect it. As far as consecutive numbers are concerned it would be safe, but a postmaster might issue an order out of consecutive order; suppose he went to a packet of orders whose numbers went to 500; he might take a number of orders out of that bundle, fill them up, and get them cashed at another office.

235. Suppose a man came for an order for 10 *l.* 10 *s.*, and you gave him the order, but returned it to the head office as only 10 *s.*; what I am getting at is the alteration of a post-office order, either in the payment or delivery by the postmaster himself. Working by numbers, the office would not know anything about the advice and the issue of this order?—Yes; but it is so very improbable, that it is one of these cases in which fraud may be committed, but in which it would not be committed; at least it is not a likely fraud for a postmaster to commit; a clerk might do it, but the postmaster would check him; I do not see that there is any mode of check upon a postmaster, although his fraud would be discovered eventually.

236. *Chairman.*] I think we should not consider this point as regards postmasters, because they give ample security?—A fraud would always be discovered at the furthest at the end of two months.

237. Mr. *May.*] How?—At the end of two months the orders would have come in.

238. It has been pointed out that there is danger from the issue of duplicates?—The fraud would be discovered directly the orders came up to the head office. Then, of course, each would be compared with the record of it; whether that record be on an advice or an account, they would be compared, and then it would be apparent. That must take place before the end of two months.

239. Mr. *Walliker.*] As we are on the question of fraud, has it ever occurred to you that a species of fraud of this kind might be committed? A clerk employed in the head office goes, not as a post-office clerk, but as one of the public, to some money-order office in London, say to Cheapside, and takes out an order for 10*l.* payable anywhere, and he gets payment of that order at some other office in or about London; say he is one of the clerks engaged in pasting in the paid orders; when the document comes up from the paying postmaster, this clerk, instead of putting it in its place, puts it in his pocket. Then he either waits till the end of two months, or complains beforehand that he has lost his order, and asks for a duplicate. There is nothing to prevent a duplicate being issued. The Post Office finds that there is a blank against the counterfoil of that particular order, and at the end of two months a duplicate is issued?—That order, when it has been paid, is claimed in the accounts of the postmaster who pays it. It is checked off in that account. I think that that is a most far-fetched case; it is a most extraordinary illustration.

240. Mr. *Earnshaw.*] You have no register of numbers to mark off; No. 203, say?—No register of it, but the number, when it comes up, will be checked off. That objection or that risk could be very easily obviated if there was any such risk; but I think it is a very remote one, because, in sending up the account which I propose should be sent up, it will on the one side show the granted orders, and on the other the orders paid. If it was necessary, the numbers of the orders paid could be entered in that account with the greatest possible ease.

241. Mr. *Weldon.*] What issue number would they check the paid number against at the head office?

242. Mr. *Walliker.*] Let us suppose the order to be paid, say, at the Fenchurch-street office, how would the fraud be prevented by that office putting down the numbers of the orders paid; there would be no localisation of that order which would point to Fenchurch-street?—It would not matter that it would not be localised at Fenchurch-street at all. The fact would be that that order would be issued at that office, number so-and-so, and was paid. The return which would accompany that docket would show where the order was issued and the number of it, and it would be quite unnecessary to localise that to Fenchurch-street, or anywhere else.

243. The man (the man employed at the head money order office), who obtained the order in Cheapside has destroyed it, and asks for a duplicate to be granted; what is to direct the Controller of the Money Order Office to Fenchurch-street?—There is no necessity to refer it to Fenchurch-street at all. You grant it at Cheapside; you do not grant it on any particular office; you make it payable at any office.

244. Mr. *Weldon.*] There is nothing to direct the attention of the Post Office authorities as to where it was paid. If they could get at where it was paid they could refer to the issuing account, but they could not tell where it was paid?—I do not quite clearly understand that.

245. You take a money order out at A, and it is payable at any place in England; when that order comes up the clerk destroys it, and in due course a confederate asks for a duplicate; there is no check at all; the order has disappeared; you would have to look through 5,000 accounts to find at what office that order was paid?—The order would bear the name of the issuing office and the number.

246. But the order has disappeared; the pasting clerk has destroyed it?—Well, I certainly did not provide for the pasting clerks in the head office stealing orders, and committing fraud in a way that cannot apply to more than one order in 50,000.

Chairman.] Does it appear to anyone that you will ever find it out?

Mr. *May.*] Only by having a sufficient guarantee before you issue a duplicate. I think Mr. Beaufort has hardly provided for this.

247. Mr. *Weldon.*] You cannot therefore deal with the public freely, because you will be under the suspicion that every application for a duplicate may be an intended fraud; do not you think that is a fatal objection to your system?—Really, in my mind, it is no objection at all. It is so very improbable

improbable that it would be easy to find a flaw of that kind in any system.

248. All the present elaborate money order system has been erected to prevent fraud; can you devise anything to meet that point?—I cannot just at this moment; but I would say that frauds of that description would be a very small loss, whereas the profit arising from the system would be very large indeed, 60,000 *l.* or 70,000 *l.* a year.

249. There can be no certainty if you have got at the same time an element of uncertainty; you will have to put it in the form of a balance; you will make so much a year as against the risk of fraud, and the Government will have to take the risk of the fraud against the profit estimated on the other side?—The fraud that is suggested now is a fraud by the confidential officers of the Post Office, and I think it is not worth consideration.

Mr. *Hawkes.*] The officers in question are messengers at 20 *s.* to 35 *s.* a week.

249*a*. Mr. *Walliker.*] How many duplicates are issued in the year, Mr. Hawkes?

Mr. *Hawkes.*] About 15,000, and about two-fifths are issued free of cost, owing to their having been lost in the post.

250. Mr. *Walliker.*] As regards the expense of making out the slip and the counterfoil, and then the order, you have said that where the manifold process is in use there would be a little more work than at present; the work would therefore rather increase under your plan; are you aware that every office in the kingdom will shortly use the manifold process?—Yes, I am aware of that; I think that the time it would take to fill up one of my orders without having the questions to ask would be a saving of time upon the present system.

251. I understood you to say that at the offices where the manifold process is used there would be an increase?—The entire work would be less though the writing would be more.

252. Have you gone into the question of the cost of making up your books compared with the cost of making up books of money orders and advices?—I do not know the actual cost of making up the present books, but my system must cost less.

Chairman.] I should like to have that put right at once.

Mr. *Chetwynd.*] I have ascertained from the Stationery Office that the present cost of money orders and advices is 7 *s.* 9½ *d.* per 1,000, and that the price of Mr. Beaufort's would be 1 *l.* 8 *s.* per 1,000. The cost of the paper on which Mr. Beaufort now sends up his account is stated to be at the rate of 3½ *d.* per 1,000 orders. The paper on which 1,000 of his proposed orders would be pasted in the guard-book would be 3 *s.* 3 *d.*; so that, in fact, whereas the present cost is 8 *s.* 1 *d.*, the cost of Mr. Beaufort's would be 1 *l.* 11 *s.* 3 *d.*, or about four times as much. These are figures furnished by the Stationery Office.

252*a*. Mr. *Thomson.*] In connection with this plan of pasting these orders on to paper, Mr. Beaufort's idea could be perfectly carried out without the pasting process. The documents could be separated and placed in pigeon-holes.

Mr. *Beaufort.*] I merely suggested pasting on, because it presented the account in a very simple form; but I did not propose that as part of the plan. It is quite unnecessary as part of the plan. The requirement is to bring the documents together.

Mr. *Thomson.*] That could be done by sorting away the forms into distinct pigeon-holes, and you could pin the relative forms together. They would be put together in the same way as a money order and its advice are put together.

Mr. *Chetwynd.*] No pigeon-hole could conveniently hold large numbers of documents of different sizes which are being constantly referred to.

Mr. *Thomson.*] There would be two, one for the original advice, and one for the order. They could be sorted into towns in numerical order.

Chairman.] Would that afford equal facility.

252*b*. Mr. *Weldon.*] You have turned the attention of the Committee to the question of expense of stationery. At present, according to the papers submitted by the officers of the Post Office, there are 50 orders accounted for on one sheet, and you only propose to put five on each sheet; so that it will take 10 sheets for your plan as against one under the present system.

Mr. *Beaufort.*] Allow me to say that under the present money order system there is a money order and an advice which have to be taken care of in London, and form part of the account, and are the means of checking it. Under my plan this order and this slip of paper together occupy a smaller quantity of paper than the present money order and advice, and they entirely do away with that sheet.

Mr. *Weldon.*] We are not satisfied about that, for the other document is so inexpensive that it costs much less than yours.

Mr. *Beaufort.*] Let me say with regard to this, that this paper is only selected by me because it is suitable to show my plan upon. I do not know anything about the cartridge paper.

Mr. *Weldon.*] There would be 10 sheets instead of one, because the paper is the same, and the cost is multiplied by 10.

Mr. *Beaufort.*] Let me remind you that in my proposals I did not say that it was necessary at all; I only referred to it as a means of bringing together the account and the order; but the actual sheet and the process of pasting is entirely unnecessary. The cheque and the portion of the account belonging to it will come together in the same way as the advice and the money order come together now, and when they do come together that is all that is necessary.

Mr. *Weldon.*] They seem to undergo so much manipulation, that whether this paper would resist the fingering in the examination of the accounts is a question.

Mr. *Beaufort.*] Would you allow me to ask you to consider that this form which I suggest as an account comes to London every night, and all that is necessary when the form comes to hand, is that it should be in such a position that it could be compared with the order when the latter is claimed. You only want to bring them together. There is no manipulation; nothing to tear the forms. These account-forms simply remain till the other portion comes up. (*Appendix No.* 10, *Form F.*)

Mr. *Weldon.*] As I understand the mode of doing the work, the register is formed from the documents themselves?

Mr. *Walliker.*] You were saying that the counterfoils or account slips need not be attached to anything. There would be at least 6,000 or 7,000 a day, and about 360,000 in two months;

Mr. *Beaufort.*
8 May 1876.

months; how would it be possible to compare the 50,000 orders which come up every day with these account slips, unless they were affixed to something?

Mr. *Thomson.*] We have similar documents in the savings bank in pigeon-holes, and they do not get into confusion. We have in our possession possibly as many as 2,000,000 that we have to refer to day by day, and these are added to the extent of about 5,000 a day.

Mr. *Weldon.*] But they have about 60,000 money orders a day.

Mr. *Thomson.*] We have about 2,000,000, to some of which we are continually referring every day, and we do not find that they get into a state of disorder, nor do they cause inconvenience.

Chairman.] The savings bank documents in question, that is to say those to which daily reference is made, are a very small per-centage as compared with money orders.

252*c.* Mr. *Beaufort.*] I was going to observe that if the Committee do not consider the name of the remitter to be necessary, there is an end of the question of all this expense. This form would be unnecessary altogether, there would be nothing to check. If these orders are to be issued and checked by numbers, then these forms are all that are required. Country postmasters would simply enter the numbers, and such particulars as may be thought necessary besides in their books, and they would send up in that docket (*see* Appendix 10, Form H.) a statement of the numbers and the amounts, and these numbers in their account would be all that would have to be referred to when the orders were paid and returned to the head office and claimed.

Chairman.] It was suggested that these things should be done by number instead of by name.

Mr. *Weldon.*] It appears to me that the names are unnecessary, if there is to be an abolition of the advice altogether.

252*d.* *Chairman.*] I really think myself that the discrepancy between Mr. Beaufort's opinion as to expense, and that of the practical officers here is so great, that before we go any further and lose any more time over this matter, Mr. Beaufort and Mr. Chetwynd should have a private interview for the purpose of checking their figures. I think we are arguing on false principles. If Mr. Chetwynd has the figures to show, I think Mr. Beaufort will be the first man to acknowledge that he has made a mistake in his calculations.

Mr. *Beaufort.*] I should be very sorry to see that Mr. Chetwynd's calculations are correct, for I do not think they are.

Chairman.] Before we proceed further, I think we should see which of these two is right.

Mr. *May.*] Mr. Chetwynd tells us that he has the authority of Her Majesty's Stationery Office. I think, therefore, we ought to stand by his calculations.

Mr. *Weldon.*] Supposing that you practically abandon the name altogether; supposing these post office orders were issued by number, is there any real difference between your scheme and Mr. Chetwynd's?

Mr. *Beaufort.*] Allow me before answering your question to say this, that I do not dispute the opinion of the Stationery Office as to their statement of the cost of the paper, but I dispute that that paper is necessary. It forms no part of my scheme, and this discussion about paper on which Mr. Chetwynd has obtained an opinion is not the paper to be used. I do not insist upon this paper at all. The cost of the paper really does not affect the question.

252*e.* Mr. *Thomson.*] The bulk and expense of paper is not, I apprehend, essential to Mr. Beaufort's plan.

Mr. *Chetwynd.*] It is only a part of it. Mr. Hawkes will tell you that the checking of the accounts will take 12 times the time required for the checking of the present accounts.

Mr. *Beaufort.*] It all depends upon the pasting work. That is no necessary part of the plan.

Chairman.] It appeared in your suggestion.

Mr. *Beaufort.*] Let me remark that I merely suggest it as a way in which it might be done. I was not competent to tell them how to do it. You will observe that it is not necessary.

Mr. *Weldon.*] I should like to repeat my question. You say there is no necessity for a name. Is not that practically an order to bearer?

Mr. *Beaufort.*] Yes.

Mr. *Weldon.*] What difference can there be? Why not adopt the principle at once of issuing postal notes? Cannot your scheme be engrafted on Mr. Chetwynd's, so as to get a good scheme out of the two.

Mr. *Beaufort.*] Mr. Chetwynd's scheme is what is called a circular note scheme, I suppose. The objection to that scheme as opposed to this is that it is not complete in itself.

Mr. *Weldon.*] In what way?

Mr. *Beaufort.*] You can only issue a note for the exact sum printed on it. It is useless for odd shillings and pence.

Mr. *Weldon.*] Cannot we then get at a scheme by putting the two together, yours being adopted for the odd amounts and Mr. Chetwynd's for the even sums?

Mr. *Beaufort.*] If this plan of mine was adopted what would be the use of the postal note; why hand a postal note in addition to one of these? There would be great use in one of these orders being given in addition to a postal note, but to give a postal note in addition to one of these would be throwing away trouble.

252*g.* Mr. *Weldon.*] The postal notes are printed, and require no filling up. The difficulty with your plan is writing in the names and amount. In Mr. Chetwynd's there is no filling up an amount at all. They are, in point of fact, notes. You give them out like so many sovereigns, but then the difficulty of Mr. Chetwynd's scheme is this; you cannot make an order for 5 *s.* 1 *d.*, because the postal note is for 5 *s.* Yours might be adopted for issuing odd sums, and the two things would run together.

Mr. *Beaufort.*] You cannot dictate to the public what they will have. The public will not have simply notes for round sums, for they want to send sums of all descriptions. If you give them notes for fixed sums they must have something else to supplement them with. They will probably supplement the notes with postage stamps. Now postage stamps sent in letters are a most fruitful and certain source of dishonesty. Every day there are letters without number stolen, simply because they have postage stamps in them. The clerks and sorters know perfectly well by the very feel of a letter and by the smell of it, that it contains postage stamps; and if there were three or four postage stamps to eke out these orders, it would simply lead the men on to the track of what they knew was valuable.

252*h.* Mr. *Weldon.*] I want to get rid of the postage

postage stam s, and use such an order as yours for odd amounts.

Mr. *Beaufort.* Would it not be more simple to have one document?

Mr. *Weldon.*] No, for this reason; wherever you introduce writing into an instrument, you introduce an element of fraud. In a paper of this kind, chemicals are so used now as to wash out all the writing, and new writing altogether can be introduced. You issue 16,000,000 of documents for small sums, and when these clever, fraudulent people get to work, any of the orders could be altered to a larger sum. It is necessary to devise a circular note, engraved so that it is impossible to forge it. You must have a prepared paper proof against fraud.

Mr. *Beaufort.*] Would that prepared paper be no more expensive than this paper?

Mr. *Weldon.*] It would be 10 times more costly, I believe.

252*i*. Mr. *May.*] You rely rather on a complicated and elaborate form, but the experience in the Bank of England is, that the simpler the form the less likely is it to be forged. The eye gets accustomed to it, and the least variation in the printing is easily detected. We rely much also on the surface of the paper.

Mr. *Chetwynd.*] Your paper is very expensive.

Mr. *May.*] We rely rather on simplicity than upon an elaborate form. I do not know that our drafts cost more than those of the London and Westminster, or any other bank.

Mr. *Weldon.*] Wherever there is writing on a plain surface, then I do not see how you can prevent fraud.

252*k*. Mr. *Walliker.*] Does not that point to the necessity of an advice to prevent fraud?

Mr. *Beaufort.*] Well it is a check against fraud; I cannot deny that.

252*l*. Mr. *Weldon.*] It is presumption, perhaps, on my part, but there is a suggestion that has occurred to me, and it is for the consideration of the head office here, and for you as representing a branch office. But it appears to me that without names a simple system of advice might be adopted by forming a register of numbers to correspond with your orders. The man at your office has a book supplied with a series of numbers. He must account for every number that goes out. A person asks for an order for 2 *s.* 1 *d.* on Reading, that is, say No. 1; another person asks for an order for 5 *s.*, that is No. 2, and so on; and the clerk issuing goes on in this way to the end of his day's work. The register is then taken up by other clerks, and they advise No. 1. to Reading, and so on. When the orders are returned to the head office they are marked off as paid.

Mr. *Walliker.*] The only difference between the plan you suggest and the present plan is, that you work without the names of the remitter and payee.

Mr. *Weldon.*] Yes, that is so.

252*m*. Mr. *Walliker.*] You propose that the postmaster who issues the orders should account for them, and claim those he pays?

Mr. *Weldon.*] Yes, but I should abolish your second process of registering these forms subsequently in the Money Order Office.

252*n*. Mr. *Beaufort.*] If you could leave out the place "Reading," then you would gain your point. That is just what ought to be done.

252*o*. Mr. *May.*] Would there be any objection, Mr. Beaufort, if the payment of these orders were limited to the Post Office in London, without reference to the country at all?

Mr. *Beaufort.*] They would be of no use. It would be destroying the use of the money orders. At some places in the country these orders are most useful.

252*p*. *Chairman.*] You said something about losing postage stamps. You appear to have a great dread of that. Can you tell me what amount of postage stamps is lost in your office?

Mr. *Beaufort.*] I cannot tell you off-hand, but there is a very large number of letters containing postage stamps stolen. We do not know the amount of the stamps.

252*q*. *Chairman.*] How do you find it out?

Mr. *Beaufort.*] The public complain.

252*r*. Mr. *Weldon.*] What advantage would your plan have over the circular-note system?

Mr. *Beaufort.*] Before answering that question I should like to point out that it is not only the letters of the rich, but of the poor that are stolen. I was asked just now what advantage a plan of this kind would have over a circular-note system. One of the objections to Mr. Chetwynd's plan, if I recollect right, is that the money orders for commission under 3 *d.* should cease. Well, I have had an account kept in order to show what proportion of money orders were issued for a commission under 3 *d.*, that is you may say poor people's orders, and I find that in the two or three months in which I took the account nearly two-thirds of the orders were of that class. Therefore I argue that any plan that involves the cessation of money orders granted for 1 *d.* and 2 *d.* tends seriously to injure poor people, by inducing them to send stamps and coin in their letters when they would otherwise send a money order which would be tolerably safe.

Mr. *Walliker.*] Do you think that would apply equally if the commission went down to 2 *d.*

Mr. *Beaufort.*] Yes, I can show you why. In October last, for instance, of the total number there were 13,682 under 3 *d.*, and 20,611 of all the rest.

Chairman.] You have the penny orders?

Mr. *Beaufort.*] Yes, there were 6,656.

Mr. *Walliker.*] Would it be a great hardship to the poor people who are chiefly of the working class if the commission were 2 *d.*

Mr. *Beaufort.*] Yes, certainly.

Mr. *Walliker.*] These orders cost us 3 *d.* Do you think we should throw away this extra penny on them.

Mr. *Beaufort.*] Certainly; I do not think we ought to deprive them of the accommodation they have, more especially when the result would be to compel them to send their money by other means. If we take that convenience away they will send stamps and coin, and increase the dishonesty to a great extent in the office.

Mr. *Walliker.*] It costs 1½ *d.* to cash 5 *s.* worth of stamps, and they could get a money order up to 19 *s.* 11 *d.* for 2 *d.*

Mr. *Beaufort.*] I do not think the persons who send the stamps take into account the expense of discounting them at all.

Mr. *Weldon.*] Your opinion is that it is necessary that the Post Office should offer facilities for issuing post office orders for anything under 1 *s.*

Mr. *Beaufort.*] It is in their power to do it now; but the sums to which I refer, viz., 1 *d.* and 2 *d.*, are the amounts of commission. It is quite necessary that the public should have the means

Mr. *Beaufort.*

8 May 1876.

of sending orders for a small amount, even as low as 6 *d.*

Mr. *Weldon.*] You are aware that the loss is upon these denominations of post office orders?

Mr. *Beaufort.*] I know that the loss is on the 1 *d.* and 2 *d.* orders.

252*s*. Mr. *Walliker.*] In what form do you propose to send your claim for paid orders to London?

Mr. *Beaufort.*] The paid orders will be enclosed in a docket showing the total number and amount. The account must be kept somewhere. It is not necessary to keep a detailed account in both the London office and my office.

Mr. *Chetwynd.*] We keep it in London now.

252*t*. Mr. *Walliker.*] You have estimated that the saving by your plan will be about 25 per cent. You said something about the orders and advices being compared at present in the London office. Have you taken that into account in estimating the saving?

Mr. *Beaufort.*] Are the advices and the orders not compared in London?

Mr. *Walliker.*] No, they are not.

Mr. *Beaufort.*] I did not take into consideration any time or labour in the London office. I knew nothing about it.

252*v*. Mr. *Weldon.*] Have you taken into account the question of forgery in regard to these orders payable to order?

Mr. *Beaufort.*] I have thought of it. I do not think there is much in it.

Mr. *Weldon.*] The Government would have to get some protection by Act of Parliament, otherwise the law courts would hold the Government liable if an order were paid on a forged endorsement.

Tuesday, 9th May 1876.

PRESENT:

MR. GEORGE MOORE, IN THE CHAIR.

Mr. A. Earnshaw.	Mr. S. Walliker.
Mr. F. May.	Mr. J. W. Weldon.
Mr. A. C. Thomson.	

Mr. BEAUFORT, further Examined.

9 May 1876.

253. *Chairman.*] I WILL ask you one or two questions first, Mr. Beaufort, and then the gentlemen of the Committee may ask such questions as they like. In your report you tell us that it is quite within the mark to say that the cost of the money order system will be 25 per cent. less under your plan than it is under the present plan, and on looking through the papers we find that in a note upon Mr. Prall's report it is stated that the cost of the Chief Office is one-third of the whole. You assume that the cost at the Chief Office will be reduced, but you told us yesterday that you had not gone into the Chief Office work; may you not, therefore, be quite wrong in calculating that the saving under your plan will be 25 per cent.?—I left the Chief Office out of the calculation.

254. But you said that the expense would be reduced 25 per cent.?—Not at the Chief Office; I had no means of calculating the expense at the Chief Office.

255. Mr. *Walliker.*] But you say somewhere that the cost of the money order would be reduced from 3 *d.* to 2¼ *d.*?—If you will follow the report you will find how I arrived at that.

256. *Chairman.*] You meant that the saving would be 25 per cent. without London?—Yes; I think that was what I meant. In calculating the saving I took into account the saving in labour alone; that alone amounts to 25 per cent. With regard to my own office 6 clerks could do the work which now occupies 8¼, and that is a saving of labour of 25 per cent.

257. Mr. *Walliker.*] You say towards the end of your report that Mr. Chetwynd states that the present cost of a money order is 3 *d.*, and then by deducting 25 per cent. you reduce the cost to 2¼ *d.*; is that saving of 25 per cent. on the whole of the work?—When 25 per cent. can be saved in labour alone I am right in saying that the saving upon the whole of the work must be much more than 25 per cent.; in addition to the 25 per cent. saved in labour there would be the saving of forms. I think I pointed out that 18 of the forms which are now used could be done away with, and there would be the saving in printing and using these forms. In the 25 per cent. the cost of the forms, and the saving in Mr. Chetwynd's office here, are not included.

258. The principal saving would be in the money order account sheet?—Since that report was written, the new instructions which have been issued have caused the discontinuance of some of the forms formerly in use.

259. What I wish to get at is how the saving of 25 per cent. is arrived at; we shall have, in reporting to the Treasury, to explain that the 25 per cent. cannot be saved?—I think I have already explained how I arrived at the saving; I arrived at it from the fact that one-fourth of the force now in the money order office at Manchester could at once be saved, and if my work is reduced 25 per cent., it is fair and right to assume that the same rate of diminution would take place throughout the kingdom.

259*a*. The calculation has no bearing whatever on the cost of the Chief Office?—I am not calculating

culating the saving at the Chief Office; whatever saving could be made there can be added.

260. And, in the same way, if there were a loss it would have to be deducted?—There could not be a loss.

261. *Chairman.*] The check upon the postmaster's accounts at the chief office is a serious item of expense, and I should like to ask you a question or two upon it. I see in the forms which you say could be abolished, you include the account sheets which you now send to London, and I also see that in your account which was sent up this morning, you claim for 1,053 orders, amounting to 2,259 *l.* 7 *s.* 5 *d.*; now, will you kindly tell us how you propose that this claim of yours should be checked here at the chief office?—I presume they are checked in some way, but I am not acquainted with the mode. The account and vouchers would come up as usual, and I presume they would be checked in the same way, but how it is done I cannot undertake to explain.

262. Mr. *Walliker.*] The form of account to which you refer, as I understand it, is that represented by form (H), and the account sheet now used would be abolished?—Yes; the account sheet now used would be abolished.

263. The account would be the form (H)?—Yes; accompanied by the cashed orders.

264. Then this form (H) is the account you propose to send to the chief office?—Yes, that appears to me to be all that is necessary.

265. How would you propose that the account should be checked?—I can easily see that they might be checked, but I cannot say what is the proper way to check them at the chief office. If I were checking these accounts I should simply take the totals of the orders paid; I should take these vouchers and count them over like bank notes.

266. Mr. *Thomson.*] The amounts would be cast mentally?—If necessary they might be written down.

267. *Chairman.*] But I do not see how you could check 1,053 orders each for a different amount like that?—So far as checking the account at the chief office is concerned, it is for Mr. Chetwynd to say what should be done. If the account could not be checked as I say, it would be very easy indeed to make a sheet.

268. That is what is done now?—They would have to be made out and entered in my book, and it would be just as well to send up a copy of the book.

Chairman.] But if I understand you rightly you do send up a copy of your book now?

269. Mr. *Thomson.*] Mr. Beaufort holds that his own check is sufficient without another check at the chief office?—Yes, allow me to explain that the ledger sheet at my office showing the number and amount of these orders could be copied by means of the copying press just as the copy of my account used to be kept, it would not take 10 minutes to copy it, and then Mr. Chetwynd and I would both have copies. Mr. Chetwynd would only have to compare the orders with the account.

270. *Chairman.*] What is it then that you do now that you would not do under your plan; you say that there would be a saving of 25 per cent., but I don't understand what that saving is?

Mr. *Walliker.*] Mr. Beaufort's proposal is rapidly reducing itself to simply the abolition of the advice. The cost of a copying press is about 8 *l.*, and do you propose to keep a copying press at each of the 5,000 offices in the United Kingdom?—No, certainly not, the writing out of the accounts would occupy very little time at the smaller offices.

271. We are coming round again to the present method of making out and supplying accounts to the chief office?—If it were necessary that the chief office should have an account, there would be no difficulty whatever in making it out and sending it up with the orders, and there would still be a saving of 25 per cent.

272. *Chairman.*] Do you now keep copies of these accounts (*referring to the Paid Order Account*) at Manchester?—Till very lately we always kept copies of the account, but owing to the re-arrangements which were made on the 1st February we now keep no record.

272*a*. Mr. *Walliker.*] Perhaps Mr. Chetwynd will explain how it was that the records were done away with?

Mr. *Chetwynd.*] It was simply not considered necessary that they should keep copies of the accounts at local offices; no detailed accounts of savings bank or Government insurance and annuity transactions are kept, and we have now abolished the local records of telegrams; we have merely brought the money order system into uniformity with the other systems in this respect. The papers handed in by me on the 5th instant in reply to question No. 116, explain the matter fully. (See *Appendix, No.* 5.)

273. *Chairman.*] I see no reason why you should not send up an account?—I see no reason whatever why we should not do so; making out a copy would not take more than ten minutes; we should copy by the press and keep a copy, and there would, therefore, be only ten minutes a day to be taken off the saving of 25 per cent.

274. I don't see how you would save anything if you propose to do as you do now?—The saving is in a variety of ways besides the forms.

Mr. *Walliker.*] But is not this one of the most important of the forms which you would save. These are the forms which you say could be saved (*referring to a marked list*, see *page* 71).

275. *Chairman.*] I think I should like to have Mr. Chetwynd's explanation of this marked list, that is, as to whether the forms can be saved or not?

Mr. *Chetwynd.*] The first marked is the order and advice form; Mr. Beaufort turns this into an order form only. I explained to the Committee yesterday that, according to the estimate of the Stationery Office, the cost of the present order and advice forms is 8 *s.* 1 *d.* per thousand, whilst their estimate of the cost of the form proposed by Mr. Beaufort is 1 *l.* 11 *s.* 3 *d.* per thousand.

Mr. *Beaufort.*] Allow me to explain that that estimate must be entirely fallacious. May I also ask that Mr. Chetwynd should now simply state whether the form I have marked can or cannot be discontinued.

276. *Chairman.*] But I wish to get at the way in which you have arrived at the saving of 25 per cent.?

Mr. *Chetwynd.*] If the advice forms are done away with, and nothing is substituted for them, then there would be a saving of 3 *s.* 4½ *d.* per thousand, but Mr. Beaufort proposes to substitute something which will cost four times as much.

Mr *Beaufort.*

9 May 1876.

much. The next item marked is the money order account sheet.

277. Mr. *Weldon.*] But can the advice form be abolished?

Mr. *Chetwynd.*] No, certainly not, with safety. The next form, as I have said, is the money order account sheet.

278. *Chairman.*] Can that be done away with?—Certainly not. The next forms marked are the letters for missing advices. There would be a saving of 3*s.* 4½*d.* a thousand there. The next form is the notice to chief office of the non-receipt of advices, and of these we have very few. The next form is the form used by the public in applying for alteration in the name of the payee; these forms could only be done away with if the advices were abolished.

279. Do I understand you, Mr. Chetwynd, that if the advices were not done away with these forms could not be done away with?—Yes, certainly.

280. Then it all turns upon that point?

Mr. *Beaufort.*] Yes; the cessation of the whole of these forms depends entirely upon the cessation of the advice; that is the point upon which the whole question turns.

281. *Chairman.*] Well then, Mr. Beaufort, turning back again to the check upon the accounts, I see you send up 1,053 orders with the account which came this morning; how do you propose to have the claim checked at the chief office?—I should say that it ought to be done the same way as now; there are the forms and the account, and it might be done in the same way.

282. Then the 25 per cent. would be saved in your operations at Manchester?—Yes.

283. Mr. *Walliker.*] But you must either incur the labour of copying the accounts at the small offices or supply them with copying presses at 8*l.* each; 5,000 presses at 8*l.* each would amount to 40,000*l.*?—But how long does a copying press last; supposing it last eight years, that is only 1*l.* a year for eight years.

284. Mr. *Weldon.*] The expense at 4 per cent. would be 1,600*l.* a year?—But it would not be necessary to have copying presses at the great majority of the offices.

285. Mr. *Walliker.*] Then you would not save the labour?—In my proposition I never suggested that the paid order ledger should be discontinued, and the account which would accompany the vouchers would simply be a copy of that ledger.

Mr. *Chetwynd.*] That is the original account, and up to the 31st January last postmasters were permitted to take copies of it for their own use, but copies have now been abolished and the presses will probably be sold.

Mr. *Beaufort.*] It was not that postmasters were permitted to take copies, they were required to do so up to the 31st January. Our paid ledger would be a simple copy, and at offices where they have no presses they might continue to do as they used to do.

286. Mr. *Weldon.*] May I ask, Mr. Chetwynd, whether the presses are still in the hands of the postmasters?—They are at present; but the postmasters, I think, have been requested to call for tenders in order to get rid of them.

287. But supposing it were conceded to Mr. Beaufort that presses were required, the presses would not have to be bought?—Yes, excepting for the 268 offices which have already been furnished with presses.

288. *Chairman.*] Do I understand that it would only cost 3*d.* or 4*d.* to copy the account?—I said it would only take about 10 minutes to take a copy. I gave no estimate of the expense.

289. Well, I have one or two more questions to ask. Under the present system the form of account occupies less than six pages, and under your plan it will occupy more than 50 pages; would not that involve very heavy expense? (*Mr. Beaufort went into an explanation with a view to show that less paper would be used if his proposition were carried out than would be used under the present system.*)

290. Mr. *Weldon.*] It appears merely a debit and credit account with regard to the paper; you have to give Mr. Beaufort credit for the forms which he would save, and charge him with the additional paper which would have to be used?—Yes; but as I explained yesterday, mine was only a suggestion as to the course which should be pursued at the chief office; I did not know whether it would be accepted or not. I pointed out yesterday that all this paper is not necessary; but how the account is checked here I do not care.

291. Then you expect them to supplement your plan in London?—Yes; you are making me adhere strictly to my plan, but I am not so bigoted as to adhere strictly to it.

Chairman.] Certainly not; on the contrary, we wish you to have the greatest possible freedom.

(*Some conversation here ensued as to whether it would be possible for the Controller of the Money Order Office to properly check the accounts under Mr. Beaufort's scheme, and Mr. Hawkes stated very distinctly that it would be impossible for him properly to cast and to check the orders under the proposed scheme.*)

292. *Chairman.*] Then it appears that Mr. Beaufort proposes something which cannot be carrid out?

Mr. *Hawkes.*] I must certainly have the accounts furnished to me in such a form as to enable me to compare the orders with them.

293. Mr. *Walliker.*] Then you would be compelled to paste them on sheets of paper as first suggested by Mr. Beaufort?—Yes.

294. *Chairman.*] These three forms are proposed to be substituted for the present money order form and advice?

Mr. *Chetwynd.*] Here you have three forms; the account is sent up and pasted into a book, and when the order has been paid it is pasted in in by the side of its counterfoil. To bring them together you must have paper to paste them on.

295. Well, I don't think we need pursue the matter any further, for Mr. Hawkes says that the plan cannot be carried out?—As you adhere strictly to the plan which I proposed, I beg to say that I only suggested a way in which the work could be done at the chief office. I think all the difficulties which have been raised by Mr. Chetwynd and Mr. Hawkes could be met with perfect ease, and these difficulties ought not to stand in the way of the plan. If I am allowed time I can easily point out how the difficulties can be met.

296. But these gentlemen have had great experience at the chief office, and I know from experience that it is very little use to propose a scheme which will not work?—All the difficulties may be very easily met. I may say at once that the

the way to meet the difficulty with regard to the issued orders is to revert to the sheet which is now sent up and Mr. Hawkes would then have no more difficulty than he now has.

297. But it has been explained that the plan will not work?—I think it would work; I think all the difficulties which have been raised are merely technical ones.

298. I must confess that I don't think so. At present the sheet sent up daily as an account contains the name of the payee and remitter?—Yes, and if the advice form were discontinued that sheet would resolve itself into one entry only. But if the name of the remitter were entered it would only be one column instead of three in the daily sheet.

299. Mr. *Walliker.*] It seems to me that what we have now arrived at is that we should carry on the system as at present so far as the chief office is concerned, and the alteration would simply be the abolition of the advice, and the ignoring altogether of the name of the payee, and the name of the office upon which the order is drawn?—Yes, and that abolition will save one-third of the present labour.

300. *Chairman.*] You do away with the advice and the entry in the account of the name of the payee and the name of the office drawn on?—Yes; doing away with the advice is tantamount to doing away with those entries, as the order would be payable at any office.

301. Don't you think that would leave room for a great deal of fraud?—I have thought of that, and I cannot see that we should be more open to fraud than we are now; there appears to be no room for any fraud which cannot, to a certain extent, be committed under the present plan.

302. Mr. *Walliker.*] Have you considered that case of a fraudulent clerk at the head office which I put to you yesterday?—Yes, I have considered it, and the more I think of it the more I think that it ought not to stand in the way of an alteration of this sort.

303. But the fraud is so simple. A clerk in the chief office goes, we will say, to the Finsbury office, and takes out an order payable anywhere; he presents the order for payment, and he gets back his 10 *l.*, being so far a loser by the transaction of 1 *s.*, the amount of the commission. He is employed in marking off the Finsbury orders, and when it arrives, after payment, instead of marking it off, he simply puts it in his pocket. Having done this, it is in his power to obtain a duplicate; he states the case (as one of the outside public) to the Controller of the Money Order Office, and is told that he must wait 60 days in order to see whether the order is presented, and that then he can have a duplicate. He waits the 60 days, gets his duplicate and a second 10 *l.* Under an arrangement like that he would certainly clear 10 *l.* for an outlay of 1 *s.* Having his original capital and the 10 *l.* which he has fraudulently obtained, he can next take out two orders for 10 *l.* each, and so on, *ad infinitum*; in fact, I don't see how he would be found out; there would be no end to it. The fraud is as simple as possible?—But the Controller would not issue so many duplicates to a clerk in his office.

304. The clerk would apply as one of the outside public, and might on the occasion of each fraud assume a different name?—But the person who would mark the orders off would be a confidential clerk.

305. Mr. Hawkes has told us that the officers who now mark the orders off are second class messengers at 25 *s.* or 30 *s.* a week?—There is no reason why men of such a class should be employed upon the work, and besides, if they were, they would not have sufficient intelligence to commit the fraud you speak of.

306. It is quite true, Mr. Beaufort, as you say, that frauds are now committed in nearly every business, but my position is that this is an exceptional case, because the fraud would never be found out; it requires no confederate, and there is absolutely nothing to lead to detection?—But the Money Order Office would not allow a man to apply over and over again.

307. He need not apply at all in his own name; he could apply in a different name each time. A very large number of duplicates are issued now, and no suspicion would arise. I believe 50 or 60 duplicates are issued every day?

Mr. *Hawkes.*] Yes, that is so; we issue 50 or 60 every day.

308. Mr. *Weldon.*] I think we are all agreed that if the present system continued to prevail at the chief office, there would be a very great opening for fraud under Mr. Beaufort's plan, but there are systems of check in other institutions which might be instituted here; a constant change of duties is one.

Mr. *Walliker.*] A man would only require two or three days in which to complete the fraud. And if he did not succeed in intercepting the order he would only have lost the 1 *s.*, and have run no risk.

Mr. *Weldon.*] You might combine the change of duties with a different system of issuing duplicates; at the Bank of England, for instance, they repay only after a lapse of five years.

Mr. *May.*] But it should be remembered that the amount of a money order is very small by comparison.

309. Mr. *Weldon.*] I look upon paying soon as a premium upon carelessness. If the clerks were changed the fraud could not be committed; is it necessary that the clerk should have a particular duty?

Mr. *Hawkes.*] No; it is not necessary that a man should have a duty for a long time; on a certain day, when an order comes up, he puts it into his pocket, and after the lapse of two months he applies for a duplicate.

Mr. *Chetwynd.*] I may mention that the system of changing the duties of the clerks is in operation in the department now; it is in force, for instance, in the Savings Bank Department.

Mr. *May.*] In considering this scheme one of the chief things to be thought of is the risk of loss either to the Post Office or to the public, and certainly Mr. Beaufort's scheme does undoubtedly present great difficulty in regard to that. The Post Office has such a number of clerks that it is impossible for the department to be acquainted with their private characters?—We have a most perfect check upon the characters of our clerks; every one of them must go before the Civil Service Commissioners, and in the course of their examination they are required to give the name of every employer they have had; every portion of a man's life is gone through, and if there is the slightest suspicion he is rejected.

Mr. *May.*] But you cannot do that at the chief office?—Yes; it applies to every officer who enters the service.

Mr. *Beaufort.*
9 May 1876.

(*Some conversation here took place as to the step which were taken to ensure the persons who entered the service being of good character. It was shown that every precaution was taken, but, at the same time, it was admitted that persons of bad character occasionally found their way in, and that frauds were sometimes committed.*)

310. Mr. *Walliker.*] You propose that the orders shall not be paid after two months; do you mean from a certain day in one month to a certain day in another?—Yes, from the 6th May, for instance, to the 6th July.

And a postmaster paying an order after the two months would have the amount of it disallowed; would not many disputed cases arise; the figure 5 is very like the figure 3, for instance, and mistakes would arise if the orders were badly stamped.

311. Mr. *May.*] That difficulty might be got over by taking the month only, and not the day of the month?—Yes.

312. Mr. *Walliker.*] If you take the month and not the day of the month, then an order drawn on the first of the month would be payable for three months all but a day, whilst an order drawn at the end of a month would only be payable for two?—I think there is no difficulty in adhering to the exact date.

313. *Chairman.*] No doubt if the principle of the plan is right, the details can easily be arranged, but I think there are great difficulties in the way of adopting the plan. Have you anything further to state, Mr. Beaufort?—You asked me whether I thought there were any objections to Mr. Chetwynd's postal note plan. I had not then time to answer, but I shall be glad now to state one or two objections to it. One objection is the liability to which it would expose postmasters. In order to guard the revenue, Mr. Chetwynd proposes to charge the notes to the respective postmasters as money value, so that in order to be prepared for the demands of the public, every postmaster in the country would probably have a larger number of the notes than would be sufficient for the ordinary demands upon him; in many cases that would amount to a very large sum. Now, the notes being charged to the postmaster as stock, he would be liable for their value if his house were broken into and robbed; the same thing would happen if the notes were stolen by a confidential clerk who had access to the postmaster's date stamp. This would be a heavy risk and responsibility throughout all the offices in the kingdom, and I think the matter deserves great consideration. We have old women and old men keeping the offices at some places, and if it became known that this valuable stock was in their possession, their places would certainly be broken into.

Mr. *Chetwynd.*] I propose that the nominal value of the postal notes shall be charged to the postmasters, in precisely the same way as we now charge them with postage stamps and Inland Revenue licenses. We send them 4,000,000 *l.* or 5,000,000 *l.* worth of postage stamps every year; we issue to them 500,000 *l.* worth of Inland Revenue licenses; we send them 3,000,000 *l.* or 4,000,000 *l.* in money every year to meet payment of money orders and savings bank warrants; we should charge these notes in exactly the same way, and it might just as well be said that the money and the postage stamps would be stolen.

Mr. *Beaufort.*] I do not think the cases are parallel. If people stole Inland Revenue licenses they could not turn them into money.

Mr. *Chetwynd.*] I said money and postage stamps.

314. Mr. *Weldon.*] On an average how much would a postmaster hold in his hands?

Mr. *Chetwynd.*] The reserve and the stocks of stamps would not be less than 20 *l.*

315. Mr. *Earnshaw.*] Are post offices ever robbed?

Mr. *Chetwynd.*] Very seldom; we have had two or three cases in the last few years. We should of course supply the offices with the notes according to their requirements, and, so far as robbery is concerned, if the notes were stolen there would be difficulty in turning them into cash; a person would have to steal the postmaster's stamp as well as the notes; the postmaster would discover his loss in less than 12 hours and would telegraph to us; we should give notice by telegraph to all the post offices in the kingdom immediately, as we now do when money orders are stolen.

316. *Chairman.*] Have you any more difficulties to put forward, Mr. Beaufort?—I have only to add that the present responsibility of postmasters is very heavy, and that they would have these valuable notes added to their stocks. Another argument in favour of my plan and in opposition to Mr. Chetwynd's plan is, that mine will bring in a large additional revenue whilst Mr. Chetwynd's will bring in a very small one.

317. Mr. *Walliker.*] When you speak of a large revenue, do you refer to the revenue derivable from the commission?—I mean that a saving of 25 per cent. in the cost is equivalent to a large revenue.

318. Mr. *Weldon.*] The postmasters would have the Post Office money order books entirely under their own control?—Yes.

319. Supposing, then, a small tradesman who was also a postmaster happened to be in needy circumstances, there would be no difficulty in his using 25 for his own purposes?—No; but he would be detected afterwards.

320. But he would borrow the orders only for a short time with the intention of paying them back?—He could do that at present.

320*a*. No; he could not get them cashed; there is the advice to prevent it. You would give him a book of orders which he could fill up for 10 *l.* each; if he wished to borrow 100 *l.* he would simply draw out ten orders and pay them away?—I do not see what is to prevent his doing that now.

321. Mr. *May.*] I should like to ask you, Mr. Beaufort, for the opinion your long experience as one of the chief postmasters in the United Kingdom has enabled you to form, as to whether the present system is practically free from loss to the Post Office and to the public; I do not mean loss in regard to the cost of the service, but loss of money to the holders of the orders?—Yes; practically, I think it is.

322. And, speaking generally, do you think it meets the requirements of the public?—I do not think it gives the public the accommodation which they might have.

323. In what respects do you think it fails?—I think it would be better if the order were payable at any office at which the person who takes it out might wish it to be paid, and also if it were payable to a person without obliging him to give the

the name of the sender. People do not like to be asked for the name.

324. Do they complain?—I very often hear people objecting to it; I think a larger number of orders would be taken out if that part of the system were done away with. People very often wish to send money privately.

325. Still, orders would be very often fraudulently cashed without it, and it appears, therefore, quite clear that some such plan as that now adopted would, under any circumstances, be absolutely necessary. No doubt it gives rise to some little inconvenience, but on the other hand it very often leads to the detection of fraud?—A person who presents an order now, can forge the name; he steals the letter which encloses the order, and that letter gives him the name of the sender.

326. Then with regard to Mr. Chetwynd's notes being only for fixed sums?—Yes; that is the great disadvantage of Mr. Chetwynd's plan; the small orders are almost all sent to pay small tradesmen's bills, and those bills are for broken amounts, and not for fixed sums. They would have to be supplemented by stamps.

Mr. *Chetwynd.*] Perhaps I should mention that the scheme which I have proposed will meet 2,250,000 cases in which orders are taken out for fixed sums of 1 *l.* and under; that is, out of 16,000,000.

327. *Chairman.*] That would be one-eighth of the whole of the orders?

Mr. *Chetwynd.*] Yes; there would be 59,900 at 2 *s.* 6 *d.*; 417,000 at 5 *s.*; 836,000 at 10 *s.*, and 952,000 at 20 *s.*

Mr. *Beaufort.*] It would apply to one-eighth of the orders, but it should be borne in mind that part of Mr. Chetwynd's plan is the cessation of the small orders.

328. Mr. *Earnshaw.*] I do not understand that Mr. Chetwynd does propose to abolish the small orders?

Mr. *Chetwynd.*] No; at page 13 of my report, it will be found that I suggest that the money order system might be left as it is, or that no order should be issued for less than 3 *d.*

329. Mr. *Beaufort.*] I think that comes to the same thing; if you raise the commission to 3 *d.* you restrict their use. I have only to add that, if necessary, I can satisfy Mr. Hawkes that my plan will work so far as accounts are concerned, and I can also meet Mr. Chetwynd's objection as to there not being a saving of 25 per cent. in labour.

329. *Chairman.*] But it appears to me that your plan takes the ground from under our feet; we might save in paper, perhaps, but we should not be able to prevent fraud?—I do not think there is much in that; frauds are committed under the present system, and would be committed under any system.

Chairman.] Yes; but your plan would increase our liability to them.

330. Mr. *Walliker.*] You would propose that the orders should be payable at any office. Take the case of a person in a large way of business; he would have a great many orders sent to him, and he would desire to cash them at the nearest office. But in many cases the postmaster's reserve only amounts to some 10 *l.* or 15 *l.*; how would such a postmaster be able to cash them; and how would the postmasters know what money to keep to meet their requirements?—It would not be necessary for them to keep any special reserves at all; it would be less necessary for them to do so than under the present system, because at present people are obliged to go to a particular office, for payment, whereas under the altered plan they would be able to go to any office. There are 60 offices in Manchester; if the orders could not be cashed at one, they could be taken to another. If there were no money order offices at all, they would still be cashable; a person might take them to a banker or to a tradesman. When a postmaster is now served with a large number of advices, and he cannot pay all the orders, he has now to apply to London for funds; but this would not be necessary as the orders would be payable anywhere, and the person holding them might go anywhere.

331. Mr. *May.*] Then it comes to this, that the orders might just as well be payable in London only?—I am afraid that would not answer, because people are so fond of keeping things in their hands for a long time that they would not present the orders in time.

Mr. *Walliker.*] At present a postmaster is able to regulate the balance which he holds, because he knows the amount of orders drawn upon him; if he has a large number drawn upon him he does not remit to London. Under your plan he would never know what his requirements might be, and perhaps he would drain himself of funds by remitting to London. You say that if a postmaster has no funds he should tell the person presenting an order to take it to a banker or a tradesman, but that is not, I think, a principle which should be admitted by a Government department.

332. Mr. *May.*] You might undertake that the orders should be paid only if the postmaster had funds?

Mr. *Chetwynd.*] That is all we undertake to do, that is made very plain.

Mr. *Beaufort.*] When a postmaster now finds that he has a large number of advices on hand, he applies to London for a remittance; he receives the advice on Monday, and applies for funds, which he receives on Wednesday. If in the meantime a person presents the orders, the postmaster says, "I cannot pay you to-day; I have applied to London for funds, and I shall be able to pay you to-morrow." Under my plan all this would be obviated; he would simply tell the person to take the orders to a banker or another office, or any tradesman. There would be less difficulty than there is now, as postmasters would not keep money in their hands in the expectation of having to make payments; they would remit to London every night down to the limits of their reserves, and the accounts would really be kept much more closely than they are now.

333. *Chairman.*] I shall be glad to know, Mr. Chetwynd, whether you have anything to say on that point?—

Mr. *Chetwynd.*] In the examination of the money order accounts it is part of the examiner's duty to notice the cases in which large sums have been drawn upon an office; a book passes between the Money Order Office and the Receiver and Accountant General's Office, showing these cases. In the Receiver and Accountant General's Office there are officers who see to the state of the postmaster's account, and, if he has not sufficient money to meet the orders, a remittance is sent to him. We are thus able to supply money to the paying office one day sooner than it would be supplied if the Postmaster were

Mr. *Beaufort.*

9 May 1876.

left to make application for a remittance. In the case of the Savings Bank the Controller gives us notice of every sum above 5 *l.* Mr. Beaufort states that postmasters now retain more money than they ought. I can distinctly state that that is not the case; postmasters are never allowed to retain more than 5 *l.* or 10 *l.* beyond their reserves without giving or being called upon to give us a list of the unpaid money orders or Savings Bank warrants or other demands to meet which the money is retained.

334. Mr. *Thomson.*] Under your plan, Mr. Beaufort, supposing a postmaster wrote for money, how would the Department know that he really required it?—Whether he required it or not, he would still be charged with it.

335. But, supposing a postmaster required money immediately for his private purposes?—As to that, it would be very easy to tell the postmasters that they are not to apply for money, but in any case they all give bond.

335*a*. We have frequent instances in which postmasters receive large sums of money from depositors without accounting for it, using the money for their own purposes; they might do the same thing under your plan?—That difficulty, is, I think, altogether imaginary.

336 Mr. *Chetwynd.*] Perhaps before Mr. Beaufort leaves, the Committee will kindly allow me to give an explanation as to the cost of this form. I have sent up again to the Stationery Office the same gentleman who went before, with a written request that they would go through the estimate again. It seems that the estimate they at first gave, although it was fully explained for what purpose the forms were required, was based on the idea that a single thousand only would be required, whereas, of course, there would be 16 millions. That makes a wide difference in the cost of them, and I thought it was only due to Mr. Beaufort that I should give this explanation.

Wednesday, 10th May 1876.

PRESENT:

MR. GEORGE MOORE, IN THE CHAIR.

Mr. A. Earnshaw.	Mr. S. Walliker.
Mr. F. May.	Mr. J. W. Weldon.

10 May 1876.

Mr. *Earnshaw.*] I WISH to make one or two observations as to yesterday's evidence. If you recollect, Mr. Beaufort stated that under Mr. Chetwynd's system there would be great risk of loss to the Post Office, inasmuch as post offices in the country would be broken into, but Mr. Beaufort did not appear to remember that the notes would be kept unsigned.

336*a*. *Chairman.*] Do you propose, Mr. Chetwynd, that the notes should be signed?

Mr. *Chetwynd.*] The notes would be stamped and signed when the postmaster issued them.

Mr. *Earnshaw.*] Mr. Chetwynd has left a line for the postmaster to sign his name, and, of course, postmasters would know the signatures in just the same way as bankers know signatures?—I am afraid that would be hopeless, as we have such a large number of postmasters and clerks.

Mr. *Earnshaw.*] But if you wish to keep up the check, postmasters should always sign except when they are away?

Mr. *Chetwynd.*] In many cases the clerk at the counter signs for the postmaster.

336*b*. Mr. *Earnshaw.*] My own proposition as to perforation is, that the order should be perforated according to the amount up to which it may be drawn, whether for 1 *l.* or 5 *s.*

Mr. *Chetwynd.*] That system is not new to the Post Office; it was intended to adopt it when we took over the issue of licenses from the Inland Revenue Department, but we were obliged to give it up.

Mr. *Weldon.*] Under Mr. Chetwynd's scheme no one could alter the amount of the notes.

Mr. *Chetwynd.*] The value of the notes would be printed on them in ink, which flies when an attempt is made to erase it with chemicals.

336*c*. Mr. *Earnshaw.*] An objection has been made, Mr. Hawkes, to Mr. Chetwynd's scheme, because you cannot get the notes for the odd pence. Do you think it would be possible to have them worded, "Pay————————, or order, 5 *s.*——," leave a blank space after the shillings for the addition of the pence? The postmaster would then, in sending up his account, have to claim for the pence only.

Mr. *Hawkes.*] But the notes are to be issued simply as postage stamps are issued, and we shall not require any register at all. In checking the claims we should simply count so many at 5 *s.* and so many at 10 *s.*

Mr. *Chetwynd.*] We should supply them to the postmasters and keep a record that so many had been sent of Class A, and so many of Class B, &c. When they were paid we should pass them to the credit of the paying office and sort them into pigeonholes provided for the offices of issue; there they would be in numerical order, and when we wanted to make up an account periodically we should simply take out a list of the unpaid notes. The scheme of check is fully described in my printed report.

336*d*. Mr. *Weldon.*] Supposing the orders were removed?

Mr. *Chetwynd.*] They would all be effectively cancelled before being put away.

Mr. *Weldon.*] But supposing they were stolen?—They would be of no value to anyone if they were stolen; they would simply appear as unpaid notes, the value of which had been duly accounted for by the issuing office; and they could not be credited a second time to any postmaster.

Duplicates

Mr. *Beaufort.*

10 May 1876.

Duplicates of postal notes are not intended to be issued.

336*e*. Mr. *Chetwynd.*] Before Mr. Beaufort left the room yesterday I mentioned that I had made further inquiry as to the cost of his forms. I have since had some correspondence with the Stationery Office, with the following results:—

I sent up Mr. Beaufort's form marked B.; a sheet contained five of the proposed orders with two counterfoils to each, and I asked them to state the cost of a thousand of the forms. I also asked them to state the price of a cheaper paper, if a cheaper paper would stand wear for two months in the hands of the public. The books were to consist of 200 sheets perforated and numbered as shown in the specimen supplied by Mr. Beaufort. They said that Mr. Beaufort's paper would not be good enough, and they sent two kinds of paper, one marked A. and one marked B. The price of the forms on paper marked A. would be 8 *s.* 7½ *d.* per thousand, and if they were perforated, so that carbonised paper might be used, 11 *s.* 11 *d.* per thousand. If the paper marked B. were used, the cost would be 8 *s.* 9½ *d.* per thousand, and 12 *s.* 1 *d.* if prepared for carbonised paper to be used.

Chairman.] I am not quite sure that I see what this information bears upon.

Mr. *Chetwynd.*] It bears upon this: my objection to Mr. Beaufort's plan was partly based on the cost of it; I said there would be a very large increase in the cost of stationery, whereas Mr. Beaufort said there would be a very large reduction. The facts now given by the Stationery Office show that the cost of his form would be 11 *s.* 11 *d.* as against a cost of 7 *s.* 9½ *d.* for the present form of order and advice, which is an increase of 4 *s.* 1½ *d.* If we did away with the advice the cost of the present form would be 4 *s.* 5 *d.* per thousand only as against the 11 *s.* 11 *d.* for Mr. Beaufort's form.

Mr. JEFFERY, called in; and Examined.

Mr. *Jeffery.*

337. *Chairman.*] WE shall be glad to hear any objections, Mr. Jeffery, which you may have to Mr. Chetwynd's postal note plan?—My objection is just this: that although it may be very suitable as a circulating medium, it is unsuitable for transmission in unregistered letters, because we have a very great number of letters stolen every year—in fact many more than we know anything about. Last year we had 65,000 applications for missing letters, and we know that the applications are few in comparison with the number of letters lost.

338. Mr. *May.*] Did the 65,000 applications relate to letters containing money orders?—No; to missing letters of all kinds. Out of the 65,000 letters we found, on inquiry, about 19,000.

339. The 65,000 were out of 1,000,000,000 letters altogether?—It was one letter out of every 25,000 in circulation. It is certain that the public do not apply for the whole of the letters which are missing. We have now three or four cases under investigation where bundles of letters have been lost, and we have noticed that we have only had one or two complaints; we have lost two mail bags with 160 letters in each, and out of the whole number we have had only one or two complaints. We lost some Manchester bags estimated to contain about 600 letters, and we only had 14 or 15 complaints. People do not always apply for letters even when they contain property, and there are various reasons for this. Our men do not steal bankers' letters as a rule, although we have had complaints on that head; neither do they, as a rule, take letters which are for important mercantile houses, although we do get some complaints from them. They generally go to the working class population in the poorer neighbourhoods; and to such people the filling-up of a form of application is a matter of considerable trouble. Mr. Walliker can bear me out in this, that people come to the post offices and complain without our hearing a word about it at the Head Office.

Mr. *Walliker.*] Yes; and finding that to be frequently the case, I made application for some of the inquiry forms, in order that we might secure the necessary information and forward it to the secretary at once.

339*a*. Mr. *Jeffery.*] Now, coming to the question of the money orders lost last year, you will find that in a report which I furnished on this subject it is stated that the number of applications was 3,000, but since the report was written I have ascertained that, including Scotland and Ireland, and the applications made to the Money Order Office, of which we knew nothing, it was nearly 7,000, and I am afraid a greater number than this was stolen, because 10,000 orders were never presented or applied for at all.

340. Mr. *May.*] But many persons might not have known that orders had been sent to them?—Taking the number of cases applied for, it is one order out of 2,398 orders issued. We know that these were stolen because we have the evidence.

341. Mr. *Weldon.*] But if duplicates were issued no harm was done; how do you account for money orders being stolen and not being cashed?—It is true that out of the 7,000 cases only 120 orders were obtained by forged signatures, and in 40 cases we were successful in bringing the forgery home, either by legal or moral evidence. This leaves 70 or 80 cases unaccounted for, and in these cases the forgeries were committed either by the public or by servants of the Post Office.

342. Mr. *May.*] The public suffer more than the Post Office?—In all cases where we bring the case home to a Post Office servant we issue duplicates free, as well as in all other cases where we are satisfied that the orders have been lost in the post but not presented for payment.

343. Mr. *Earnshaw.*] Have you looked at the matter in this light, that the orders said to have been stolen may never have been stolen at all; business people may have received them, treated them as they chose, and then declared that they were never received. They may not have been stolen by Post Office people?—I do not say that the 120 forgeries were committed by Post Office servants. We only brought the offence legally home to two of our own officers, and 25 outside persons. In 13 cases there was a little doubt, and in 70 or 80 cases we had no clue.

344. Mr. *May.*] You state that the letters stolen belong chiefly to the poorer classes; how

Mr. *Jeffery.*
10 May 1876.

do you arrive at that?—The complaints which we get are largely from that class.

345. What is the mode of discovering the letters of the poorer classes?—They are very obvious when they are bulky with stamps, and coin is, of course, palpable. A man takes 20 letters on the chance of finding something of value in some of them.

346. In proportion to the number of letters, do they take more in London than elsewhere?—Wherever there is any confusion on account of the magnitude of the work. I was about to suggest that it might be desirable for the Committee to see the Circulation Department here when the mails are going out; it would then be seen how utterly impossible it is to have a check on an unregistered letter.

347. Mr. *Walliker.*] With regard to one letter in 25,000 being stolen, I should be glad to know whether that is the proportion of missing letters for which written applications are made?—That is what we have in black and white; there is no calculation or allowance in it for what we do not hear about.

348. Mr. *Weldon.*] Do you know whether cheques payable to order are ever stolen?—Yes; they are, very often.

349. Mr. *Weldon.*] You know that that takes place?—Yes; they sometimes change the cheques through publicans when they are crossed.

Mr. *May.*] Is that so?—I should say from our experience that the crossing is a great protection.

350. Mr. *Weldon.*] I was just going to make the same remark. Do you mean that crossed cheques are cashed through publicans?—It must, of course, be an open crossing, otherwise publicans would not take them.

351. Have you many cases of this kind?—Just at present there are more cases of that kind than we have had for some time.

352. What course is taken when a letter has been ascertained to be stolen?—We stop payment of the cheque; or get the bankers, at any rate, to exercise caution.

353. Mr. *Earnshaw.*] Have you tolerably good evidence that letters are not stolen by servants of the public?—We went into that question very closely, and the conclusion we arrived at was that some of them were, and that Post Office servants had some of them.

354. You see in large firms, and so on, there is often great irregularity as to the way in which they are treated after delivery; they are handed to a boy very often for distribution. If the robberies were effected by Post Office servants they would be more readily traced?—There is great difficulty in tracing them; last year we prosecuted or dismissed 149 persons.

355. Out of what number of servants?—We have no estimate of the number who actually deal with the letters; such an estimate could only be got by going to each office throughout the country for the number employed.

Mr. *Chetwynd.*] There are 42,000 people in the Post Office employ, 11,000 being in the telegraph service.

356. Mr. *Earnshaw.*] Were your prosecutions successful?—We had convictions in 63 cases, and in 86 cases the persons were dismissed, the evidence not being sufficient for us to obtain convictions.

357. Mr. *May.*] Have you found that the robberies have greatly increased since pillar letter boxes have been brought more into use?—The robberies are increasing every year.

358. *Chairman.*] But your operations are increasing?—Yes, but the robberies are increasing more in proportion than the letters. In the year 1870, according to the applications which we received, one letter in every 33,000 was lost; in 1871 it was one in every 31,000; in 1872 the statistics were not sufficiently complete to enable us to make a reliable calculation; in 1873, the number was brought down to one letter in every 26,000; in 1874 it was about the same: and last year the figures show that it was one in every 25,000.

358*a*. Mr. *Walliker.*] The increase in the number of applications may be due, to a certain extent, to the spread of education; many years ago the poor people could not write out their applications, but they can now?—There is an aversion to complaint on the part of poor people.

359. Mr. *May.*] Do you think that the robberies take place more from the letter boxes than from the receiving offices; it always appears to me that there is no sort of check?—There is no check as regards the number of letters; the man simply fills in the time he takes the bag, and a missing letter could not be traced.

360. Mr. *Walliker.*] Mr. Jeffery has stated that a great number of letters containing money orders are lost in course of transmission through the post, and that the orders are fraudulently signed; I should like to have his opinion as to the value of the advice?—My belief is that the advice is essential to security; the existence of the advice saved the 7,000 orders which were stolen but not presented last year. They could all have been forged but for the advice, whereas only 120 were forged as it was.

361. *Chairman.*] They would have been stolen and not traced?—Yes; I think these facts show that the advice is essential to security, and that the present system is really very secure.

362. Mr. *Weldon.*] I should like to ask a question as to whether the advice could be numbered so as to have no name except the name of the sender; I want to get rid of the name of the payee?—Then how would a postmaster know that he was paying the right person?

363. But a postmaster would know that by the person giving the right name of the sender?—But the person who stole the letter containing the order would probably know the name of the sender.

364. But he could not be certain that the writer of the letter was the sender of the order?—A good many would be presented under any circumstances. In my report I give three reasons why orders which are stolen are never presented, and the first reason is that, in consequence of the repeated admonitions which we have given, a good many letters enclosing money orders do not now contain the names of the senders; a second reason is that a good many of the letters are stolen in towns at which the orders are payable, and the thieves dare not present them because they are known; but the third and greatest reason why they are often not presented is that the orders are stolen at great distances from the offices at which they are payable, and cannot be presented on account of the expense of the journey.

365. If the name of the payee were abolished labour would be saved; do you think that if the orders

orders were advised by number, it would give rise to a greater number of frauds than are committed at present; a certain post office would have an advice to pay a certain number for such-and-such an amount, the sender's name being so-and-so? —If the order were payable to a certain person and another person signed it with the proper name, he would be able to get the money.

366. The question put by the postmaster would be, "Who sent this order?" and with the caution which you recommend as to the name of the remitter, a person who stole a letter could not give the information?—If you could get the public to withhold the names of the remitters, the plan would be perfect.

367. I want to ascertain whether there is any advantage in a postmaster entering the name of both the payee and the remitter when he advises the Chief Office?—It is, of course, an element of security; the person who presents an order must be correct as to the name both of the remitter and the payee.

Mr. *Hawkes*.] Considerable trouble would arise if we had not the names of the remitter and payee in the Money Order Office. About 900 references are made daily to the accounts, and without the names many of the references would have to be made to the issuing postmasters.

368. Mr. *Weldon*.] The system at present is to secure letters with gum; do you think that any great number of letters are opened and inspected and then closed again?—That is done, but not to any very great extent; we have perhaps 5,000 or 6,000 complaints every year of mere abstraction of contents. The present envelope is very unsafe.

369. Mr. *Walliker*.] Are the new envelopes which are being used, composed of paper and linen, safer or less safe than the ordinary envelopes?—Their very strength is their weakness, because if you put a paper-knife in the folds of the envelope it will lift it up without tearing, and may be closed again without showing traces of the violation. This can be done whenever linen comes to linen, or when linen comes to paper, but when paper comes to paper you cannot separate the parts without tearing and leaving the marks behind.

370. We shall be glad to have your views as to the safety of registered letters as a means of transmission?—Registered letters are not so safe now as they were. The system itself is perfect, because we have the signature of every person through whose hands a letter passes; but people get careless after a time. We are now whipping them up, and we are consequently getting better. At one time we had only about one registered letter lost in about 250,000, but the proportion is greater now, it is one in 68,000. There were about 4,250,000 registered letters sent last year

371. Mr. *Weldon*.] All your registered letters are now secured by a string; would it not be better to turn that into profit by selling covers to the public?—Yes; that is part of a new plan under consideration, but at present the envelope makers are asking so heavy a price for them that we do not think the public would buy them.

372. Mr. *Walliker*.] Would there be any reduction in the cost of registration to the public? —I do not know; at present the price is 4 *d*.; that is now generally the charge throughout the postal union. The question of insurance is under consideration; the German Post Office has proposed a system of insuring registered letters, and if the system be adopted throughout the postal union we must, perhaps, adopt it for inland letters.

373. *Chairman*.] But you insure letters now? —No, we register the letters, but we do not insure their contents.

374. Mr. *May*.] An insurance company will insure you?—Yes, but that is done to a very small extent.

375. *Chairman*.] Have you any more to say as to the safety of Mr. Chetwynd's postal notes as a means of transmitting money?—My impression is that they will be stolen and used. We have 7,000 persons complaining of the loss of money orders; in nearly every one of these cases we issued duplicate orders free of charge, but what would have been the result if we had given no compensation?

376. Mr. *Walliker*.] These circular notes will be much cheaper than the money orders, and if people take them it will be on the understanding that they are not so safe?—They are not like money orders; they are payable anywhere in the United Kingdom, and I think they would be stolen and fraudulently cashed.

377. *Chairman*.] But supposing the notes were localised?—Then you get at once one element of security.

378. Would that, Mr. Chetwynd, be fatal to your scheme?

Mr. *Chetwynd*.] Not at all. We propose to leave it to the remitter to make the note payable at any office he likes by crossing it to that office as a man now crosses a cheque to a certain bank; he may also make it payable to a certain person by filling in the name of that person.

379. But that is not making it payable at any place?—The note would be issued payable at any one of the 5,000 offices in the United Kingdom, but it would be left to the sender to cross it to a particular office.

380. Would not that prevent its circulating in the country?—The note would, if crossed, be payable immediately. The primary object of my scheme is to produce an article transmissible by post with a reasonable amount of security; it would not have the same security as the money order; that is obtained through more writing, and an additional document.

381. You propose notes for 2 *s*. 6 *d*., 5 *s*., 10 *s*., and 1 *l*.?—Yes.

382. Supposing I wished to send an order for 2 *s*. 11 *s*.?—No one would discover five postage stamps.

383. Mr. *Earnshaw*.] Mr. Jeffery's evidence goes to prove that even under the present money order system—which is, in some respects, perfect —robberies take place, and that they are not carried to any successful end because there is a difficulty in getting the orders cashed; if it became known that the letters contained documents payable at any office throughout the country, the robberies would increase tenfold?—They would increase largely.

384. *Chairman*.] But payment might be localized?

Mr. *Earnshaw*.] Then you would have the same trouble as now.

Mr. *Chetwynd*.] No; you would simply leave purchaser to fill in the name of the office if he liked.

Mr. *Jeffery*.] The fact that Mr. Chetwynd's scheme provides for no compensation when the

Mr. *Jeffery.*

10 May 1876.

orders are lost would lead to very great outcry amongst poor people; it is no good reasoning with the poorer classes, and telling them that they should not do this and that; they say you have had their money and you must give it them.

385. Mr. *Weldon.*] Supposing a man sends postage stamps?—We give them notice that they should not send them, and our argument is that we are not responsible, and that they have done wrong in tempting our servants.

386. Mr. *May.*] But the sending of postage stamps is exactly what Mr. Chetwynd's scheme encourages?

Mr. *Chetwynd.*] No; we cannot prevent postage stamps being used, but a person sends them at his own risk. It will be remembered that the public will still have the option of taking out money orders if they wish.

387. Mr. *Walliker.*] I shall be glad to know what you think the effect would be if the lowest commission for which a money order could be obtained were fixed at 2 *d.*?—I think they would be largely used then.

388. *Chairman.*] How would that operate, Mr. Chetwynd?

Mr. *Chetwynd.*] There would still be a loss on a very large number of orders. There is a loss of 2 *d.* on every 1 *d.* order issued, and a loss of 1 *d.* on every 2 *d.* order issued. The orders at a penny amount to more than 25 per cent. of the whole, and the orders at 2 *d.* amount to more than 24 per cent. of the whole.

389. *Chairman.*] You propose that no order should be issued for less than 3 *d.*?—Looking at the matter simply from a commercial point of view, I do not think that we should sell an article under the price which it costs us.

390. Mr. *Walliker.*] But we sell orders for more than 3 *d.*?—Yes; but we do not get enough of that business to balance it.

391. If the postal notes were limited to 10 *s.* would that affect the question of liability to loss?—I do not think that would affect it in any way.

392. *Chairman.*] Does the Post Office charge anything for cashing stamps?—The Post Office deducts 2½ per cent.

393. Mr. *Earnshaw.*] You do not buy detached stamps?—Not single stamps; it is prohibited to buy them singly.

394. Mr. *Walliker.*] Would it not be well if the persons selling stamps to postmasters were called upon to give their names and addresses and these were recorded. Part of the discount of 6 *d.* in the pound which is now deducted from the full value of stamps purchased would pay for this extra trouble?—If a person sold stamps and presented them to be cashed, he would give a wrong name and address.

395. Mr. *Weldon.*] Would it not be well to create a new postage stamp to be paid at a particular office?—That was proposed some time ago by Mr. Monsell. I had a talk with him about it some years ago, and I was requested to report upon the plan. I did so and reported against it. It would not work.

396. Let me ask you this. Suppose Mr. Chetwynd's scheme is in operation, and that you create a stamp of the kind proposed. The object I want to arrive at is the doing away with these odd written sums in the books of the Post Office. A person goes to a post office to get an order for 5 *s.* 3 *d.* He buys one of Mr. Chetwynd's postal notes for 5 *s.*, on which there would be a place provided for affixing these special stamps; all he would have to do is to buy a 3 *d.* stamp and affix it to the order. You immediately make the order one for 5 *s.* 3 *d.*?—That would simply do away with the transmitting loose stamps with the postal notes, and do away with a few of the odd broken amounts of pence in the books of the Post Office.

Mr. *Hawkes.*] The paying postmaster would have to make a double claim, that is, for notes and stamps.

397. Mr. *Earnshaw.*] It would not meet the objection of Mr. Jeffery as to the increased fraud arising from the orders being paid anywhere.

Mr. *Chetwynd.*] There was a proposal put before the Post Office some time ago by a Mr. Scott, formerly a clerk in the Edinburgh office, and his proposal was to paste stamps of various denominations on sheets of paper prepared for the purpose and sold by the Post Office. That scheme was gone into very fully, and there is a report from Mr. Scudamore which sums up its disadvantages. Mr. Scudamore's minute describes Mr. Scott's proposal, and shows that it was impracticable.

398. Mr. *Weldon.*] We will take your document, Mr. Chetwynd, one for 5 *s.*, what is to prevent there being a place designated for the stamp?—To make the order 5 *s.* 3 *d.* it would only be necessary to stick on a 3 *d.* stamp.

Mr. *Chetwynd.*] That was partly Mr. Scott's plan, for which he has taken out a patent.

Chairman.] I should like to have the minute about Mr. Scott's proposal read to us.

The following Minute was then read:—

"The Postmaster General,

"This proposal of Mr. Scott's for a post office money order system has been brought forward before, and its adoption negatived on the ground of several grave objections to it, but as he again presses the scheme on the attention of the Department, and as he has evidently bestowed much labour upon the preparation of an elaborate exposition of it, I deemed it but fair to accord to it a further and full consideration.

"I accordingly referred the proposal to the Controller of the Money Order Office for his report, which I now beg to submit.

"In this report Mr. Jackson has not stated all the objections to which the scheme is open, as he considers that those he has dwelt upon, viz., the impossibility of obtaining with the requisite degree of promptitude, information at the Chief Department of the amount of business transacted throughout the country, and of the balance of cash in the hands of postmasters, and the facility it would afford to attempts at deceit and fraud are alone fatal to its adoption.

"In these views I entirely concur. Perhaps it will place the matter more clearly before your Grace if I state that Mr. Scott's scheme may be summed up simply as an arrangement to supply postmasters with stamped money order paper in a manner similar to that which they are now supplied with postage stamps.

"Now we are fully aware of the imperfections of this arrangement, and how constantly postmasters who may be dishonestly inclined, falsify their stamp accounts to deceive the Department, by pretending that they have on hand a stock of stamps of which they have already disposed and used

used the money. It is only by constant and vigilant check on the part of the Receiver and Accountant General and Surveyors that attempts at fraud in this way are detected. It is therefore apparent that in this respect alone, and apart from all other objections, the Department would be placed in a much worse position than it now is, while the extended field of operation which the adoption of Mr. Scott's proposal would offer for these fraudulent practices would render almost any amount of check inoperative.

"Mr. Jackson has not entered upon Mr. Scott's calculations of expense for conducting the business under his proposal, but I think it right to point out that I consider his estimate altogether faulty, and based upon very insufficient data. For instance, on page 28, he assumes that a clerk could issue 300 orders in six hours. Perhaps he could, but his calculation in this respect would apply to very few offices indeed, as at the large majority of money order offices the daily issue of orders amounts to but a fraction of that number. The same objection applies to his estimate of orders paid, given on page 29. Again, to propose as remuneration for 200 orders issued the sum of 5 *s.*, and a like sum for 500 orders paid.

"Now the payment at present made to those sub-postmasters, who are allowed commission, and which is considered barely adequate for the labour and trouble which the duty imposes, is as follows:—

"For the first 500 orders in the year—issued 2 *l.* 15 *s.*; paid, 2 *l.* 5 *s.* (This is at the rate of 11 *s.* per 100 orders paid.)

"For the second 500 orders in the year—issued 2 *l.* 5 *s.*; paid, 1 *l.* 15 *s.*

"For every 1,000 transactions after the first 1,000—issued 4 *l.*; paid, 3 *l.*

"Your Grace will thus see at a glance how erroneous in this particular alone Mr. Scott's estimate of expense is, since the payment at present made, which is far from giving satisfaction, exceeds by such a large amount that which he proposes.

"I submit, therefore, that Mr. Scott may be informed that his scheme has again received full consideration, and that it is still deemed inexpedient to adopt it.

"4 December 1866. *F. I. S.*"

This recommendation was approved by the Duke of Montrose, then Postmaster General.

399. Mr. *May.*] Does the existing money order system, in your opinion, sufficiently protect the public and the Post Office?—Yes, it does.

400. Mr. *Earnshaw.*] I think we ought definitely to understand what Mr. Jeffery points out, that if you remit documents that can be easily cashed, robberies through the post will increase?—Yes, I think so.

401. Mr. *Weldon.*] Do you know whether many bank notes sent unregistered through the post are stolen?—Yes, a good many. Frequently 50 *l.* notes are sent, and we get many applications for 50 *l.* notes. The practice of sending valuables in letters has been condemned by every judge in the land. I have heard the present Recorder of London state he would never certify for a witness' expenses in a prosecution case when the witness is the person who sent the valuables through the post in an unregistered letter. Mr. *Jeffery.* 10 May 1876.

402. Mr. *Walliker.*] You could say to the person who lost a circular note, and asked for compensation, "Did you make it payable to a particular person at a particular office"?—Well, you see, you make the money order absolutely secure now in various ways. It can be made payable only after 10 days, through a banker, and so on; but people, it is true, do not always do that.

403. *Chairman.*] I must confess that localising notes under Mr. Chetwynd's scheme is a very great security?—It is an element of security against fraudulent negotiation. It gives no security against theft, and therefore if a note were stolen the remitter or payee would not get his money any the more.

404. Mr. *May.*] Do you think the present money order system is generally approved?—I do not know. Some people think it is clumsy, but it is certainly very secure. The public have no reason, I think, to complain.

405. Mr. *Weldon.*] Mr. Beaufort's plan is worse than that, because it proposes to issue orders payable everywhere, and written orders also, so that there is a danger of forgery and alteration of the amount. Mr. Chetwynd proposes to print the amount and to do away with the advice. If you introduced broken sums in writing you would have a large element of insecurity?—I think that Mr. Chetwynd's scheme secures the Post Office, but not the public.

Mr. *Weldon.*] The only advantage Mr. Beaufort can show is that of economy in stationery, and some little economy, which is doubtful, in labour. We are informed that there is no real saving, at any rate in the shape of money.

Chairman.] I think Mr. Beaufort has been working in the dark to a great extent, not knowing the course followed in the head money order office. How can a man legislate on America if he has not been there?

406. Mr. *May.*] Exchequer bills run thus: "Pay to———," with a note at foot, viz., *If this blank is not filled this bill will be paid to bearer.* It is suggested that this new document might be framed in the same way, "Pay to———," leaving also the name of the money order office to be filled up, and a note put on to the order itself stating that if these blanks are not filled up the document will be payable to bearer. Do you think that would be a safe form? The remitter could localise it by filling in the name of any person to whom and the post office at which he wished the amount to be paid?—I think all these things would be so many elements of security. My difficulty is with so many stolen documents. What are we to say to the public, there being no means of compensating them?

Mr. MILTON; Examined.

407. *Chairman.*] You have been asked to give evidence on the subject of missing letters?—Yes. Mr. *Milton.*

408. Have you any statement to make?—I shall be happy to answer any questions that may be put by the committee.

409. Mr. *Walliker.*] Will you give us your experience as to the facilities the employés of the

Mr. *Milton.*
10 May 1876.

Post Office have for obtaining a knowledge of the contents of letters, and of the inducements which lead them to steal letters?—They become in time experts in the feeling of letters, and they can tell very correctly whether letters contain bank notes or stamps.

410. Mr. *Weldon.*] Your office is a very large one. Have you any statistics of missing letters appertaining to your office?—Yes. 30 millions of letters pass through my office in a year. In 1873 there were 3,882 missing letters; in 1874, 3,696; and in 1875, 4,063.

411. Mr. *Weldon.*] Is there any increase in the number of letters passing through your office?—No; they have slightly gone down in consequence of alterations in circulation, &c. The number was 30 millions in 1873, and 29 millions in the other two years.

412. Mr. *May.*] How do you account for the large increase of missing letters in 1875?—I cannot account for it in any way.

413. Mr. *Walliker.*] You have told us how exceedingly clever these men get by practice in divining the contents of letters; do you think they can tell when a money order or cheque is enclosed?—I think they must be very clever to do so.

414. Where is the line to be drawn as to the quantity of stamps it is practically safe to send in a letter?—A single slip of stamps, say one shilling's worth, might possibly pass without a certainty of being detected, but two shillings' worth, I think, might be detected by the feel.

415. Mr. *Earnshaw.*] Mr. Jeffery tells us that letters are stolen wholesale, and that the men destroy those which do not contain anything?—I do not say that they are stolen wholesale, but the men take them in large numbers.

416. Mr. *Weldon.*] I suppose the figures you have given show the proportion of missing letters, and that the letters reported missing are those which come for distribution to your district?—They are those passing through my office either for delivery in the district or passing through to other offices.

417. Mr. *May.*] As a rule can you tell us to whom these letters belong, to the better classes or to the poor?—Mine is not a poor district by any means.

418. Mr. *Weldon.*] Have you many bank letters reported missing?—Banks seldom come into the lost letter question.

Mr. *Weldon.*] It would be curious to know with regard to the eastern district as to this matter.

Mr. *Jeffery.*] I can tell you. There were 700 cases against the western district office during the first three months of this year, and 543 against the eastern district office.

Mr. *Milton.*] Yes; but our numbers of letters are much in excess of those of the eastern district; my district comprises outer districts where there are poor neighbourhoods.

419. Mr. *May.*] Have you a large money order business in the western district?—Yes, very large.

420. Do you issue many orders for small sums, say below 2 *s.* 6 *d.*?—I should say we issue for rather higher sums than most offices. I am not prepared to say how many there are, but there are a large number of small orders both issued and paid.

421. Mr. *Weldon.*] Do you think there is any utility in issuing orders for 2 *s.* or 2 *s.* 6 *d.*?—I think not.

Mr. *Jeffery.*] I can enlighten you a little on that point. I had a thousand of these missing stamp letter cases analysed, and out of the 1,000 there were 14 only containing sums up to 1 *s.*; 86 up to 2 *s.*; 159 up to 3 *s.*; 136 up to 4 *s.*; 115 up to 5 *s.*; 348 from 5 *s.* to 10 *s.*; 110 from 10 *s.* to 15 *s.*; 22 from 15 *s.* to 20 *s.*; and 9 upwards of 1 *l.* That is the analysis of the contents of 1,000 stamp letters reported to be missing.

Mr. *Weldon.*] That shows that postage stamps under 1 *s.* escape very freely, and are not worth stealing.

Mr. *Jeffery.*] Yes.

Mr. *Weldon.*] Following that up, would it not be desirable to abolish post office orders under 2 *s.*?

Mr. *Jeffery.*] Could you charge any the more?

Mr. *Weldon.*] We are told that the loss upon post office orders is on these small orders. If order sunder 2 *s.* were abolished, that would lessen the number of the orders upon which there is a loss.

Mr. *Earnshaw.*] A gentleman gave evidence yesterday that the postmen can smell the stamps.

Mr. *Jeffery.*] Some years ago I made up about 20 letters of which five contained stamps and the rest did not. All were alike on the outside, and were rather bulky, and Mr. Tilley picked out the five containing stamps. I then scented the letters with eau de cologne, but he could not then discover the stamps. Sometimes the stamps have a smell and sometimes they have not.

421*a*. Mr. *Walliker.*] If the stamps are under 12 in number they generally escape?

Mr. *Jeffery.*] Clearly.

Mr. *Walliker.*] Would it be possible to send 8 *s.* 10 *d.* in this way; a postal note for 5 *s.*, three stamps at 1 *s.*, and five at 2 *d.*

Mr. *Jeffery.*] You must bear in mind that you do not get the public to transmit high-class stamps now; the penny stamp is the favourite.

Chairman.] You might transmit a small number of stamps without danger of discovery.

Mr. *Jeffery.*] I remember when the order was given to discontinue the purchase of postage stamps at post offices, there was so great an outcry that the order had to be rescinded. The newspapers got one shilling's worth of stamps for advertisements, and there were several hundreds of such remittances for each editor or proprietor. Their argument was that the 1 *s.* stamp letters did not go, that is, they were not generally stolen.

Mr. *Earnshaw.*] You could transmit the balance of a postal note up to 1 *s.* with security.

421*b*. Mr. *Weldon.*] I was going to say that the difficulty might be met by introducing a postal note for 7 *s.* 6 *d.* There is no reason why these notes should not be for 2 *s.* 6 *d.*, 5 *s.*, 7 *s.* 6 *d.*, 10 *s.*, and so on.

Mr. *Jeffery.*] I think you have misunderstood the tenor of my remarks on that matter. My view is that the 12 stamps are not stolen because they are undiscovered, but because they are not worth stealing. Directly the stamp remittances go up in value they begin to be stolen more frequently, because they are worth stealing.

Mr. *Walliker.*] If the higher denominations of stamps were used there would be fewer stamps in the letters. The men would not steal them in that case?

Mr. *Jeffery.*]

Mr. *Jeffery.*] Mr. Boucher will tell you that a man habitually delivering letters at a house knows very well what the letters contain.

Mr. *Chetwynd.*] Does not the smell of the stamps go off after a few weeks?

Mr. *Jeffery.*] I do not think there is much in that.

422. *Chairman.*] Now, Mr. Milton, you said people could not discover 12 stamps in a letter. Supposing I had to send a remittance of 8 *s.* 10 *d.*, and I took a postal note for 7 *s.* 6 *d.*, and putting that in a letter with eight 2 *d.* stamps, that would be about the same bulk and weight as an ordinary letter. Would that be secure?—I do not think that it would be readily discovered. I think I am right in saying that there are very few post office orders stolen, simply because there is a difficulty in getting the money.

423. Mr. *Walliker.*] If so small a quantity of stamps as 12 are put into a letter with two postal notes, like two cheques, and if a money order is practically safe from detection by the persons through whose hands it passes, do not both letters stand the same chance?—Yes, I think it is quite possible.

Mr. *Jeffery.*] There are 7,000 money order letters in a year that we know of stolen.

Mr. *Milton.*] I fancy, if it is a question of stealing circular notes, that the thing goes beyond that, for when circular notes become a means of transmitting money and supersede money orders, the question arises whether the men will not look out for these notes, because when they once get them they would be so much more easily cashed.

424. *Chairman.*] If they were localised?—That would be a greater security, but there would be none without it.

425. If made payable to order?—I think the being made payable to order is a mere nothing.

Chairman.] Well, I think it is a very good security myself.

Mr. *Earnshaw.*] But the question still remains, how is the Post Office to compensate persons who may lose these orders in the post?

Mr. *Weldon.*] The person to whom it would be made payable would be known in the town where it is to be paid. That would be the only safeguard.

Mr. *Milton.*] That might be so in some places, but not in London.

426. *Chairman.*] I am coming to the conclusion that Mr. Milton is more favourable to the postal note scheme than Mr. Jeffery?—I think the scheme will lead to more frequent attempts at theft; but I said also that the localisation would make it more secure.

Mr. *Weldon.*] The localisation will be of little use in London or in other large towns.

Mr. *Jeffery.*] We have little trouble with small towns; it is with large communities, and the point is that the localisation would, in many cases, prevent the negotiation of the notes, but it would not prevent their being stolen.

427. Mr. *Weldon.*] Mr. Milton seems to think that if the circular notes were supplemented by means of postage stamps there would not be any risk?—Yes, you might pack them very well and prevent the possibility of detection.

428. Mr. *Weldon.*] The Post Office authorities are very averse indeed to postage stamps going in letters?—They encouraged it at one time by legalising the purchase of them at post offices. After that they put a stop to it.

Mr. *Chetwynd.*] They tried to stop it, but they had to withdraw the prohibition.

Mr. *Jeffery.*] The Post Office is not more opposed to postage stamps than to any other article of value presenting a temptation. I am decidedly averse to sending postage stamps through the post, but not more so than to bank notes and the like.

Mr. *Weldon.*] You consider the danger in sending the proposed postal notes to be in the stamps enclosed to supplement the amount?

Mr. *Jeffery.*] No; my idea is that the letters are stolen to a large extent on speculation.

Mr. *Milton.*] The easy way in which these notes could be converted into money would no doubt induce more stealing.

Mr. *Jeffery.*] If it were only on the present scale we should not know what to say to the public. We should have no answer.

428*a*. Mr. *Weldon.*] You would have a complete answer, because you gave them an option either to pay more commission and get a post office order with the greater security, or to pay less commission for a postal note without that security. This option would be offered by printed regulations in the offices.

Mr. Walliker having gone to consult Mr. Boucher, the Controller of the Circulation Office, on his views, returned, and explained that he (Mr. Boucher) held the opinion that a letter containing a money order, or a few postage stamps, was practically safe. Mr. Walliker also informed the Committee that Mr. Boucher did not think he could give any evidence that it was not in the power of Messrs. Jeffery and Milton to give.

Mr. *Jeffery.*] I wish it to be understood that I do not adopt the opinion that a man does not steal a letter containing one shilling's worth of stamps, because he does not know what is in the letter, but because that amount of stamps is not worth stealing. The poor persons who get regular remittances often tell the letter-carriers what the letters contain, and even treat them for delivering the letters. The men get to know what that class of letters contain more than any other class of letters.

The Committee adjourned till Wednesday the 17th May, at 12 o'clock.

Wednesday, 17th May 1876.

10 May 1876.

PRESENT:

Mr. GEORGE MOORE, IN THE CHAIR.

Mr. A. Earnshaw.
Mr. F. May.
Mr. A. C. Thomson.
Mr. S. Walliker.
Mr. J. W. Weldon.

Chairman.] I HAVE received the following letter from Mr. Jeffery. He says:—

"In reading over the minutes of evidence given by myself before the Committee last week, I think I failed to give full expression to my views relative to postal notes and money orders, and as a report prepared on the subject by me on the 17th March last was before the Committee, but not read, I beg to request that even now that report may be considered and printed with other documents in the appendix to the report of the Committee"

I do not think there is any objection to printing the report Mr. Jeffery refers to.

Mr. *Chetwynd.*] I may mention that I have replied to Mr. Jeffery's report, and my reply should also be printed, I think.

(*Mr. Jeffery's and Mr. Chetwynd's reports handed in.* See *Appendix, No.* 12.)

Chairman.] It will be well for us to have both the reports printed. I do not think there is any necessity for us to read the reports now, so long as we have them printed. It appears to me that when people get to know that postal notes cannot be traced with the same facility as money orders, they will be stolen to a much greater extent than the money orders. I have been thinking the matter over, and I have come to the conclusion that the old system is as perfect as any system can be. I think, whatever else we do, we must make that perfectly clear. I do not think we should expect a large margin of profit, seeing that the system is principally for the humbler classes. With regard to the business for to-day, I think we had better take into consideration Mr. Beaufort's second report, which has come to hand since our last meeting. (*The following report was then handed in and read.*)

Manchester,
THE SECRETARY, 11th May 1876.

AT the meeting of the Money Order Committee on Tuesday it was stated that the mode in which I proposed to make out the daily account of orders issued and paid under the plan which I had suggested, was not such as would meet the requirements of the Chief Office, and I replied that there could be no difficulty in altering the mode so as to satisfy these requirements.

The Chairman then requested me to furnish, for the meeting of the Committee on Friday, specimens of the altered forms, with an explanation of the way in which they would be used, and I now beg to do so; sending up also specimens of the forms now used.

The set of forms marked A. are those now used for issuing an order and bringing it to account; and the set marked B. are those which I propose to use for a similar purpose.

It will be seen that the forms B., which I propose to use for the daily account, are the same as those now used, the issued sheet being reduced so as to meet the requirements only of the new plan, and the paid sheets being exactly the same as those now in use.

The objections raised by Messrs. Chetwynd and Hawkes in regard to the working up of the account at the Chief Office are thus of course removed.

Mr. Chetwynd's objection as to the supposed increase of stationery involved in my plan must also obviously fall to the ground, as the forms B. contain 284 square inches of paper as compared with 370 inches in forms A. The only element of extra cost in the B. forms is that the money order itself should be printed on a somewhat better and thinner paper, as before described, in order to prevent erasures and alterations.

Mr. Walliker's objection that it would take longer to grant an order under my plan than it now takes, which, however, I did not admit, can no longer exist, as under this amended arrangement the requisition form will be simplified, and can be filled up more quckly, and it will be seen at a glance that the order can be prepared and handed to the public in a shorter time than that in which it could be possible to issue an order now.

The issuing clerk has now to place his carbonic paper between the order and the advice, then to remove it and write on the advice the names of the remitter and payee, and to write the name of the paying office on the order form; and he has to make sure that the office named in the requisition form is a money order office, and sometimes he has to ascertain the nearest money order office for the remitter's information.

Under my plan the only work he will have to do, *of the above*, will be to write the name of the person in whose favour the order is granted.

The entry of the amount is of course common to both forms, but practically the issuing of an order under the proposed plan will not occupy much longer than half the time now occupied; and further saving in clerical work will arise from there being no advice form to fold, fasten with gum, and address, not to mention the stamping and sorting of the same.

It may possibly be found that it will not be necessary to record the name of the person in whose favour the order is granted, and the work will then be still further reduced; but I think that it would not be wise to go so far at first.

The principle of my plan is no way affected by these alterations, nor will they stand in the way of the contemplated saving of 25 per cent. in time and labour, while it is plain that there must be a large saving in stationery arising from the reduction of some of the present forms, besides the entire cessation of a quantity of forms now required for daily use.

J. ST. L. BEAUFORT.

(*The sets of forms referred to as A. and B. are printed in Appendices* 13 *and* 14.)

I see that Mr. Beaufort still maintains that he can save 25 per cent.

Mr. *Walliker.*] Then I think it would be well for us to hear evidence as to the saving to be effected, and Mr. Adams is prepared with statistics relative to the probable saving in stationery.

Mr. A. J. ADAMS, called in; and Examined.

Mr. *J. Adams.*

17 May 1876.

429. Mr. *Walliker.*] YOU are, Mr. Adams, a clerk in the office of the Receiver and Accountant General of the Post Office?—I am.

430. You are, amongst other things, the stationery clerk in that office?—I am.

431. You have also had considerable experience in the Money Order Office?—Yes; I was in the Money Order Office for two years.

432. You understand Mr. Beaufort's propositions?—I do.

433. Have you made inquiry at the Stationery Office as to the saving which could be effected in regard to stationery if his propositions were adopted?—I have made personal inquiry

434. Will you tell the Committee the effect as regards the cost of stationery under Mr. Beaufort's first plan and under his second plan?—If Mr. Beaufort's first scheme were adopted, the result, as compared with the present system, would be an increase in cost of 3,305 *l.* a year.

435. Practically Mr. Beaufort's first scheme save that part of it which refers to the abolition of the advice has been abandoned, but it may be as well to have the figures on record; and under the second plan what would be the effect?—Under Mr. Beaufort's second scheme there would be an annual saving of 2,844 *l.* in the cost of stationery as compared with the cost under the present system.

436. Mr. *Chetwynd.*] That assumes that we should not do away with the advice?—It is the present money order system with the advice as compared with Mr. Beaufort's second scheme without the advice; the saving in stationery would be 2,844 *l.* a year.

437. Mr. *Walliker.*] Mr. Beaufort says, in his report to the Secretary, of the 11th instant, "The "principle of my plan is in no way affected by "these alterations, nor will they stand in the "way of the contemplated saving of 25 per cent. "in time and labour, while it is plain that there "must be a large saving in stationery arising "from the reduction of some of the present "forms, besides the entire cessation of a quantity "of forms now required for daily use." Now, in making your calculations have you taken into account all the forms at present in use which Mr. Beaufort says would be discontinued?—Yes, I have a schedule here of the forms marked by Mr. Beaufort.

438. Have you tied Mr. Beaufort down to his own proposals, or have you given him the benefit of your own knowledge and the knowledge of other practical men?—With the assistance of the officers of the Stationery Office I have gone very carefully into the cost of the various forms proposed by Mr. Beaufort, and the statements which I have here have been prepared with a careful regard to the practical requirements of Mr. Beaufort's schemes.

439. Perhaps Mr. Chetwynd will kindly tell us what the total annual cost of the money order system is?

Mr. *Chetwynd.*] About 207,000 *l.* a year.

440. Perhaps, Mr. Hawkes, you will tell us, having seen Mr. Beaufort's second plan, what saving would be effected under it in your office?

Mr. *Hawkes.*] There would be no saving at all. There would be a saving of three messengers in the Chief Office, and about 500 *l.* a year in the contractor's office, but a large increase of force would be necessary to deal with outstanding orders and the correspondence with the public which would arise in various ways, and especially in consequence of their not being supplied with duplicate orders directly the originals were lost.

441. Will you tell us, Mr. Chetwynd, what saving you think can be effected in the provincial offices under Mr. Beaufort's second plan; you know that he proposes to keep journals?

Mr. *Chetwynd.*] We should be obliged to go back to the old system of keeping copies of the accounts, which was done away with in February last.

442. Do you think there would, practically, be any saving to the Department?—No; I do not think there would be any money saving to the Department.

443. There appears to be three heads under which a saving might be effected, viz., stationery, work at the Chief Office, and work in the provinces. The only saving which can be effected appears to be in respect of stationery, and that amounts to 2,844 *l.* The total cost of the money order system is 207,000 *l.*; can you tell us what per-centage of the whole the 2,844 *l.* is?—About 1⅓ per cent.

444. The saving is 1⅓ per cent. and not 25 per cent.?—Yes; about 1⅓ per cent.

444*a.* *Chairman.*] I do not think it is necessary for us to call Mr. Beaufort again. I think the whole question in respect to his plan turns upon the abolition or retention of the advice, and I should like to have an expression of opinion as to whether it is desirable to do away with the advice, because even if a saving could be effected by its abolition, I should still hold that there is something higher than a mere money saving to be looked at, and that is, the temptation to fraud which would follow on doing away with this safeguard. I think we ought to see how far we can take temptation out of the way, and I must confess that if the device be done away with, it appears to me that the system will be thrown into confusion, and there will be no means of tracing the stolen orders.

Mr. *May.*] Your remarks have reference to Mr. Beaufort's scheme?

Chairman.] Yes, to the proposed abolition of the advice.

444*b.* Mr. *Walliker.*] Amongst the papers will be found a report from Mr. Bradfield, of the Money Order Office, a very careful painstaking officer. He has brought forward a scheme for the abolition of the advice, through the use of a new and special form of money order which he has designed, and as he has given an immense amount of time and thought to the matter, I should like you to hear his report read.

Mr. *Earnshaw.*] I think we have made up our minds that if the money order system is continued the advice must be continued.

Mr. *Chairman.*] Mr. Bradfield is in favour of abolishing the advice.

Mr. *Walliker.*] Yes; I will, if you will allow me, read that part of his report which has especial reference to that. He says, "I propose that "money orders when issued should be marked

Mr. *J. Adams.*

17 May 1876.

"with a large stamp showing the amount, in the "following manner:—

@ - - - - LESS than £. 7.

"and that each postmaster be supplied with a "set of amount stamps from 1 *l.* to 10 *l.* When an "order is issued, say for 6 *l.* 5 *s.* 6 *d.*, *after the* "*amount in figures and in words is inserted in the* "*money order as heretofore,* the order to be stamped "with the figure 7, as above, and the difference "between the actual amount and "the stamp "written in the space @, thus, fourteen / six,—

@ Fourteen / six LESS than £. 7.

"This being done, I contend that the successful "alteration of the order is impossible."

Chairman.] I really think it is not worth while to go into a scheme of that kind. What I wish to have is, an expression of opinion with regard to the advice.

Mr. *Walliker.*] Mr. Wight, the contractor at the Chief Money Order Office, who has been engaged in the issue and payment of money orders for many years, who, in fact, pays one-seventh of the whole of the orders issued in the kingdom, can give us an opinion on that point.

Mr. WIGHT, called in; and Examined.

Mr. *Wight.*

445. Mr. *Walliker.*] YOU are Mr. Wight, the Contractor for the money order work at the Chief Office?—Yes.

445*a.* You have been engaged in the duty of paying orders for a large number of years?—Yes; five years engaged in paying them personally, and five years in superintending their issue and payment.

446. What is the average number of orders paid at your office?—About 7,000 to 8,000 a day. (*See* Appendix, No. 9.)

447. What proportion is that to the whole payment of the country?—It is about one-seventh, not only of the orders issued in England, but of the orders issued in the colonies and abroad.

448. Do you think the advice of the money order operates as a safeguard?—Most certainly.

449. As a safeguard against fraud?—Most certainly; in many cases although we have been unable to stop the person, we have been able to prevent payment of an order owing to the existence of the advice. Recently we had a case of an order payable to Mr. Spurgeon, his initials are C. H., and the order was presented signed "Charles Haddon Spurgeon," the "Charles Haddon" being on one line, and the "Spurgeon" being written below. The order was not in correspondence with the advice, and having the advice I was enabled to refuse payment. I asked the woman who she got it from, and she said from a customer of hers, Mr. Spurgeon. She was a boot and shoemaker. I felt certain that the order was in wrong hands, but unfortunately it was the Queen's birthday, which was a holiday in the Chief Office though not in my office, and I had to content myself by taking the woman's name and address. I retained the order and told her to tell Mr. Spurgeon to come himself and sign it. We afterwards found the woman out, for, although she had not given her own name and address, she had given the address of a friend of hers, and in that way we traced her. She got four months' imprisonment. If we had not had the advice we could not have done this. We had another case, in which there was a slight difference in the signature of "Francis Goodlake," of the "Times." We refused payment, and the boy who presented the order got six months' imprisonment, and the letter carrier who incited him to do it died in prison, I believe.

450. Mr. *May.*] Are not these instances of intelligence and discrimination on the part of the payclerks rather than instances of the advantage of the advice; the circumstances of these cases excited suspicion?—Yes, but if we had not had the advices we should have simply seen that the amount of the order was correct, and then have paid it.

451. But, with or without advice, the paying clerk would always use care and discretion in cashing money orders?—Yes, but we should not have the advantage which we have now. For instance, if an order is stolen it is presented almost immediately, and if payment is refused in consequence of any irregularity, we find that, as a rule, it is never presented again. We know this because we write "W. N." (wrong name), or "R. N." (remitter's name) on the advice of an order which has been presented and refused, and we find in many cases where duplicates are asked for the advices have these letters on them. This shows that the original was presented by a person who had no right to it; that payment was refused owing to the name of the payer or remitter being incorrectly given, and that afterwards a duplicate was applied for by the proper person.

452. Mr. *Weldon.*] Why cannot you always retain the orders which differ from the advice, and give the public receipts for them?—I think the public would very strongly object to that, and it would also greatly complicate the work of paying the orders. We have to refuse many every day.

453. Mr. *Earnshaw.*] The 8,000 orders which you pay every day include bankers?—Yes, about 7,600 are paid through bankers.

454. Mr. *Weldon.*] Then you only pay 400 to the public?—Yes, about that; but sometimes it runs up to 600 or 800.

455. *Chairman.*] How long have you been in the department?—Fourteen years, during five years of which I have been contractor.

456. And you think that many successful frauds would be perpetrated if the advices were withdrawn?—Decidedly; I think the advice is most important. I do not think there would be any great saving in time in paying an order, if the advice were done away with, because more care would have to be exercised with regard to the date of issue, and it would also have to be seen that the form had not been tampered with in any way. At present, all the advices are sorted away alphabetically,

alphabetically, and it only takes a second or two to get each out and compare it with the order; it would take quite as long to see that the order had not been tampered with, and that the date was correct.

457. Mr. *Walliker.*] Supposing the advices were abolished, would you take your present contract for less than now?—My work would be simplified by the abolition of the advice, because part of my work consists of recalling the advices of orders from various offices when the orders have been paid through a banker. I have five men employed upon that work for eight hours a day. There would be perhaps a saving of 500 *l.* a year, but my office is exceptional, being the only office at which the advices are recalled.

458. Could you do with the same number of paying clerks?—They would have to be paid better, on account of the additional risk.

459. Would you want more men?—I do not think there would be any reduction in the force employed in paying orders, but there would be a saving at my office in "recalling advices." All orders paid into London banks are brought to the Chief Office, whether drawn on the Chief Office, London, or any other office in the United Kingdom. Two-thirds of the orders are drawn upon other offices, and in these cases we have to withdraw the advices from those offices.

Mr. *Chetwynd.*] Mr. Hawkes has put in two letters, which were sent round to the London bankers some years ago, explaining to them the mode in which it was proposed to conduct the money order business between them by the Chief Office. (*See* Appendices, Nos. 1 and 2.)

460. Mr. *Thomson.*] Postmasters in rendering their accounts to the Chief Office, give certain information under certain headings; could any of the information be dispensed with?—No; I think not.

461. "To whom payable;" have you any use for that column?—Frequently.

462. But is it very important?—Yes; I think so. I had a case this morning; an order was drawn upon London, and the advice had been sent to Lincoln, and owing to having the account, we were enabled to pay the order, although the advice was missing.

463. Would it not be sufficient if you had the remitter's name only?—No; because being without the advice, we could not then make payment.

464. You could have delayed payment until you got the advice from Lincoln?—That would be putting the public to great inconvenience.

465. But these are only occasional cases?—No; we pay a great number of orders from the account, and this information is absolutely necessary when we do so.

466. If you have the advice, you have the information?—Yes; but we want the account when we have no advice, or when the name in the advice is indistinctly written. I think the column headed "To whom payable" is very important. If the requisition forms were mislaid we should have no record at all as to whom the order was payable if that were done away with.

467. You could refer to the office where the order was drawn and where the advice might be?—The advice might not be there. We get them from all quarters; sometimes they are found in the covers of newspapers.

468. Mr. *Weldon.*] Supposing you fall back on the power which you have to refuse payment of an order unless you have the advice; at present you appear to have a double means of reference?—Yes; we have the advice and the account.

469. But an Act of Parliament gives you power to refuse payment if you have not the advice?—Yes, but it is to meet public convenience that we pay from the account. The account is also essential for the issue of duplicates.

Mr. *Hawkes.*] As I have already stated, we make as many as 900 references to the accounts daily.

470. Mr. *Weldon.*] Can you devise any more simple form of advice by which a saving might be effected?—No; I know of no more simple form than the present. The amount is of course stated twice, once in writing and once in figures; we might dispense with one of these, but we frequently find differences.

471. Mr. *Chetwynd.*] And then you refer to the account?—Yes.

472. Mr. *Walliker.*] Some members of the Committee, Mr. Hawkes, are desirous of inquiring more closely into the usefulness of the paid issue check. Perhaps you will kindly follow me whilst I read this paper, and say whether I correctly describe what the check is and what it does. "It is used as a complete check on the "correctness of the amounts charged to post-"masters for orders issued, and as a test of the "correctness of the amount credited to postmas-"ters for orders paid. The postmasters account "to London for the orders they issue, and the "casting of their accounts, are checked and "posted daily in the relative ledgers; when the "orders are paid, they are claimed by the pay-"ing postmasters, the amounts claimed are "checked by the orders, the castings are checked, "and the totals claimed and allowed are also "posted into the ledgers. A current, and so far "as it goes, satisfactory check, has up to this "point been placed on the issued and paid sides "of the postmasters' accounts. But the orders "paid may differ from the amounts accounted "for by the postmasters who issued them, or "they may not have been accounted for at all. "As soon as possible, therefore, after payment, "they are compared with the accounts in which "they appear as orders issued, and the relative "entries are ticked, to signify that they have been "paid. It is at this stage that they are termed "'paid issues.' In making this comparison many "errors are discovered, but it is found in practice, "that many hundreds, if not thousands a year, "escape detection, and for this reason, amongst "others, the amounts of these 'paid issues' are "subsequently entered in registers prepared "with printed numbers, &c., for the purpose. "In these registers, provision is made for "entering in different columns the payments "made during the current and during the fol-"lowing year, and the amounts of the out-"standing and void orders, and when all these "entries have been made, the registers are cast, "and the totals of the three columns are used to "prove beyond further question, the amounts "debited to postmasters in the office ledgers for "orders issued. Having fulfilled this important "function, they are then without any further ex-"penditure of labour, employed as a test on the "entire amount credited in the ledgers for orders "paid. The value of this test is exhibited in a "remarkable way by the result of the compari-"sons between the once quarterly, and now "yearly balances, made up respectively of issues

Mr. *Wight.*
17 May 1876.

"and paid issues, and issues and payments, by "which it appears that in 21 quarters out of 34, "the difference on the 8 or 9 millions of money "involved every quarter did not amount to "20 *l.* in any quarter, whilst the entire balance "of deficiency on the 11 years which ended on "the 31st December 1872, amounted only to "567 *l.* 19 *s.* 7 *d.* A great part of this deficiency "no doubt found its way into the void order book, "and is therefore practically, no deficiency at all. "This is on a turnover of 362,000,000 *l.* (reckon- "ing orders issued and orders paid), and the "result must be looked upon as eminently satis- "factory." You have followed me, Mr. Hawkes; have I correctly described the "paid issue" check?—Yes; there is the expense of preparing the balance sheets, which amounts to about 100 *l.* a-year, but that is a very small matter, and with the exception of that, I entirely concur.

472*a*. *Chairman.*] I should now like to have a discussion as to the commission to be charged for money orders?

Mr. *Walliker.*] The gain on foreign and colonial money orders is estimated at 4,286 *l.*, and the loss on the inland orders is 1,356 *l.*, leaving a net gain of 2,930 *l.* Now, if the 1 *d.* orders were raised to 2 *d.*, there would be an arrest of loss to the extent of 16,804 *l.*, which with the 2,930 *l.* leaves a margin, practically, of 20,000 *l.* This is without reckoning the void orders, which would give 5,000 *l.* more. Mr. Chetwynd hopes that the postal notes will reduce the number of cheap orders, and we should have a further arrest of loss in that way, so that we should have a very handsome margin to start with.

Mr. *Weldon.*] If you charge 2 *d.* for a money order, and 2 *d.* for a postal note, people will take the money order on account of its greater security?

Mr. *Walliker.*] The money order for 1 *l.* will cost 3 *d.*

Mr. *May.*] And the postal notes could be procured much more readily.

Chairman.] Well, Mr. Chetwynd, I thall be glad to hear what you have to say on this point?

Mr. *Chetwynd.*] These are all facts, so far as they go, but they leave us still in the position of people selling a large quantity of an article at less than it costs them.

473. Mr. *May.*] We must take the thick with the thin?—Yes, but the Treasury tell the Postmaster General that they are not satisfied that the remitters of large orders should pay for the small ones. In their letter of the 29th March last they say that they agree with his Lordship, "That the existing condition under which re- "mitters pay the loss incurred by the Department "on the smaller amounts is not satisfactory, and "they hope that the result of the inquiry they "propose will be the simplification of the system "and the reduction of cost, without withdrawing "any necessary precaution against loss either to "the Department or the public."

Mr. *Walliker.*] But we cannot have a universal rate without charging too high for the small sums, or too low for the high ones, and we cannot have a simpler system than we have at present. I have always understood that the present system was founded on a strong appeal from the public for gradually ascending rates.

Mr. *May.*] It is impossible for us to say why persons who can send their cheques should prefer to use the money order, but as they find it convenient to do so it is only reasonable that they should pay for the accommodation, and we have not heard that the commission on the larger orders has been complained of.

Chairman.] I think we have had sufficient evidence and discussion on all the points submitted to us for consideration, and perhaps it would now be best to have a sub-committee to draft a report to be submitted to the General Committee at as early a date as conveniently may be.

APPENDIX.

INDEX TO APPENDICES.

No. of Appendix.

I. Letter to London bankers, describing conditions upon which the system of paying of money orders to bankers at the Chief Money Order Office in London is carried out.

II. Letter to London bankers, showing mode of transacting business between the Post Office and London bankers.

III. Return showing per-centage of orders issued at each of the 12 existing rates of commission.

IV. Post Office circular note scheme (Mr. Chetwynd's proposals of 28th October 1874).

V. Papers referring to changes in money order system, with a view to economy, introduced on 1st February 1876.

VI. Return of orders for small amounts issued at certain offices.

VII. Summary of money order reserves held by postmasters, sub-postmasters, &c. in the United Kingdom.

VIII. Return of money orders paid to bankers and the public respectively at certain offices.

IX. Return of money orders paid to bankers and to the public respectively at the Chief Office, London.

X. Forms submitted with Mr. Beaufort's (first) money order scheme.

XI. Report by Mr. Walliker on Mr. Beaufort's (first) money order scheme.

XII. Report by Mr. Jeffery on Mr. Chetwynd's proposed post office circular note scheme, and Mr. Chetwynd's reply thereto.

XIII. Forms in current use under the present money order system (May 1876).

XIV. Forms relating to Mr. Beaufort's (second) money order scheme.

XV. Estimates of profit on money order business, assuming the lower rates of commission were raised, &c.

XVI. Forms proposed by the Committee for use in effecting transfers of payment of money orders.

XVII. Statement showing the relative cost of carrying on the money order business at certain offices.

APPENDICES.

APPENDIX, No. 1. (See page 3, Question 4.)

3rd May 1876.

PAPER handed in by MR. HAWKES describing the CONDITIONS upon which the SYSTEM of PAYING ORDERS to BANKERS at the CHIEF MONEY ORDER OFFICE in LONDON is carried out.

General Post Office, London,
GENTLEMEN, 1st September 1865.

WITH a view to facilitate the transaction of business between the London bankers and the financial branches of the General Post Office, it is proposed to substitute for the present system of payments by means of cheques and money, a system of transfers from the Postmaster-General's account at the Bank of England, to the accounts, at that establishment, of the bankers having charges upon the Post Office.

Under the present arrangement, the course of business between bankers and the Money Order Department of the Post Office is as follows:—

The bankers' clerks leave their money order charges at the chief office in Aldersgate Street, generally, between 9.45 and 10.45 every morning, and they call again at a later hour in the day to receive payment of the amount of the orders which, in the interval, have been examined and found to be correct. These payments are made partly by means of cheques and partly by money, the cheques being obtained from the Receiver and Accountant General's Office in advance of the examination of the order, and for an estimated amount, the object being, for the safety of the bankers, to pay as largely as is possible by means of cheques and to prevent the bankers' clerks being delayed when they make their second daily visit to the Money Order Office.

The present system renders it necessary for the bankers' clerks either to wait while their orders are under examination or to call a second time at the Money Order Office for each charge; and they are occasionally compelled to wait for payment on their second visit, partly because they have completed their round early, and partly because the pressure of business on the Money Order Office sometimes prevents the examination of all the orders of all the bankers being effected at the precise moment that it suits the respective clerks to call for them.

Under the proposed system of transfer, the bankers' clerks would simply have to leave their charges at the Money Order Office as early as possible, and not to call again. As soon as the orders shall have been examined, a certified list of the sum due to each banker for money orders will be sent to the Bank of England, and those sums will there be transferred from the Post Office account to the credit of the respective bankers.

It is believed that, if the charges are left at the Money Order Office by 10.15 a.m., the transfers at the Bank of England may be made by, or before, 2.30 p.m.

It is further proposed, whenever the amount of the charge disagrees with the amount of the examined orders, that the Controller of the Money Order Office shall notify the fact, by letter, to the banker, and that he shall return, on the same afternoon, in a letter, all orders which he cannot pay. In his letter he will state the amount of the charge, the amount of returned orders, or the amount of difference between the charge and the examined orders, and the amount transferred at the Bank of England; but where the charge is found to be correct, no communication will be made to the bankers as they will find the amounts of their charges upon the Post Office credited to them in their Bank of England pass books.

It is believed that in all cases where the charges are left by 10.15 a.m., the letter containing returned orders, and the statement just mentioned, can be delivered by post to the respective bankers by, or before, 3 o'clock p.m. on the day they are so left.

The advantages of this system to the bankers would, it is believed, be important:—

1st. It would not be necessary for their clerks to call more than once a day, or to wait long at the Money Order Office when they call.

2nd. It would relieve the bankers' clerks from the risk of loss, which they now incur, by carrying about with them the cheques and money which they receive from the Post Office.

3rd. The bankers would be relieved from making entries of, and collecting, the cheques now given to them by the Post Office, as the Post Office payments would be entered in their respective pass books at the Bank of England, and neither cheques nor money would pass.

The adoption of a similar system in regard to the payment of due bills, or Post Office warrants, presented by bankers' clerks at the Cashier's Branch of this Office, would secure similar beneficial results to those bankers who have business of that kind to transact with the Post Office.

Before taking any further steps in the matter, it is deemed necessary to ascertain the opinions of the London bankers upon the proposed scheme, and I have therefore to request that you will be good enough to consider the proposal, and inform me, at your earliest convenience, whether you concur in it, and if so, whether you will be prepared to adopt the system, should this Department decide upon carrying it into effect.

I am, &c.
GEO. CHETWYND,
Receiver and Accountant-General.

To Messrs.————Bankers, London.

APPENDIX, No. II. (See page 3, Question 4.)

May 3rd, 1876.

PAPER handed in by MR. HAWKES showing the MODE of TRANSACTING BUSINESS between the POST OFFICE and LONDON BANKERS.

General Post Office, London,
GENTLEMEN, 28th December 1865.

Referring to my letter of 1st September last, a copy of which I enclose, and to your reply to that letter, I have now the honour to inform you that in consequence of the almost unanimous concurrence of the London bankers, the Postmaster-General has authorised the adoption of the plan therein described; and the 8th January next has been fixed as the date upon which it is to be commenced.

As regards money orders presented at the chief office in Aldersgate Street, the Controller of that office will issue to each of the bankers' clerks a ticket, upon which the clerk is to state the number of orders left and the amount claimed.

If, on examination, the number and amount be found to agree with the records of the Money Order Office, and if there be no reason for delaying or refusing payment, a transfer of the amount claimed will be made from the Postmaster-General's account to the credit of your account at the Bank of England, by or before 2.30 p.m. on the day upon which the orders are presented at the Chief Money Order Office.

If the amount claimed should not be found accurate, or if there be any orders to be returned, a transfer of the proper amount will be made, and a statement, explaining the difference and enclosing the returned orders, will be forwarded to you by post in time to reach you by or before 3 o'clock p.m. on the day of presentation.

Should you desire to re-examine the orders, the Controller of the Money Order Office will cause them to be exhibited to one of your clerks at any time between 10 and 12 on the following morning, up to which latter hour they will be kept for that purpose, but after that hour the parcels must be broken up for other necessary official purposes.

As regards the presentation by your clerks of warrants issued by the Receiver and Accountant-General of the Post Office revenue upon the cashier of this Department, for payment of any of the various services performed for the Postmaster-General, and also as regards bills drawn upon the Post Office, and which have arrived at maturity, I beg to state that a course similar to that above described in respect to money orders will be followed, viz. :—

Warrants and due bills should be left at the cashier's office as soon after 10 a.m. as may be found practicable.

The cashier will give to the clerk a ticket for the number of documents, and state the amount claimed upon them.

If found correct, upon examination, a transfer will be made by or before 2.30 p.m. from the Postmaster-General's account, to the credit of your account at the Bank of England.

If the amount claimed be found incorrect, or if there be any warrants or bills to be returned, a transfer of the proper amount will be made at the Bank of England, and a statement, explaining the difference and enclosing the returned warrants or bills, will be sent by post in time to reach you by or before 3 o'clock p.m. on the day of presentation.

May I beg that you will be good enough to issue the necessary instructions for commencing these arrangements on the 8th January 1866.

I am, &c.,
GEO. CHETWYND,
Receiver and Accountant-General.

To Messrs.————————, Bankers, London.

APPENDIX, No. III. (See page 14.)

APPENDIX, No. IV. (See page 17.)

5th May 1876.

Handed in by MR. CHETWYND.

POST OFFICE CIRCULAR NOTES.

For the Secretary.

The fact that every money order issued and paid in the United Kingdom costs the Post Office threepence, while a very large proportion of the inland money orders are issued at a charge of 1 *d.* and 2 *d.* per order, has led me to consider whether a simpler and cheaper scheme of transmitting small sums could not be invented, which, while it gave less trouble to the public and the postmasters would yield a small profit to the Department on each transaction. After much consideration I have prepared a plan which will, I think, fulfil these conditions, and relieve the Department from a state of things which is rapidly rendering the money order system unprofitable to the Government.

In my report of the 12th February last, which accompanied the statement of the transactions of the quarters ended 30th June 1872, and 30th June 1873, it was pointed out that the average amount of an inland money order and the average amount of commission were undergoing a small gradual falling off; and the statement for the years ended 31st March 1873 and 31st March 1874, shows that this downward movement is still going on. For instance, in the June quarter of 1872, the average amount of an inland money order was 1 *l.* 14 *s.* 8 *d.*, and in the June quarter of 1873, the average amount of an inland money order was 1 *l.* 14 *s.* 5½ *d.* In the years ended 31st March 1873, and 31st March 1874, the relative amounts were somewhat less, the average amount of an order in the former year being 1 *l.* 14 *s.* 3 *d.*, and in the latter year 1 *l.* 13 *s.* 8 *d.* The average rate of commission received on an inland money order in each of the periods above specified is set forth below :—

Quarter ended 30th June 1872 - -	3¼ *d.*
„ „ 30th June 1873 - -	3$\frac{7}{9}$ *d.*
Year ended 31st March 1873 - - -	3⅛ *d.*
„ „ 31st March 1874 - - -	3$\frac{1}{12}$ *d.*

On the assumption that the cost to the Department of each money order issued is 3 *d.*, there is a loss on every order on which a less amount than 3 *d.* is charged for com-

mission, and it is owing to the more rapid increase in the number of orders issued on which a commission of 1*d.* and 2*d.* only is received than in the number of orders of higher amount, that the average rate of commission has descended to a point very slightly in excess of the estimated cost. If the downward movement should continue long enough there would of course be a loss on the money order business, but this state of things does not seem likely to come about before the expiration of two or three years.

The cost of the money order system arises from the large amount of clerical work which is involved in issuing, recording, accounting for, and paying orders in the various post offices, and from the expense of checking and managing the accounts in the chief offices in London, Edinburgh, and Dublin. For every order issued there is an application form filled up by the remitter, containing the following particulars, viz., amount, place of payment, name of payee, and name and address of remitter. All these particulars are copied into the journal, and—with the exception of the remitter's address—into the account sent to the Chief Office, and the whole of them are copied into the advice sent to the paying office. Every order paid is entered in the local journal of paid orders, and also in the account of paid orders sent daily to the Chief Office. After the paid orders are checked against the accounts of the paying office in the Chief Office, they are sorted to their respective offices of origin, and into the numerical order of their issue, and each one is compared with the entry of its amount in the account of the issuing post office. After this an account is raised against each office, so as to prove the accuracy of the charge for orders issued, the paid orders and advices of unpaid orders being used for effecting this check. It is not to be wondered at that the average cost of a money order is as much as about 3*d.*, when all this work is done in respect of such orders.

My idea is to avoid not only the necessity for an advice of each order, but all detailed records whatever, and to use for this purpose a form which will require no writing on the part of a postmaster beyond his signature, and which will combine the simplicity of a postage stamp as the subject of an account with the advantages of a small bank post bill, a circular note, and a cheque issued by what may be called a Government bank, and payable at any one of 5,000 Government banks, throughout the United Kingdom, to the order of any person named by the purchaser of the note, in writing, on the back of it.

The form which I would propose to use, and which I have prepared for this purpose, is of the following pattern:—

(FRONT OF THE FORM.)

Class B. POST OFFICE CIRCULAR NOTE.—Price Five Shillings and One Penny.

Stamp of Issuing Post Office

No._____

ISSUED at the Post Office ABERGAVENNY.

To the Postmaster in charge of any Money Order Office in the United Kingdom.

PAY at any time within twelve calendar months from this date, but not afterwards, to the Person named in the Order written on the back of this Circular Note the sum of **Five Shillings,** that amount having this day been paid to me for the same on account of Her Majesty's Postmaster General.

Embossed Stamp for Commission

Five Shillings.

Postmaster.

Stamp of Paying Post Office Cancelling this Note.

The Remitter of this Circular Note must state in writing on the back of it the name of the person to whom he desires it to be paid, and sign his own name in the place there provided for it. The person to whom it is thus made payable must, before obtaining payment of it, sign his name in the place provided at the back of it for his signature. If this Note be crossed ———— & Co., payment will not be made except through a Bank.

N.B.—After once paying this Circular Note the Post Office will not be responsible for any loss whatever in connection with it.

(BACK OF THE FORM.)

ORDER to be signed by the Remitter of this Circular Note before forwarding it to the person to whom it is intended to be paid.

Pay to *_____ (*Insert name of the Payee.)

Signature of the Remitter of this Circular Note

Received Payment—

Signature of the Payee above named

NOTES.

I. If the signature of the Payee be not in agreement with the above order, payment will be refused.

II. Post Office Circular Notes not paid within 12 calendar months from the date of issue will become forfeited.

III. If this Circular Note be lost or destroyed no allowance will be made for it by the Post Office.

IV. The Postmaster who pays this Circular Note must not, under any circumstances, re-issue it. He must claim the Amount in his Daily Cash Account and forward it with that Account to the Chief Office.

This form, it will be observed, is in the nature of a cheque for 5*s.*, and purports to be issued by the postmaster of Abergavenny, who acknowledges having received the amount on behalf of the Postmaster-General, and is to be made payable at any money order office in the United Kingdom to the person to be named on the back of it by the purchaser. It is not to be paid after 12 months from its date, and payment is to be refused if the signature of the payee be not in agreement with the written order of the remitter of the note. If it be not paid within 12 calendar months it will become forfeited. If it be lost or destroyed no allowance will be made for it by the Post Office. If it be crossed "—— & Co.," payment of it will not be made except through a bank, and, after once paying it, the Post Office will not be responsible for any loss whatever in connection with it. When it is issued it must be stamped by the issuing postmaster, and when it is paid it must be stamped by the paying postmaster—this latter stamp cancelling it. The postmaster who pays it is forbidden to re issue it, and he is directed to claim the amount in his daily cash account and to forward it with that account to the Chief Office.

I propose that these circular notes should at first be issued in four classes at the following rates of commission:—

Class A for 2*s.* 6*d.*	at a charge of	½ *d.*
„ B „ 5*s.*	„	1 *d.*
„ C „ 10*s.*	„	1½ *d.*
„ D „ 20*s.*	„	2 *d.*

These classes may hereafter be increased or altered as experience may suggest.

I propose also that each form should bear an embossed stamp—to be affixed by the Inland Revenue Department. This stamp may either designate the charge for commission, or that charge combined with the value of the note. I propose that this stamp should be cancelled at the Chief Office when the note has been passed to the credit of the paying postmaster in his daily cash account. The adoption of this stamp will have the following amongst other advantages:—

1. It will afford the Exchequer and Audit Department precisely the same check upon the issue of these documents to the Post Office by the Inland Revenue Department as is now afforded in the case of postage stamps issued to the Post Office.
2. It will present a serious obstacle to the production of counterfeits.
3. It will, when cancelled at the Chief Office by being punched out of the form after payment, effectually mark the note so as to prevent its fraudulent reissue by any one having access to it in the Chief Office.

It will be observed that this circular note differs from a money order in the following points:—

1. It requires no application form from the public.
2. No advice is required to be sent to the paying office.
3. No entry of details in the postmaster's book is required.
4. No detailed account for the Chief Office is necessary.

All these things are required and are necessary under existing regulations in the case of a money order.

5. It is payable at any money order office or post office savings bank in the United Kingdon, while a money order is payable only at an office named in its advice.
6. It is payable without any advice, while a money order is not so payable.
7. It will be cheaper, in most cases, to the public than the money order system, as will be seen by the following examples:—

A Money Order		A Circular Note	
for 2*s.* 6*d.* costs	1 *d.*	for 2*s.* 6*d.* will cost	½ *d.*
„ 5*s.*	„ 1 *d.*	„ 5*s.*	„ 1 *d.*
„ 10*s.*	„ 2 *d.*	„ 10*s.*	„ 1½ *d.*
„ 20*s.*	„ 3 *d.*	„ 20*s.*	„ 2 *d.*

8. It may be purchased in books by the public, to be used at their own convenience without any further application at the Post Office, while money orders cannot be so purchased. In this case the purchaser practically opens an account at a Government bank, and the cheque book issued to him enables him to draw upon any of the 5,000 Government banks to the extent of the amount deposited by him, but to no larger amount.
9. This note will afford some of the advantages of a money order office to persons residing in places at which the probable business would not justify the Department in establishing a money order office.
10. It certainly has one disadvantage from which the money order is free, namely, that it is only proposed to be issued for fixed sums, while a money order may be issued for any amount of shillings and pence, but the fact must not be forgotten that the four proposed classes of circular notes are susceptible of combinations which, if aided by a few postage stamps, will make up any amount of shillings and pence required for any special purpose.

This scheme of circular notes may perhaps be regarded as affording facilities for fraud which are not afforded by the money order system, but this view is one which cannot I think, be successfully maintained. The letter containing a money order gives, in most cases, the name of the payee and the name and address of the remitter, and this information is sufficient to enable a dishonest person, who obtains possession of the letter, to obtain payment of the order. The proposed form of circular note certainly shows these particulars on its back and gives dishonest persons the information necessary for obtaining payment. This objection, however, may with equal force be made with regard to any cheque payable to order, but this does not appear to have any great restrictive influence upon the issue of cheques payable to order, which are extensively used for payments of all kinds throughout the United Kingdom. As the laws relating to forgery appear to be sufficient to keep down this description of crime in respect of cheques of large amount, it will no doubt suffice for these small circular notes.

It may be convenient now to describe the course of business which I would propose as between the Post Office, its agents, and the public, so far as these circular notes are concerned. I have already stated that the notes should be of four classes. These four classes should be distinguished by being printed on paper of different colours so as to facilitate sorting and other treatment of the documents. We have an example of the value of this practice in the case of the letter bills, as also in the case of the telegraph accounts, and in the case of the cash accounts.

The notes should be made up into books containing a certain number of forms.

They should be stamped at the Inland Revenue Department and issued to this Department precisely as postage stamps or Inland Revenue licenses are now issued to it.

They should be supplied to postmasters in the same manner and under regulations similar to those under which postage stamps are issued, and they should also be accounted for by postmasters in like manner. I will suppose a supply of 10 *l.* worth to have been sent yesterday to a postmaster. That postmaster should charge himself with the amount in his cash account of this day under the head of "Remittances from G.P.O. (c) Circular Notes." I will suppose that he has to-day sold 2 *l.* worth of the notes; at the close of the day he should have 8 *l.* worth unsold, and he should claim this amount as a part of his balance in hand as unissued circular notes. The effect of these two entries in his daily cash account would be to show an increase of 2 *l.* in his cash in hand. At the end of each day, or at any other specified period, the postmaster should be required to state on a small docket* (which will be necessary for another purpose to be described presently) the number and value of each class of unissued circular notes, and this information would afford the means of ascertaining the exact value of the issues at any time and also of checking the accuracy of the postmaster's accounts in a way that is not possible in the case of postage stamps, receipt stamps, saving bank deposits, or Inland Revenue licenses. In these last-named cases we cannot know the accuracy of the postmaster's statements until a surveying officer visits the office and counts the postage stamps, the receipt stamps, the savings bank books, and the licenses in hand, but in the case of the circular notes we shall be able to compare the numbers given in the docket with the notes of the same date (after they are paid), and we should thus be enabled to detect very promptly any inaccurate statement made by a postmaster in respect of the claim in his balance in regard to unissued notes.

The course of business with the public would be as follows:—A person requiring a circular note for 10*s.* would apply for one; the postmaster would stamp and sign the first one in his book containing that class of note, taking 10*s.* 1½ *d.* in money from the purchaser. This would not give rise to any entry whatever in his books any

* For pattern see next page.

more than if he had sold 10*s.* worth of postage stamps. If he issued only this one note, his notes in hand (and his balance) at the end of day should be one note short of his stock at the beginning of the day in the 10*s.* class, and his cash should be 10*s.* 1½*d.* in excess of his commencing balance.

The remitter of the note should state on the back of it the name of the person to whom he desires payment to be made, and sign his own name in the place provided for it on the form, and he should then enclose it in a letter to that person. On receipt of the letter, the payee should sign his name in the place provided for it on the back of the order, and then present it for payment at any of the 5,000 money order offices or post office savings banks that may be most convenient to him. The postmaster to whom it is presented should see that the signature of the payee is in agreement with the order of the remitter, and if so he should then pay the amount, stamping the note with his dated stamp in the place provided for the purpose, and thus cancelling the note. At the close of the day the postmaster should fill up a small docket, showing the number of circular notes of each class paid during the day; and he should claim in his daily cash account the total amount thus paid, and enclose the documents in that account.

The following is a specimen of the Docket referred to :—

POST OFICE CIRCULAR NOTES.

Stamp of Office.

DOCKET showing the Number and Value of Circular Notes Paid and also of those remaining unissued at the Post Office at **ABERGAVENNY** this day of 187 .

Number and Value of Circular Notes **PAID** and attached to this Docket.							Number and Value of Circular Notes remaining **UNISSUED** at the close of business this Day, including Commission.				
CLASS.				Amount Paid and Claimed in this Day's Cash Account.			CLASS.				Value as claimed in the Balance of this Day's Cash Account.		
A 2/6	**B** 5/	**C** 10/	**D** 20/	£.	*s.*	*d.*	**A** 2/6½	**B** 5/1	**C** 10/1½	**D** 20/2	£.	*s.*	*d.*

							Last No....						

of Notes in hand.

Clerk to Postmaster. *Postmaster.*

N.B.—To prevent errors the Entries in this Docket should be checked before it is transmitted to the Chief Office.

On the arrival of the account at the Chief Office, it should be the duty of the Cash Account Branch to see that the total value of paid notes stated on the docket agrees with the total amount claimed in the Cash Account as paid. The dockets and paid notes should then be sent to the Examining Branch where they should be checked against the entries in the docket, and if any error should be discovered it must at once be dealt with in conjunction with the Cash Account Branch. The paid notes should then be separated from the dockets and both should be sorted. The paid notes should be sorted to the name of the office of issue, and into the numerical order of each series, and then put away into lockers prepared for the purpose. The dockets when sorted into the alphabetical order of payment, should be entered in an abstract which would enable us to ascertain each day the amount paid. and it would also enable us at the close of the month to check the amount credited in the ledger to each postmaster in respect of these payments.

The only alterations necessary in the Daily Cash Account forms will be three, viz., an addition on the debit side for notes supplied, and two additions on the credit side, one for showing the value of notes paid, and the other for showing the value of unissued notes forming part of the balance in hand.

The following is a pattern of the Cash Account as proposed to meet this case :—

Abergavenny.

Dr. **Cr.**

CASH ACCOUNT of the Head Postmaster for the day of 187 .

Stamp of Office.

(*a*) A return of these Licenses must be made on the back of this Account on the last day of each month.
(*b*) The amount entered as cash must consist of cash exclusively, and must be given in detail at the back of this account *daily*.
(*c*) All payments must be claimed on the date on which they are made, if possible. If Vouchers are held over for any reason, the amount must be entered above and the vouchers must be described and the reasons given for their detention at the back of this account.

In the postmasters' ledgers and their summaries, all that will be necessary will be the addition of two columns, viz., one on the debit side for notes supplied, and one on the credit side for notes paid.

At the close of each month the ledgers will show on the debit side the value of supplies, and on the credit side the value of payments made, and the difference will be the amount in hand and outstanding.

The total of the supplies will be checked by the supply ledger which will be kept in the Chief Examiner's Branch, and which will be made up from the sheets which will show the daily issues to postmasters by the Cashier's Branch, just as the supplies of stamps and licenses are now shown. The total of the payments will be checked by the abstract of payments made daily which will be prepared from the dockets above described. This is the plan adopted in the Savings Bank Department for ascertaining daily the totals of postmasters' transactions. The outstanding notes can be proved by means of lists, showing for each office the numbers of each class of note which will not be found in the pigeon-holes into which the paid notes are to be sorted in numerical order. Thus we shall have a very complete and prompt check upon the whole of this business without the labour and expense of detailed accounts either local or metropolitan.

Additional work in connexion with this business in the London Office will fall on the Cashier's Branch, the Chief Examiner's Branch, the Cash Account Branch, the Ledger Branch, and the Principal Book-keeping Branch. A new Examining Branch will also have to be established.

The Cashier's Branch must have the custody and issue of the notes to postmasters, just as it now has the custody and issue of postage stamps, receipt stamps, and Inland Revenue licenses. Probably one additional clerk and two messengers will suffice for this branch during the earlier working of the plan.

In the Chief Examiner's Branch one clerk will be required to check the stock and the issue of notes, and to keep the supply ledger.

In the Cash Account Branch two additional clerks will be required for the primary check.

In the Ledger Branch three clerks will be required.

In the Principal Book-keeping Branch, and in the Arrears Branch one clerk will probably suffice.

The Examining Branch will have to be an entirely new establishment. The work to be done in this branch will be of a somewhat simple character, consisting of—

1. Checking the paid notes with the dockets.
2. Sorting the notes to the offices of issue, and into their numerical order, and placing them in pigeon-holes provided for each class of note.
3. Sorting the dockets into the alphabetical order of the names of the offices from which they are received.
4. Entering them in abstracts.
5. Adding up these abstracts and preparing a daily statement of payments.
6. Checking periodically the numbers shown on the dockets as unissued on a certain day, with the numbers of the notes reported as issued on the day, so as to prove the accuracy or otherwise of the claim made by the postmaster in respect of unissued notes in the balance of his daily cash account.
7. Preparing lists of outstanding notes, to effect a proof on the issues and payments.

All this work can be performed by female clerks, and I think that this branch should consist entirely of such clerks. I can speak with some confidence on this point from my experience of the account work performed by female clerks in the Clearing House Branch of the Receiver and Accountant General's Office.

The cost of this additional force will be estimated presently.

The payment to postmasters may now be considered. At present the rate allowed for the sale of postage stamps is 1*l.* per cent., so that to earn 1*l.* a postmaster must sell—

48,000 halfpenny cards or stamps,
or 4,000 packets of cards,
or 24,000 penny stamps,
or 12,000 twopenny stamps,
or 4,000 sixpenny stamps,
or 2,000 shilling stamps.

Stamps are sold in such uncertain quantities to each purchaser that it is almost impossible to establish anything like an analogy between such sales and the issue of the proposed notes. I will, therefore, leave the above facts as they stand, and proceed to consider the value of the work of issuing and paying these notes as compared with the allowance made to sub-postmasters in respect of the issue and payment of money orders. The allowance for money order work may be roughly set down at 8*l.* per 1,000 issues and payments, or say 2*d.* per order. Last year we paid about 50,000*l.* for about 6,000,000 orders issued and paid at sub-offices. The work connected with the issue and payment of a circular note would certainly not amount to one-fifth of the work involved in the issue and payment of a money order, and therefore one fifth of the allowance made for money orders would suffice for the circular notes; but, as under the new plan, it is proposed to charge the public one ½*d.* each as commission on notes below 5*s.*, some modification of this rate becomes necessary. Instead, therefore, of giving a fixed rate of 32*s.* per 1,000, that is to say, 16*s.* per 1,000 for issues, and 16*s.* per 1,000 for payments, I would adopt two rates, viz., one for notes under 5*s.* each, and one for notes of 5*s.* and upwards. The rates should, I think, be 40*s.* per 1,000 issues and payments for notes of 5*s.* and upwards, and 20*s.* per 1,000 issues and payments for notes below 5*s.* The low charge of ½*d.* each for the notes below 5*s.* will not admit of so high a rate as 32*s.* per 1,000 being paid to postmasters, while the higher rates of 1*d.*, 1½*d.*, and 2*d.* per note to be charged for those of the value of 5*s.*, 10*s.*, and 20*s.* respectively, will allow of a higher rate than 32*s.* per 1,000 issues and payments. The following table will show the amount of commission on the issue and payment of 1,000 notes of each class, the amount proposed to be allowed to postmasters, and the amount left for Chief Office and other expenditure and for profit:—

Class.	Commission charged on 1,000 issues.	Payment to Postmasters for issuing and for paying 1,000 notes.	Amount left for Chief Office and other Expenditure and for Profit.
	£. s. d.	£. s. d.	£. s. d.
A	2 1 8	1 0 0	1 1 8
B	4 3 4	2 0 0	2 3 4
C	6 5 0	2 0 0	4 5 0
D	8 6 8	2 0 0	6 6 8

These results will be noticed presently when I deal with the question of income and expenditure.

I propose now to show how far the four classes of notes which I have suggested will meet the requirements of persons remitting precisely the amounts of these notes, and to enable me to do this with some approximation to accuracy, I have carefully analysed the paid money orders of Manchester, Liverpool, Leeds, Hull, and Leicester, for three days in June last, and for three days in April 1873. The whole number of paid money orders thus analysed was 15,482. Of this number 6,425 consisted of orders of 1*l.* and under, and of these 2,264 were of the precise amounts of the proposed notes, viz.:—

59 at 2*s.* 6*d.*
417 at 5*s.*
836 at 10*s.*
952 at 20*s.*

2,264

If these proportions hold good throughout, it is clear that out of the 15½ million money orders per annum now being issued, about 2¼ million would be met by the use of the cheap classes of circular notes which I have proposed. I need not now stop to consider the large number of cases in which remitters will certainly combine notes of two or more classes and a few postage stamps to make up precise amounts not exactly met by any one of the notes, or cases in which one of the notes combined with a few postage stamps would meet many requirements. I will only recall the fact, that on all money orders under 1*l.* a loss is experienced, and that this plan will exchange that loss for a profit.

I will now proceed to estimate the income and expenditure, on the assumption that 2,264,000 of these notes are issued annually.

INCOME.

No.			£.
59,000 at 2*s.* 6*d.*,	yielding at ½*d.*	per note	123
417,000 at 5*s.*,	" 1*d.*	"	1,737
836,000 at 10*s.*,	" 1½*d.*	"	5,225
952,000 at 20*s.*,	" 2*d.*	"	7,933
	Total Income		£. 15,018

EXPENDITURE.

	£.	£.
Allowance to postmasters, viz.:—		
59,000 at 20 *s.* per 1,000	£. 59	
2,205,000 at 40 *s.* „	4,410	
		4,469
10 clerks in Account Department at 100 *l.*		1,000
2 messengers for „		100
Female staff for Examining Branch		1,600
2 boy messengers for „		40
Furniture		400
Stationery		1,000
Rent, taxes, gas, water, fuel, &c.		500
		9,109
10 per cent. for contingencies, &c.		911
Total expenditure		£. 10,020

It may, therefore, be estimated in round figures that the

Annual income will be about	£. 15,000
and the expenditure about	10,000
leaving a margin of about	£. 5,000

or one-third of the income upon an estimated business of about 2¼ million issues and about 2¼ million payments.

This quantity of business might be doubled without causing any addition to the 10 clerks required for the account branches, and the increase in the female staff would be below the proportion which that staff bears to the work stated in the above estimate, as experience will lead to a more rapid discharge of the duties than could be expected at the commencement of a new business.

The question of security to be given by the postmasters and the question of the reserves to be allowed to them must now be considered.

The plan of charging postmasters with the value of the notes supplied to them will, as a matter of course increase the balance of every postmaster, and in some cases, no doubt, it will be found necessary to increase the penalty of the postmaster's bonds; but as the increased cost would for 200 *l.* amount to only 15 *s.* a year, the postmasters will not find this a very severe infliction when they consider the liberal scale of remuneration proposed to be allowed to them for this new work.

As regards the reserves necessary to be kept to meet these notes, it will be borne in mind that postmasters already possess reserves sufficient to meet the payment of money orders of the four denominations embraced in the plan of the circular notes, and that no fresh funds will be necessary, at any rate in the early stages of this new business. In a few months we shall have ample means of seeing the progress of the circular notes and the effect they may have upon the money order system, and cases of a special nature can be readily picked out and dealt with as they arise.

I would suggest that on the introduction of the circular note system, one of two courses will be open to the Department with regard to the money order system:—

1. To leave the money order system as it now is, making no change in the rates of commission until some experience of the circular note plan shall have been obtained, or
2. To allow no money order to be issued at a lower charge than 3 *d.*, that being the estimated average cost of every inland money order.

The adoption of either of these courses will leave the entire money order system open to the public, and give them in addition to that system the further facilities affordrd by the circular note plan.

In conclusion I may point out that, in addition to giving great facilities to the public for transmitting small sums through the post office, these circular notes may also become a new and very extensive circulating medium, possessing as they will the advantage of a cash basis and Government security.

GEO. CHETWYND,
Receiver and Accountant General.

General Post Office,
28th October 1874.

APPENDIX, No. V. (See page 17, Question 116.)
5th May 1876.

Handed in by MR. CHETWYND.

FOR THE SECRETARY,

REFERRING to a conversation which I had a few days ago with Mr. Frederic Hill on the subject of measures calculated to reduce the cost of the Money Order Office, I mentioned a proposition which I intended to put forward with this important object in view, and I mentioned also that the main feature of the proposition was the abolition of all local records of the detailed particulars of each money order issued, and of each money order paid at those offices.

When we established the Post Office Savings Banks in 1861, it was determined that no such records should be kept by the postmasters so far as deposits and withdrawals are concerned, and our 13 years' experience has clearly shown that this decision was a sound one. In 1865, when the Department commenced the system of Government Insurances and Annuities, it was also deecermined, following the practice of the Savings Banks, that no detailed records of the receipts and payments should be kept by the postmasters, and our nine years' experience of this arrangement has been altogether satisfactory. When the Post Office Telegraph system was established in 1870, the same question was discussed as regards telegraph accounts, but as our knowledge of telegraph business was based on what the telegraph companies had done and not upon our own experience, it was decided that in the beginning at least we should adopt all that appeared to be necessary for safety in the system followed by the companies, leaving it open to the Department to reconsider the whole matter when our practical experience should be found sufficient to enable us to do so safely.

In the case of the Savings Banks we are now collecting annually more than 3,000,000 small sums amounting to upwards of 8,000,000 *l.*, and we repay annually more thsn 1,000,000 sums to depositors amounting to upwards of 6,500,000 *l.*

In the scheme of Government Insurances and Annuities the transactions are very much smaller in number and in amount than they are in the Savings Bank scheme; but they are still sufficiently numerous and involve a sufficiently large sum to enable us to form an opinion on the question of the necessity or otherwise of keeping records of details at every post office throughout the United Kingdom. At present we receive at various post offices about 14,000 sums per annum, amounting in the whole to about 9,000 *l.*, for Government Insurances, and we pay out about 3,000 *l.* per annum in about 80 sums on account of that service. For Government Annuities we receive about 117,000 *l.* in about 2,250 sums, and we pay to annuitants about 55,000 *l.* per annum in about 8,700 sums.

In carrying out the Savings Bank system and the Insurance and Annuity system we have never been inconvenienced by the absence of local records of the details, and very large savings have been effected through our not requiring them.

As regards the Telegraph system, which began early in 1870, when the companies left off with 6,000,000 forwarded messages per annum, it is now under consideration—when we have 20,000,000 forwarded messages—to abolish all the local records, and to rely, as we do in the case of the Savings Bank and the Insurance and Annuity business, on original documents. The saving in the case of the telegraphs is estimated at upwards of 18,000 *l.* a year.

The proposal which I have to make is that the journals of money orders issued and the journals of money orders paid, now kept at all money order offices, should be abolished as unnecessary. These journals are in fact duplicates or copies of the accounts sent daily by postmasters to their chief office, and they are only useful for the following purposes:—

1st. To enable postmasters to furnish a duplicate account should the original be lost.

2nd. To enable postmasters to furnish a second advice or a corrected advice should the original advice have miscarried or be found inaccurate.

3rd. To enable postmasters to answer inquiries respecting money orders issued or paid by them.

These requirements can all be met in other existing ways if the journals be abolished, as will be seen by the following suggestions:—

A. That the use of the existing application forms (pattern annexed) be made compulsory.

B. That the orders issued and the orders paid shall be entered as they are issued and as they are paid on the daily account sheet intended to be sent to the Chief Office.

C. That the application forms shall be numbered to agree with the orders as they are issued, and that they shall be filed, or carefully kept in numerical order, to facilitate reference should it be required.

D. That the advices of paid orders should not be sent up to the Chief Office with the relative orders, as should the accounts and advices be lost it will be impossible to supply a duplicate account of payments. The advices of all paid orders should be sent to the Chief Office on the day following that of payment.

Assuming that the proposal is adopted, the only suggestion to which any objection can be made is that which makes the use of the application form compulsory. Some hesitation may naturally be felt in requiring more to be done by the public than is now done, but I believe that a very large proportion of remitters of money orders use these forms, and that to make their use compulsory would not inflict any serious labour on the public. If, however, it should be deemed advisable not to compel the public to use these forms, there cannot be any well-grounded objection to making it compulsory on the issuing clerk of the money order office to fill up a form of this kind where the applicant refuses, or is unable, to do it himself.

Suggestion B. makes the original accounts available for the purposes of the Chief Office, and thus avoids the errors incident to any system of copying not mechanically performed.

Suggestions A. and C. will furnish a postmaster will all the necessary information for supplying second or corrected advices, and will enable him to furnish a duplicate of the debit side of any account that may be lost, while his cash book, if properly kept, will always enable him to check the total of such an account.

Suggestion D. provides the means of making up the credit side of a lost account.

The savings to be effected by these proposals may be divided into three heads, viz. :

1. Saving of books.
2. Saving of carriage.
3. Saving of labour.

From a return furnished by the Storekeeper the annual cost of books appears to be 616 *l.*, and the annual cost of carriage 110 *l.*

It is not easy to estimate the saving of labour so as to show the entire result in the form of money, because in many cases the saving will not take that direct form, but rather the indirect form of releasing clerks from this work and enabling them to discharge other duties which would necessitate increase of force. It may be roughly estimated that about one half of the money order work is done at present at offices paid by commission, and that the remainder is done at offices where the clerks are paid by salary. At the offices paid by commission about one third of the work will be abolished by the abolition of the journals, and it would be possible therefore *to reduce the rates of commission by one third.* There will probably be some few exceptional cases, but these need not now be considered, as they will not seriously affect the result.

The amount paid during the year ended 31st March 1874 for money order commission to sub-postmasters, &c. was 50,495 *l.* ; so that for the purpose of this rough estimate one third of that sum, or 16,831 *l.*, may be considered as a saving which will follow the abolition of the journals at such offices.

As regards the offices paid by salary, it may be roughly estimated that about two thirds of the money order work is done at offices supplied with copying presses, and as the journals there are simply press copies of the daily accounts, the only saving which can be reckoned here will be the saving of the books and the value of the copying presses should they be recalled and sold. The annual cost of the books is about 144 *l.*, and that value is included in the estimate quoted above which was furnished by the Storekeeper.

The copying presses number about 271, and taken at an average of 4 *l.* each (about half price) the value of the whole may be stated at 1,084 *l.*

Of the remaining one third of the money order work done at offices paid by salary, it may be reckoned that the saving of work by abolishing the journals would be at the same rate as that allowed for sub-offices in the above estimate. Taking this rate as the measure of the saving, the result would be about 5,600 *l.* a year

The total estimated annual saving would then stand thus :—

	£.
1. Saving of cost of books	616
2. Saving of cost of conveyance	110
3. Saving of labour at head offices using the copying press	—
4. Saving of labour at head offices not supplied with copying presses	5,600
5. Saving of labour at offices paid by commission	16,831
Total annual saving	£. 23,157

The saving in respect of sub-offices could be realised immediately. The saving in respect of head offices which do not use the copying press could not be realised to any great extent immediately. At these offices the duties proposed to be abolished form only a portion of the work of a clerk, and the saving in such cases will take the form of deferring the grant of additional force.

If, however, the measure be carried out simultaneously with the proposed abolition of local telegraph records, the joint abolition may enable the department in many instances to abolish a clerk or to defer filling a vacancy when, if the two measures were carried out at different times, the saving might have to be deferred.

19th October 1874. GEO. CHETWYND.

MR. CHETWYND,

THE particulars you require regarding the Money Order Journals, and copying press books supplied for money order purposes, are as follows:—

Description of Book.	Number issued per annum.	Cost per annum.
		£. s. d.
Journals of Orders issued and paid	950	161 5 2
Do. do. issued	1,574	187 16 0
Do. do. paid	924	123 9 4
Copying Press Books	400	144 0 2
Totals.	3,848	£. 616 10 8

A pattern sheet of each description of book above referred to is herewith, and the total cost for conveying the books in question by goods train to the provinces would be about 110 *l.*

JNO. FLETCHER,
2nd October 1874. Storekeeper.

The following INSTRUCTION to POSTMASTERS on this subject was issued in January 1876.

MONEY ORDERS.

The following changes will take place on and from 1st February 1876, viz. :—

With a view to simplify and reduce the work connected with the issue and payment of money orders the following changes will take place on and from the above named date.

The journals of orders issued and orders paid are to be discontinued, and the account sent to the Metropolitan Office alone is in future to be the sole complete record of these transactions. The intention in this case is to assimilate this part of the money order work to that of the savings bank accounts.

As a substitute for the journal of orders issued, postmasters must obtain a requisition form for every order, and on these forms the number of the order issued is to be entered, and an impression of the dated stamp affixed. In all cases the public who apply for orders should be asked to fill up the ordinary requisition form, but in case they decline to do, the issuing officer must fill one up.

The requisition forms of each day are to be carefully tied up and put away in proper numerical order, and they are to be used in all respects as the substitute for the journal of orders issued. All notes affecting the order or advice must be made on the back of the requisition form. As new requisition forms are printed, provision will be made in them for inserting the number of the order issued, and also for an impression of the dated stamp. In the case of foreign and colonial orders, the existing form of requisition is to be used as at present, but an ordinary form (No. 3—D.) is also to be filled up and put, in its proper numerical order, with the forms of the day.

The advices of orders paid are to be sent to the metropolitan offices on the day after the despatch of the account

in which credit is claimed for the payment of the respective orders, as in the event of the account and paid orders being lost the particulars of the paid orders can be obtained from the advices. These advices must bear the office stamp of the date of payment.

The manifold writing system is to be extended to all offices at which it is now in use for the preparation of the orders and advices, so that in several important particulars both these documents can be filled up at one and the same time.

As new supplies of money order and advice forms are printed they will be prepared so as to admit of the application of the manifold writing process.

At offices supplied with copying presses, the present system of taking press copies of the money order accounts is to be discontinued, and instructions as to the disposal of the presses will be issued hereafter.

JOHN TILLEY,
Secretary.

General Post Office,
January 1876.

APPENDIX, No. VI.

8th May 1876.

PAPER handed in by MR. CHETWYND.

ORDERS for SMALL AMOUNTS. (See page 23, Question 199.)

APPENDIX, No. X.

FORMS SUBMITTED by MR. BEAUFORT with his first Plan (see page 23).

Form A.—Money Order.

201 **MANCHESTER.**

Pay to _____

or order, the sum of £ _____ s. _____ d. _____

Postmaster.

This Order may be made payable either to the Remitter or to any other person named by him, and the Remitter or the person to whom payable can endorse it in favour of any other person. The Order will be cashed at any Money Order Office in the United Kingdom, within two months of the date of issue, when signed below by the person to whom last made payable, after which the responsibility of the Department ceases.

Stamp of Issuing Office.

Received by _____

Stamp of Paying Office.

(ON THE BACK OF THE FORM.)

Pay to _____ *or Order.*

Holder's Signature. _____

(Each subsequent endorsement to order, by any holder, to be made as above.)

Caution.—This Order should not be received from any one except the person to whom last made payable.

The Commission to be paid on the issue of a single Order drawn on the United Kingdom is

Under 10 *s.* - - - **1 d.**
10 *s.* and under £. 1 - - **2 d.**
£. 1 „ „ £. 2 - - **3 d.**
And an additional 1 *d.* as each £. 1 is reached up to £. 10; beyond which no single Order can be issued.

Care should be taken not to lose this Order, as a Duplicate cannot be obtained until after two months from the date of issue. All applications on this subject are to be made to the Chief Money Order Office in London, Dublin, or Edinburgh, as the case may be. This Order will be forfeited if not cashed at a Money Order Office within two months of the date of issue.

FORM B.—PAGE OF ORDER BOOK.

Part 1. Counterfoil to be kept by the Postmaster as a permanent record.

Part 2. Slip to be sent to the Chief Office as the Daily Account of the Postmaster

APPENDIX, No. XI. (See pages 28-30.)

8th May 1876.

Papers referred to in Mr. Walliker's Report.

1.—*Advices.*

The advice, with rare exceptions, secures payment to the proper person, as 35 years' experience proves.

It enables a postmaster to regulate his balance so that he may meet the demands of the public. All careful men do so use them, and the public constantly reap the advantage.

It gives confidence to a postmaster (especially at small offices) his responsibility being hedged in and limited to payment in accordance with the advice. A certain amount of discretion is allowed, but this might be extended to meet cases in which a postmaster is dealing with well-known people.

The difficulty of getting spurious advices into circulation is considerable and is a great bar to fraud, besides they localise the presentation, which is of itself a good check. There are several risks of detection besides the above, such as the discovery of duplications or wide disagreement in Nos. of true and false advices, both of which might happen to be drawn on the same office.

Mr. Beaufort says a thief can generally give full particulars as to name of remitter, sign correctly, &c.

We know that the thief is sometimes detected,—we do not know how often orders refused would have been fraudulently cashed but for the check supplied by the advice.

(We had a case not many months ago in which the thief was detected and punished.)

An advice, should be folded once, not twice. This would be quicker work, and the advice being larger would travel more safely through the post.

2.—*Postal Notes.*

Would be found very useful (amongst other things) for issue at country sub-offices where no money order business is transacted. The sub-postmasters could also cash and send circular notes to their head postmasters as remittances, receiving in return cash, stamps, or circular notes for issue.

Concession of this privilege might be limited to those offices for which some one or more of those seeking them would give an undertaking to secure the Crown from losses by default.

There is a greater difficulty in point of time with regard to the loss of circular notes than in the case of Mr. Beaufort's money orders, but then the public have in the former case alternative plans, and may have perfect safety if they pay the higher rate.

The embossed stamp on the note is a good check against forgery for so small a sum.

3.—*Commission on Orders.*

I agree with Mr. Prall that if we were to reduce the rates for the larger orders we should attract some new business, but one difficulty is the fixing a simple and equitable scale; whilst the main difficulty consists in the work of checking the account at the Chief Office. With the present simple system (barring the 1*d.* orders) there are, Mr. Prall says, 100 errors made every day. The correction of the increased number of errors which would result from a less simple scale, and the labour of checking at the Chief Office, would absorb a considerable portion of any new profit which might accrue. Besides, I doubt if we could decrease the rates for large amounts to an extent which would attract much new business. A man willing to pay 9*d.* will not hesitate much about another 3*d.*

The collection of commission by means of stamps has been discussed at various times during the past 20 years, but it would involve a great deal more trouble than the present plan. The issuing of an order would be slower, there would be more errors than now, the check at the Chief Office would be more expensive, and after all someone would have to construct an account showing the money order revenue.

4.—*Facilities.*

I see no objection to an alteration of the present order so as to admit of endorsement. The name of the remitter should in case of endorsement be written on the order.

Whatever risk there might be would be on the shoulders of the persons accommodated. Of course the office of payment could only be varied by transfer.

At page 3 of Mr. Beaufort's paper of the 5th December 1874, there is a marginal query, "What does this mean?"

Mr. Beaufort says that his order should be "paid once only." He means that when the postmaster has once cashed an order he must not re-issue it, but must claim it in his account for the day on which he pays it. But, is it not quite likely that a postmaster in trade would sometimes use these orders as cheap and ready means of making remittances?

Mr. Beaufort suggests that if a postmaster cannot cash an order, any tradesman or other person will do so; what is to prevent a postmaster, in his capacity as a tradesman, from cashing the order from his own till, having it properly endorsed to himself, and then, having re-endorsed it, remitting it in payment of a debt of his own?

Persons wanting money orders are sometimes in doubt as to name of payee, and give fictitious names. If there were no objection beyond what appears on the surface, then

in such cases the difficulty might be met by writing the words "to order" on the advice in lieu of payee's name, and the order would be paid to any signature at risk of sender. Special requisition form should be filled in such cases.

It is not the business of the Money Order Office to create a new circulating medium, but to provide for the safe and ready transmission of money from one town to another. Besides, by increasing the facilities for circulation you decrease your profits on transmission. It would be the large orders, which now pay well, which would circulate, benefiting the merchant; the lower and middle classes, for whom the Money Order Office was created, would reap but little benefit.

Mr. Beaufort says that if a postmaster had not cash to meet one of his orders, anybody would cash it. Yes, but only, as a rule, at a discount. Besides, the Crown would hardly like to find a shoemaker, for instance, meeting a bill which its agent was not able to pay. We should contrast unfavourably with the Cheque Bank in such a case.

Transfers, repayments, and alterations of name are often rendered necessary through default of the Department. Why might not either of these be arranged for a universal charge of 2*d.* as for postage?

If transfers and repayments were arranged on the original orders (which are now treated as paid, and new orders are issued), much delay and inconvenience would be avoided. The requests for transfer or repayment could be pinned to the original orders as the authorities.

5.—*Forfeited Orders.*

Under Mr. Beaufort's plan, orders would become forfeited after two months (I presume this means two months from date to date), and a postmaster would have to take care that he did not pay a forfeited order.

It is simply impossible for a man to tell the precise date of an order, in thousands of cases. If the letters of the month could be taken, then the chance would be greatly improved, but to decide a date by the figures of a stamp impression is often impossible.

What then would occur? A postmaster, knowing that after two months, duplicates of lost orders may be demanded, would also know that if he paid a forfeited order it would be disallowed; under such circumstances, he would naturally refuse to cash all doubtfully stamped orders in which the letters of the month did not guide him.

This seems to me to be a fatal blot, and that it is at any rate a serious objection may be gathered from the following statistics obtained from advices in my own office:—

The number of advices on hand on Dec. 13 was 1,077:—

Of these, 25 had been issued 61 days and upwards. Deduct from these 20 per cent. for advices improperly detained or addressed, and we have left, say 20 per 1,000, or 2 per cent. of the entire issue now held beyond 61 days (Mr. Beaufort's limit).

It seems fair, therefore, to assume that the adoption of the proposed limit would disturb the convenience of the holders of upwards of 318,000 orders per annum; and this number may also be taken as, in some sense, a measure of the responsibility which would be placed on the shoulders of postmasters in respect to the possible payment of forfeited orders.

No wonder that the Controller of the Money Order Office deprecates the introduction of these forfeited orders. The confusion and difficulty they would create in his office cannot even be estimated.

6.—*Fraud.*

A clerk at head quarters investing 20*l.* in two 10*l.* orders could, if he destroyed them when paid, ask for duplicates and get the money over again, and if he only worked one order a month could make an income of 120*l.* a year. Now, the absence of the advice would cause search to be made, and the order would probably be traced, payment being localised.

Mr. Beaufort, at page 14 of Mr. Prall's Report of September 9th, makes light of "paternal protection of people "from swindlers;" but surely that is one of the functions of a Government Department, and it is not right to do or permit evil that good may come.

We must, as it appears to me, be content to work within the narrower circle which does not wittingly embrace the evil.

7.—*General.*

It would appear somewhat incongruous if the Treasury, which will not allow 6*d.* to be passed if not properly vouched, should permit one of its Money Order agents to pay any amount of money on trust.

The advice is a trustworthy authority for payment, and has done good service for 35 years.

I remember, many years ago, a man, of some position in the Money Order service at the time, deliberately propounding the theory that because all the errors we found resulted in the debits nearly balancing the credits, it was therefore folly to spend money in finding the errors out.

I need hardly say that his views were not favourably received.

8.—*Lost Orders.*

The suffering entailed on a poor man who, having lost his order, would have to wait nearly two months for his money, cannot be contemplated with indifference. The poor complain heavily of the delay under the present system.

Orders are often lost through the carelessness or dishonesty of lodging-house keepers, and not infrequently in their passage through the post.

In the latter case the Department would do the loser a double wrong, and he would refuse to be comforted by the assurance that he was suffering for the good of others. In the former case it is to be feared that orders which now would be either destroyed altogether, or which might eventually find their way into the hands of the payees, would be taken away and cashed in some other town. Localising payment and demanding particulars, as is always done with strangers and doubtful people, frequently prevent even the attempt to commit a fraud. A thief is shy, as my experience has proved, of making a personal appearance at a local office.

9.—*Present Form of Money Order.*

If not altered so as to permit of endorsement (see *Facilities*), the form should at least be so altered as to prevent the frequent errors and inconvenience to illiterate people, which arise through there being two spaces for signatures on the face of the order. These spaces, or rather the bottom one, is a fruitful source of error and annoyance. People instead of signing in the "receipt" space sign the request for transfer, and have to trudge many a mile, and often wait many days, before they can again present the order.

(*See* suggestion at the end of *Facilities*, as to transfer and repayment.)

10.—*Requisition Forms.*

Mr. Prall, judging from the clear and correct manner in which requisitions for foreign orders are filled up, thinks that requisition forms generally might be used as advices.

But as such forms are, in Hull at any rate, nearly all made out at a special office, known to nearly every foreigner coming into or resident in Hull, they are not criteria as to requisition forms in general.

If a larger form were provided,* I have no doubt it would be more freely used, and be filled up much better than at present.

11.—*Reserves.*

Reserves are important at small offices, especially where work is carefully and conscientiously done.

To meet Mr. Beaufort's "universal orders," reserves would have to be increased rather than otherwise, Mr. Prall thinks, by 100,000*l.* Take the town of Hull, for example; the orders paid in the town are chiefly drawn on "Hull," but they might, under Mr. Beaufort's plan, be presented at any of the receiving houses of the town, and the reserves at those offices, averaging from 15*l.* to 20*l.*, would of necessity have to be increased.

My reserve, however, would certainly not undergo a proportionate reduction, as large numbers of orders might be presented "any day," and there must be cash to meet them.

The risk of increasing reserves of ready money at small offices is far greater than in placing circular notes on credit in their hands.

Applications for funds by telegraph are always to be deprecated even in the case of large offices. Twenty-four hours must elapse before cash can be obtained, and when obtained, as Mr. Prall has pointed out, the money, under Mr. Beaufort's scheme, may have been obtained elsewhere, for the orders which had been presented, and to pay which the money had been asked for.

12.—*Swiss Money Orders.*

It appears from the statistics given in the Blue Book that the amount of money paid through the agency of the Post and Telegraph Offices was equal to about 30*s.* per person per annum, *i.e.* on the whole population of 2,700,000.

In the United Kingdom the amount only reached about 16*s.* 6*d.*

* This has since been done.

But no doubt very large sums are paid in Switzerland by telegraph. The number of money orders should have been given.

Mr. Ffoulke's suggestions—

To deliver money at the door of payees would be impossible in England without serious risk and a large increase of staff all over the country.

To send notification to a payee, as suggested by Mr. Ffoulkes, is unnecessary, as he is advised by his correspondent.

Fuller details as to the manner in which the work is done would be interesting, and might prove useful.

APPENDIX, No. XII. (See page 50.)

Mr. Jeffery's Report on the Postal Note Scheme, and Mr. Chetwynd's Reply thereto.

The Secretary,

1. As directed by you, I now beg to submit a report on the proposed postal note.

2. Nearly five years ago the Postmaster General (then Mr. Monsell) proposed a postal remittance stamp, and just afterwards Mr. Frederic Hill submitted a scheme for a postal note, which in most respects was similar to that proposed in these papers.

3. I was requested at the time to minutely examine each scheme in all its features and bearings and candidly to report on the same. This I did, and if I had to do the same again I should modify those reports but very little indeed.

4. I enclose a copy of Mr. F. Hill's plan together with copies of my reports.

5. In perusing these papers I have been struck with the ease with which the moral objections to the scheme proposed in consequence of the temptations which it will create and the thefts which it will lead to, have been disposed of. Messrs. Godby and Rich just hint there may be difficulties of that kind, but Mr. Beaufort alone seems to have approached the subject with anything like a true perception of the dangers on that head.

6. Of all the persons, however, whose opinions are recorded on the subject, so far as they appear in these papers, it may be safely affirmed that not one knows or can be aware of the extent and peculiar character of letter stealing in the Post Office, and although the bearing of that matter on this proposal is all important, it appears to have met with very little consideration.

7. During the past year more than 60,000 applications have been made for missing letters, most of which contained property and much of that in the form of remittances in some shape or another.

8. In about 20,000 cases the inquiry and search made for these letters proved successful, leaving, however, more than 40,000 letters not accounted for.*

9. If this were all it would be a very serious matter, but the confidential information which the officers of the Missing Letter Branch obtain in the course of their experience has long convinced those officers that not one-half of the letters lost are ever applied for, especially letters of certain kinds.

10. It is unnecessary here to enter into all the details and proofs which would confirm this statement, but, if desirable, such evidence could be adduced.

11. This condition of things exists, too, notwithstanding that detections have been constantly increasing in number; thus showing, I think, in this case at least, that the repression of crime is much more difficult than the prevention of it.

12. It is also unnecessary for the purpose now in view to discuss all the causes which combine to produce this unhappy state of things; it may suffice to remark that one of the principal, if not the chief cause, is the enormous extent to which the public send remittances through the post in unregistered letters; and the question is a pertinent one, is it expedient or right to promote the growth of a practice which produces such baneful results, and which has been more or less condemned by almost every judge in the land?

13. Remittances by post are made by one of the following methods:—

1st. By money orders; and in case of failure of the letters containing them, complaint is almost invariably made.†

2nd. By cheque, draft, or some similar document; and if the letters enclosing such are missing, applications are generally made for them.

3rd. By bank notes; and when the letters in which they are sent fail, inquiry does not always follow.

4th. By coins; and when the letters which contain these are lost, inquiry is only made in about half the cases.

5th. By postage stamps; and those, when lost, are only applied for in half the instances.

14. When Mr. Monsell's plan of the remittance stamp was under consideration, it was ascertained that during the previous year rather more than 2,000 letters containing money orders were missing,‡ and that only in a very few instances had the money been obtained by forgery. In nearly all the cases, therefore, duplicate orders were issued with but small cost to the Department and little trouble to the public.

15. Last year there were nearly 3,000 money orders missing in letters sent by post,§ and that increase marks the growth of this evil. Comparatively few, however, of these were fraudulently used after they were stolen, and duplicates were accordingly issued for nearly all of them in the usual way.

16. It may be worth while to inquire why out of so many stolen money orders so few are presented for payment.

17. It is assumed in these papers (postal note papers) that the reason is to be found in the heavy penalty attaching to the crime of forgery, but it is overlooked that letter-stealing is a crime of equal magnitude, inasmuch as the law awards just as severe a punishment for the latter as for the former offence.

18. Servants of the Post Office having, therefore, committed the offence of stealing letters, are not likely, in their endeavours to secure the proceeds of their thefts, to be restrained from perpetrating the crime of forgery on the grounds assumed.

19. The following reasons, it is submitted, will to a great extent explain the matter:—

1st. A great many of the stolen letters containing money orders do not furnish the name of the remitter, and without this, it is well known, payment would not be made by any careful officer.

2nd. Money orders are payable only at specific offices, and when stolen in the same towns or places the thieves are often known at those offices, and cannot therefore present the orders for payment.

3rd. When the orders are stolen at the place of posting or at towns remote from the paying office, the amount is often too small to justify a journey in order to obtain it; or, if otherwise, the thief may not be able to get away from home, or if he could, it would not be without drawing suspicion on himself, to be followed probably by detection.

20. Now the postal note has not one of these safeguards about it, nor indeed any real safeguard at all, as it may be presented at any office and by any person, no question being asked.

21. It has been assumed also that the letters in which the postal notes would be sent would be so thin that the officers dealing with the letters could not distinguish those containing postal notes; then, it may be asked, how did they manage to distinguish those 3,000‖ last year which enclosed money orders, most of which, if not all, were very thin letters.

22 As bearing on this question of thin letters, I may remark incidentally, that whereas some 12 or 14 years since an application for a non-property letter was a rare occurrence, it has now become common, amounting to between 20 and 30 per cent. of the entire applications; and this furnishes but an imperfect index to the true condition of things, because not one lost non-property letter in 20 is applied for, indeed communications of that kind are more

---

* This is in the proportion of 1 to about every 25,000 letters in circulation.

† From later information received it appears that complaints are not made in very many of these cases.

‡ That is, so far as is shown by the applications made to the Secretary.

§ This refers only to applications made to the Secretary. Applications made to other quarters bring the number up to 7,000.

‖ 7,000.

in the nature of complaints than of applications made with the view of recovering the letters.

23. Now, as no rogue would ever steal a purse if he knew it was empty, so no Post Office thief would ever steal a letter if he was sure it contained nothing worth having, and the only theory on which these large losses of non-property letters can be explained is, that they are stolen on the mere chance and expectation of finding something of value in them. Thus the persons whose non-property letters are lost in this way, are made to suffer because other persons will persist in sending articles of value in unregistered letters despite the cautions and recommendations of the Post Office to the contrary,

24. In my opinion, therefore, it is morally certain that, so long as human nature in the Post Office remains what it is, and so long as the officers are exposed to so many temptations, letters containing postal notes would be stolen as well as letters containing money orders, and that, too, in a greater proportion, because the one would contain an article differing but little from a coin as regards the ease with which it could be disposed of, while the other encloses a document which cannot be converted into money at any time without immense difficulty and danger, and often not at all.

25. As before stated, the stolen money orders not being negotiated, duplicates were issued with small expense to the Post Office and little inconvenience to the public, but if the Department had declined to take such a course, and had thrown the loss on the remitters or payees of those 3,000* orders which failed last year, a perfect storm of indignation would have been raised; and yet this is precisely what is proposed to be done as regards those persons whose postal notes may be sent in letters and stolen in transit.

26. Therefore, after having provided postal notes, and sold them to the public expressly to be sent in letters, I fail to see, in the event of their being lost in the post, that a repudiation of responsibility on the part of the Post Office, even though such may be printed on the back of the note, would do other than render the Department most unpopular, and put it into a position from which it would have eventually to retreat.

27. Hitherto it has been the policy of the Department to caution and advise the public against sending articles of value in unregistered letters. Every post office and pillar box in the United Kingdom, however small or remote, has on it a caution of this kind.

28. Only two or three years since large placards were placed in or about every post office, and more than a million small handbills were distributed from house to house, asking the public to co-operate with the Department in preventing thefts by not sending any articles of intrinsic value in unregistered letters.

29. Among the applications from the public on these matters, there is even now many an angry complaint and loud demand for compensation; but the arguments or statements embodied in the reply, viz., that the Post Office strongly urges the public not to send valuable articles in unregistered letters, as temptations are thereby put in the way of its servants, is one that silences, if it does not satisfy, the complainants.

30. At any rate, this position which the Post Office has taken is one of decided advantage in dealing with the public in these matters, but I fail to see how this position can be retained if the Post Office is to provide, and therefore practically recommend for transmission in unregistered letters, articles which have no more safeguard than postage stamps, and less security than bank notes or open cheques.

31. I have written thus much *on the assumption that the scheme would be sanctioned, and that the postal notes would be as extensively used as anticipated, or at least sufficiently so to supplant the cheap money orders;* but, nevertheless, and for the reasons assigned five years ago in my reports on the respective schemes of Mr. Monsell and Mr. F. Hill, I have strong doubts that the present proposed postal note plan, even if sanctioned, would ever be a decided success; for however promising it may appear as a theory, it lacks every element of security; *and while there are two other methods in existence*, both popular and extensively adopted, *one just as cheap* and perfectly secure, and the other just as secure and without any cost at all to the remitter, I fail to see, at least at present, that these methods would give way to a plan which does not possess the security of one nor the cheapness of the other, so far as the remitter is concerned.

16th March 1876. T. JEFFERY.

---

* 7,000.

† That is, if it be merely placed in competition with the present money order system.

FOR THE SECRETARY,

FOR convenience I have numbered the paragraphs of Mr. Jeffery's report, and I beg to offer the following remarks upon such of them as appear to call for notice.

Paragraphs 2 to 4.

I was not aware that a scheme of postal notes had been proposed by Mr. F. Hill till it was brought under my attention in the accompanying papers.

Paragraph 5.

The "moral objections" to the proposed scheme referred to by Mr. Jeffery, have not been disregarded or lost sight of. A paragraph devoted to this point will be found at page 5 of my printed report proposing the scheme. As Mr. Jeffery has entered into the matter more specifically in subsequent paragraphs of his report, I will reserve my further observations thereon till I come to deal with the paragraphs in question in their numerical order.

Paragraph 6.

Mr. Jeffery and the officers who assist him in the missing letter branch, may fairly claim more extensive and exact knowledge in the matter of letter stealing than that possessed by other officers of the Department, but this circumstance is unfavourable to their being able to deal with other aspects of such a scheme as that of postal notes, of which letter-stealing is but an incident.

Paragraphs 7 and 8.

The fact of 60,000 missing letters being applied for in one year (most of which contained property, much of it in the form of remittances), about two-thirds of which only were traced, is no doubt a very serious matter, but its significance must not be exaggerated. In the whole of the cases, assuming the letters to have been unregistered, the blame primarily rested with the public, as they had the power to protect themselves, and in a degree their losses were therefore deservedly visited upon them. The enormous extent of the letter-carrying business of the Post Office, and the large proportion of it which is transacted safely, must not, however, be lost sight of when its failures are under consideration. The total number of letters delivered last year in the United Kingdom was more than 1,000,000,000, and the 60,000 missing letters referred to constitute but ·006 per cent., or $\frac{6}{100000}$ of the whole number. In the same year 16,577,670 money orders were issued in the United Kingdom, the whole of which may be assumed to have been sent through the post in unregistered letters, and the whole of these letters were safely delivered except about 3,000, or ·018 per cent., or $\frac{18}{100000}$ of the whole. (See paragraph 16 of Mr. Jeffrey's report). In considering any plan for securing some great public advantage, we must, therefore, not only take into account the risk involved in it, but the relation which that risk bears to the extent of the advantage anticipated.

Paragraphs 9 to 12.

Mr. Jeffery is no doubt correct in stating that all missing letters are not applied for, but it is scarcely credible that the number not applied for is so large as he supposes. So far as the public are concerned, the Post Office may fairly be relieved from attaching much importance to lost letters not applied for, and so far as the department itself is concerned, it is very doubtful whether its hands would be strengthened for dealing more efficiently with its dishonest servants than at present, were the whole of the lost letters brought under its notice,

Mr. Jeffery asks whether it is expedient or right to promote the growth of the practice of sending remittances through the post in unregistered letters, whereby letter-stealing is stimulated, and which practice has been more or less condemned by every judge in the land? The reply is, will the proposed postal note induce an increase in the number of stolen letters, as Mr. Jeffery assumes, and, even if he is right, which is not admitted, are the public to be deprived of a great public boon because a small number of the servants of the Post Office are untrustworthy.

Paragraph 13.

Mr. Jeffery describes five methods by which remittances are sent by post, meaning of course in unregistered letters. It is with the first and last only that it is necessary now to deal in considering their bearing on the scheme of postal notes.

1. Remittances by money orders—

Postal notes, like money orders, would present no external indication of their enclosure in a letter, and as

complaint is made in almost all cases of lost money orders, so might the Department expect that complaint would be made in almost all cases of lost postal notes. All that need be said here is that the Department would be made acquainted with the full extent of the evil, and attention would thus be drawn to the localities in which dishonesty was being practised.

2. Remittances by postage stamps—

Mr. Jeffery states that postage stamps, when lost, are only applied for in half the instances. No doubt the practice of remitting by postage stamps, so that the fact of their presence in a letter can be detected by manipulation, is a highly objectionable one, and the facilities afforded for turning stamps into cash do enable thieves to practice dishonesty with a certain amount of security. No unprejudiced person, however, would for a moment contend that postal notes and postage stamps stand on the same footing in this particular; but as Mr. Jeffery enlarges on the matter in subsequent paragraphs of his report, I will defer my remarks thereon till I come to deal with those paragraphs.

Paragraphs 14 *and* 15.

In these paragraphs Mr. Jeffery states that comparatively few of the lost money orders are fraudulently used, and that most of them are replaced by duplicate orders. It may be conceded at once that the money order has the advantage over the proposed postal note in so far that if lost and not presented for payment it can be replaced by a duplicate order, but this is an advantage which the public can obtain for themselves by taking the extra trouble and paying the extra expense of procuring a money order. If they choose, however, to incur the extra risk in the case of a postal note, which it is believed would be almost infinitesimal, I do not see that the option should not be given them. Further, should the postal note, as may be expected, displace the use of postage stamps as a means of remittance, an unquestionable benefit would in that way be obtained.

Paragraphs 16 *to* 18.

Here Mr. Jeffery attempts to explain why it is that so few stolen money orders are presented for payment, and in doing so commits himself to the view that the penalty attached to forgery has little or nothing to do with it, seeing that a similar penalty attaches to letter-stealing. Without inquiring whether the penalty is practically alike in each case, and *known to be so* by the persons prepared to commit the offence of letter-stealing, surely it may be averred that the same facility of proving the crime does not exist in each case. A destroyed letter leaves no mark behind it, but a forged signature does. A stolen letter may be destroyed, and no doubt always is destroyed, when practicable, by the thief alone. A document to which a forged signature is attached has to be presented to a second person, to whom either the rightful owner of the document or the thief may be personally known. It is rather the risk of detection than the amount of the penalty that has a deterring effect on criminals, and the parallel indicated by Mr. Jeffery hardly, therefore, supports his theory that the penalty attaching to forgery does not present stolen money orders being utilised.

Paragraph 19.

Mr. Jeffery advances three reasons which in his opinion explain the security of the money order as a means of remittance:—

1. Because a great many letters which contain money orders do not furnish the name of the remitter.

In my view, this reason may be dismissed as having no practical foundation, and a long experience at the largest paying office in the kingdom (the window of the Chief Money Order Office) enables me to speak with some confidence in this matter. It frequently happened that the person presenting the order for payment did not furnish particulars in strict accordance with the advice. In such cases it was usual to ask for an inspection of the letter in which the order had been remitted, and I seldom or never found an instance in which a letter failed to show the name of the remitter.

2. Because money orders are payable at specific offices, and when the orders are stolen at the towns or places in which those offices are situated, the thief may be known, and dare not present the order for payment.

The security thus enjoyed is effected by the use of an advice, a document which is useless in any town other than that in which the order is payable, without the expense of a second commission and the trouble of a special application. If it be thought that the security in question with its drawbacks is a privilege which the public would prize more highly than that of being able to cash an order at any office in the United Kingdom, with its attendant small risk, nothing would be easier than to put the money order and the postal note on the same footing, or nearly so, in this respect, by empowering the remitter to specify the office of payment at the back of the order, and confining payment to the office specified in such cases. In fact an alternative use might be made of the postal notes at the option of the holder.

3. Because orders stolen at a place remote from the office of payment are generally too small in amount to make it worth while to incur the expense of a journey to and from the place in which the paying office is situated, or because a journey from home on the part of the thief might excite suspicion and be followed by detection.

My remarks on the case of orders stolen at the place of payment are applicable to this case also.

Paragraph 20.

Mr. Jeffery affirms that the postal note has not one of the safeguards possessed by the money order, but I think, after what I have already said on the subject of forgery, and also as to the powers which may, if thought necessary, be given to the holder of a postal note to confine payment to a specific office, Mr. Jeffery's condemnation can hardly be sustained.

Paragraph 21.

Here Mr. Jeffery attempts to show that the postal note would not enjoy security in consequence of the letter containing it not being distinguishable from other letters, else, he says, it may be asked how were the 3,000 letters distinguished last year which contained money orders and were stolen?

They might contain other enclosures which excited the cupidity of the thieves, or they might form part of a number of letters stolen, and searched on the chance of valuables being found in some of them, as suggested by Mr. Jeffery in paragraph 24 of his report. Be this as it may, letters containing money orders are as a rule safe, as last year 16,574,670 out of a total issue of 16,577,670 appear to have reached the persons for whom they were intended. There is no reason for assuming, so far as I can see, that letters containing postal notes would be less safe.

Paragraphs 22 *and* 23.

Mr. Jeffery states that between 20 and 30 per cent. of the applications for missing letters are for missing non-property letters, and as in paragraph 8 of his report he stated that the total number of applications was about 60,000, the number of applications for non-property letters would appear to be from 12,000 to 18,000. But Mr. Jeffery further states that not one in 20 of missing non-property letters is applied for, and if this estimate be correct the number of missing non-property letters would amount to from 240,000 to 360,000. Of course I am not aware of the basis upon which Mr. Jeffery frames his estimates, but, taking it as he gives it, it would appear that at the outside about 400,000 property and non-property letters are missing out of 1,000,000,000 letters delivered in the year, and this proportion of non-deliveries to deliveries is, I think, extremely small, amounting only to ·04 per cent. This view of the case hardly supports the theory that letters are destroyed to any great extent on the chance of their containing valuables in cases in which they furnish no evidence of such contents without being opened.

Paragraph 24.

In this paragraph Mr. Jeffery assumes that letters containing postal notes would be stolen in considerable numbers, and that the notes would differ but little from a coin as regards the ease with which they could be disposed of. I have already attempted to show that as a rule the letters in question would not be stolen, and that the penalty for forgery would restrain a thief from turning them to account. I have also shown that the notes could be provided, if thought necessary, with a similar kind of security to that which Mr. Jeffery so properly eulogises as attaching to the money order.

Paragraphs 25 to 30.

The replacement of a lost money order by a duplicate is no doubt a provision of great value, but the public will always be at liberty to secure the privilege by paying for it. It may be, as Mr. Jeffery states, that a storm of indignation would have been raised if the Department had declined to issue duplicates in the cases of the orders which failed to reach their destination last year. But the Department could give no sufficient reason for taking such a course, and would not have been justified in taking it. With the postal notes it would be altogether different, as

they would be issued on the understanding that the Department could not undertake the responsibility of making them good if lost. The matter would stand somewhat thus:—

Advantages of the postal note not possessed by the money order:

1. Cheapness as regards cost of commission.
2. The facility with which they could be purchased and cashed, involving a saving of time and trouble.
3. The advantage of a supply of them being obtainable and available for use wherever they could be transmitted by post.
4. The circumstance of their being payable at any office in the United Kingdom, or, if thought expedient, at any specific office.

Disadvantages of the postal note as compared with the money order:

1. Non-recovery, if lost.

The reason, of course, why a duplicate could not be issued would be that payment of the original could not be stopped, and there would be difficulty in establishing the applicant's title to the lost document to the satisfaction of the Department. It might fairly be said that, as out of 16,577,670 money orders issued, 16,574,670 reach their destination safely, a like proportion of safe deliveries might be looked for in the case of postal notes. Mr. Jeffery lays considerable stress upon the false position the Department would occupy by selling notes to be expressly sent by post, and repudiating responsibility for their loss in transit through the Post. I think that greater importance is attached to the matter, as thus represented, than it is entitled to. No large business can be carried on without risk of some kind. The Department cannot ensure honesty on the part of all the persons who are in its service. All that can be done is to see that those it employs are persons of good character, and to take care that they are sufficiently paid for the work they are called upon to perform. I do not think that entrusting them with letters for delivery which contain postal notes is putting undue temptation in their way, especially as it would be necessary to commit forgery to obtain the value of the notes. No doubt the Department is right in urging the public to refrain from sending letters containing valuables through the Post without ensuring their safety as far as possible by registering them. And as to postage stamps, the danger of remitting them, I apprehend, is this, that the persons who are disposed to steal them can distinguish the letters which contain them from other letters. I cannot think that the wholesale stealing of letters is practised to any great extent on the chance of finding valuables in some of them. A systematic practice of this kind would raise such an outcry as would draw immediate attention to the quarter in which it was carried on. The postal note would have a special value as a test to discover a thief, as the printed name of the office and the serial number thereon would be of great assistance in its identification. In the absence of experience, however, speculation of this kind is not very profitable; and, in considering whether it is desirable to introduce the postal note, the Department has, I think, only to take care that the matter is fully placed before the public, both in regard to its advantages and disadvantages, and that no undertaking is given in respect of them which cannot faithfully be maintained. This done, I do not think there is any need for apprehension as to the unpopularity which Mr. Jeffery has ventured to predict.

Paragraph 31.

Mr. Jeffery appears to be a little inconsistent in this, his closing paragraph. After dwelling with considerable force upon the disastrous state of things likely to ensue from the introduction of the postal notes, he winds up by expressing the opinion that the plan, if sanctioned, would never be a decided success, as there are two other methods, both popular and extensively adopted, one just as cheap and perfectly secure, and the other just as secure, without any cost at all to the remitter. Why, then, all this outcry against the poor postal note? The two methods referred to by Mr. Jeffery are, I presume, the method of remitting by money order and the method of remitting by means of postage stamps; but so far as the money order is concerned, it should be stated that the amount of the commission charged to the public is insufficient to meet the expenses; and so far as postage stamps are concerned, I think I have shown that Mr. Jeffery is in error in assuming that they have the same amount of security for remitting purposes as the postal note would have.

Leaving these minor points, however, I will at once admit that from his own standpoint Mr. Jeffery has put forward his views with great ability and force, and I think it would have been unfortunate if he had not been afforded an opportunity of giving expression to those views. But he has lost sight of the fact that the money order system, which he so properly eulogises, cannot be continued as it is. He appears to have forgotten that on every order on which a commission of a penny or twopence only is charged, the Department sustains a loss, and that this loss is rapidly increasing. The net profit of the money order system, which amounted to 50,000 *l.* in 1870, has been decreasing year by year, till at last it has been wholly dissipated, and should the rates of commission remain unaltered there will be an annually increasing loss on the money order business. In discussing the postal note scheme it is necessary to remember these things. In the first instance it will be an experiment, but not altogether devoid of promise. It is impossible to foresee of what modifications it may be susceptible till some experience of its working has been gained; but as the penny money orders must at least be given up, the postal notes will in a great number of instances serve to fill the gap. It will then soon be ascertained whether they are acceptable to the public, and future modifications may be adopted as called for. It is not proposed to disturb the money order system as it is, further than to put a stop to its being carried on at a loss.

GEO. CHETWYND.

MONEY ORDER.

Pay the Person named in my Letter of Advice the Sum of

£.....s.....d.....

To the Post Office at.....

.....Postmaster.

The Person, to whom this Order is made payable, must sign here his or her Christian and Surname. In the case of Firms, the usual Signature will suffice if so advised at the Paying Office.

Received the above,

.....Signature of Payee.

If this Order be payable at any Office in the United Kingdom, and the Payee or Remitter should require payment at any other Office in the United Kingdom, *the following request must be signed, and the Order must be receipted* and forwarded, in a printed Form, *which may be obtained at any Money Order Office*, to the Postmaster of the Office on which it is originally drawn, who will send a New Order for the amount, less the commission.

B. I request that this may be exchanged for a new Order payable at *.....

.....Signature.

* Here state the name of Office.

If the Remitter of an Order issued and payable in the United Kingdom is desirous of delaying payment for ten days, he must, at the time of the issue of the Order, affix a Penny Receipt Stamp in the space, after the request C., allotted for his Signature (which Signature must be written across the Stamp), and he must then hand the Order to the Issuing Officer so that the necessary instructions may be given to the Paying Office.

Stamp of Paying Office.

C. I request that this Order may not be paid until ten days after date of issue. .....Signature of Remitter.

For other Instructions, see Back.

(ON THE BACK OF THE MONEY ORDER.)

INSTRUCTIONS.

If stoppage of payment of a Money Order, payable in the United Kingdom, be required, application for the same, accompanied by a second commission in Postage Stamps, must be made to the Office at which the Order is payable.

If a duplicate Order be required, application for the same, accompanied by a second commission in Postage Stamps, must be made to the Chief Money Order Office of the country where the original was issued.

If the Remitter of an Order desires an alteration in the name of the Payee, application for the same, accompanied by a second commission in Postage Stamps, must be made to the Office at which the Order was issued.

To save time and prevent errors it is advisable to furnish, in writing, the particulars of every Money Order required and, before leaving the Office, to see that the Order is in accordance with those particulars. Application Forms for the purpose are supplied gratuitously at all Money Order Offices.

On presentation of an Order for payment information must be given as to the Christian name and Surname of the Remitter; or, if sent by a Firm, the name of the Firm,—unless the Order is presented through a Bank, in which case such information is not required.

These regulations are intended to secure as far as practicable, payment to the rightful Payee, but for additional security the adoption of the following two precautions is also advisable, viz.:—

1st. To take care when procuring an Order to furnish correctly the Christian name and Surname of the person in whose favour it is to be drawn.

2nd. To take care in procuring an Order that the name of the Remitter is correctly known to the Payee. When practicable (unless the Order is made payable ten days after date of issue, in which case the precaution is unnecessary) initials only should be used in giving the Payee information, so that should the letter enclosing the Order get into the hands of anyone for whom is is not intended it may be impossible to obtain payment.

Under no circumstances can payment of a Money Order be demanded on the day of issue.

Although at the end of twelve months from that in which it was issued, a Money Order, if still unpaid, becomes legally void, nevertheless, when a good reason can be given for the delay in presenting it, an application for payment, subject to a certain deduction, is entertained.

After once paying a Money Order, by whomsoever presented, the Department is not liable to any further claim.

MANCHESTER. **2901**

The red figures show the operation of the primary check at the Chief Office.

It will be seen that the money columns of the account (ex. commission) are checked by casting the pence, shillings, and pounds columns, and stating the totals of each separately. The casting of the pounds in the orders issued serves a double purpose, as the result is taken as a part of the proof on the commission, which includes a charge of 1 *d.* for every complete pound. Thus 6 *l.* at 1 *d.* = 6 *d.*, and four orders at 2 *d.* = 8 *d.*, total 1 *s.* 2 *d.*, less 1 *d.* for an order under 10 *s.* = 1 *s.* 1 *d.*, the amount accounted for by the postmaster.

The Postmaster must take especial care to preserve uninjured the holes ○ made in this portion of the Sheet, as they are provided for binding the Accounts at the Chief Office.

APPENDIX, No. XV.

See REPORT of COMMITTEE "J."—RATES of COMMISSION.

ESTIMATE No. 1.

ESTIMATE No. 1, being that on which the Committee base their recommendation as to future rates of Commission for Money Orders.

ESTIMATE of the NUMBER of INLAND MONEY ORDERS for the year 1875, and the AMOUNT of COMMISSION, based upon the assumption that the 1 *d.* and 2 *d.* rates of Commission had been raised to 2 *d.* and 3 *d.* respectively, and assuming also that Mr. Chetwynd's Postal Note Scheme had been in operation, and had absorbed 500,000 Orders under 10 *s.*, and 1,900,000 of 10 *s.* and not exceeding 20 *s.*, in all 2,400,000 Orders, together with the estimated cost to the Department, at 3 *d.* per Order, and the net profit.

Rates of Commission.	Number of Orders.	Amount of Commission.
		£. s. d.
2 *d.* on Orders under 10 *s.* - - - - -	3,763,000	31,358 6 8
3 *d.* „ of 10 *s.* and under 2 *l.* - - -	5,947,000	74,337 10 0
4 *d.* „ 2 *l.* „ 3 *l.* - - -	1,703,000	28,383 6 8
5 *d.* „ 3 *l.* „ 4 *l.* - - -	910,000	18,958 6 8
6 *d.* „ 4 *l.* „ 5 *l.* - - -	511,000	12,775 0 0
7 *d.* „ 5 *l.* „ 6 *l.* - - -	435,000	12,687 10 0
8 *d.* „ 6 *l.* „ 7 *l.* - - -	190,000	6,333 6 8
9 *d.* „ 7 *l.* „ 8 *l.* - - -	138,000	5,175 0 0
10 *d.* „ 8 *l.* „ 9 *l.* - - -	98,000	4,083 6 8
11 *d.* „ 9 *l.* „ 10 *l.* - - -	76,000	3,483 6 8
1 *s.* „ 10 *l.* - - - - - -	283,000	14,150 0 0
Totals - -	14,054,000	211,725 0 0
Estimated cost to the Department at 3 *d.* per Order - -		175,675 0 0
Net estimated profit on Inland Money Orders - £.		36,050 0 0

ESTIMATE No. 2.

ESTIMATE of the NUMBER of INLAND MONEY ORDERS for the year 1875, and the AMOUNT of COMMISSION, based upon the assumption that the rate of Commission on all Orders under 1 *l.* had been fixed at 2 *d.*, and assuming also that Mr. Chetwynd's Postal Note Scheme had been in operation and had absorbed 1,400,000 Orders under 1 *l.*, and 1,000,000 Orders of 1 *l.*, in all 2,400,000 Orders, together with the estimated cost to the Department at 3 *d.* per Order, and the net profit.

Rates of Commission.	Number of Orders.	Amount of Commission.
		£. s. d.
2 *d.* on Orders under 1 *l.* - - - - -	6,846,000	57,050 0 0
3 *d.* „ of 1 *l.* and under 2 *l.* - - -	2,864,000	35,800 0 0
4 *d.* „ 2 *l.* „ 3 *l.* - - -	1,703,000	28,383 6 8
5 *d.* „ 3 *l.* „ 4 *l.* - - -	910,000	18,958 6 8
6 *d.* „ 4 *l.* „ 5 *l.* - - -	511,000	12,775 0 0
7 *d.* „ 5 *l.* „ 6 *l.* - - -	435,000	12,687 10 0
8 *d.* „ 6 *l.* „ 7 *l.* - - -	190,000	6,333 6 8
9 *d.* „ 7 *l.* „ 8 *l.* - - -	138,000	5,175 0 0
10 *d.* „ 8 *l.* „ 9 *l.* - - -	98,000	4,083 6 8
11 *d.* „ 9 *l.* „ 10 *l.* - - -	76,000	3,483 6 8
1 *s.* „ 10 *l.* - - - - - -	283,000	14,150 0 0
Totals - -	14,054,000	198,879 3 4
Estimated cost to the Department at 3 *d.* per Order - -		175,675 0 0
Net estimated profit on Inland Money Orders - £.		23,204 3 4

ESTIMATE No. 3.

ESTIMATE of the NUMBER of INLAND MONEY ORDERS for the year 1875, and the AMOUNT of COMMISSION, if the 1 *d.* and 2 *d.* rates of Commission had been raised to 2 *d.* and 3 *d.* respectively, together with the estimated cost to the Department at 3 *d.* per Order, and the net profit.

Rates of Commission.	Number of Orders.	Amount of Commission.
		£. s. d.
2 *d.* on Orders under 10 *s.* - - - - -	4,263,000	35,525 0 0
3 *d.* „ of 10 *s.* and under 2 *l.* - - -	7,847,000	98,087 10 0
4 *d.* „ 2 *l.* „ 3 *l.* - - -	1,703,000	28,383 6 8
5 *d.* „ 3 *l.* „ 4 *l.* - - -	910,000	18,958 6 8
6 *d.* „ 4 *l.* „ 5 *l.* - - -	511,000	12,775 0 0
7 *d.* „ 5 *l.* „ 6 *l.* - - -	435,000	12,687 10 0
8 *d.* „ 6 *l.* „ 7 *l.* - - -	190,000	6,333 6 8
9 *d.* „ 7 *l.* „ 8 *l.* - - -	138,000	5,175 0 0
10 *d.* „ 8 *l.* „ 9 *l.* - - -	98,000	4,083 6 8
11 *d.* „ 9 *l.* „ 10 *l.* - - -	76,000	3,483 6 8
1 *s.* „ 10 *l.* - - - - - -	283,000	14,150 0 0
Totals - -	16,454,000	239,641 13 4
Estimated cost to the Department at 3 *d.* per Order - -		205,675 0 0
Net estimated profit on Inland Money Orders - £.		33,966 13 4

Estimate No. 4.

Estimate of the Number of Inland Money Orders for the year 1875, and the Amount of Commission, if the rate of Commission on all Orders under 1 *l.* had been fixed at 2 *d.*, together with the estimated cost to the Department at 3 *d.* per Order, and the net profit.

Rates of Commission.	Number of Orders.	Amount of Commission.
		£. s. d.
2 *d.* on Orders under 1 *l.* - - - - -	8,246,000	68,716 13 4
3 *d.* „ of 1 *l.* and under 2 *l.* - -	3,864,000	48,300 – –
4 *d.* „ 2 *l.* „ 3 *l.* - -	1,703,000	28,383 6 8

1 *s.* „ 10 *l.* - - - - -	283,000	14,150 – –
Totals - - -	16,454,000	223,045 16 8
Estimated cost to the Department at 3 *d.* per Order - -		205,675 – –
Net estimated profit on Inland Money Orders - - £.		17,370 16 8

Estimate No. 5.

Estimate of the Number of Money Orders which would have been issued in 1875 if the old rates of Commission had been reverted to, and of the amount of Revenue which would have accrued.

Number of Orders.	Rates of Commission.	Amount of Commission.
		£.
10,450,000	3 *d.*	130,625
2,900,000	6 *d.*	72,500
740,000	9 *d.*	27,750
450,000	1 *s.*	22,500
Totals - 14,540,000		253,375
	Estimated cost to the Department at 3 *d.* per Order - - - -	181,750
Net estimated profit on Inland Money Orders - £.		71,625

APPENDIX, No. XVI.

Forms suggested by the Committee for Use in Effecting Transfer of Payment. (*See* Report "C" Issue of the Order.)

FOR USE OF PUBLIC.

Application for Repayment or for Transfer of Payment.

To be addressed to the post office at which the order was first made payable.

Should the particulars be found correct the advice will be forwarded as requested without delay.

Particulars of the Order.

To be filled in by Applicant.

Date of issue_____ No. of order

Amount of order_____

Where issued_____

*Where payable_____

To whom payable _____

By whom remitted_____

Sir,

I request that you will forward by first post the advice of the above-described order to the postmaster of_____ in order that the amount may be paid to me at his office. Stamps to the amount of 3 *d.* are affixed hereunder.

Here affix postage stamps value 3 *d.*

I am, Sir,

Your obedient Servant,

_____ Signature, and

_____ } Address of applicant who must be either the payee or remitter.

_____ }

Date_____ 187 .

THIS PORTION OF THE FORM NOT TO BE WRITTEN ON BY THE PUBLIC.

Stamp of Office.

Advice enclosed as requested.

_____ Signature of postmaster of office on which the order was first made payable.

To the postmaster of _____

Note.—When the order has been cashed at the office to which payment has been transferred, this form must be attached to the order, and the order must be claimed at the end of the account for the day.

.....

This part of the form must be detached by the postmaster at whose office the order was first made payable, and be put in the place of the original advice.

Particulars of Order.

Date of issue_____

No. of order_____

Amount of order, £._____

Where issued _____

The advice of the above-described order has been this day forwarded to the postmaster of _____ at whose office payment was requested.

Stamp of Office.

Initials of postmaster forwarding the advice

_____

APPENDIX, No. XVII.

STATEMENT showing the FORCE ENGAGED, the TIME OCCUPIED, and the COST, exclusive of Supervision, &c. of the Money Order and Savings Bank Transactions at certain Post Offices.

NAME OF OFFICE.	Money Order Business. Daily Average of		Savings Bank Business. Daily Average of		Particulars as to Force, &c. exclusive of Supervision, engaged daily on Money Order and Savings Bank Business, as per information furnished by the respective Postmasters, &c.			Time occupied per 100 Transactions.	Cost of a Specific Number of Transactions, the Salaries and Wages being taken at the Mean of the several Scales as given in the Estimates 1876–7.		REMARKS.	Number of Money Orders paid through Bankers at the respective Offices on 5th May 1876.
	Orders Issued.	Orders Paid.	Deposits.	Withdrawals.	Daily Force Engaged.	Daily Time Occupied.	Daily Cost, Salaries and Wages being taken at the Mean of the several Scales.		Cost per 100 Transactions. *	Cost per 10,000 Transactions. *		
						H. M.	£. s. d.	Hours.	s.	£. s. d.		
Belfast - - -	90	372	15	10	2	17 40	0 12 10	4·866	3·535	17 13 6	- - - - -	33
Birmingham - -	267	945	93	31	7½	56 0	2 13 9	5·484	5·264	26 6 4	†The actual force engaged consists of 8 officers; one half of the work performed by a redundant principal clerk being devoted to supervision, &c.	450 (estimated.)
Bristol - - -	147	452	34	12	4⅔	39 0	1 4 3	7·910	4·918	24 11 9	†The actual force engaged consists of 5 officers; one third of the work performed by a first class clerk being devoted to supervision, &c.	171
Dublin, Chief Office	141	1,046	29	20	6	39 0	1 13 1	4·391	3·725	18 12 6	- - - - -	731
Edinburgh „	112	627	4	3	6	39 30	2 5 2	7·355	8·410	42 1 0	N.B.—A reduced establishment is under consideration, whereby the cost for 10,000 transactions will be reduced to 21 *l.* 9 *s.* 9 *d.*	380
Glasgow - - -	256	810	3	3	5¾	45 20	1 17 10	5·652	4·725	23 12 6	†The actual force engaged consists of 6 officers; one quarter of the work performed by a first class clerk being devoted to supervision, &c.	526
Hull - - -	122	349	10	5	2½	18 0	0 12 8	4·864	3·427	17 2 8	- - - - -	13
Leeds - - -	190	461	22	7	4	31 30	1 3 10	5·977	4·531	22 13 1	- - - - -	95
Liverpool - -	132	765	13	8	5⅔	45 0	1 13 9	6·787	5·090	25 9 –	†The actual force engaged consists of 6 officers; one-third of the work performed by a clerk of the first section being devoted to supervision, &c.	73
Manchester - -	230	912	15	8	7½	62 45	2 9 1	7·288	5·700	28 10 0	†The actual force engaged consists of 8¾ officers; three quarters of the work performed by a superintendent of the first class being devoted to supervision, &c.	215
Newcastle-on-Tyne	193	300	25	11	3½	28 0	0 17 7	6·526	4·098	20 9 9	- - - - -	108

* In this calculation money orders issued and savings bank deposits and withdrawals have been estimated as occupying each the same amount of time, but three money orders paid have been estimated as occupying no more time than two of the other transactions.

† In the case of each of these offices the portion of the work devoted to superintendence, &c., has been deducted, and the particulars furnished under the respective heads of force, time, and cost, have been reduced accordingly.

INDEX TO EVIDENCE.

A.

Accounts.—Abolition of local records kept by postmasters, *Beaufort*, 272; *Chetwynd*, 272 *a*. (*See also* Appendix No. 5). Abolition of paid order account proposed, *Beaufort*, 262.

Adams, Mr. A. J.—Cost of stationery under Mr. Beaufort's second plan, 429-436.

Advices.—The advice a check upon fraud, 78, 79, 252 *k*. Abolition of the advice advocated, *Bradfield*, 444 *b*; *Beaufort*, page 31, 223. Cost of printing, 80. Abolition of the advice deprecated, 444 *a*. As to whether the advice could be abolished with safety, *Hawkes*, 15; *Chetwynd*, 78. The advice essential to the security of the money order, *Jeffery*, 360, 361, 367. Form is simple and satisfactory, *Wight*, 470. Often mis-sent and delayed, 462-7. The advice localises payment of an order, and regulates the balances held by postmasters to meet liabilities, 79, 330, 331. Numerous advantages of the advice, *Wight*, 448-58. Advices recalled in the case of certain orders paid to bankers at chief office, *Hawkes*, 9, 10; *Wight*, 457, 459.

Amount of a single money order increased to 10 *l*. in the, year 1862, page 2.

B.

Balances held by postmasters, *Hawkes*, 13; *Chetwynd*, 28, to 37, 47. How regulated and controlled, *Chetwynd*, 333. Regulated by telegraph, *Chetwynd*, 49-51.

Bankers.—Money orders paid through bankers, *Hawkes*, 2-8, 85, and Appendices 1, 2, 8, 9. Orders paid to at chief office, London, although drawn on other offices, 75*a*. As to extension of privileges afforded to bankers in London, to large towns in the country, *Hawkes*, 8. Proportion of orders paid through the chief office in London to bankers, *Hawkes*, 17. As to orders paid to bankers throughout the country, *Chetwynd*, 85. At large offices, *Chetwynd*, 201, 205. Would prefer money order limited to 5 *l*., 80*a*. As to bankers' letters being seldom lost, *Milton*, 418.

Bank Notes, as to theft of, when sent through the post in unregistered letters, *Jeffery*, 401.

Bank of England.—Bill account with, 49.

Bearer, as to postal notes or other documents payable to' *Chetwynd*, 57, 147-151.

Beaufort, Mr., *first system proposed by, pages* 23-26, *Reports on, pages* 25, 28-29, *and Appendix No.* 11. *Second system, page* 50. Abolition of advice advocated, 223, 232, 233, 299, 300. Usefulness of advice admitted, 252 *k*. Continuance of 1 *d*. rate of commission on money orders advocated, 252 *r*. Copying of accounts by postmasters dispensed with, 272. Copying presses, cost and use of, 283-287. As to whether the money order system meets the requirements of the public, 322-5. Orders should be payable anywhere without advice, 320-332. Safety of the money order system admitted, 321. Liability of proposed system to fraud disputed, 234-249, 301-306, 318-320 *a*, 329. Limitation of period of payment of order, 310-12. Limitation of places of payment deprecated, 252 *O*. Proposed system of check on money orders paid, 252 *s*, 261-9, 281. Proposed abolition of accounts sent to chief office, 261-4. Proposal to check money orders paid by counting, 265. Objections to postal notes, 252 *f*, *g*, *r*, 313-315, 326. As to control of chief office in regard to remittances asked for by postmasters, 334, 335. Names and addresses of remitters of money orders, are they required, 213-20, 227, and 228, 252 *c*. Uses of the requisition form, 208-212, 224, 229, 231. Saving to be effected by system proposed, 250, 252*c*, 253-257, 270, 271, 274, 280, 289, 295. Work at the chief office not included in first estimate, 252 *t*, 253-60. Reduction of 25 per cent. in cost, how estimated, 259, 282.

Bills Receivable.—Accounts of with Bank of England, *Chetwynd*, 49.

Bradfield, Mr.—Advocates the abolition of the money order advice, 444 *b*.

C.

Cash Account, present form of, Appendix, No. 4. Rendered by postmaster, *Chetwynd*, 34.

Character of Employés at Chief Office, 309.

Check on Money Orders issued by numbers only, 232-235, 252*c*. *l*. On paid orders, *Beaufort*, 261-9.

Cheque Bank and Postal Note System, *Chetwynd*, 86, 87.

Cheques Crossed, or payable to order, as to safety of, *Jeffery*, 348-52.

Chetwynd, Mr.—*Report on Mr. Beaufort's first system, page* 25. As to whether the advice can be abolished with safety, 78. The advice localises payment and regulates balances held to meet liabilities, 79. Use of the advice in the detection of fraud, 78. Balances held by postmaster, 28, 34, 47. How regulated and controlled, 49, 50, 51, 333. As to orders paid to bankers throughout the country, 85. As to orders paid to bankers at certain large offices, 201-5 (*see* Appendices 8 and 9). As to documents payable to bearer, 57. As to account with the Bank of England in regard to bills receivable, 49. Cash account rendered by postmaster, 34. Cheque Bank and postal note systems, 86, 87. Rates of commission from 1838 to 1871, 128. Gradually ascending scale of commission conceded to public demand, 188. Lowest rate of commission should be 3*d*., 383-91. Copying of accounts by postmasters dispensed with, 76, 114-7, 272*a*. Number of postal and telegraph employés throughout the kingdom, 355. Expense of postal notes and money orders compared, 63. Amount of forfeited orders, 26-27 *a*. Limitation of the amount of a single order, 46. Loss on orders for sums under 10 *s*., 83. Loss by reduction in rates of commission, 52 (last sentence). Mode of tracing missing letters, 143. Money orders for small sums compared with postal notes, 132, 133. Average amount of an order decreasing, 110. Money orders for small amounts, 98-113, 119-126. Cost of each money order transaction, 95. Money orders for sums up to 10 *l*. save labour, 80 *a*. Classification of the amounts of money orders, 80 *a*, 83. Money orders paid by authority of chief office, 75-76*a*. Money orders for large amounts, 45-6, 80*a*. For small amounts, 199-201. As to small amounts paid by the Paymaster General, 105. Perforated amounts not practicable, 336 *b*. Mr. Scott's scheme of pasting postage stamps on prepared paper, 397, 398. *Report on postal note system, Appendix No.* 4. *Reply to Mr. Jeffery's report on postal note scheme, Appendix* 12. The postal note as a circulating medium, 86, 87. Commission, profit, and loss in regard to, 25, 52, 1-5, 171-2, 175-6. Advantages of postal note in country places, 196-8. Cost of printing and embossing, 184-6. Cost of working compared with cost of working money order system, 192. Female staff to be employed in the postal note branch, 166. As to cancelling postal notes, 160, 161, 162. Forfeited absolutely if not paid within 12 months, 73. Limitation in regard to period of circulation, 150-4. Small amount of the postal note will not tempt to fraud, 145. May be crossed to a banker, 137. Separate branch of business, 65. Aid to the money order system, 57. As to localisation of payment, 135-7,

135–7, 146–8, 378–80. As to the issue of notes for 1*s.*, 119–21. Simplicity of check upon accounts, 336*c*. As to the issue of notes for odd amounts, 336 *c*. The notes to be signed by postmasters, 336 *a*. Probable extent of issue, 326–7. Saving of book-keeping, 104. Amounts of and charges for the postal notes, 96. Simplicity and advantages of, 96 (second par.). General explanation in regard to the postal note, 91–198. Poor people require money orders for small sums, 104*a*. Provision of funds to meet payment, 88, 89. As to confining payment to certain centres, 87–89*a*. Why payable to order, 89 *a*. Cancelled when paid and could not be credited a second time, 336 *d*. Legislation required, 70. Refusal to pay a money order on presentation, 38–44. As to the reduction of fee for registering letters, 82. Mode of remitting money to postmasters, 31. Remittances from sub to head offices, 31. Regulation of reserves, 29, 30. General information in regard to reserves, 32–7. Safety of public provided for in a less degree by postal notes than by money orders, 59. Safety of the public under the money order system, 54–60, 194. Mode of keeping savings' bank accounts, 47*a*. Provisions for payment of savings' bank withdrawals, 49, 50. Payments on account of the savings' bank to the National Debt Commissioners, 48. Estimate of the cost of working the Post Office Savings' Bank, 183. Security of money order system, page 3. first par., 132. Saving in stationery if advice abolished, 80. Stationery cost if under Mr. Beaufort's first system, 336, 336 *e*. Stolen postal notes, 73. System of money order business not capable of much improvement, 61. Progressive improvement in the system, 52. Trouble caused by unpaid letters, 133, 134. Work at chief office under Mr. Beaufort's second plan, 441, 442. Reduction in amount and cost of work at post offices, 74, 76, 114–7. Writing on stolen documents leads to the detection of theives, 140-2.

CIRCULATING MEDIUM, the postal note as a, *Chetwynd*, 86, 87.

COLONIAL MONEY ORDER business commenced in 1856, page 2.

COMMISSION, objections to a high rate of, 252*r*, 329. General discussion as to rates, 165–195, 472*a*, 473. Effect of fixing lowest rate at 2*d*., *Jeffery*, 387. As to lowest rate, whether it should be 3*d*. or 2*d*., 187–190, 388–91. Rates of Commission from the year 1838 to the year 1871; after 1871, page 2, *Chetwynd*, 128. Gradually ascending scale conceded to public demand, *Chetwynd*, 188. Profit if the 1*d*. rate be abolished, 172, 187. Appendix 15. Simplicity of check upon present rates of commission, 188*a*, Appendix 13, page 79.

COPYING PRESSES, cost of, 283–7.

SECOND

ANNUAL REPORT

OF THE

PUBLIC WORKS LOAN BOARD, 1876-77.

(*Presented pursuant to Act* 38 *&* 39 *Vict. c.* 89.)

Ordered, by The House of Commons, *to be Printed,*
20 *June* 1877.

SECOND ANNUAL REPORT

OF THE

PUBLIC WORKS LOAN BOARD, 1876-77.

(In pursuance of the Act 38 & 39 Vict. c. 89.)

The Board of Public Works Loan Commissioners, pursuant to Section 5, Sub-section 3, of the Public Works Loans Act, 1875, make the following Report of their transactions under that Act during the Financial Year which expired on 31st March 1877 :—

1. The Board, at their first meeting, upon the Public Works Loans Act, 1875 coming into operation, elected Mr. Thomas Newman Hunt to be their chairman, and Mr. Jervoise Smith to be the deputy chairman of the Board.

2. The only public general Act of Parliament affecting the Public Works Loan Commissioners which was passed during the Session of 1876 was the Public Works Loans (Money) Act (39 & 40 Vict. c. 31), enacting that, for the purpose of loans by those Commissioners, any sum or sums not exceeding in the whole 4,000,000 *l.* might be issued out of the Consolidated Fund, or the growing produce thereof, during the period ending on 30th June 1877, or on any earlier day in accordance with Section 3. The Act further contains special authority for the purposes of advances by the Loan Commissioners under 31 & 32 Vict. c. 81, to the Portpatrick and Belfast and County Down Railway Companies, and, under 37 & 38 Vict. c. 24, to the Government of the Colony of Ceylon, for the improvement of Colombo Harbour, it having been considered doubtful whether the powers given by the Public Works Loans Act, 1875, extended to such purposes. Provision was also made by the Money Act for a reduction prior to 31st July 1876 of the rate of interest on certain of the Public Works Loan Commissioners' Loans made before the passing of the Public Works Loans Act, 1875, and as to the construction to be placed upon the words "Special Act" in sections 18 and 50 of such last-mentioned Act; and, further, for the application of a sum of 17,551 *l.* 9 *s.* 1 *d.* to the purpose of the adjustment of accounts of moneys issued under the authority of Public Works Loans Acts antecedent to 1875.

3. The amount advanced by the Loan Commissioners during the financial year 1876-77 has been 3,249,622 *l.*, which sum comprises 2,426,897 *l.*, part of the amount of 4,000,000 *l.* authorised to be issued as above-mentioned, and 822,725 *l.* authorised by previous Acts.

4. The Appendix A. to this Report contains a statement in detail, made out to 31st March 1877, of the sums issued to the Public Works Loan Commissioners for the purpose of advances under various Acts of Parliament, amounting to 33,805,231 *l.* 6 *s.* 7 *d.*, the sums advanced by the Commissioners during the financial year 1876-77, amounting to 3,249,622 *l.*, the total payments into the Bank of England in repayment of principal and for interest, during the like period, amounting to 1,262,352 *l.* 19 *s.* 3 *d.*, and the balances of principal and interest outstanding on 31st March 1877, amounting to 17,195,538 *l.* 11 *s.*, with other particulars.

The number of accounts open in the books of the department on 31st March 1876 was 5,238, the number closed during the financial year has been 139; number of new accounts opened during the like period, 1,434, making the total open on 31st March 1877, 6,533.

5. A list

5. A list of the loans, the balances of which have during the last financial year been paid, with all interest thereon, and which by such payment have been fully discharged, will be found in a separate statement in Appendix B.; the amount of these is, in all, 580,429 *l.* 17 *s.* 7 *d.* During the financial year 1875-76 the loans which, by payment of balances in that year, became extinguished, amounted to 484,572 *l.* 15 *s.* 5 *d.*

The amount of the loans paid off is liable to differ very much from year to year, being affected by a variety of causes; for instance, the amount in 1875-76 was largely swelled by reason of the efflux in that year of the term for which certain loans of upwards of 190,000 *l.* had been advanced by the Commissioners under the South Wales Turnpike Trusts Act of 1844, whereas on the other hand the amount paid off in 1876-77 consists to a considerable extent of sums paid off by borrowing authorities who had been enabled by the state of the money market to obtain money at a lower rate of interest than that of 5 per cent. per annum which they were paying for the loans advanced to them by the Public Works Loan Commissioners; several borrowing authorities thus availed themselves of the opportunity of discharging their debts to the Commissioners in anticipation of the period provided by their securities; this has been notably the case in the instances of the Commissioners' loans to the justices of Glamorganshire, to the guardians of the parish of St. Pancras, and to the Commissioners of the Harbour and Docks of Leith.

The loans which the Board had made under the South Wales Turnpike Trusts Act, 1844, amounting in all to 215,241 *l.* 7 *s.* 1 *d.*, have now, with all interest, been paid off.

6. The amount of the loans granted by the Board during the financial year 1876-77, as compared with 1875-76, and under what Acts of Parliament, or for what purposes, the grants of such loans have been made, is as follows, viz.:—

1875-76.	1876-77.	
£.	£.	
1,718,116	1,869,600	Under the Elementary Education Acts, 1870-1873.
666,383	310,105	Under the Education (Scotland) Act, 1872.
737,173	811,062	Sanitary Loans recommended by the Local Government Board under Section 44 of the Public Health Act, 1872, and Section 243 of the Public Health Act, 1875.
5,489	29,393	Loans to Local Boards and other authorities under the Public Health and Sanitary Acts, but not under recommendations as above mentioned.
79,000	156,550	Loans to Parochial Boards, Police Commissioners, and other borrowing authorities in Scotland.
14,258	29,750	Loans to Burial Boards in England and Wales.
14,420	1,000	Under the Poor Law Amendment Acts.
14,000	30,000	Under the Labouring Classes Dwelling Houses Act, 1866.
125,000	- Nil -	Canals, Rivers, and Drainage.
1,800	- Nil -	For Police Offices and Cells, and other Public Buildings.
3,750	7,900	Under the Portpatrick and Belfast and County Down Railway Companies Act.
70,000	3,000	Under the Harbours and Passing Tolls, &c. Act, 1861.
50,000	25,000	Under the Harbour of Colombo Loan Act, 1874.
Nil -	6,000	Other Harbours not under the above Harbour Acts.
3,499,389	3,279,360	

Particulars of the above-mentioned loans, of the rate of interest per cent. per annum on each, and of the number of years for repayment, are given in the Appendix C.

7. The amount of the loans granted by the Loan Commissioners under the Elementary Education Acts to School Boards in England and Wales in the course of the financial year for which this Report is made, has exceeded by about 150,000 *l.* the amount of those which were granted by the Commissioners during the year 1875-76; the amount granted in 1876-77 to the School Board of London alone has been 583,815 *l.*, making the total amount already granted to that School Board by the Loan Commissioners 2,431,180 *l.*, and recommendations by the Education Department, which have not yet been acted upon, for loans of a considerable amount for providing further London Board Schools, are outstanding, the applications for such loans not having as yet been sent in.

The amount granted by way of loan in 1876-77 to School Boards in Scotland is smaller by a little over 350,000 *l.* than in 1875-76.

The Education Department in their proceedings under the Elementary Education Acts, so far as relates to the raising money by way of loan for the purposes of those Acts, have, except in a few instances, given their consent to the repayment of the moneys which School Boards in England and Wales have sought to borrow from the Loan Commissioners being spread over 50 years, and have also recommended the Loan Commissioners to grant such loans repayable within that period; the Commissioners, however, have had regard to the general authority given to them by section 9 of the Public Works Loans Act, 1875, and to the responsibility cast upon them by the provisions of section 11 of that Act, to the effect that in considering whether the period for repayment of a loan should or should not be the full period authorised by a special Act (such as the Elementary Education Act) they should have regard to the durability of the work for the purpose of which the loan is required, and to the expediency of the cost of the work being paid by the generation of persons who will immediately benefit thereby; and have dealt with each application from a School Board for a loan according to the special circumstances of each, so far as it was in their power to ascertain them. It would have been the desire of the Loan Commissioners to adopt a shorter period than 50 years for repayment of the School Board Loans generally, but, in deference to the representation of the Education Department, they have, as a rule, abstained from any reduction of the period of repayment below the number of years over which the Education Department consent that it should be spread; there have, however, been many cases of applications for loans for works of improvement or additions to existing schools, and in such cases, or when loans of small amount have been required, and the assessable value of the school district has been large enough for a very small rate to provide for repayment both of principal and interest, the Commissioners have considered that they would not be justified in conceding the full period for repayment authorised by the Education Acts. The Loan Commissioners also, in accordance with their uniform practice in the cases of all applications for loans, have declined to make advances to School Boards to pay off debts contracted in the open market and secured by mortgage of the rates.

8. The loans granted in 1876-77 by the Commissioners, pursuant to recommendations of the Local Government Board, in the terms of section 243 of the Public Health Act, 1875, for sanitary purposes, have amounted to 811,062 *l.*, and thus show an increase over the amount of the grant of such loans in 1875-76, which was 737,173 *l.* The above-mentioned recommendations of the Local Government Board relate to the number of years for which the loans should be made, and to the rates of interest on such loans, but no loan is granted by the Public Works Loan Commissioners for the purposes of the Public Health Act, 1875, except for works which the Local Government Board have satisfied themselves are of a permanent character within the meaning of the Act, and for the execution of which the Local Government Board have issued their sanction to the sanitary authority for the borrowing of the sum required, and have further by such sanction determined the number of years within which the repayment should be made; the Local Government Board, in thus determining the time for repayment of loans under the section 243 referred to, are required by that section to have regard to the probable duration and continuing utility of the works for which their recommendation to the Public Works Loan Commissioners to make such loans is issued.

Under

Under the recommendations above referred to, the loans which the Commissioners have granted to sanitary authorities, during the year 1876-77, have been :—

6	in number, for loans to be repaid within periods ranging from 3 to 10 years.
13	in number, to be repaid within periods ranging from 20 to 25 years.
113	in number, to be repaid in 30 years.
13	in number, to be repaid in 50 years.
145	in all.

thus showing that the terms of 30 years for repayment, with interest at the rate of $3\frac{1}{2}$ per cent., have been adopted in the large majority of cases.

9. The loans granted by the Board in 1876-77 to local authorities in England under the Public Health Acts, apart from those recommended in pursuance of section 243 of the Public Health Act, 1875, amount to 29,393 *l.*; they have been only six in number, and, for the most part, for purposes of street improvement; the number of years for their repayment by annual instalments varies from 10 to 20 years, and they bear interest at the rate of five per cent. per annum.

10. Borrowing authorities in Scotland have resorted, during the last financial year, to the Public Works Loan fund, to an increased extent, as compared with the previous year, the amount of loans granted to such borrowers during the year 1876-77 having been 159,070 *l.*, as against 79,000 *l.* in 1875-76. The loans have been required for a variety of purposes; those which have been granted under the Burial Grounds (Scotland) Act have been made repayable in 20 years, with interest at five per cent. per annum, whilst the terms of repayment of others granted for drainage and water supply, or for other purposes, under the recommendation of the Board of Supervision, have been made repayable in periods varying from 20 to 50 years, pursuant to such recommendations, and bear interest at $3\frac{1}{2}$, $3\frac{3}{4}$, or 4 per cent. per annum, in accordance with the scale made applicable by the Treasury to such periods of years respectively.

11. The Board, during the financial year to which this Report applies, have granted 13 loans, under the Burials Acts, to Burial Boards in England and Wales, all repayable by instalments in 20 years, with interest at five per cent. per annum; the total amount of such loans has been 29,750 *l.*

12. The only loan granted by the Board in 1876-77, under the Poor Law Amendment Acts, has been to the Guardians of the Union of Neath, 1,000 *l.*, for the purchase of land for school buildings for the union; it has been made repayable in 30 years, and bears interest at five per cent. per annum.

13. A difference of opinion has arisen between the Treasury and Local Government Board and the Public Works Loan Commissioners with reference to the proper construction to be put upon section 11 of the Public Works Loans Act, 1875, which provides that all loans shall be repaid within a period not exceeding the period authorised by a special Act relating to such loans, or, if no period be so authorised, not exceeding 20 years.

There are several Acts, such as the Poor Law Acts, the Burial Acts, and others, which authorise the Loan Commissioners to lend, and which are, therefore, "special Acts," but do not name any period within which the Commissioners' loans should be repaid.

It has been considered by the Public Works Loan Commissioners, that, in such cases as above-mentioned, they could not lend for a longer period than 20 years, but the view taken by the Treasury and the Local Government Board was, that the Loan Commissioners had power to lend for the whole period for which the authorities under the Acts referred to had power to borrow; the subject has, however, been referred by the Treasury to the law officers of the Crown, who have confirmed the view taken by the Loan Commissioners.

In such cases as have been above referred to, the period for repayment of loans will, therefore, not exceed 20 years, unless the Treasury, on the recommendation

mendation of the Loan Commissioners, extend the period of repayment in accordance with the power contained in section 11 of the Public Works Loans Act, 1875.

14. The Board, in February of the present year, granted, under the Labouring Classes Dwelling Houses Act, 1866, to the Improved Industrial Dwellings Company (Limited), a loan of 30,000 *l.*, for the erection of four blocks of buildings on land in Goswell-road, held on a leasehold tenure for 95¼ years. The number of separate dwellings which the blocks are designed to contain is 275, exclusive of 15 shops, with rooms attached; the plans and specifications of the buildings were reported on by Her Majesty's Board of Works and Public Buildings as properly prepared, and the proposed accommodation as suitable and sufficient for occupation by persons of the labouring classes.

The total sums granted by the Board for a like purpose within the area of the Metropolitan district, since the passing of the Act, has been 151,000 *l.*

15. Further loans, amounting in all to 7,900 *l.*, were granted by the Commissioners to the Portpatrick Railway Company in the course of the year, pursuant to the authority given by the 39 & 40 Vict. c. 31, hereinbefore referred to, 4,500 *l.* of such amount being for the purpose of defraying the cost of works for extension and improvement of stations, and the residue for discharge of debentures in accordance with the enactments of 31 & 32 Vict. c. 81.

16. The only loan granted by the Commissioners in 1876–77, under the Harbours and Passing Tolls, &c. Act, 1861, was of the amount of 3,000 *l.* to the Commissioners of the Harbour of Rosehearty, situated in the most northerly part of the county of Aberdeen. The Board in 1875–76 had refused to grant a loan of 5,000 *l.* to the Harbour Commissioners on the ground of insufficiency of security for repayment of that amount; but the application was subsequently renewed, and limited to the sum of 3,000 *l.*; the loan has been required for the extension of works already executed by means of a loan of a like amount of 3,000 *l.* which had been advanced by the Public Works Loan Board in 1864; the number of fishing vessels using the harbour and of trading craft resorting to it has increased considerably since the loan in 1864 was made, the fishing boats being now upwards of 100 in number, and the object of the proposed new works has been to provide a wider and safer entrance channel, and increased accommodation within the harbour by extension of the piers; on completion of the new works, which are in progress, the harbour will thus, better than hitherto, serve the purposes of refuge and shelter for the vessels frequenting it, and will at the same time afford increased advantages for a growing trade.

17. The Trustees of the Town and Harbour of Borrowstounness, in the county of Linlithgow, made application in 1875 to the Public Works Loan Commissioners for a loan of 50,000 *l.*, for improvement of their harbour on the foreshore of the Frith of Forth, such proposed improvement consisting of the construction of a wet dock and of the extension of an existing pier; the present revenue of the harbour being insufficient in the opinion of the Loan Commissioners for the repayment of any larger sum than would suffice for the extension of the pier, they declined to entertain the application except so far as might be required for that purpose, and after obtaining in October 1876 a favourable report from Mr. Rendel, C.E., upon the works proposed to be executed, the estimate of their cost, and their utility, they granted to the trustees a loan of 6,000 *l.* for the proposed extension, repayable by annual instalments in 20 years, with interest at 5 per cent. per annum.

18. The Board in July 1876 authorised the issue of a further advance of 25,000 *l.* for the harbour works at Colombo, under the Colombo Loan Act, 1874, referred to in their last Report.

19. A list of the applications for loans which the Commissioners during the last financial year refused to grant, is given in Appendix D.

20. The Bill referred to in the Board's last annual Report to enable the Great Southern and Western (of Ireland) and Dublin, Wicklow, and Wexford Railway Companies

Companies to purchase the Waterford, New Ross, and Wexford Junction Railway, received the Royal Assent on the 13th July 1876, and the purchase has been duly completed.

21. In respect of the correspondence referred to in the Board's Annual Report for the year 1875-76 with the Chairman of Committees of the House of Lords on the subject of the powers and rights of the Public Works Loan Commissioners, under their Act of 1875, being inconsistent with the powers and rights of the ordinary statutory mortgagees under the private Acts relating to borrowers, a clause for insertion in private Bills was agreed on between the Lords Commissioners of Her Majesty's Treasury and the Chairman of Committees of the House of Lords; this clause was inserted in private Acts of last Session relating to Harbour Authorities, and is to the effect to preclude the authority referred to in the private Act from borrowing from the Public Works Loan Commissioners any part of the money thereby authorised to be borrowed, but should the authority borrow any money from the Commissioners under the powers contained in the Harbours and Passing Tolls, &c. Act, 1861, the Commissioners' Loan is not to have priority, without the consent of the creditors, over any money previously borrowed, but is to have priority over any money subsequently borrowed; and the amount authorised by the private Act to be borrowed is to be diminished by the sum borrowed under the Harbours and Passing Tolls, &c. Act, 1861.

22. With reference to the Artizans and Labourers' Dwellings Improvement Act, 1875, by the 22nd section of which the Public Works Loan Commissioners are empowered to make loans for the purposes thereof, to be repaid within a period not exceeding 50 years, and to bear interest at the rate of 3½ per cent. per annum, or such higher rate as may in the judgment of the Lords Commissioners of Her Majesty's Treasury be necessary to enable the loans to be made without loss to the Exchequer, their Lordships have instructed the Loan Commissioners to require payment of interest on any such loans at the rates undermentioned, viz.:

3½ per cent. for loans repayable within 30 years.
3¾ per cent. for loans repayable in a period exceeding 30 but within 40 years.
4 per cent. for loans repayable in a period exceeding 40 but within 50 years.

It will be observed that these terms are alike to those which are made applicable to the loans granted under the recommendation of the Local Government Board, pursuant to section 243 of the Public Health Act, 1875.

23. The notices given prior to 31st December 1876, pursuant to section 13 of the Public Works Loans Act, 1875, by intending borrowers, of the sums which they should probably apply to borrow during the financial year 1877-78, are for amounts as follows, viz.:—

	£.
School Boards, England	2,971,390
Ditto - Scotland	573,241
Miscellaneous, England	5,984,975
Ditto - Scotland	411,679
Burial Boards	73,166
Ireland	17,000
Harbours	373,600
Labouring Classes Dwellings	146,000
£.	10,551,051

The statement of the above amounts has been duly transmitted to the Lords Commissioners of Her Majesty's Treasury.

By order of the Board,

Public Works Loan Board,
31 May 1877.

W. W. Willink, Secretary.

Appendix (A).

ACCOUNT of the Public Works Loan Commissioners, showing, to the 31st March 1877, the Amount the Amounts advanced by the Commissioners; the Amounts paid into the Exchequer in

Loans.

LOANS.

The foregoing abstract gives the results of all Loan transactions, under their several classes, which have been intrusted to the Board's management from the commencement of its operations in October, 1831, to 31st March, 1877.

More detailed statements of some of these will be found, for Public Works Loans, including Arterial Drainage, at pp. 42 to 51; for Land Improvement Loans at pp. 15 and 16, and 63 to 67; and for the Loans under the Land Act at pp. 16 and 17.

The operations under the other two classes have been practically brought to a close.

APPLICATIONS received from 1ST APRIL, 1876, to 31ST MARCH, 1877, inclusive:—

Public Health (Ireland) Act, 1874, 37 & 38 *Vic., c. 93, s.* 43.

Board of Guardians of the poor law union of *Castlederg*, for a supply of water for the town of *Castlederg*, county Tyrone,	£800 sanctioned.
Board of Guardians of the poor law union of *Kinsale*, for a supply of water for the town of *Crosshaven*, county Cork,	£850 sanctioned.
Board of Guardians of the poor law union of *Ballina*, to complete the sewerage works for the town of *Ballina*, county Mayo,	£1,300 sanctioned.
Board of Guardians of the poor law union of *Strabane*, for improvement of water supply of town of *Raphoe*, county Donegal,	£500 sanctioned.
Board of Guardians of the *North Dublin* poor law union, for a supply of water to the *Drumcondra District*, county Dublin,	£300 sanctioned.
Board of Guardians of the poor law union of *Glin*, for water supply at *Glin*, county Limerick,	£250 sanctioned.
Board of Guardians of the poor law union of *Belfast*, for waterworks for town of *Holywood*, county Down,	£10,500.
Board of Guardians of the poor law union of *Dungannon*, for water supply for the town of *Dungannon*, county Tyrone,	£13,500 sanctioned.
Board of Guardians of the poor law union of *Dungannon*, for sewerage works for the town of *Dungannon*, county Tyrone,	£3,165 sanctioned.

New Ross Town Commissioners.—For the erection of a Market-place and Weigh-bridge in the town of New Ross,	£2,000.

Further applications not within Board's powers of lending or not recommended :—

Carrickfergus Harbour Commissioners.—For construction and extension of Piers, to form increased harbour accommodation,	£12,000.
Belfast Water Commissioners,	£40,000.
Clontarf Town Commissioners.—For the general purposes of the Township, and for repayment of a Loan,	£3,500.
Corporation of Dublin.—For preliminary expenses in preparing an Improvement Scheme under Artizans and Labourers' Dwellings Improvement Act, 1876,	£1,000.
Sligo Harbour Commissioners.—For Harbour improvements ; construction of Pier and Embankment,	£20,000, limited for the present to £10,000.
Sligo Union Board of Guardians.—To purchase the Workhouse premises and Farm, and Dispensary,	£2,400, £180.

Sanctions.

SANCTIONS.

During the past year Loans have been sanctioned by your Lordships out of the respective Loan Funds for the following objects, viz. :—

	£	
(1.) Public Works Loan Fund, 1 & 2 Wm. IV., c. 33, &c.—		
Counties,	8,211	
Local Boards for Improvements in Towns and Districts,	6,700	
Railways,	90,000	
Ardglass Harbour,	5,000	
Labourers' Dwellings in Towns,	11,100	
Glebe Loans,	33,292	
Public Health Act,	41,139	
River Drainage Maintenance,	1,700	
River Drainage, 26 & 27 Vic., c. 88,	53,694	
		250,836
(4.) Land Improvement Act, 10 Vic., c. 32—		
For Thorough Drainage, Farm Buildings, Labourers' Dwellings, Fencing, Planting, &c.,	129,310	
National School Teachers' Residences,	1,790	
		131,100
(5.) Land Act, 33 & 34 Vic., c. 46—		
For the Purchase by Tenants of their Farms,		68,106
Total,		£450,042

The total Sanctions being £450,042 as compared with £449,826 for the previous year show the continuous steady progress of our Loan operations, each year giving an excess of £120,000 over the transactions of the years 1874–75.

The above abstract points out the variety of objects to which the various funds entrusted to our management have been allocated during the past year, and as some of the classes are distributed in comparatively small amounts, the total also represents a considerable addition in number to the outstanding open accounts. The number of new Loans made was 430, as against 145 closed in the same period.

In January last we felt it our duty to call your Lordships attention to the state of the Funds available for Loan purposes, and to point out that at the present rate of our operations, two of these Funds, viz., the Public Works Loan Fund and the Land Improvement Loan Fund would become exhausted, and our means of making Loans restricted, if powers were not taken during the present Session of Parliament to meet the estimated deficiency, and to provide for the continuous demand for advances in future years. By the Bill now before Parliament to meet this want, your Lordships, among other important changes connected with these services, propose to place the future advances as respects these two Funds, and other services the issues for which are charged by their respective Acts on the growing produce of the Consolidated Fund, on the same footing as the Public Works Loan Fund, England, viz., to provide, by an annual Act of Parliament, for the total estimated amount which will probably come in course of payment during the year. This will embrace all advances from the Consolidated Fund for Loan purposes, excepting those for the Irish Land Act, for which a special Fund of £1,000,000 was provided. This course determines the extent of the aggregate advances within the year, and we have no reason to think that a change which necessitates an annual investigation into all the circumstances and requirements of these services will be otherwise than advantageous.

The Sanctions of the year include a Loan of £5,105 made for the repairs of the Blackrock road; two Loans for Burial-grounds, which we are authorized to make in pursuance of the Act 19 & 20 Vic., c. 98, which extends the repayment over a term of years not exceeding twenty, with interest at 5 per cent.; also a Loan of £40,000 to the Ilen Valley Railway Company, and £50,000 to the Letterkenny Railway, both being repayable within twenty-five years, with interest at 5 per cent.; and a Loan of £5,000 to aid in the erection of Ardglass Harbour, which, under the conditions of the special Act of last Session, becomes a charge on the neighbouring proprietor and district.

The amount applied for and allocated during the past year for the erection of Labourers' Dwellings in towns was £11,100, being much less than the previous year, when the amount stood at £24,242. This falling-off, we believe, is rather accidental than otherwise, as the desire on the part of the public to avail themselves of the advantages conferred by the Act, appears to be gradually increasing, as it becomes more generally known and understood. With the five Loans santioned it is proposed to erect 132 separate dwellings, at an average cost of £84 for each.

The Glebe Loan Acts, unless renewed, will expire on the 31st August, 1878. During the past year we have made seventy Loans, amounting to £33,292. These figures are less both in number and amount than in the former year, when eighty Loans, for £44,031, were granted. Since the passing of the Act, 372 advances for Glebe purposes, amounting to £171,870, have been authorized.

The Loans for Sanitary purposes, which during the year amounted to £41,139, are also considerably less than the previous year's transactions. This also, judging from the number and amounts of the applications which have been made by Sanitary bodies and are under our consideration or that of the Local Government Board, must not be deemed as showing a less desire on the part of these bodies to avail themselves of this Fund. In the year ten districts have obtained Loans to the extent of £24,539 for sewerage works; six for water works, amounting to £16,200; and one of £400 for a slaughter-house.

The works on three Arterial Drainage districts have been commenced in the past year, under the provisions of the Act 26 & 27 Vic., c. 88, which are in operation under their respective local bodies, viz.:—The Rathangan district, in the county of Kildare, to which a Loan of £45,869 has been granted; £6,000 to the Tory Hill district, in the county of Limerick, and £3,825 to the River Bride and Kilcrea district, in the county of Cork, making a total appropriation under this section of Arterial Drainage works of £348,760, spread over thirty-two districts.

The applications for Land Improvement Loans, a service which has been in operation since the year 1847, continue to be made in increased numbers; the total sum approved during this year being £129,310, against £125,600 for the last; the total advances now amounting to £2,723,442. The Funds of this service have been extended

by the provisions of the Act 38 & 39 Vic., c. 82, for the purpose of making advances in aid of National School Teachers' Residences connected with non-vested schools, to be applied either for the erection of new buildings, or for the enlarging or improving existing buildings, or for the purchase of dwelling-houses.

No Loans for this purpose are to exceed £250, the repayment of which is to be secured by a charge on the building itself, as well as on the land on which it is erected. Eight of these Loans have been authorized during the year, absorbing £1,790.

The sum of £68,106 has been allocated, under the provisions of the Land Act, to aid in the purchase by tenants of their farms. Since the passing of the Act in 1870, 575 tenants have purchased their farms, and have thus become proprietors to the extent of 35,975 acres, at a total cost of £599,623, including £357,958 advanced by us. The annual rent paid in respect of these holdings was £24,460, against which the annual rent-charge payable to the Government for thirty-five years will be £17,898.

ADVANCES AND REPAYMENTS.

The total Loan advances during the year amount to £406,572, against £312,952 of the former year, and the repayments including interest to £171,263, against £156,612.

The following statement shows under general heads to what purposes the advances have been applied, and sources from which the repayments have come, viz.:—

	Advances.	Repayments.
	£	£
1. Public Works Loan Fund—		
Counties,	8,978	5,551
Local Boards,	3,500	2,055
Roads and Bridges,	—	500
Inland Navigation,	—	1,458
Railways,	53,333	3,506
Harbours, Docks, &c.,	—	4,174
Fishery Piers,	2,557	928
Labourers' Dwellings,	18,795	635
Glebe Loans,	33,371	5,755
Public Health,	44,443	6,823
River Drainage, 5 & 6 Vic., c. 89,	—	38,060
Do. 26 & 27 Vic., c. 88,	42,400	10,426
Drainage Maintenance, 29 & 30 Vic., c. 49,	1,584	2,318
	208,961	82,189
4. Land Improvement,	121,405	73,251
5. Land Act,	76,206	15,823
	£406,572	£171,263

The repayments continue to be made, with a few exceptions, with satisfactory punctuality. The year again closes with no outstanding arrears on the Public Works, Labourers' Dwellings in Towns, Glebe Loans, and Public Health classes of Loans, comprising 423 separate half-yearly charges. The Land Act has one proprietor in arrear out of 575 borrowers, which is highly creditable to the class to which they belong, and is evidence of its continued prosperity. The Arterial Drainage, having 2,072 distinct charges, shows at the close of the year 107 in arrear; but as the larger portion of these incur a poundage charge of 1*s.* in the pound, no loss arises from the deferred payments. The Land Improvement Service, having upwards of 2,900 open accounts, shows 70 proprietors, representing 144 Loans, in arrear.

The amounts received in the year on nearly 6,000 open accounts, of which 5,950 are repayable by half-yearly instalments by way of an annuity, have, under your Lordships' instructions, been divided into principal and interest, with the object of carrying the sum received as interest in aid of the year's income; the whole amount received and paid to Her Majesty's Exchequer having been apportioned as follows:—

	£
Principal,	103,689
Interest,	67,574
	£171,263

The latter sum exceeds that paid in on the previous year by £6,217, but the amount must, under our present extended operations, undergo considerable increase in future years.

By the same investigation we have been enabled to ascertain the present value of all the 6,000 debts standing in our books, which have increased from £1,994,722 on the

1st of April, 1876, to £2,297,605 on the 31st March, 1877, showing a net increase of debt on the year of £302,883.

The charges have terminated, since our last report, on the Cross Lough Drainage district—a work executed under the Act 5 & 6 Vic., c. 89—also on the Drainage Maintenance of Lough Dalla, which determines half-yearly charges of £29 1*s.* 10*d.* In the same time awards have been made, bringing the advances made to Local Boards in pursuance of 26 & 27 Vic., c. 88, in course of repayment, viz. :—

District.	Cost of Work.	Half-yearly Instalment.	No. of Proprietors Contributing.
	£ *s.* *d.*	£ *s.* *d.*	
Upper Gully River,	2,447 15 2	59 8 11	6
Camogue,	11,745 19 6	288 13 0	16
	£14,193 14 8	348 1 11	22

And in respect of Drainage Maintenance Works, 29 & 30 Vic., c. 49, the following charging Orders have been made :—

District.	Cost of Work.	Half-yearly Instalment.	No. of Proprietors Contributing.
	£ *s.* *d.*	£ *s.* *d.*	
Owenabrocka,	491 14 10	37 13 4	6
Glenariff,	489 18 2	41 18 1	5
Borris-in-Ossory,	3,967 15 11	276 8 9	37
	£4,949 8 11	£356 0 2	48

Loans amounting to £1,396,407 have now been finally closed under the Land Improvement Loan Service, which has of course contributed to limit the increase on our total repayments for the past few years.

Irish Reproductive Loan Fund Act.

In our Report for last year we fully explained the system we had found it desirable to adopt to bring the provisions of this Act, 37 & 38 Vict., c. 86, into operation, more particularly as it affected the main purpose of the Act, viz., the making small advances to fishermen in the maritime counties, and the course adopted for securing their faithful discharge by promissory notes payable at intervals of six months, generally extending over three, four, or even five years. After another year's experience we are enabled to state that these arrangements have proved in all respects most satisfactory, resulting in our still being able to carry out these very numerous transactions—many of them in the most remote and backward parts of the country—without entailing on the funds entrusted to us any expense beyond a few very small payments to local solicitors for proceedings for the recovery of over-due promissory notes, or for the entire Loans advanced, in the event of non-application to the purposes for which they were made.

Under the rules sanctioned by His Excellency the Lord Lieutenant, we are authorized to make Loans for fishery and other purposes out of the respective funds of the ten counties, of from £5 to £500, at 2½ per cent. interest, to be repaid within any term of years not exceeding ten, a bond being taken in each case for the due and proper application of the advance.

We append the following abstract of our proceedings during the past year under the respective counties :—

County.	Money Value of Fund at credit of County, in January, 1876.	Available for Fishery Loans in 1876.	Advances in respect of 1876 Loans.	Number.
	£	£	£	
Clare,	1,656	414	371	28
Cork,	2,824	931	920	34
Galway,	4,756	1,189	1,144	77
Kerry,	9,172	2,293	1,718	28
Leitrim,	1,252	313	30	1
Limerick,	2,352	588	–	–
Mayo,	2,828	707	707	60
Sligo,	1,708	427	124	8
Roscommon,	4,856	Non-	–	–
Tipperary,	3,313	Maritime.	–	–
	34,717	6,862	5,014	236

Up to the 31st March, 1877, we have made 607 separate advances, amounting to £11,267, which have been secured by upwards of 4,000 promissory notes, together amounting to £11,897 12*s.* 2*d.*, including principal and interest at 2½ per cent. On account of this last-mentioned sum there has been repaid, up to the same period, £3,429.

Of the promissory notes which became due before the 31st March, there are now (1st May) only eighteen remaining unpaid, which is satisfactory evidence of the attention and punctuality of the fishermen-borrowers under this Act.

We have during the year sold stock to the amount of £1,700, the residue of the advances having been discharged by the repayments and dividends received in the year. In the year now commenced we hope to meet all the advances from these two sources without having to resort to any further sale of stock as long as the loans are confined to fishery purposes.

We have again to report that no applications for any advances have been made out of the funds of the non-maritime counties of Tipperary and Roscommon, and in Limerick no application has been received either for fishery or any other purpose. It will also be observed that during the past season the funds of the counties Kerry, Leitrim, and Sligo were not taken up by the fishermen of these counties to the extent of the amounts which were available.

Public Buildings.

PUBLIC BUILDINGS.

The necessary works of repairs and maintenance to the several metropolitan and provincial public buildings and official residences in charge of the Board have been duly attended to, and efficiently maintained.

Post and Telegraph Offices.

The works at the new Post Office at Cork were commenced some months past, and the building is progressing satisfactorily.

The new post offices at Waterford and Londonderry, which form part of the new public offices in those cities, are occupied and open for the transaction of public business.

Customs Buildings.

New offices for Customs and Inland Revenue services at Waterford and Londonderry have been provided in the recently erected public buildings at these places.

Constabulary Barracks.

New barracks have been completed at Monaghan, county Monaghan, and Howth, county Dublin; the former to accommodate 1 Head Constable and 25 men; the latter 1 Head Constable, 3 Constables, and 18 men.

Metropolitan Police Buildings.

Additional cells have been provided at Chancery-lane Station, in the A Division; a ball-alley has been constructed at Manor-street Barrack, in the D Division; and improvements made in the ball-alley at Rathmines, in the F Division.

Coast-Guard Stations.

The following new Stations have been completed during the past year:—

Bray, county Wicklow, 1 Chief Officer and 5 men.
Cahirmore, county Cork, 1 Chief Boatman and 4 men.
Cushendall, county Antrim, 4 men.
Costello Bay, county Galway, 1 Chief Boatman and 5 men.
Cranfield Point, county Down, 1 Chief Officer and 6 men.
Gortrummagh, county Galway, 1 Chief Boatman and 6 men.
Killybegs, county Donegal, 1 Chief Boatman and 5 men.
Portaferry, county Down, 1 Chief Boatman and 5 men.
Port Ballintrae, county Antrim, 1 Chief Boatman and 4 men.
Port Kinnago, county Donegal, 1 Chief Boatman and 4 men.

The works are in progress at the following new Stations :—

Annagassen, county Louth, 2 men.
Curracloe, county Wexford, 1 Chief Boatman and 6 men, watch-house, boat-house, store, &c.
Doohoma, county Mayo, 1 Chief Boatman and 4 men, watch-house, boat-house, store, &c.
Knockalla, county Donegal, 1 Chief Boatman and 4 men, watch-house, boat-house, store, &c.
Mizen Head, county Wexford, 2 men.
Newcastle, county Down, 1 Chief Officer and 5 men.
Rossmoney (Inishlyre) county Mayo, 1 Chief Officer, 1 Chief Boatman, and 10 men, boat-house, watch-house, store, slipway, &c.
Tara, county Down, 4 men.
Torr Head, county Antrim, 4 men.
Rosslare, county Wexford, drill-shed, battery, magazine, boat-house, and slipway.

Extensive additions and alterations have been carried out at Bonmahon, Buncrana, Malin Head, and Rosslare.

Phœnix Park.

The lodges of the Bailiff, Deer Keeper, Gate Keepers, and Park Constables have been kept in proper order; and the works necessary for the conservancy of the Park and the cultivation of the People's Garden have been carefully carried out.

Queen's Colleges.

The necessary works of repair and maintenance at the Queen's Colleges, Belfast, Cork, and Galway, have been attended to.

National Education Buildings.

Twenty-three new ordinary literary National School-houses have been built in the past year, at a total cost of £8,198 14*s.*, towards which the Board paid as Grants two-thirds, or the sum of £5,465 16*s.*, the remaining one-third of the expense being contributed by local persons interested in the schools.

Various additions to and enlargements of school-houses, together with such works of improvement as providing timber-flooring, erecting porches, building enclosing walls and gates, wainscoting, tablet rails, eave gutters, and other works, have been effected at 27 ordinary literary National Schools, at a total cost of £1,734 3*s.* 1*d.* Towards this sum the Board paid two-thirds, viz., £1,156 2*s.* 1*d.*, and the remaining one-third was borne by local persons interested.

Besides this outlay, the Board have expended in new works and alterations, repairing and maintaining the Metropolitan (or Central) Model School Buildings, the District Model, Minor Model, and Model Agricultural Schools, the sum of £5,405, and a further sum of £1,786 10*s.* 3*d.* for furniture for those buildings; and on the ordinary literary National Schools in charge of the Board, a sum of £3,180 13*s.* 9*d.* has been also expended, in works of maintenance and repair.

Seven Grants in aid of building residences for Teachers of Vested National School-houses, have been made during the year, amounting to £677 12*s.*

NATIONAL SCHOOL TEACHERS' RESIDENCES (IRELAND) ACT.

38 & 39 Vic., c. 82.

Thirty-one applications under this Act have been received during the year for Loans, amounting to £6,795, eight of which have been sanctioned within the year, amounting to £1,790. The remainder await the compliance by the applicants with certain conditions required by the Act and the Treasury regulations.

LABOURING CLASSES' LODGING-HOUSES AND DWELLINGS ACT (IRELAND);

29 & 30 Vic., c. 44.

Seventeen applications have been received under this Act during the year ended 31st March, 1877, and six loans have been decided on during that period, amounting to £11,100, for the erection, &c., of 132 dwellings.

GLEBE LOANS.

Glebe Loan (Ireland) Acts, 1870–71–75;
33 & 34 Vic., c. 112; 34 & 35 Vic., c. 100, and 38 & 39 Vic., c. 30.

Eighty-four applications under these Acts have been received during the year ended 31st March, 1877, viz.:—

Purpose for which Loan is required.	No.	Amount applied for.	Amount sanctioned.	No. Sanctioned.
		£ s. d.	£ s. d.	
For the purchase of glebe land or houses, . .	16	6,644 6 8	7,206 0 0	18
„ building or improving of glebe houses, or erection of out-offices, . . .	63	32,570 0 10	24,906 0 0	49
„ paying-off of glebe debts, . . .	5	1,080 0 0	1,180 0 0	3
	84	40,294 7 6	33,292 0 0	70

Of these 84 applications 50 have been sanctioned, and 34 are under consideration or awaiting compliance with certain requirements. Of the 70 total sanctions, amounting to £33,292, 20 were for applications received during previous years, amounting to £8,551.

NATIONAL MONUMENTS AND ECCLESIASTICAL RUINS.

Irish Church Act, 1869; 32 & 33 *Vict.*, c. 42.

The works necessary for the preservation of the National Monuments vested in the Board by the Church Temporalities Commissioners for preservation and maintenance, have been carried out in the order of their importance and urgency.

The works have now been completed at Ardmore Cathedral and Round Tower, Ardfert Cathedral and two Churches, Monasterboice three Churches, Crosses, and Round Tower, and the Rock of Cashel, with its several ancient monuments; all these structures have been placed in charge of caretakers to protect them from injury, and provision has been made for their effectual maintenance.

The works are in progress at Devenish Church and Round Tower, and those at the Seven Churches, Round Tower, Stone Crosses, and other structures at Glendalough are drawing towards completion.

The details of the progress made and works executed during the year will be found in the report of the Superintendent (Mr. Deane). The Board think it desirable here to repeat that the instructions which they have given to their Architect and Mr. Deane are that the operations are to be strictly confined to what is necessary for the preservation of the several monuments—securing loose stones, preventing infiltration of water by cement covering to walls, &c., where practicable, and clearing away rubbish, where, by doing so, portions of the buildings now hidden may, with advantage, be brought to view—but carefully to avoid any attempt at restoration, or doing anything which might mar the ancient and picturesque character of the ruins.—*See Appendix, page* 68.

LIMITED OWNERS' RESIDENCES.

Acts 27 & 28 Vic., c. 113; 33 & 34 Vic., c. 56; 34 & 35 Vic., c. 84.

Applications under these Acts have been made during the past year by D. B. M. Baird, esq., Newtownstewart, for the erection of a mansion; the Earl of Kenmare, for the erection of a mansion; the Earl of Wicklow, for improvements; Lord Kilmaine, for improvements; and C. A. Nicholson, esq., for additions and improvements. The necessary inquiries and preliminaries have not yet been completed. In the case of the application of Henry Bruen, esq., M.P., the Provisional Order has been made absolute to the extent of the value of the work executed.

FUEL AND LIGHT, &c.

This service for the twelve months ended 31st March, 1877, embraced the supply to about 250 establishments, of coals, coke, turf, gas, chandlery, &c., to the aggregate amount, including the Phœnix Park, and Kingstown and Howth Harbours, of £23,656 0*s.* 3*d.*

LAND IMPROVEMENT.

Land Improvement.

In this division of the Board's duties we have to report an increase in the sums advanced for the execution of works; the total issued for the year now reported on being £121,405—a larger amount than that issued in any year since 1851.

The applications and the amounts issued in each year since the commencement to the close of the financial year 1876–77, are stated as follows:—

	No. of Applications.	Amounts Issued.		No. of Applications.	Amounts Issued.
1847, June to December (inclusive),	1,354	£72,790	1862,	184	£61,375
1848,	571	356,160	1863,	138	58,830
1849,	643	379,836	1864,	132	58,430
1850,	436	250,324	1865,	90	46,215
1851,	280	145,653	1866,	98	26,295
1852,	164	88,542	1867,	145	39,180
1853,	154	55,454	1868–9,	179	64,973
1854,	123	49,293	1869–70,	166	83,775
1855,	98	35,180	1870–71,	159	77,980
1856,	108	32,510	1871–72,	160	82,555
1857,	114	31,674	1872–73,	223	76,290
1858,	112	35,524	1873–74,	224	99,572
1859,	111	29,334	1874–75,	245	102,005
1860,	135	26,902	1875–76,	265	98,730
1861,	154	36,656	1876–77,	218	121,405

On the 31st March, 1877, there remained unappropriated, of the fund of £3,000,000 provided by the Acts quoted in the margin, the sum of £197,225.

16 Vic., c. 32; 12 Vic., c. 23; 13 & 14 Vic., c. 31; 29 & 30 Vic., c. 40.

The total amount issued under the several Land Improvement Acts, for all descriptions of work, to the 31st March, 1877, was £2,723,442.

During the year now reported on, works have been commenced under 200 new Loans, which are divided under the following heads:—

	No. of Loans.	Amount Sanctioned.
Drainage and other Land Works,	60	£44,825
Farm Buildings,	104	59,240
Labourers' Dwellings,	36	28,875
Scotch Mills,	—	—

The numbers of applications and the sums issued in the several counties of Ireland from the commencement to the 31st March, 1877, are given in the following table:—

SCHEDULE showing the NUMBER of LOANS SANCTIONED and AMOUNTS ISSUED.

Name of County.	No. of Loans.	Amount Issued.	Total No. of Loans.	Total Amount Issued.

THOROUGH DRAINAGE.

The quantity of land thorough drained under the Acts from the commencement in 1847, to the 31st March in this year, is 258,183 acres; and of this quantity 2,627 acres have been drained during the year now reported on, at an average cost of £7 0*s.* 6*d.* per acre.

PLANTING FOR SHELTER.

For this purpose 30 Loans have been granted since the passing of the Act 29 & 30 Vic., c. 40, and of this number 3 amounting to £2,725, were sanctioned since the 31st March, 1876.

FARM BUILDINGS.

Since the passing of the Act 13 & 14 Vic., c. 31, 1,043 Loans have been sanctioned for the erection of farm buildings, amounting to £519,670. Of this number 84 Loans, amounting to £51,435, were approved during the past financial year.

DWELLINGS FOR AGRICULTURAL LABOURERS.

For this class of work 349 Loans have been sanctioned since the passing of the Act 23 Vic., c. 19, giving a total amount of £199,090; the cases sanctioned since our Report last year being 44, amounting to £32,105.

Appendix C gives the Reports of the District Inspectors, and Appendix D the usual statement of the Loans in progress and amounts issued.

LANDLORD AND TENANT ACTS, 1870 AND 1872.

33 & 34 Vic., c. 46, and 35 & 36 Vic., c. 32.

Landlord and Tenant Acts, 1870 and 1872.

Under this head we have to report a considerable increase in the advances made to tenants in aid of purchase, the total of the several Loans under both Acts amounting to £76,206 for the past year, as against £43,402 issued in the preceding year, which, with the sums issued in previous years, makes £357,958 advanced to assist tenant-farmers in purchasing their holdings.

In the majority of these cases the sales were made in the Landed Estates Court, under the 45th section of the Act of 1870; the number coming under that section during the year ending 31st March, 1877, being 103, and the advances amounting to £55,775; the total number of Loans under that section being 514, amounting to £305,736.

Under the 44th section of the same Act, which provides for the granting of Loans to tenants purchasing by agreements with their landlords, such agreements to be approved by the Court, the number of advances made since our Report for 1875–6 was 4, amounting to £4,145, and giving a total under this section, since the commencement, of 14 cases, amounting to £17,212.

Under the Amending Act (1872) we have advanced sums in aid of purchase by tenants in 12 cases since the end of March, 1876, amounting to £16,286. In these cases the proceedings were carried out without the intervention of the Court. The number of cases since the passing of that Act in which advances have been made under its provisions is 47, the total amount issued being £35,010.

In the following table will be found the numbers and amounts of the Loans made under both Acts since the commencement in 1870 to the 31st March, 1877, arranged according to Provinces and Counties.

SCHEDULE showing the number of cases in which Advances have been made to Tenants for the purchase of their Holdings, stating the amount of the Purchase-money, the sum advanced by the Board, the number of Acres purchased, with the Annual Rent and Government Valuation of same, up to 31st March, 1877.

ARTERIAL OR RIVER DRAINAGE.

Arterial Drainage.

The Board's duties in connexion with the works of Arterial Drainage, with Improvements of Navigation and Water-power, under the original Acts, viz., the 5 & 6 Vic., cap. 89; 8 & 9 Vic., cap. 69; 9 Vic., cap. 4; 10 & 11 Vic., cap. 79; 16 & 17 Vic., cap. 130; 18 & 19 Vic., cap. 110; 19 & 20 Vic., cap. 62; 20 & 21 Vic., cap. 23; 21 & 22 Vic., cap. 41; and 35 & 36 Vic., c. 31, have been confined during the past year to determining, on the application of proprietors, the amount of increased rent to be paid by tenants in respect of the benefit derived by them from improvements in their holdings, resulting from the Drainage operations; and to giving information, assistance, and advice to the Trustees of Districts, on such points connected with their trusts as they might request,

and which we have felt it within our province to give: all executive operations have been long since brought to a close.

The price agreed upon for Clonakilty Slob-lands has been paid; this will relieve this Board of any future responsibility in connexion with them.

The whole expenditure charged against the different undertakings commenced under the Arterial Drainage Acts (prior to 1863), including £70,201 for works chargeable to counties, amounted at the end of March, 1876, to £2,390,612 12*s.* 4*d.*; and the repayments in respect thereof amounted to £1,308,058.

Drainage and Improvement of Lands (Ireland) Act, 1863, and Amendments thereof;

26 & 27 Vic., c. 88; 27 & 28 Vic., c. 72; 28 & 29 Vic., c. 52; 32 & 33 Vic., c. 72; 35 & 36 Vic., c. 31; and 37 & 38 Vic., c. 32.

Applications for two new Drainage districts were received during the year 1876–77, namely, the Laracor and some of its tributaries, in the counties of Galway and Roscommon; and the Quoile, near Downpatrick, county Down; and a renewed application for The River Suck District (No. II.)—Nos. 47 and 52 in subjoined list—counties of Galway and Roscommon.

The total number of districts brought before the Board since the passing of these Acts and up to the 31st March, 1877, is 50, (three being twice applied for), viz.:—

	A.	R.	P.
1. Athboy, county of Meath,	1,388	0	27
2. Ballynacarrig, King's and Queen's counties,	2,502	1	23
3. Thurles, county of Tipperary,	2,446	1	15
4. Rathdowney, Queen's county,	413	1	39
5. Sixmilebridge, county of Clare,	2,595	0	4
6. Kilmastulla, county of Tipperary,	1,681	1	18
7. Silver River, King's county and county of Westmeath,	1,092	2	30
8. Parsonstown, King's county and county of Tipperary,	2,719	0	1
9. Camoge, county of Limerick,	1,260	3	0
10. Elphin, county of Roscommon,	3,395	3	12
11. The Connell, county of Kildare,	747	2	0
12. Brickey, county of Waterford,	829	1	20
13. Upper Inny, counties of Cavan, Longford, Meath, and Westmeath,	11,675	2	6
14. The Quinagh, county of Carlow,	680	3	0
15. The Clodiagh, county of Tipperary,	1,657	1	4
16. The Island Lakes and Glore River, county of Mayo,	1,457	0	32
17. Lough Oughter and River Erne, county of Cavan,	3,077	1	30
18. Buncam Lake and Ballyhean River, county of Mayo,	823	0	0
19. The Gully, Queen's county,	1,064	0	10
20. The Doohyle, county of Limerick,	409	2	32
21. The Ward (No. I.,) counties of Dublin and Meath,	886	0	18
22. Frankford River, King's county,	1,204	2	0
23. The Mulkear, county of Limerick,	3,250	2	24
24. Dunderry, county of Meath,	3,434	0	20
25. Douglas, county of Carlow,	3,088	2	0
26. Derrinlough, King's county,	622	0	30
27. Boolinarrig, King's county,	926	3	20
28. Kildare (Tully River), county of Kildare,	2,347	3	30
29. Baltracey, county Kildare,	1,955	2	30
30. Lough Erne, counties Fermanagh, Cavan, and Monaghan, (No. I.,)	17,437	3	0
31. Torrent River, county Tyrone,	453	1	16
32. The Boira, county Wexford,	1,227	3	3
33. The River Bride and Kilcrea, county of Cork,	1,269	3	4
34. The Upper Gully—River Gully, Queen's county,	508	1	18
35. Ballycranmore—Blackstaff River, county of Down,	147	2	10
36. Lough Erne, counties Fermanagh, Cavan, and Monaghan, (No. II.,)	19,417	1	5
37. Ballynacourty, county Limerick,	179	0	5
38. Ollatrim River, county Tipperary,	323	3	36
39. Fourtowns and Jerrittspass, counties Armagh and Down,	428	2	17
40. Rathangan River, county Kildare,	8,789	3	15
41. Stoneyford River, counties Meath and Westmeath,	3,536	2	30
42. Tory Hill, county of Limerick,	980	1	38
43. Barnakyle, county of Limerick,	1,007	2	22
44. Ballintemple, county Carlow,	504	3	0
45. Upper Finn River, county Donegal,	1,274	2	0
46. Upper Leannan, county Donegal,	656	3	0
47. The Ward (No. II.,) Dublin and Meath,	86	0	18
48. The River Suck and its tributaries, counties of Galway & Roscommon, (No. I.,)	32,465	2	3
49. The Swanlinbar or Blackwater, county of Cavan,	265	2	19
50. The Ballyadams, near Athy, Queen's county,	833	2	0
51. Laracor and tributaries, co. Meath,	878	3	22
52. The Quoile, county Down,	1,379	3	30
53. The River Suck and some of its tributary streams, counties Galway and Roscommon, (No. II.,)	15,200	0	0

Acts have been passed confirming the provisional orders of the Board constituting thirty-three of those districts, viz.:—

Athboy.
Ballynacarrig.
Rathdowney.
Sixmilebridge.
Kilmastulla.
Silver River.
Connell.
Brickey.
Quinagh.
Parsonstown.
Elphin.
Clodiagh.
Camoge.
Upper Inny.
Doohyle.
Gully.
Island Lakes and Glore River.
Frankford River.
Douglas River.
Derrinlough.
Baltracy River.
Boolinarrig River.
River Torrent.
Mulkear.
Kildare.
Lough Oughter and River Erne.
Upper Gully.
Ballynacourty.
Stoneyford.
Bride and Kilcrea.
Tory Hill.
Fourtowns and Jerritzpass.
Rathangan River.

The works have been completed and final awards made for—

Athboy.	Brickey.	Derrinlough.	Island Lakes and Glore River.
Rathdowney.	Sixmilebridge.	Parsonstown.	
Ballynacarrig.	Doohyle.	Baltracey.	Torrent.
Connell.	Elphin.	Boolinarrig.	Ballinacourty.
Quinagh.	Clodiagh.	Frankford.	Upper Gully.
Kilmastulla.	Gully.	Douglas.	Camoge.
Silver River.			

The works of the following districts are in course of execution :—

Upper Inny, Mulkear, Kildare, Lough Oughter and River Erne, Stoneyford, Bride and Kilcrea, Tory Hill, Stoneyford and Rathangan River.

The works have not been commenced in the Fourtowns and Jerritzpass.

With regard to the remaining districts, the Thurles, Buncam Lake, Dunderry, Boira, Ballycranmore, and Barnakyle, appear to have been abandoned, and the Upper Finn, Ollatrim and Ballintemple have been withdrawn by the petitioners. Revised plans for the Ward and the Suck have been submitted, and the other districts are passing through the stages required by the Acts previous to provisional orders constituting them being made.

Since our last report nothing further has been done in the case of the Lough Erne district. The Inspector reported unfavourably on the project submitted, and his report was furnished to the promoters of the project. The plans having been revised, the Inspector made a further report, which was furnished to the petitioners.

Another petition was presented by the principal proprietors of land in this district, and the Inspector held the meeting required by the Acts and made his report, which was furnished to the petitioners; but the assents of the proprietors have not yet been given to either project, and, until they are, this Board can take no further steps.

The total area of land to be improved in the districts which have been, or are being, proceeded with, is 98,557 statute acres, and the estimated cost of the works £656,185.

The Loans sanctioned by your Lordships under these Acts amount to £348,760. The advances on account thereof, including interest charged during the operation of the works, amount to £275,595, and the repayments from districts, in respect of which awards have been made, amount to £49,979.

Increased Rents in respect of Drainage Charges.

During the past year twenty-two applications were received from Proprietors for increased rents to be paid by the tenants in respect of lands improved by drainage, and meetings were held by us, representing 126 holdings—81 being tenants from year to year, and 45 leaseholders. See following Schedule :—

Name of District.	Proprietor.	Number of Tenants.	
		Leaseholders.	Year to Year.
Baltracey, co. Kildare,	John A. Potterton,	1	1
	Representatives of E. H. Rickards,	6	1
	Do., do.,	3	–
	Christopher Rynd, Blackhall, Naas,	–	6
	Henry Aylmer, Painstown, Kilcock,	1	20
Boolinarrig, King's county,	Francis V. Bennett, Parsonstown,	1	1
Burren, co. Carlow,	Miss Elizabeth Digby,	4	–
Douglas, „	Nicholas G. Elliott, Johnstown House, Carlow,	2	1
	Right Hon. R. M. O'Ferrall, (2),	2	–
	W. J. Morton, 6, Ely-place, Dublin,	–	2
	W. H. Lecky, 35, Onslow Gardens, London,	3	–
	James Kelly, Tullow,	2	–
	Edward Pim,	5	2
Gully and Upper Gully, Queen's co.	Samuel Edge, esq., M.D., Raglan House, Clyde-road, Dublin, (2),	–	8
Inny, co. Westmeath,	Joseph Tuite,	12	29
Parsonstown, King's county,	Bigoe Cuolahan, Ross House, Parsonstown,	1	–
Sixmilebridge, co. Limerick,	William Bentley, Hurlstown, Broadford, co. Clare,	1	–
Torrent, co. Tyrone,	William Woodney, agent for the Governors and Guardians of the Observatory, Armagh,	–	3
	Joseph Falls, Drumballyhue Rock,	–	4
	John Somerville, Turney, Castlecaulfield,	1	3
		45	81
	Number of Applications, 22,	126	

Drainage Maintenance Act, 1866;
29 & 30 Vic., cap. 49.

Three new applications were received during the past year, viz. :—

Hind River District, county Roscommon, for removal of obstructions at the mouth of the river at Lough Ree.

Quin River District, county Clare, obstructions at Cullane Lake, &c.

Ballinamore and Ballyconnell Drainage District, county Leitrim, dangerous state of bridge at Droppogue.

The works of the following districts were in progress :—
Borris-in-Ossory, Glenariff, Loughans, and Monivea.

The works of Borris-on-Ossory and Glenariff were completed.
Charging Orders were made for Owenabrockagh, Borris-in-Ossory, and Glenariff.
The steps required by the Act have been taken as regards the Hind and Ballinamore and Ballyconnell. The Quin awaits an Inspection by the Engineer.

Maintenance of Navigations in connexion with Drainage under provisions of Act 19 & 20 Vic., c. 62.

With reference to the two applications from the Ballinamore and Ballyconnell Navigation District, detailed in our last Report, we have had the repairs of the embankment, &c., at Ballyconnell Mills completed, and the certificate for the cost, £130 14*s.*, was presented at last Spring Assizes.

Harbours.

HARBOURS.

Kingstown Harbour, County Dublin.

All the works of this Harbour, including the Piers, Jetties, Wharves, Buildings, Fences, Roads, Lamps, and Sewers have been maintained in good order, and the following works have been executed, or have been in progress :—

The reconstruction of "The Wolf" Jetty at the East Pier was completed.
New system of Fenders and Sheeting for the protection of the Mail Packet Pier from collision with the Mail Packets.
Making good the inner faces of the Wharves and Parapets.
Repairing the Coast Guard Slips.
Deepening the Harbour by dredging.
A Screw Mooring was fixed in the bight of the East Pier.

The gale of the 3rd January, 1877, caused considerable damage to the sea pavement of the West Pier, and to the breakwater, parapet, and road-way of the East Pier.—*See Engineer's Report, Appendix* B.

The following is a return of the Vessels that have used the Harbour during the last year, 1876—Mail Steam Packets excepted :—

	Number.	Tonnage.
To and from the port of Dublin, waiting wind and tide, Sailing Vessels,	228	73,767
Do. do. do. Steamers,	23	5,966
From English, Irish, Scotch, and Foreign ports, to Irish ports,	253	22,870
From English, Scotch, and Foreign ports, to English and Scotch ports,	115	15,680
From Irish ports to English, Scotch, and Foreign ports,	192	17,319
From English and Scotch ports to Foreign ports,	28	10,692
For Orders,	2	502
To Kingstown,	318	35,395
Yachts from Great Britain,	93	—
Men-of-War, H.M. Steam Troopships, &c.,	30	—
Total,	1,282	182,191
In the previous year the numbers were,	1,412	200,809

Howth Harbour, County Dublin.

The works completed or in progress during the year were :—
The works of the sea pavement of the East Pier.
The roads, wharves, &c., were sufficiently maintained.

Very great damage was done to the Harbour Works, by a succession of gales in September, 1876, and January and April, 1877; both East and West Piers were seriously injured, and fourteen of the fish curing sheds were destroyed.—*See the Engineer's Report, Appendix* B.

The herring fishery was satisfactory.—*See Harbour Master's Report, Appendix* B.

Donaghadee Harbour, County Down.

Very considerable damage has been caused by the storms of the past Winter.—*See the Engineer's Report, Appendix* B.

Dunmore Harbour, County Waterford.

The works in progress were repairs to the sea slopes and pavements; and the reconstruction of part of the stone jetty adjoining the pier head. The sea slope and parapet were damaged by the storms in November, 1876.—*See Engineer's Report, Appendix* B.

FISHERY PIERS AND HARBOURS.

Fishery Piers and Harbours.

Acts 9 Vic., c. 3; 9 & 10 Vic., c. 75; 16 & 17 Vic., c. 136; 19 & 20 Vic., c. 37; 29 & 30 Vic., c. 45.

One memorial was received during the year 1876–77 for a new Pier at Ray, Lough Swilly, county Donegal.

The following is a Schedule of the memorials for piers, harbours, and other works received since the commencement of the year 1870, showing the nature of the work, and whether recommended, or in progress, &c. :—

Name and Situation.	County.	Description of Pier, &c.	Observations.
Ballyloughan,	Galway,	Repairs of Quay,	Not sanctioned.
Annalong,	Down,	To enlarge Harbour,	Not followed up by Memorialists.
Glin Pier,	Limerick,	To construct new Pier,	Completed and handed over to County.
Giles'-quay,	Louth,	To construct Pier and Landing Slip,	In progress under Board's Engineer.
Blackrock,	Louth,	Pier or Landing Slip,	Not followed up by Memorialists.
Courtown Harbour,	Wexford,	Pier to be replaced,	Completed.
Carrickfergus,	Antrim,	To improve and extend Harbour,	Harbour being vested in the Harbour Commissioners and cannot be transferred to the county, no grant could be made.
Port Oriel, Clogher Head,	Louth,	Do., do.,	In progress by Contract.
Mannin Bay,	Galway,	For a small Pier, Quay, and Landing Slip.	Not followed up by Memorialists.
Lower Ring, near Clonakilty.	Cork,	Pier,	Not recommended, as fishery interests would not derive sufficient benefit.
Ballycotton,	Cork,	To lengthen Pier and build Breakwater.	Not followed up by Memorialists.
Courtmacsherry,	Cork,	Pier and Dock,	In progress by Contract; nearly completed.
Greystones,	Wicklow,	Quay and Landing Slip, with approaches.	Not recommended.
Inishbofin Island,	Galway,	Pier,	Completed and handed over to County.
Inishshark Island,	Galway,	Slip or Landing Place,	Completed and handed over to County.
Pool Hurrin,	Donegal,	Pier and Slip,	*Not yet reported on by Engineer.
Malingbeg,	Donegal,	Landing Slip,	Not followed up by Memorialists.
Kinsale,	Cork,	Pier at "Scilly,"	Site not approved—see Kinsale "Town Rock."
Tawney,	Donegal,	Pier and Slip,	*Not yet reported on by Engineer.
Mucross,	Donegal,	Pier,	Not followed up by Memorialists.
Smeerogue, or Poulahly,	Galway,	For a Pier and Slip, with road thereto.	*Not yet reported on by Engineer.
Scattery Island, Lower Shannon.	Clare,	To enlarge and improve present Pier.	*Reported on by Engineer.
Ballysiggart Boat Port,	Donegal,	Pier,	*Not yet reported on by Engineer.
Bournapeaka Pier,	Clare,	Pier near Ballyvaughan,	In progress by Contract.
Molranny, Clew Bay,	Mayo,	Pier and Landing Slip,	*Reported on by Engineer.
Cape Clear Island,	Cork,	To repair and improve the Ship Basin at North Harbour or Keiran's Port.	Grant sanctioned, and contributions paid.
Rathmullan Pier,	Donegal,	Extension and rebuilding of Pier Head.	In progress by Contract; nearly completed.
Burton Port,	Donegal,	To repair and extend Pier and improve Harbour.	*Reported on by Engineer.
Inishbofin and Inishshark.	Galway,	For a navigable cut through the shoal, south side, and to improve Slip.	*Do.
Kinsale,	Cork,	Pier at "Town Rock," and approach Road and Boat Slips.	Site approved; waiting information from the Memorialists.
Cheek Point,	Waterford,	To extend and repair the old Pier,	*Engineer has not yet reported.
Passage, East,	Waterford,	For extension of North Pier as far out as the South Pier.	Not followed up by Memorialists.
Skerries Harbour,	Dublin,	For a Fishery Pier and some Wharfage and Harbour Accommodation.	Do., do.
Ray,	Donegal.	Pier on Lough Swilly,	*

As the works at the harbour of Ardglass will involve a large expenditure, Your Lordships have directed us, for the present, not to bring forward applications for grants in aid of fishery piers from any other places, with the exception of Kinsale. We have, therefore, taken no further proceedings in the cases in the foregoing Schedule which are marked thus (*).

The Ardglass Harbour Act, 39 & 40 Vic., c. 236 (Local), vesting the harbour in this Board, having received the Royal assent on the 15th August, 1876, we commenced the preliminary proceedings required by the Acts, lodged the provisional declaration, and took the necessary steps to obtain the assents of the rate-payers of the district and of the proprietor of the lands chargeable with the loan. These having been obtained, the other steps required will now be taken to enable us to proceed with the works.

The Bill for the improvement of Arklow Harbour, which was introduced last session, was withdrawn, owing to the opposition of the new Board of Directors of the Wicklow Copper Mine Company: the former Directors approved of the provisions of the Bill.

Ballyvaughan Pier, county Clare—Works of repair in progress.

Kilkeel Harbour, county Down—Report and estimate for repairs forwarded to the Lord Lieutenant.

Inland Navigations.

INLAND NAVIGATIONS.

Lower Boyne Navigation.

The works consisted of repairs to lock gates, river walls, and towing-paths, &c.—*See Report of Superintendent, Appendix* B.

River Maigue Navigation.

The works of this navigation are in very good repair, and the house and premises in good order.—*See Inspector's Report, Appendix* B.

Tyrone Navigation (Coalisland Canal).

This navigation has been maintained in good order, and the works have been limited to the repairs incidental to its maintenance.—*See Inspector's Report, Appendix* B.

Ulster Canal.

This canal has now been re-opened for traffic four years, but a very limited use has been made of it as a means of carriage, and there is no improvement in the amount of traffic. A moderate scale of dues was fixed with the view of giving encouragement to the trade in the district, but the result, up to the present, has not proved satisfactory as stated in our last report. Any improvement in the amount of traffic will depend chiefly on a through trade between the north of Ireland and Belfast, and the towns situated in the vicinity of the canal and on to Lough Erne, which can only be effected by the assistance of steam tugs, which are not yet used in Lough Neagh.

The works during the past year have been limited to the repairs incidental to its maintenance.—*See Inspector's Report, Appendix* B.

Shannon Navigation.

The works have been kept in good repair.—*See Inspectors' Reports, Appendix* B.

The gross receipts from all sources amounted to £3,946, and the charges of maintenance to £3,459, showing a surplus of receipts over the expenditure of £487. The sum received in respect of tolls was £2,146, against £2,003 for last year. The increase, £143, is satisfactory evidence of the progress of trade on the navigation.

Post Roads.

POST ROADS.

Act 6 & 7 Wm. IV., cap. 116, section 61.

Applications from the Postmaster-General were received during the past year for repairs of post roads situated in the following counties:—

CARLOW—*Carlow to Tullow.*
CLARE—*Bell Harbour and New Quay, near Ballyvaughan.*
CORK—*Cork to Crosshaven.*
CORK—*Cork to Carrigrohane.*

County of Town of Drogheda—*Post Office to Railway Station at Drogheda.*
Dublin—*Blanchardstown to Clonee and County Boundary.*
Leitrim—*Drumshambo to Drumkeeran.*
Londonderry—*Magherafelt to Draperstown.*
Mayo—*Swinford to Ballyhaunis.*

The repairs so far as preliminaries are completed, and where the road is not already under contract, are being executed under the superintendence of the respective County Surveyors. The cost of the works is repayable by Grand Jury Presentment at subsequent Assizes.

COUNTY SURVEYORS' ASSISTANTS.

County Surveyors' Assistants.

Nine candidates for the office of County Surveyors' Assistants have been examined under the Warrant of the Lord Lieutenant, pursuant to the provisions of the Act 6 & 7 William IV., c. 116, and their qualifications certified to the County Surveyors, as follows :—

Counties.	County Surveyors.	Number of Assistants.
Antrim,	Alexander Tate,	One.
Clare,	John Hill,	One.
Down,	Bernard B. Murray,	One.
Fermanagh,	Frederick Willson,	One.
Kilkenny,	Peter Burtchaell,	One.
Leitrim,	James B. Pratt,	One.
Londonderry,	A. C. Adair,	Three.

ARBITRATIONS UNDER "THE RAILWAYS ACTS, IRELAND (1851, 1860, 1864)."

Under the Railways Acts, Ireland (1851, 1860, 1864).

Arbitrations have been applied for, and Arbitrators appointed for the following, viz. :—
Waterford, Dungarvan, and Lismore Railway—Additional Premises at Kilmacthomas Station.
Ballymena and Larne Railway—Land for construction of Line—Two arbitrations.
Dundalk, Newry, and Greenore Railway—Land at Greenore.
Midland Great Western Railway of Ireland—Land at Westport.
Ditto, do. Extension from Enfield to Edenderry.
Dungannon and Cookstown Railway—Land for construction of Line.
Great Southern and Western Railway—Lands in Cork city.
Corporation of Cork—Lands, &c., for making a new Street, &c., in the city.
Omagh Town Commissioners—Lands for Water Works.
Galway Poor Law Guardians—Lands for Cemetery.
Belfast Water Commissioners—Lands for Water Pipes.
Mulkear Drainage Board, co. Limerick—Lands for additional Works.
River Bride and Kilcrea Drainage, co. Cork—To determine damage to Lands—Two arbitrations.
Rathangan Drainage Board, co. Kildare—Lands for Works.

TRAMWAYS (IRELAND) ACTS.

Tramways.

23 & 24 Vic., c. 152; 24 & 25 Vic., c. 102; and 34 & 35 Vic., c. 114.

Application having been made, pursuant to these Acts, for a portion of the Dublin Street Tramways, the engineering inquiry and report required have been made by Mr. William Forsyth, C.E.

BRIDGES.

Bridges.

Wellesley Bridge, Limerick.

This bridge, which became vested in the Commissioners by the Act 30 & 31 Vic., cap. 53 (1867), was taken over from the lessees on 20th May, 1868, since which period we have maintained the bridge, paid the interest on the commuted debt of £10,000, including arrears of same from 1st July, 1866, and discharged £1,824 of the principal, reducing it to £8,176.

The tolls received during the year amount to £920 against £955 in the previous year.

BRIDGES BETWEEN COUNTIES, UNDER "THE BRIDGES (IRELAND) ACTS."

4 & 5 Wm. IV., c. 61; 2 & 3 Vic., c. 50; 30 & 31 Vic., c. 50; and 38 & 39 Vic., c. 46.

Youghal Bridge.

(Acts 9 Geo. IV., c. 53; 30 & 31 Vic., c. 57; 36 & 37 Vic., c. 46; and 36 & 37 Vic., c. 47.)

On memorials from the Grand Juries of the counties of Cork and Waterford, the Lord Lieutenant, on our recommendation, appointed Messrs. Forsyth, Kirkby, and Tarrant, to inquire into and report upon the expediency of having a new bridge built over the River Blackwater, near Youghal.

Carrick-on-Suir Bridge.

The Lord Lieutenant, on our recommendation, appointed Messrs. Forsyth and Cotton to inquire into the statements contained in a memorial of the Grand Jury of the South Riding of the county of Tipperary, praying for the re-building of the bridge over the River Suir at Carrick-on-Suir.

The requisite steps are being taken in both cases.

BLACKROCK ROAD, COUNTY DUBLIN.

In compliance with Order of the Privy Council in Ireland, dated 31st May, 1876, the Board proceeded to undertake the repair of the public road and footpaths from MacCartney's-bridge at Baggot-street to the Cross of Blackrock, a total length of 1,212 perches. The works, consisting of (1) cleaning and removing mud, rubbish, &c., (2) restoring surface by filling ruts and spreading road metalling over its entire extent, (3) repairs of footways, channels, curbs, and crossings, were at once undertaken, under the superintendence of the Board's officers, and were completed at a cost of £5,105; the road having been in a state of utter disrepair. The completion of the works was duly represented, and the necessary proceedings will be taken to have that amount repaid to the Board, levied as follows: one-third upon the city of Dublin, one-third upon the county of Dublin, and one-third upon the barony of Rathdown.—*See Engineer's Report, Appendix* B.

We have the honour to be,

Your Lordships' obedient Servants,

J. G M'KERLIE,
W. R. LE FANU,

Commissioners of Public Works.

E. HORNSBY, *Secretary,*

Office of Public Works, Dublin,
1*st June,* 1877.

APPENDIX B.

Report of Mr. Robert Manning, M. Inst. C.E., Chief Engineer.

APPENDIX B.

INLAND NAVIGATIONS AND HARBOURS.

REPORT of Mr. ROBERT MANNING, M. Inst. C.E., Chief Engineer, on PIERS and HARBOURS. For the year ending 31st March, 1877.

Office of Public Works,
30th April, 1877.

I beg to lay before the Board the report of the works in charge of the engineers' branch during the year ending 31st ult.:—

ROYAL HARBOURS.

Kingstown Harbour, County Dublin.

The works for the completion of the sea slope near the west pier-head, alluded to in my last annual report, were finished towards the end of the year 1876 in a very substantial manner. The sea face of the east pier did not require any repair, and, therefore, the expenditure during the year was mainly on the maintenance of the inner works of the harbour. The reconstruction of the "Wolf" jetty at the east pier was completed; the inner faces of the wharves and parapets were made good; satisfactory progress was made in erecting the new system of fenders and sheeting for the protection of the Mail Packet Pier from injury by collision with the mail packets; the coastguard slips were repaired; a screw mooring was fixed in the bight of the east pier; and all the works of the harbour, including roads and buildings, were maintained in good order.

Although there was a succession of heavy gales during the winter, and damages were reported from several other harbours between the 11th November and 2nd December, no damage worth speaking of occurred at Kingstown till the 3rd of January last. On that day there was a heavy southerly gale, and the water inside the harbour rose to fifteen feet above low water of spring tides, being more than three feet above the ordinary level; this gale was accompanied by a very heavy sea. At the west pier the sea tore up the paving of an ashpit at the rere of the lightkeeper's house, and, following the line of a soil pipe, tore up the filling, and did much damage to the sea pavement. This injury commenced at the upper part of the sea slope, eight or ten feet above high water. The toe, or lowest part of the slope, for a height of about nine feet, was, however, uninjured. At the east pier the sea rolled over the parapet and roadway, tearing the latter up (in some places to a depth of three feet); the rubble breakwater on the sea slope was disturbed, and part of it carried away by the sea. I estimated the amount of damage done to the works of the harbour at a sum of £1,500.

Registry of Rainfall at Kingstown for year ending 31st March, 1877.

Total for year,			38·95

Dredging.

The deepening of the harbour has been continued during the year, and a quantity of 22,421 cubic yards dredged.

The dredger is now undergoing repairs to her boiler, machinery and hull.

Howth Harbour, County Dublin.

Satisfactory progress was made with the works at the sea pavement of the east pier, 1,560 superficial yards of which was reconstructed. The roads, wharves, curing sheds, &c., were efficiently maintained.

I regret, however, to be obliged to state that very great damage has been done to the works of the harbour from a succession of gales, the first of which occurred on the 30th September last, and the last so late as the 27th April. On the 9th January last I reported as follows:—"Both east and west piers have suffered more or less for their entire length. The concrete work of 1875 and 1876 (522 feet in length, and exposing a surface of 24,000 superficial feet to the sea,) has escaped with comparatively little injury, probably not exceeding £150; but that executed in the year 1874, next to the old rubble slope, has been seriously damaged. The entire of this last-mentioned slope has been nearly demolished; the hearting has been torn up, exposing the parapet (in one place to a depth of nearly eight feet), the coping of which has been carried away for a length of 300 feet, and thrown either on the quay or into the harbour. Three hundred square yards of wharf paving have been torn up. Of eighteen wooden sheds erected by the Board and let to fish-curers, only four remain standing."

It is well to state that the damage to this harbour (as at Kingstown) commenced from ten to fourteen feet above the level of high water, the sea tearing up the old rubble pitching and washing out the hearting, notwithstanding which the new work below it remained uninjured for a length of more than 500 feet, as above described. I estimated the damage done to this harbour at £5,000.

Donaghadee Harbour, County Down.

Damages having been reported to this harbour by the storm of 2nd December last, I visited it on the 8th of that month, and ascertained the amount of the damage to be £250. I again made an inspection of the harbour on the 11th January, when I found that the recent gale had much increased the damage, which here, also, had commenced above the level of high water. The sea first tore up the heavy pitched slope and washed out the rubble filling; it then attacked a heavy well-built wall (forming the foundations of the parapet,) which the destruction of the slope had exposed, in which it made a breach, fortunately, however, without injury to the parapet itself. Lemon's wharf, inside the harbour, was also injured. In my report of the 9th January I estimated the total damage at £1,500.

Dunmore Harbour, County Waterford.

The works at this harbour consisted in repairs to the sea slope; 1,653 cubic yards of sea slope and toe of pavement were constructed, and 586 superficial yards of same jointed with cement concrete. Part of the stone jetty and wall adjoining it, referred to in my last annual report, has been taken down, and is now in course of re-construction.

From the 11th to the 16th November, 1876, there was a continued storm, which damaged the sea slope, tore up the waggon rails, which were bolted on top of parapet, and disturbed some of the ashlar masonry.

In the gale of the 3rd January the wind shifted from E.S.E. to S.W., and but little damage occurred.

I estimated the damage done during the gales at £300.

Fishery Piers and Harbours.

Glin Pier, County Limerick.

The works of this pier are completed, and it is now in charge of the Grand Jury of the county Limerick.

Courtmacsherry Harbour, County Cork.

The masonry of this pier is finished, but a small quantity of excavation still remains to be removed from the bed of the harbour; it is expected that this will be also finished within a few weeks.

Port Oriel Harbour, County Louth.

The excavation of this harbour is in progress.

Ballyvaughan (Bournapeaka) Pier, County Clare.

Early in the past year Messrs. Mannix and Slade, the contractors, commenced work at this pier. Up to the 20th July they were principally occupied in forming and fencing approach road to the pier; at that date the setting of concrete *in situ* commenced, the total quantity thus set, up to the present, being 765 cubic yards. Concrete blocks, representing a total quantity of 286 cubic yards, have been made, of which about 56 cubic yards have been set. The works now extend to a length of about 280 feet, the several parts of which are in different states of progress.

Rathmullen Pier, County Donegal.

The works of this pier, the execution of which the Board let by contract to Mr. William J. Doherty, were commenced and completed during the year. The contractor is now employed in putting up some timber fenders to protect the pier from collision; this work will be finished during the ensuing month.

Giles'-quay, County Louth.

At this pier 382 concrete blocks (about 750 cubic yards) were made, of which 184 were set. A quantity of 803 cubic yards of concrete was set *in situ*, 2,252 cubic yards of shingle hearting to pier, 290 superficial yards of wharf pavement, and 80 lineal feet of wharf coping set, and 366 cubic yards of sand and gravel excavated out of the bed of the harbour.

The works of the pier are completed for a length of a little more than 350 feet, and a further length of forty feet is in different stages of progress.

On the 3rd of December the Clerk of works wrote, "I am sorry to have to report to you that there is serious damage done to the works and staging. The storm on last night was fearful, accompanied by an extraordinary high tide; the eastern traveller was swept off, and the western one is in a dangerous position. I fear the next tide will do further injury."

I visited the pier on the 5th, and, as reported to the Board on the 7th, I found that a length of 340 feet of the pier which was completed was *absolutely uninjured;* that the damage done to the masonry of the unfinished work at the outer end (then in progress) was only £101 10*s.*; and that the whole damage done, including injury to machinery and loss of staging, &c., &c., would be covered by £350.

On the 3rd of January the Clerk of works reported that there was a terrific storm, (with an extraordinary high tide), blowing from the east, which swept off the western traveller and a portion of the staging, together with a large quantity of filling. In my report of the 9th January last I estimated the entire damage done at the sum of £500.

Ballyvaughan (Old Pier), County Clare, (Repairs).

The works of this pier having received serious damage from the sea, a memorial was presented to His Grace the Lord Lieutenant, on which an order was issued for its repair under the directions of the Board.

The works were commenced on the 1st January last. The breach in the sea wall is now made good nearly to the level of the wharf; and that at the pier-head is also completed. The bulk of the work is, therefore, done, and the whole will be completed during the summer.

Maintenance of Drainage and Inland Navigations.

Glenariff District, County Antrim.

This work was completed on the 10th October, 1876, at a total cost for all purposes of £489 18*s.* 2*d.* The amount of the estimate was £500.

Monivea Drainage District, County Galway.

The works in this district are in charge of Mr. E. Townsend, C.E.

Borris-in-Ossory Drainage District, County Tipperary.

Those works were carried on under the superintendence of Mr. H. J. B. Kane, C.E. His report is annexed.

Loughans Drainage District, County Kilkenny.

The execution of the maintenance works in this case are being proceeded with, under contract, by Mr. Kane, C.E., representing "The Arterial Drainage and Improvement of Lands and Construction Company, Limited." The long-continued wet weather impeded their progress. They are expected to be completed early in the current year.

Ballinamore and Ballyconnel Navigation and Drainage.

The repairs to an embankment, weir, lock-gates and sluice, at Ballyconnel, were let by contract to Mr. Lang. The estimate for these repairs was £130. The total cost was £130 14*s.*

A memorial having been presented on behalf of Mr. O'Beirne, one of the proprietors of the drainage district, for the renewal of an accommodation bridge over the canal, the necessary legal steps having been taken, I received authority to proceed with the work, on the 23rd April, and the construction of the bridge is now in hands.

County Roads' Maintenance.

Blackrock-road, County Dublin.

On the 27th March last, I made the following report on this:—

"In pursuance of an Order in Council, bearing date the 31st May last (and transmitted to the Secretary of this Board by the Under-Secretary of State for Ireland, on the 9th of June following), I was directed by the Board to proceed with the repairs of the portion of this road extending from Macartney's bridge at Baggot-street, to the Cross of Blackrock, a distance of 1,212 statute perches.

The work of repair was commenced on the 19th of June. Since that time a quantity of 9,963 cubic yards of broken stone has been spread on the road, and 8,606 cart-loads of mud removed from it. The water-tables, drains and footpaths have been cleaned and repaired, and the surface has been freed from stagnant water. The total expenditure, as reported by the accountant, is £5,105.

I beg to report that the road is now in good order."

By direction of the Board, I attended the Grand Jury of the county of Dublin at the Easter Presenting Term, and gave them all particulars they required of me. The expenditure on the road was as follows:—

	£	*s.*	*d.*
Broken stone, 9,963 cubic yards .	3,838	19	7
Carting mud off road, 8,636 cart-loads	285	0	1
Rolling surface of paved road .	6	10	0
Manual labour . . .	679	16	4
Plant, tools, pipes, traps, stores, &c.	103	9	1
Wages of overseers and pay clerk .	202	12	6
	£5,116	7	7
Plant and tools transferred to Kingstown harbour . .	11	7	7
	£5,105	0	0

APPENDIX B.

Report of Mr. Robert Manning, M. Inst. C.E., Chief Engineer.

I beg to remark that this road is one of the most important outlets from Dublin. The circulation of traffic upon it reaches nearly to 1,200 vehicles daily, and to maintain the surface of the road in good order requires constant care. For several years past the expenditure upon repairs has been insufficient, and the result has been the necessity of the very large outlay on the road during the past year. It will be observed that nearly four-fifths of that expenditure has been for broken stone, of which nearly 10,000 cubic yards were spread on the road; this large quantity represents, however, a depth of only 4½ inches over its entire surface. It is quite obvious that if the road is suffered to remain without repair for any length of time (as it has now been for more than a month), it will revert to the condition in which it was when the Board took charge of it last June.

DRAINAGE AND IMPROVEMENT OF LANDS.

Inspections of the works have been made in the eight districts in progress during the year. Certificates have been given to the amount of £40,500.

ROBERT MANNING, Engineer.

REPORT ON STORM DAMAGES.

I regret to be obliged to report to the Board extensive damage to the works of the several harbours under their control during the gale of Wednesday last, the 3rd inst.

From the 11th November to the 2nd December, damages were reported from Dunmore, Donaghadee, Howth and Giles'-quay. I have since visited the three last-named harbours. At Donaghadee the damage was comparatively slight, amounting to about £250, for which the Treasury authorized an additional estimate. At Howth the cost of repairing the damage amounted to about the same sum.

At Giles'-quay the damage to the work itself was £101 10*s.*, but loss of machinery and previous damage was estimated at £250 more.

On the 2nd inst., I was enabled to report to the Board, that no further damage from the continued heavy gales and sea had been reported. On the following day, however, there was a heavy southerly gale, and the high water within the harbour at Kingstown stood at 15 feet, being more than 3 feet over the level of high-water spring tides. This gale was accompanied by a heavy sea, and from the fact that equal injury was done at the lee and weather sides of the bay, there can (in my opinion) be no doubt that a great ocean wave swept through the Irish Sea.

ROYAL HARBOURS.

Kingstown, County Dublin.

The sea pavement at the west pier-head was torn up to the extent of 1,200 superficial yards, and the tool-house and its contents carried to sea; on the east pier the sea rolled over the roadway, tearing it up in some places to a depth of 3 feet. A large extent of the rubble breakwater on the sea slope was carried away or displaced.

Howth, County Dublin.

Both east and west piers have suffered more or less for their entire length. The concrete work executed during the years 1875 and 1876 (522 feet in length, and exposing a surface of 24,000 superficial feet to the sea), has escaped with comparatively little injury, probably not exceeding £150; but that executed in the year 1874, next to the old rubble slope, has been seriously damaged. The entire of this last-named slope has been nearly demolished; the hearting has been torn up, exposing the parapet in one place to a depth of nearly 8 feet, the coping of which has been carried away for a length of 300 feet, and thrown either on the quay or into the harbour; 300 square yards of wharf paving have been torn up; of eighteen wooden sheds erected by the Board and let to fish curers, only four remain.

Donaghadee Harbour, County Down.

At this harbour both northern and southern piers have suffered; the sea pavement having been breached in seven different places. The sea first tore up the heavy stone pitching which formed the sea slope, then removed the rubble hearting and attacked the foundations of the cut stone parapet, from which it took nearly 100 cubic yards of rubble masonry. The parapet itself, I am happy to say, was uninjured.

Dunmore, County Waterford.

No further damage is reported from this harbour.

FISHERY PIERS.

Rathmullen, County Donegal.

Damage has been done to the staging by collision of a vessel, but no other injury is reported by the contractor.

Bournapeaka, County Clare.

No damage reported.

Port Oriel, County Louth.

The works here consist entirely of rock excavation, and would not therefore suffer.

Damage is reported at Kilkeel, county Down, and Kilmore, county Wexford; those piers are in charge of the counties.

It is impossible, at present, to make a proper examination of the damages sustained at the several harbours. From the materials at hand I beg to submit the following approximation:—

I. Kingstown . .	£1,500
II. Howth (including sheds) .	5,000
III. Donaghadee . .	1,500
IV. Dunmore . . .	300
Total Royal Harbours	£8,300
Giles'-quay fishery pier .	500
	£8,800

The whole of this sum will not be required during the ensuing financial year. I estimate the amount, in addition to previous estimates, as follows:—

Kingstown .	£1,000
Howth . .	1,500
Donaghadee .	750
Dunmore . .	200
	£3,450

I beg respectfully to request that I may be authorized to proceed with the necessary repairs with as little delay as possible.

ROBERT MANNING, Engineer.

Office of Public Works, Dublin,
January 9, 1877.

Report of Mr. Edward H. Alcock, Harbour Master.

REPORT by Mr. EDWARD H. ALCOCK, Harbour Master, on the NUMBER of VESSELS frequenting DUNMORE HARBOUR. For the year ending 31st March, 1877.

Harbour House, Dunmore, East,
March 23rd, 1877.

SIR,—In accordance with your directions, I now make my annual report on the fisheries here.

All through the year 1876, fish, generally speaking, was scarce, and the trawl and line boats in the harbour failed to make an average season of it. Ocasionally mackerel, whiting and hake were taken in fair quantities, but no large hauls, either with seines, trawls or lines, were made, while, with regard to the herring and pilchard, I may say they failed to put in an appearance at all. The shell fishermen did much better, there being a plentiful supply of both lobsters and crabs to be had during the summer.

We have had from 15 to 22 large cutters trawling in the deep out of here throughout the winter, but as a whole their season has not proved a remunerative one. No doubt some large hauls of the rougher sorts of fish, such as plaice and skate, were made; but the better paying class of head fish, including turbot, brit, sole and dory, was scarce, and the same may be said of cod, ling and eels. Besides such drawbacks, the fisherman has had to contend with an exceptionally wild winter; the storms which frequently visited these coasts having been very severe indeed.

The salmon fishery in both the Waterford and New Ross rivers has proved to be a very good one, the fish having been plentiful, of good size and in prime condition; the market opened at 2*s.* 4*d.* and gradually fell to 1*s.* 4*d.* per pound. The present salmon season (1877) did not commence as favourably as usual, the fish being scarce and small; but it is improving. The market opened at 3*s.*, rose to 3*s.* 4*d.*, and then gradually fell to 1*s.* 6*d.* per pound, at which it stands at present.

Your ever obedient servant,

EDWARD H. ALCOCK, Harbour Master,
Dunmore, East.

To Edward Hornsby, Esq.,
Secretary, Office of Public Works,
Custom House, Dublin.

Report of Capt. Henry D. Burney, Harbour Master.

REPORT by Captain HENRY D. BURNEY, R.N., Harbour Master, on the NUMBER of VESSELS frequenting HOWTH HARBOUR. For the year ending 31st March, 1877.

Harbour Office, Howth,
March 31st, 1877.

SIR,—In compliance with your letter of the 10th ultimo, I forward a report on the state of the fisheries, &c., of Howth, for the year ended 31st March, 1877. The fishery at this port has maintained the steady rate of progress of preceding years, which is very satisfactory. The port continues to be visited by large fleets of boats from Cornwall, Scotland, Isle of Man, and from all parts of Ireland. The take of fish was 86,910 mease of herrings, sold at an average of £1 6*s.* 10*d.* per mease, making an aggregate of £116,604.

The tolls on the 800 boats and 195 cargo vessels amounted to £520, the payment of which, in some cases, is made with great reluctance. I need not point out the trouble entailed in collecting dues from this class of people, I believe much of which would be avoided if a by-law were obtained, making it compulsory to report the first arrival in the year within 24 hours after entering the harbour. The following is a return of the commerce of the port, viz. :—

Vessels frequenting the port during the year :—

Fishing boats	. 850 .	tonnage,	15,480
Cargo vessels	. 195 .	„	11,415

Imports.

Salt .	. 1,320 tons.
Coals .	. 6,000 „

Exports.

Limestone	. 4,000 tons.

Tonnage of vessels carrying fish—5,244 tons.

I have the honour to be, sir,

Your obedient servant,

HENRY D. BURNEY,
Harbour Master.

Secretary, Board of Works,
Custom House, Dublin.

Report of Mr. H. J. B. Kane, C.E.

REPORT of Mr. H. J. B. KANE, C.E., on the STATE of the BORRIS-IN-OSSORY DRAINAGE MAINTENANCE DISTRICT. For the year ending 31st March, 1877.

BORRIS-IN-OSSORY DISTRICT.

Maintenance Works.

The Arterial Drainage, Improvement of Lands, and Construction Company (Limited.)
Offices—1, Foster-place, Dublin, March 29th, 1877.

SIR,—Referring to your circular of 10th March, I beg to state that all the works of maintenance are now fully completed on this district; and said works have been of great benefit to the lands included therein, which lands, notwithstanding the wetness of the past year, have been comparatively free from floods.

I have the honour to remain, sir,

Your obedient servant,

H. J. B. KANE.

The Secretary, Office of Public Works, Dublin.

APPENDIX B. EXTRACTS from the REPORT of Mr. JAMES M. MERRICK, on the STATE of the UPPER SHANNON NAVIGATION from SHANNON HARBOUR to LOUGH ALLEN; also the BOYLE WATER NAVIGATION from its Junction with the SHANNON to DRUM WHARF, near BOYLE. For year ending 31st March, 1877.

Extracts from Report of Mr. James M. Merrick, Inspector.

Shannon Office, Athlone,
31st March, 1877.

SIR,—I beg leave to submit the following report on the state of the works in my charge, on the Upper Shannon and the Boyle Water.

Navigation Course from Shannon Harbour to Spencer's Wharf, Lough Allen.

The navigation course from Shannon harbour to Spencer's wharf, 90 miles in length, is defined by thirty-three stone beacons, 297 iron or timber guide piles, and fifty-four iron or timber buoys; those on the Connaught side of the navigation course being painted red, and on the Leinster or east side black.

The severe storms and unusually high floods of last spring and winter caused a great amount of injury to beacons, piles and buoys, rendering it necessary to underpin, or point with cement, fourteen stone beacons, and erect forty-three new larch guide piles to replace decayed ones; eighty-six piles were bushed, or boarded on top, to render them visible in twilight or foggy weather, fifty-seven were painted in the distinguishing colours, red or black; twelve new buoys were moored, and twenty old ones were taken up, painted and re-moored.

In consequence of the high floods in January last, covering the callows at west side of river, between Athlone and Lough Ree, I was obliged to erect six temporary guide piles on the margin, to indicate the channel; and as the flood of last January reached a height of 10½ feet above the summer level below Athlone weir wall to Clonmacnoise (10 miles), covering the tops of several of the guide piles, I was obliged to erect six temporary guide piles alongside of those that were covered, to enable steamers to ply to and from Shannon harbour and Athlone.

Shannon Bridge.

Some slight repairs were effected on the sheeting of roadway of swivel bridge, which is much decayed, and will soon require to be renewed.

The toll-collector's house has been lime-washed, and roof repaired.

Athlone.

The lock-gates at this station were tarred, and iron-work above water painted. A piece of red pine, 6 feet long by 12 inches square, was inserted into one of the mitre posts, to repair a defective part. The machinery for opening and closing the gates has got a thorough overhaul, and two new cast-iron crab barrels were erected in the gear-boxes to replace two that were worn out.

One hundred and seventy cubic yards of silt were raised from the navigation course by bag and spoon dredging.

A large quantity of weeds was removed from the navigation course, between the Athlone and railway bridges.

Sixty-six tons of broken stones and gravel were spread on the west wharf. The traffic on this wharf is daily increasing.

The rain gauge that was erected on the spoil-bank, at east end of weir wall, has been maliciously broken up and carried away.

The high floods of January last made a breach in the boundary wall, at the King's meadow, 94 feet in length by 7 feet in height and 2 feet in thickness. This breach must be repaired next summer.

The machinery of the swivel bridge was overhauled and gearing adjusted; the roadway sheeting, which is much worn, has been repaired by the insertion of 20 square feet of planking.

The toll-collector's house and office has been lime-washed and woodwork painted.

A new slated roof, 26 feet by 21 feet, was erected on the Board's store in Connaught-street, to replace the old one, that fell in from decay.

Lanesborough.

Several cogs having been broken in the large driving pinion of machinery of swivel bridge, a new one was substituted.

Tarmonbarry.

The lock-gates were tarred, and the ironwork painted.

A new red pine balance beam, 43 feet in length, was erected on west leaf of the breast-gates, to replace a decayed one. The foot-boards were repaired, and two new iron brackets furnished.

Some slight repairs were effected on the hall-door and frame of the Board's house, at the bridge, and the woodwork painted.

The machinery of swivel bridge was adjusted, and the iron trackway on platform repaired.

Cloondrah.

The lock-house at this station, which was in a very bad state, has been thoroughly repaired; the roof of store was thatched, and a new door and frame erected to replace the former ones decayed.

A pair of new breast-gates, each 13 feet by 10 feet high, were erected at Cloondrah lock, to replace decayed ones; a considerable leakage from the east forebay embankment into the lock chamber was completely staunched.

The 45-ton spoon and bag dredging barge (built in 1840) has been docked at the Royal Canal dry dock (adjoining this station), and repaired.

Rooskey.

The lock-gates were scraped and tarred, and the ironwork painted; the balance-beams are very much decayed, and will soon require renewal; the sluice gear of lower gates was repaired.

Two new oak stop-posts were erected at the lock to replace decayed ones.

The roadway of swivel bridge was repaired at each end by twelve square feet of oak sheeting two inches thick.

The lock-house was lime-washed, and chimney-stack and ridge-tiles on roof were pointed with cement.

Jamestown Canal, Lock, and Lock-house.

The lock-gates were scraped and tarred, and iron-work painted; new footboards of red pine were erected, and two cast-iron brackets repaired.

Two hundred and fifty-five perches of boundary drain were scoured up, twelve feet in width.

In consequence of the exceedingly high floods at the end of December and beginning of January, the water overflowed the banks, which rendered it necessary to raise about 500 yards at both sides of canal, from twelve to twenty inches, with sods, planks, and stones. The water rose with such rapidity on the 30th and 31st of December, that the sodding was carried on in nine inches of overflow. The banks stood the increased pressure very well, but they will require to be permanently raised and strengthened next summer.

The roof of mill building at Jamestown suffered much from the storms of last winter.

Carrick-on-Shannon.

The roof of the toll-collector's house and office was repaired with four square yards of new slating, having been injured by the storm in January.

The sewers in connexion with the harbour and wharves were scoured up, and two guide piles were erected on the site of a lumber boat that sunk near the navigation channel.

Locks and Lock-houses at Battle Bridge and Drumleague; also Lough Allen Canal and banks.

The lock-gates at Battle-bridge were tarred, and ironwork painted.

The lock-house has been lime-washed, the slated roof pointed, and the chimney-stack repaired.

An overflow conduit of red pine, eighteen feet in length, two feet in width, and one foot high, was inserted in canal bank near the lock, to carry off excess of water on the four-feet six-inch level and prevent overflow on banks, the sluices of breast-gates not being sufficiently large for that purpose.

Two hundred and sixty-four perches of boundary drain was scoured up between Battle-bridge and Drumleague locks.

The lock-gates at Drumleague were tarred, and ironwork painted. The lock-house was limewashed, and the roof, which suffered much from storms last winter, was thoroughly repaired. A new deal floor, fifteen feet square, was erected over kitchen, to replace an old one.

The heavy rains in December raised the water of Lough Allen very suddenly. On the 26th December the water on gauge was eight feet, and on the 29th it was nine and a-half feet, having risen eighteen inches in three days. I therefore got the stop-gate timbers into their grooves on the 30th at 4 P.M. As the banks were often before subjected to a pressure of nine and a half feet, I considered that the safety of the banks was insured; but at 9 P.M. (five hours after the stop-gate was secured) a rupture took place in the west bank, 550 yards north of Drumleague lock.

The repair of this breach was at once commenced, and was finished and navigation resumed on the 26th of March.

The late flood was the highest the country people ever remembered for the last fifty years in Lough Allen.

The Boyle Water.

The lock-gates at Knockvicar were tarred and the ironwork painted.

The platform of timber bridge on towing-path was carried away by the high flood on the 2nd of January. It was towed back and refixed, the masonry of piers being also repaired.

General State of Harbours and Wharves.

The harbours and wharves at Lecarrow, Dromod, Drumsna, Carnadoe, Jamestown, Kilbride, and Drumshambo, on the Shannon, and at Cootehall-bridge and Knockvicar on the Boyle Water, are in a good state of repair.

I am, sir, your obedient servant,

JAMES M. MERRICK, Inspector.

To the Secretary, Board of Public Works,
Custom House, Dublin.

EXTRACTS from REPORT of Mr. WILLIAM MOLLOY, Inspector, on the STATE of the SHANNON NAVIGATION (LIMERICK DISTRICT), and the MAIGUE NAVIGATION. For the year ending 31st March, 1877.

Extracts from Report of Mr. William Molloy, Inspector.

Shannon Office, Limerick,
31st March, 1877.

SIR,—I beg leave to submit to you, for the information of the Board, the following report on the state of the works on the Lower and Middle Shannon, and also the Maigue Navigation, which have been carefully maintained during the past year:—

Querrin Pier, Co. Clare.

The pier, harbour, and roadway at this station are in good repair. No expenditure incurred during the past year.

Kilrush Pier and Harbour, Co. Clare.

The pier, harbour, and cranes are in very good repair. The heavy gales during the past year have done some trifling injury to the western side of the pier, which has been secured. The top surface of the old pier has been repaired with 25 tons of broken stones. The hoisting crane at the steamboat berth, from the constant working, was very much worn; it has been thoroughly repaired; both cranes have been cleaned and painted; the storehouse and office coated with well-boiled Stockholm tar.

Saleen Pier, Co. Kerry.

The surface of the pier has been repaired with 20 tons of strong gravel. The frames, doors and windows of the collector's house were very defective, being exposed to a westerly wind. They have been replaced by two new frames and doors, six window frames and sashes glazed and painted, and the house limewhitened.

Kilteery Pier, Co. Limerick.

The works at this station are in good repair. No expenditure incurred during the past year.

Foynes Harbour, Co. Limerick.

The wharf has been repaired with 20 tons of broken stones. The stone pitching of the breakwater suffered a good deal of injury from the heavy gales during the past winter; it has been thoroughly repaired, and the three hoisting cranes painted. The accumulation of silt in the harbour is still on the increase, and the passenger steamer cannot touch at the end of the pier at low water in consequence of this accumulation.

Kildysart Pier, Co. Clare.

The causeway leading to the pier has been repaired with 25 tons of strong gravel from the beach.

Clare Harbour, Co. Clare.

The wharf has been repaired with 40 tons of broken stones; the berths for vessels cleaned and made even; the hoisting crane painted, and a new short link chain has been supplied for same; the collector's house limewhitened.

Limerick Navigation.

The lock-gates, canal banks, wharves, roadways, bridges, culverts and towing-paths, between Limerick and Killaloe, a distance of sixteen miles, have been well and carefully maintained, no accident having occurred during the recent high water. In consequence of the high floods during the past winter, the water covered the towing-paths in several places on the Shannon levels; the horses could not tow the trade boats, they had to be towed by tug steamers; the top of the towing-paths suffered a good deal of injury, and several slips took place in the sod embankments. When the water subsided they were repaired without delay. The following works and repairs have been executed, viz.:—The roadway and wharf between Clare-street and the Grand Canal Company's stores have been repaired with 70 c. yards of broken stones; the cast-iron pillars, 28 in number, cleaned and painted; the towing-paths have been repaired with 275 tons of strong gravel, 65 yards of superficial stone pitching, and 312 yards superficial of sodding on slopes of banks; 2,800 perches lineal of boundary drains have been cleaned up and deepened. The lock-gates, twenty-five pair in number, have been all kept in good order; one new pair of deep gates made and erected; thirteen new footboards, twelve new elm sluices, twelve loggerheads, twenty-seven uprights and brackets, four racks, four pinions, four rollers, and five balance-beams put on the different gates; the woodwork to water level coated with Stock-

APPENDIX B.

Extracts from Report of Mr. William Molloy, Inspector.

holm tar, and the iron and woodwork over water level painted in oil. The middle clapping sill of Cussane lock was very defective, chipped and broken in several parts, the leakages very great. I put on a thorough metal casting on top, 1⅛-inch thick, securely bolted and leaded, which had the desired effect, and stopped all the leaks. Two oak stop-posts put down at Gillogue. The lock-houses, stores and offices along the navigation, twenty-three in number, have been cleaned, repaired, and limewhitened. One new store gate for Grand Canal Company's store, eleven feet square, framed, sheeted with 1-inch sheeting, with wicket-door, swing-bar, run on metal rollers, made and erected.

World's End.

The works at this station are in good repair. No expenditure incurred during the past year.

Ardclooney River.

This river continues to be an annual source of expense, as the autumn floods bring down large quantities of shingle and gravel from the Clare mountains, the chief portion of which is trapped above the towing-path, and in time of rapid floods a large quantity is driven into the navigation course, which has to be dredged out; on this year 3,100 cubic yards have been removed by horses and carts, and 1,320 tons dredged from the navigation course; 181 perches of back drain cleaned up.

Killaloe.

The collector's and caretaker's houses, stores and offices limewhitened. The C dredger has been repaired, painted, and her deck caulked; a new set of tubes, thirty-seven in number, have been put into the boiler. One hopper barge repaired; four row-boats repaired and painted; six pairs of oars made for small boat at different stations. Slip yard—The framing of the capstan and the timber of the carriage ways for winding up the boats became defective and rotten; both had to be renewed.

Scarriff and Tomgrany Quays.

Both quays are in good repair. At the entrance to the Scarriff harbour, at the junction of the Shannon and Feakle rivers, there was an accumulation of gravel and stones, the deposit of many years; this I had removed by dredging 280 tons of gravel and ten tons of large stones. The harbour has been cleaned of the weeds which impeded the traffic of the trade boats.

Mount Shannon Pier, Co. Galway.

The pier at this station has suffered some injury by the successive gales of the past year; 21 feet lineal of the wharf coping has been removed, and 15 yards square of the top pavement torn up; this will be attended to and repaired when the weather moderates.

Portumna, Co. Galway.

The wharf at this station has been repaired with twenty-five tons of broken stones; three oak mooring posts put down; a new timber shed; 20 feet long by 10 feet wide and 8 feet high, has been erected on the wharf for the accommodation of the collector. The wooden office has been repaired, the top coated with tar, and the interior painted. The berths for vessels had to be deepened in consequence of the accumulation of silt; there were 440 tons of gravel dredged from the harbour. The swivel bridge has been repaired with 480 feet superficial of 2-inch native elm sheeting; three tons of cast iron has been added to the former ballast, which has given considerable ease in the working of the bridge. The toll-house has been limewhitened, the two rooms on the ground floor ceiled, and one new step-ladder supplied for the house.

Meelick.

Several leakages having appeared from time to time in the new canal banks, they were attended to without delay and stopped with well-tempered puddle. The deep gates of Victoria lock are becoming difficult to work, and the woodwork is becoming defective, which will render it necessary to provide a pair of new gates; I have had them adjusted this year, and four pairs of new brasses put in for the rollers, the woodwork of gates scraped and coated with tar, and all the ironwork painted. The toll-house was limewhitened, and the roofs of the store-houses overhauled and pointed; 180 perches lineal of boundary drains were cleaned and deepened.

Cloonaheenogue Canal.

The roof of the lock-house has been thoroughly repaired, a new floor put in the living room, and the premises limewhitened. The old swivel bridges over this canal became very defective and rotten; one of them at Kylenascarriff gave way altogether, which had to be taken down and replaced by a new one on five girders of half balk. Allen's bridge—The girders at both ends defective; I had those scarfed and bound with iron glans; freed and adjusted all rollers and machinery; laid on 120 feet superficial of 3-inch sheeting for roadway; tarred woodwork, and painted the ironwork of same; put in one new balance-beam and one new rack in Hamilton lock, four oak stop-posts put down, and scoured up 600 perches of boundary drains.

Banagher.

The traffic at this station is likely to increase, as the new Distillery Company is now in full working order. The collector's house has undergone a thorough repair on the outside, the roof pointed, the walls plastered and pebble-dashed, the interior limewhitened; the wharf was very much cut up by the traction engine; it has been thoroughly repaired with 120 tons of broken stones; 48 perches of boundary drain cleaned up.

Shannon Harbour.

The winter floods bring down a quantity of silt each year, which is deposited in the recesses of the ferry landings; 270 tons has been dredged out this year; 100 tons of stones drawn from Derryholmes to build retaining wall, 50 tons of gravel for towing-path; an abutment at the end of wooden bridge, 20 feet high, 12 feet wide, and 4 feet thick, was built to support girders and retain embankment; a retaining wall, 60 feet long and 6 feet high was pinned and secured, and two heavy piles driven at the west end of the wooden bridge to support the structure.

General Navigation.

The necessary guide-piles, ten in number, have been driven to define the sailing course during the time of high water in the old sailing course between Victoria lock through the Cribbies and Counsellor's ford; 9 heavy oak piles driven to protect booms at Killaloe; 6 buoys placed on shoals on Lough Derg; all buoys painted the usual colour, red and black, so as to define the sailing course.

RIVER MAIGUE NAVIGATION.

The works on this navigation are in very good repair, the bridge clean and well kept, the house and premises in good order. A new out-office has been built in the yard, sheeted with boards, covered with felt, and coated with well-boiled Stockholm tar.

I have the honour to be, sir,
Your obedient servant,

WILLIAM MOLLOY.

The Secretary, Board of Public Works,
Custom House, Dublin.

Appendix B

Report of Mr. Robt. Adams, Inspector.

Report of Mr. Robert Adams, Inspector, on the State of the Ulster Canal and Tyrone Navigation. For the year ending 31st March, 1877.

Coalisland, 23rd March, 1877.

Ulster Canal and Tyrone Navigation.

Sir,—I beg to report, for the information of the Board, that the works executed on the Ulster Canal during the past year have been merely limited to the repairs incidental to its maintenance, viz. :—

From Charlemont to Monaghan, 25 miles.

Repairs of Nos. 4, 5, and 6 lock-gates and the renewal of the deep gates of No. 13 lock, one new flood sluice near to No. 16 lock, boundary fences and farm passes, scouring out back drains, staunching leaks, sodding and puddling broken down parts of the canal banks, the removal of the earth which slipped down from the side-long cuttings into the channel of the canal during the winter, the removal of shoals formed in the bed of the canal at the several points where the natural feeders discharge into it, and the removal of weeds, have been the principal works executed on this division.

From Monaghan to Clones, 14 miles.

The repairs effected on this division were raising the subsided portions of the canal banks, staunching leaks, clearing out back drains, raising boundary fences, puddling broken down parts of the canal banks, farm passes, and the removal of weeds out of the canal.

From Clones to Lough Erne, 7 miles.

The subsidence in the banks during the past winter on this division was very considerable, and required constant attention ; sodding and puddling broken down parts of the canal banks, staunching leaks (some of which were very heavy), clearing out boundary drains, raising fences, repairs of farm road passes, and weeding the canal, were the principal repairs executed on this division.

Quiglough Reservoir.

The embankments, occupation bridges and boundary fences have been maintained in good order.

Tyrone Navigation.

This navigation has been maintained in good order during the past year, and no expenditure has been incurred further than what was required for its maintenance.

The works of repair executed have been merely limited to the repairs of the towing-path (which is also a turnpike-road), sodding and puddling broken-down parts of the canal banks, staunching leaks, also the removal of 300 cubic yards of silt out of basin at Coalisland, the repairs of lock-gates, and cleaning and coating same with prepared tar, repairs of lock-keeper's houses and regulating sluice-keeper's house, lime-washing the boundary walls of stone-yard and wharf, painting the iron balustrading on north side of basin, and the removal of weeds out of the canal.

I have the honour to be, sir,

Your most obedient servant,

Robert Adams, C.E.

The Secretary,
Board of Public Works.

Report of Mr. P. J. Dodd, Superintendent.

Report of Mr. P. J. Dodd, Superintendent, on the State of the Lower Boyne Navigation. For the year ending 31st March, 1877.

Drogheda, 29th March, 1877.

Sir,—I beg to forward annual report on the state of the works on the "Lower Boyne Navigation," asked for in your circular of the 10th inst.

River Wall and Towing-path, Ballsgrove.

The stone facing of river wall has been thoroughly and well maintained, and the surface of towing-path well repaired from time to time during the year, which has been an unusually severe one.

Oldbridge Station and Lock-house.

The balance-beams and part of the framing of deep gates are showing signs of decay ; new footboards have been fixed to the four gates. The house is in fair order and clean.

Oldbridge Guard Lock-gates.

The breast gates are in very good order; but the tail gates are somewhat shaken, being old.

Stalleen Station and Lock-house.

The gates are in pretty fair order, but the footboards require to be renewed. The house is in good order.

Stalleen Guard Locks.

The four gates are bad and out of repair, and will require to be renewed during the summer season.

Broe Station and Lock-house.

These gates have been thoroughly overhauled and repaired during the year. The house is clean and well kept.

Broe Guard Lock.

The gates are in fair repair, and stood the floods of the year well.

Rossnaree Station and Lock-house.

The gates are in very fair order, a new balance-beam has been fixed to one of them. The house is well kept, but requires some repairs.

Mill Lock, Slane.

These gates have been thoroughly overhauled, and for the most part renewed during the year, and are in first-class order.

Castle Lock, Slane.

The deep gates are in first-class repair; but the breast gates are very weak, and must be renewed at no very distant date. The house is in good order.

The weeds during the hot season were well kept down by dragging in both canals and river, and the surface of the towing-paths well maintained ; and a few land-slips, which occurred from the heavy rains and great floods during the year, have been cut away and made good, and the navigation has been kept well clear during the year.

I have the honour to be, sir,

Your obedient servant,

P. J. Dodd, Superintendent.

The Secretary, Office of Public Works,
Custom House, Dublin.

Appendix C.

Landed Property Improvement.

Inspectors' Annual Reports.

APPENDIX C.

Landed Property Improvement.—Inspectors' Annual Reports, 1876–77.

Counties Antrim, Londonderry, Armagh, Tyrone, Monaghan, and Fermanagh.

In compliance with the request contained in your communication of February the 2nd, I now submit the following annual report, for the information of the Commissioners of Public Works, on the working of the Land Improvement Acts for the year 1876–77.

During this period I have made in all seventy-one inspections, eight of which have been preliminary, the remainder the ordinary progress inspections. Most of these loans are for building purposes, such as farm buildings, labourers' dwellings, &c.; so that this will show an increase on drainage and plantations, &c., to the preceding year.

Viscount Templetown (county Antrim) is still carrying out his large drainage scheme, which is giving great satisfaction to his tenants, who at first refused, and now find the great benefit of having their lands thorough drained and in parts reclaimed.

Mr. Ancketill, of county Monaghan, has just completed a drainage loan, and is about embarking in a large drainage scheme for the benefit of his own immediate lands, and which will amply repay for the outlay, as the grounds, I may say, lie low and spongy.

The Earl of Enniskillen is making new roads through his property in the neighbourhood of Florence Court, which will be of the greatest use to his tenantry, who had little or no access to their bog-lands; and good substantial labourers' dwellings are being erected in different parts of his estate, which, no doubt, will be an example to other proprietors.

Mr. Robert Gore, of Raveagh, in the county of Tyrone, is executing good drainage works, and has just completed an extensive farmyard and offices suitable in every way to the extent of the farm.

Sir William M'Mahon will shortly have completed a farm residence and offices near Mountfield, county Tyrone.

The Marquess of Ely is completing a long series of new roads, which open up a wild and inaccessible country to which his tenants go for turbary, near to Church Hill, in the county of Fermanagh.

About the best reclamation that has come under my notice for the last year is that carrying out by the Rev. John Beatty at Bellisle, barony of Lower Dunluce, county Antrim. A large tract of bog-lands has partly been thorough drained &c., with deep arterial cuts, and what was utterly useless is now giving crops and repaying well. I expect, within the next two or three years, Mr. Beatty will have the entire bog-lands of Bellisle in arable condition. Through the county of Antrim large tracts of these useless lands, I am sorry to say, exist, and if Mr. Beatty's energetic actions were imitated, all might be brought to be fruitful and well repay.

Sir Frederick W. Heygate, bart., has commenced making improvements on his property at Bellarena under the Land Improvement Act, such as planting for shelter, building and repairing labourers' dwellings.

The Earl of Charlemont has within the last few months finished a most valuable reclamation of *cut-out bog* ground, which, when his lordship commenced operations, did not grow a blade of grass; it has all been levelled, clayed, and limed, and the last season the greater portion produced a most valuable cereal crop. Grange Blundell is the name of townland, in the county Armagh, alongside the leading road from Moy to city of Armagh.

Mr. Walter M'Geough Bond has commenced draining and improving under the Board. The townland of Drumsill is the part he is now levelling old fences on and making into large fields, fenced by seven strands of wire cable instead of mound and gripe, and thorough draining throughout.

Mr. Lowry has nearly completed all his improvements, for which he had loans, and his property is very much benefited by the results.

His Grace the Lord Primate of Ireland is at present expending a considerable loan in thorough draining in his demesne, which required it badly, and will be much improved.

Thomas Baillie-Gage, esq., has just entered on very considerable works of drainage, plantations, road-making, &c., buildings, &c., in the demesne of Tirnaskea, where drainage had never before been thought of.

Mr. John G. V. Porter, of Belleisle, county Fermanagh, is carrying out very considerable improvements on his property at Lisbellaw and Belleisle, in the way of drainage, labourers' dwellings, and farm buildings.

Altogether, I have much pleasure in stating that I am perfectly satisfied with the manner in which proprietors and their agents have carried and are carrying out works during the last year under my directions, and in only one or two instances have I had occasion to report to the Board to the contrary.

Thomas S. Irwin,
Civil Engineer.

Counties of Carlow, Kildare, Kilkenny, King's, Queen's, Wexford, and Wicklow.

Ashfield Hall, Carlow,
3rd February, 1877.

In obedience to instructions contained in your letter, dated 2nd February, 1877, I herewith furnish my annual report on the working of the Land Improvement Acts in the district of my inspection for the past year.

During the year 1876 I have made fifty-four inspections under the Land Improvement Acts. Nineteen were for new loans; thirty-five were progress inspections. Of the new loans eight were for thorough drainage, fencing, &c.; eleven were for farm buildings, labourers' dwellings, farm dwellings and offices.

Proprietors are generally willing to build and improve farm dwellings and offices, if occupiers will consent to pay a fair per-centage on the outlay; in most cases tenants are willing to do so.

Labourers' dwellings are not looked on as a good investment by proprietors, except when the tenants of adjoining lands agree to pay the instalments on loans as they become due; this, in many cases, will not be done; therefore labourers' dwellings are not built generally, although much needed; and on farms remote from towns or villages it is very often difficult to procure a sufficient number of farm hands in times when most needed.

The provisions of these Acts are, when acted on, found to be very satisfactory to borrowers.

I have been inspecting and reporting for the Commissioners of Public Works from the passing of the Act in 1846 to the present time, during which period I have heard all borrowers express their great satisfaction at the results in every respect, and with the Board's regulations for obtaining loans, and the several instalments thereof as they are required for carrying out the proposed works of improvement.

The price of labour has greatly increased, and is an impediment in the way of drainage, fencing, &c.

J. Fishbourne.

County of Longford, and parts of Westmeath, Meath, Cavan, Leitrim, and Roscommon.

Newtownbond, Edgeworthstown,
7th April, 1877.

In compliance with your request, I beg to submit, for the information of the Board, my annual report on the working of the Land Improvement Acts in the above-named district, since the 17th April, the date of my last report, up to the present.

During the past year I have made fifty progress inspections for buildings, drainage, fencing, &c., and I am happy to say that I have found all the works satisfactorily executed.

The only drainage loans, of any extent, which I have inspected, are on the properties of John Cooke, esq., Lord Annaly and Dr. Gregg, in Longford, and of Mr. Murray, also on that of the late Samuel Reynell, esq., in Westmeath; and the results are, in every instance, most gratifying.

A remarkable instance of the benefit of the Acts has occurred on Mr. Cooke's property in Longford. The tenantry were, at first, so much averse to the extra expense involved in the improvement of their land, that Mr. Cooke determined to discontinue the works, and did so for some time, but the rapid amelioration of the land that had been reclaimed was so marked, that the tenants are now most anxious to have all the proposed improvements carried out.

The loans for the building and repairing of farm residences and offices, &c., still continue to be most in favour, and amongst those in the county Longford I may instance Mr. Gregg's very substantial farm residence at Derrydarragh, while several small proprietors and tenant farmers are greatly enhancing the value of their farms by their improvements, both in this county and in Meath, Leitrim and Roscommon. Messrs. O'Connor and Wade have also provided several commodious farm residences, with suitable offices, on their property in Meath and Cavan; and Mr. Sanderson, in Cavan, has made considerable and valuable additions to his farm offices, at great expense.

In Westmeath Lord Longford and Miss Connolly have been mindful of the welfare of their labourers, and have provided healthy and comfortable cottages for them—an example which should be widely followed.

The cost of labour and materials throughout this district, though not less than last year, has not increased.

WILLIAM BOND.

County of Tipperary.

Riverston, Nenagh,
March, 2nd, 1877.

In submitting my annual report on the operations of the Land Improvement Acts for the past year in the district with which for so many years I have been connected, I have not any new or important fact to bring under the notice of the Commissioners, nor much more than to contrast the nature of the applications for loans, which I think show a decided advance in the local improvement of the country.

In former years the loans were chiefly granted for the improvement of the soil by the various modes applicable; now, though there is still need of improvement, particularly connected with arterial drainage, yet the attention of the owners of property is more directed to the improvement of the dwellings for their labourers and tenants, and to the providing proper farm offices, &c., than to drainage.

Within the last year or two the attention of proprietors has also been directed to planting, in situations where pasture or tillage could not be attempted, with the prospect of satisfactory results, and which, I think, is likely to prove remunerative.

In explanation of those general remarks, I would refer to the returns, which will show that for the past year my inspections have been for farm buildings and labourers' cottages, thirty; while those for thorough drainage have been but twelve.

Some of the loans for farm buildings have been of very considerable amount, the principal of which have been to Mr. Parker, of Castle Lough, and Mr. O'Meara, of Somerset. The loans for labourers' dwellings to Mr. Gibson, of Rocheforrest, Mr. Thomas Butler, of Ballycarron, the Earl of Rosse and Mr. Barton, average very nearly £700 for each. The loans for planting amount to within a few pounds of £4,000. There has been only one case connected with water-works, that of Mr. Farrer, which has been attended with very beneficial results, both in a sanitary point of view as well as a great convenience to every part of a large establishment.

I am happy to be able to state that the several works have been all very fairly executed, that I have not been obliged in any case to recommend the refusal of further instalments to be issued, and that any suggestions I found it necessary to make to the parties, in the expenditure of the loans, were met in a good spirit and generally adopted.

I need not remark that the estimates made some—even a year or two since, are found insufficient to carry out the full works contemplated, and that supplimental loans have, in some instances, been necessary, owing to the great advance in tradesmen's wages, and which I do not see any likelihood of decreasing, as I learn, on inquiry, that few young men are, as they used to do in former years, bound to artizans or tradesmen.

JAMES JOCELYN POE.

Counties of Mayo, Roscommon, Galway, and part of Clare.

Galway, 9th April, 1877.

In compliance with the request of the Board, I beg to forward the following report in relation to the working of the Land Improvement Acts in my district during the past year:—

Within that period I have made one preliminary and 101 progress inspections; and I have certified for works to the amount of £25,371 2*s.* 3*d.* Of the 101 cases of inspection, fifty-seven came under the head of agricultural holdings, and forty four of the improvement and reclamation of land.

In relation to buildings, what I mentioned in my former reports still remains a serious desideratum, viz., substantial, healthy, and moral cottages for the Irish peasants.

Some advance in this respect has been made in my district; but the high price of slates has been a great check to every description of building. Mr. Fallon, of Netterville, Mr. Persse, of Moyode, and Mr. Ffrench, of Monivea, have erected some excellent cottages, which seem well adapted for the requirements of the Irish labourer or small tenant.

They contain a good-sized kitchen, pantry, or dairy, and three bed-rooms, with an independent entrance, good light, and a fire-place in each; and the average cost is £105.

Some fine farm offices have been erected by Captain Knox, of Creagh, in the county of Mayo, Mr. O'Rorke, of Clonbern Park, in the county of Galway, and Mr. Sandford, of Castlerea, in the county of Roscommon.

With regard to land improvements since my last report, I am happy to state that a considerable amount of open main and thorough drainage has been carried out in this part of the country.

The best specimens of this kind of work have been executed on the estates of Mr. Packenham Mahon, at Strokestown; of Mr. Callaghan, at Skecor; of Colonel Daly, at Raford; and of Mr. Richardson, at Tiaquin. Mr. Richardson obtained the gold medal of the Royal Agricultural Society for the style and excellence of his thorough drainage.

Of all the works executed under loans from the

APPENDIX C.

Landed Property Improvement.

Inspectors' Annual Reports.

Board, improvements of this nature appear to yield the best return. The tenants and owners of the soil are now, I am glad to say, becoming alive to this profitable investment of labour and capital.

In all cases where the drainage has been well executed, the proprietors inform me that the beneficial effect is almost immediate; and the wonder is, considering the great facilities afforded by the Board for obtaining loans, that, in localities where stones are found in great abundance, large tracts still remain barren and worthless, which could easily be reclaimed by open main or thorough drainage.

Ireland, comparatively speaking, has no manufactures, and is singularly deficient in mineral wealth. Peat exists in great abundance, but it lacks that squeeze essential for the production of that material to which England chiefly owes her wealth and greatness. If this country is ever to become rich, the attention of her people must be directed to the improvement of her husbandry and the reclamation of her land, enabling "the earth to yield her increase."

EDWARD TOWNSEND.

The Secretary, Office of Public Works,
Custom House, Dublin.

County of Limerick, and portions of Clare, Tipperary, and Cork.

Offices—No. 66, George-street, Limerick,
20th March, 1877.

In submitting my annual report upon the working of the Land Improvement Acts in my district during the past year, I beg to say that I made three preliminary inspections and forty-one progress inspections, reporting upon thirty-four loans, and certifying for an expenditure of £9,243 12*s.* 5½*d.*, of which sum £3,160 11*s.* 8*d.* was laid out on land improvement, and £6,083 0*s.* 9½*d.* upon building works, showing an increase of £28 10*s.*, in the former, and a decrease of £764 2*s.* 5*d.* in the latter department, on the expenditure of the year 1875.

The number of applications for loans reported upon by me during last year fell short of the preceding year by two, and the loans in progress, or being carried out, last year were less by one than the number in operation in 1875.

I am unable to observe any change in the value of artizans' labour since my former annual report; building materials, however, have increased in price.

I am able again to repeat that the several loan expenditures have given thorough satitisfaction.

WILLIAM SIDNEY COX,
M. Inst. C.E.I.

The Secretary, Office of Public Works,
Dublin.

Counties of Kerry and Cork (part of.

Tralee, 6th February, 1877.

Pursuant to your order of the 1st inst., I have to make the following report on the working of the Land Improvement Acts in my district during the year 1876:—

It is satisfactory to find that the decrease shown since 1874 in the extent of improvement, as detailed in my report of progress in 1875, seems to have reached its lowest, as there is an increase of £491 in the certified expenditure during last year over 1875. The gross total is £10,655 11*s.* 6*d.*, and the greater part, £7,602, has gone for buildings, and the balance, £3,053, for land improvement, shows £104 of that increase. The borrowers are more disposed to improve their own holdings than those of their tenants, for there has been only £4,786 expended on land improvement and buildings on lands in occupation of tenants, including only five loans for labourers' houses, on which £1,457 have been certified in 1876, the most of it for eight dwellings at £942 for Lord Lansdowne, *nearly all built in* 1875.

The most important object of these Acts may be regarded as almost entirely neglected in Kerry, until the improvement of labourers' dwellings increases for some years to twenty-five per cent. on the yearly expenditure instead of amounting to the accommodation of only six or seven families at £557, as it did for the last year.

We may never expect to see that increase until the extravagance of building is kept down, and houses built at estimates not exceeding £50 apiece. Such houses *have* been built, and *can* be built everywhere. Mr. G. Hewson has just shown *a model* on his farm at Gortnaskeha, in this county built by contract, comprising a double house 52 × 17 outside, and 8 feet high, which is all well lit, and finished inside with plaster ceilings and cement floors at less than £2 per lineal foot, which *will pay.* Such examples will be copied, while the building of labourers' dwellings at £160 apiece only deters prudent people from engaging in what seems to many a waste or unprofitable use of public money.

Great discrepancy in cost of farm offices may be found too. I can show a cattle-house for forty-two cows that cost only £2 2*s.* per lineal foot at £240, and another for forty cows (root-houses annexed in both) which cost about five times as much. Such expenditure as this last can never pay.

These cases strongly suggest that there ought to be, at least, some limitations, without drawing any hard-and-fast line restricting the borrowers.

The use of cement concrete roofing has been tried with success, and I am sure that much of the difficulty of building cheaply for labourers will be got rid of by it, for a concrete roof can be made as cheaply as thatching with straw, strong enough, quite weather-proof, and *safe from decay.*

HENRY STOKES.

County of Cork.

Cork, 15th February, 1877.

I beg to submit the following statement of the working of the Land Improvement Acts in my district for the past year:—

I have made five preliminary inspections for land improvement, four of which were for small sums, and twenty-two progress inspections of buildings, ten of which were for labourers' dwellings, and the others for farm offices, with or without dwellings. None of the latter cases were of very considerable extent; while some of the loans for labourers' dwellings were large, and, particularly where carried out in towns, the demand for the houses is considerable, and, no doubt, the advantage to the labouring classes great.

In land improvement I have made twenty-five progress inspections, and some of the cases were of considerable extent. In those that have been going on for some time the increase in the value of the land drained is very evident, and the return good for the amount expended. The advantages derived under the Acts are acknowledged by all, but the scarcity of labour and the unusually wet season have kept the works very much back. With very few exceptions, the various works have been executed in a most satisfactory manner. Notwithstanding the increase in the prices for building, there is a decided tendency on the part of farmers to get better accommodation both in dwellings and offices.

J. T. CORNWALL.

E. HORNSBY, *Secretary.*

Office of Public Works, Dublin,
1st *June*, 1877.

APPENDIX E.

NATIONAL MONUMENTS AND ECCLESIASTICAL RUINS.

REPORT of Mr. T. N. DEANE upon the WORKS executed and their results, with EXPLANATORY DRAWINGS.

ARDFERT, NEAR TRALEE, COUNTY KERRY.

The ruins here consist of the cathedral and two churches, the former dedicated to St. Brandon, the latter called respectively Tempul-na-Hoe and Tempul-na-Griffeen.

Ardfert was originally the site of a monastery founded by St. Brandon in the 6th century. He was born in the year 484, and died in the year 577.

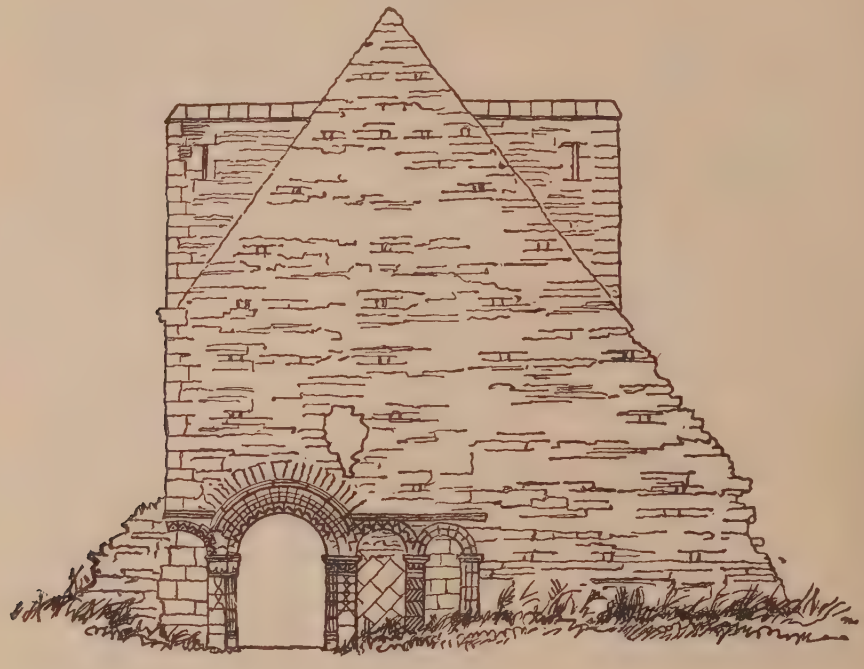
The cathedral is 137 feet long by 25 feet wide, and was erected about the year 1250 on the site of a more ancient church. An aisle has been added on the southern side, with arches opening into the nave. In later times a transept was built on the south, and a mortuary chapel or chantry on the north.

At the western end the entrance and arcaded wall of the more ancient church exists, probably of the 11th century. The mouldings exhibit the characteristics of early Norman detail (see illustration No. 1. I am indebted to Mr. Hill's work for this illustration).

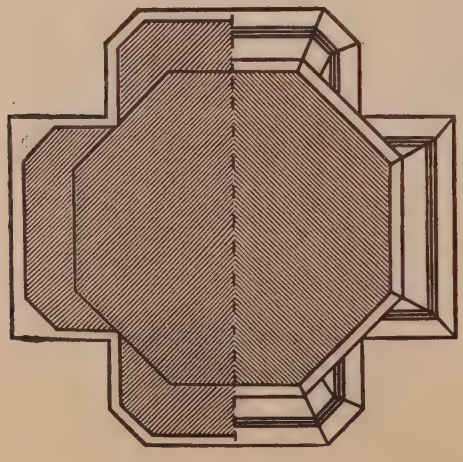
On the northern side is a portion of masonry apparently corresponding in date with the western entrance. The arches dividing the nave from the aisle are plain and simple in character. The only feature in them worthy of remark is the very peculiar capital of the pier. The mode of corbelling for the arches which spring from it is particularly ingenious. (See illustration No. 2.)

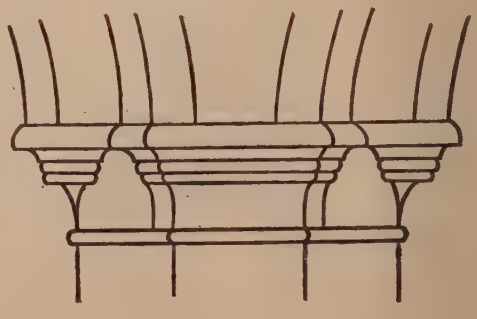
The choir is lighted by a grand arcade of nine arches on the southern side, and three at the eastern end, the highest being 30 feet. The detail of these windows is excellent and shows that the designer had a thorough knowledge of early English work. I have frequently remarked in Ireland that although the main features of a style were followed with a certain accuracy, the mouldings exhibit what, if not due to difference of material, shows either a want of knowledge of the more delicate detail or a carelessness in execution not usually met with in England. As usual, the stepped battlements have replaced the original eaves. The chantry and transept are late 15th century work, with good detail, but of little interest.

(No. 1. West End.)



(No. 2.)

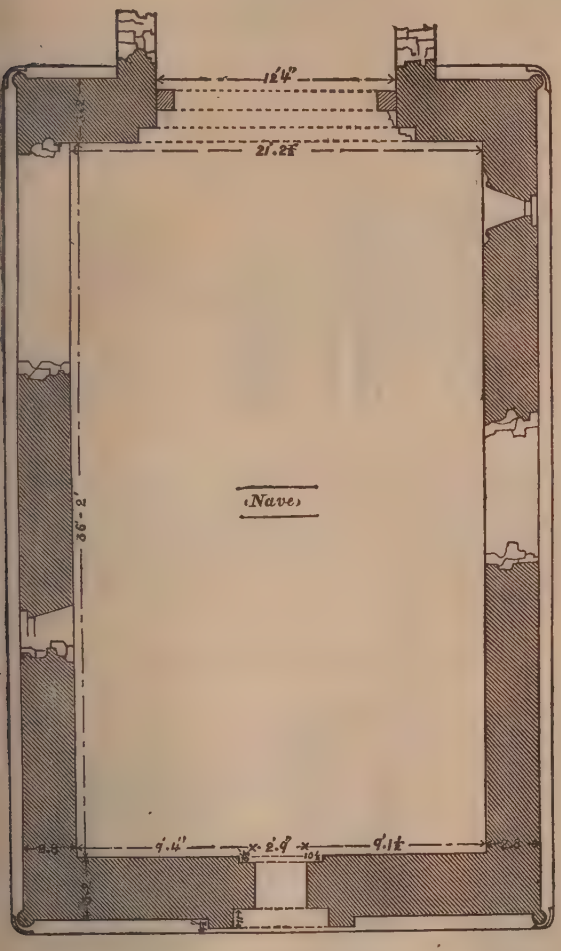




Tempul-na-Hoe.

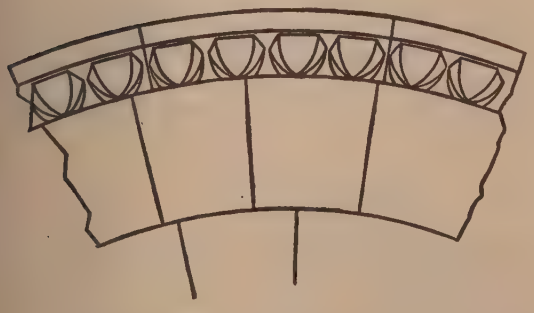
This church, of same date as the western doorway of the cathedral, is remarkable for its beautiful and delicate detail and the markedly classical character of some of its mouldings.

(No. 3 Plan.)



On the western doorway the moulding is suggestive of the Greek echinus. (See illustration No. 4.)

(No. 4.)



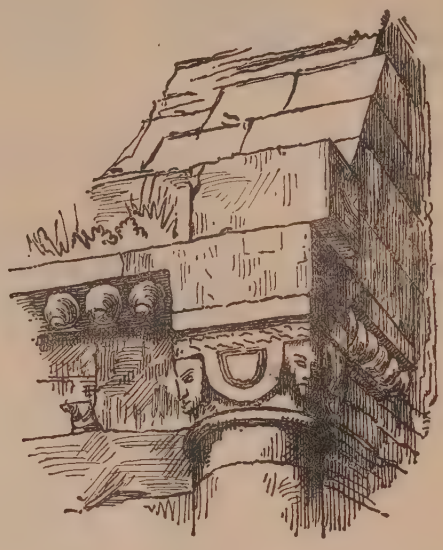
The angle capitals and large angle shafts, with moulded and corbelled eaves course are worthy of study (see illustration No. 5), and recall the church of Kilmalchedar, near Dingle.

Tempul-na-Griffeen, or Church of the Griffin,

Has but little interesting detail, and is of much later date than either the more ancient part of the cathedral or Tempul-na-Hoe.

The repairs to these several churches mainly consisted in pointing the walls with cement, where necessary, the removal of dangerous roots of trees, and grouting with concrete the upper portions of the walls.

(No. 5.)



The arcade of nine windows in the cathedral, as well as the eastern end, required the greatest care; the former was in a ruinous condition, and it was found necessary to build a flying buttress against it to prevent its falling outwards.

The arches into the transept have been re-opened, the walls have been pinned with stone, and the ground of the interior of the buildings levelled as far as possible.

MONASTERBOYCE, COUNTY LOUTH.

The ruins here consist of a round tower, three stone crosses, and the remains of three churches.

The top of the tower had fallen, and none of the original stones were found. The walls were in a precarious condition, but are now safe, having been pointed with cement and the larger interstices filled with small stones.

One cross was broken into three pieces, which have been carefully put together and re-erected; the others were standing and in good condition and required no repair.

The remains of the churches exhibit but little detail worthy of note, and are in so ruinous a condition that nothing further could be done than pointing and grouting the walls.

The graveyard has been partially levelled, especially the spaces within the churches.

DEVENISH ISLAND, LOUGH ERNE.

The buildings here consist of—

1st. The remains of the ancient church with conventual buildings attached, erected in the year 1439, according to the inscription thereon.

2nd. The oratory of St. Molaise.

3rd. The ruins of a more ancient church and buildings surrounding.

4th. The round tower.

5th. Several sculptured stones, including the remains of stone crosses.

The repairs done to these buildings are as follows:—

1. *The Ancient Church.*

Several stones have been reset, and some replaced in the piers of the tower; the base of the tower has been made good where defective; the top of the tower wall has been pointed and the newel of the staircase

repaired; the rent in the side wall of the choir has been made good; the rubbish has been cleared away from the interior of the church; the south wall of the choir has been levelled, and some of the loose stones and sod coping put thereon; the crosses and sculptured stones have been collected and placed in a convenient position; sods are being laid down in the church at the original floor level; some general pointing with cement to joints of loose stones has been done, and sod coping to protect the walls.

2. *Oratory of St. Molaise.*

The rubbish within this building has been cleared, and the loose stones collected and stacked in a convenient position.

3. *The Round Tower.*

With the exception of pointing with cement a few loose joints of masonry in the lower part, which has been done, no repairs were necessary.

4. *Ancient Church, &c.*

With the exception of clearing away the rubbish and collecting and stacking the loose stones, which has been done, no repairs were necessary.

GLENDALOUGH.

In my report for the year 1876, I referred briefly to the works undertaken at Glendalough, which at that time had been commenced.

Trinity Church

was then finished, and some progress had been made towards clearing the site of

St. Saviour's.

As anticipated, the accumulated rubbish concealed much architectural detail, and the excavations on the site of the priory exposed the complete outline of the building. On the southern side were found the arch and jamb stones of three windows, as well as those of the two entrances; and on the eastern side the complete details of a beautiful and curious window.

This most interesting example of Romanesque work I look upon as unique in detail. The ope is divided on the inside into two sub-arches separated by a mullion, the tympanum and two arched heads being in one stone. There is no abacus or capital, and the

Details, Architrave, inside.

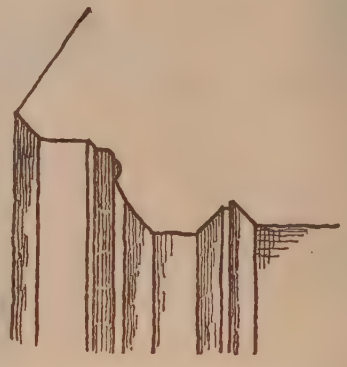
(No. 6.)

(No. 7.)

splay of the lights following that of the inner splay is a peculiarity which I have not observed elsewhere. I have had it replaced in its original position, as to which there could be neither speculation nor doubt.

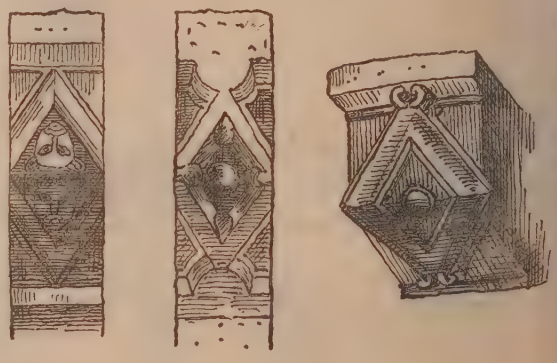
At the northern side the church expanded into what appears to have been the domestic portion of the building, apparently of the same date as the rest of the priory. In the eastern wall was found a flight of steps which evidently led to the croft over the chancel. On the northern side were discovered the stonework of two other windows.

(No. 8. Jamb of North Window.)



The chancel arch has been re-erected, nearly all the stones having been found amongst the rubbish; any which were missing, have been replaced by uncarved voussoirs. This arch presents perhaps the most beautiful and elaborately carved example of its kind in Ireland.

(No. 9. Carved Voussoirs, Chancel Arch.)



Some of the detail of the mouldings is peculiar, and would almost lead one to place the date of the work later than the 12th century, whereas other detail is decidedly very early.

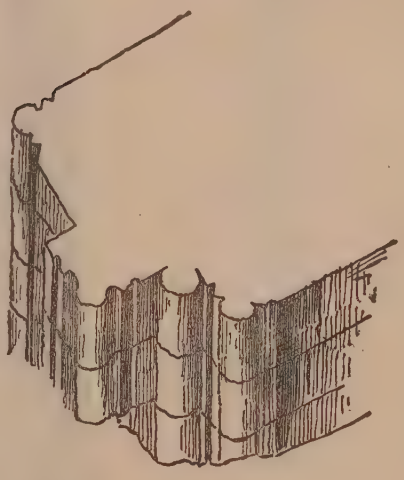
The walls have been pointed with concrete, the fences made good, and the interior laid in grass.

The Cathedral.

The condition of this building was much the same as that of the others. Piles of ruined masonry and gravestones, ancient and modern, lay about on all sides: tangled weeds and brushwood overgrew the walls. The masonry exhibits work of three distinct periods: the lower portion of the walls is of a very early date; the upper being rebuilt from the debris of more ancient work, the frustra of shafts being used in places; the latest portion being 12th and 13th century work, the mouldings Romanesque and early English, and all of Caen stone. On the north the jambs and bases of a fine doorway were found, and, beneath where the chancel arch stood, most of the arch stones. As many of these as would indicate the form of the arch have been reset upon the impost caps. The eastern

(No. 10. Details of Capitals, Chancel Arch, St. Saviour's.)

(No. 11. Jamb of North Doorway, Cathedral.)



window has been partially restored; those on the south side have been opened. The walls have been grouted with concrete, and the interior levelled as far as was consistent with respect to graves.

The Priest's House.

This curious little oratory, which excited the interest of the antiquarian Berenger and others in 1779, and by whom its details were carefully drawn, had fallen into a sad state of delapidation. On excavating the surrounding ground, sufficient stones of the eastern end and southern entrance were found to enable the structure to be put in the same condition as it was in 1779. The carved tympanum (see No. 13), which had been removed, was given back and replaced in its original position, and the stonework generally has been secured with concrete.

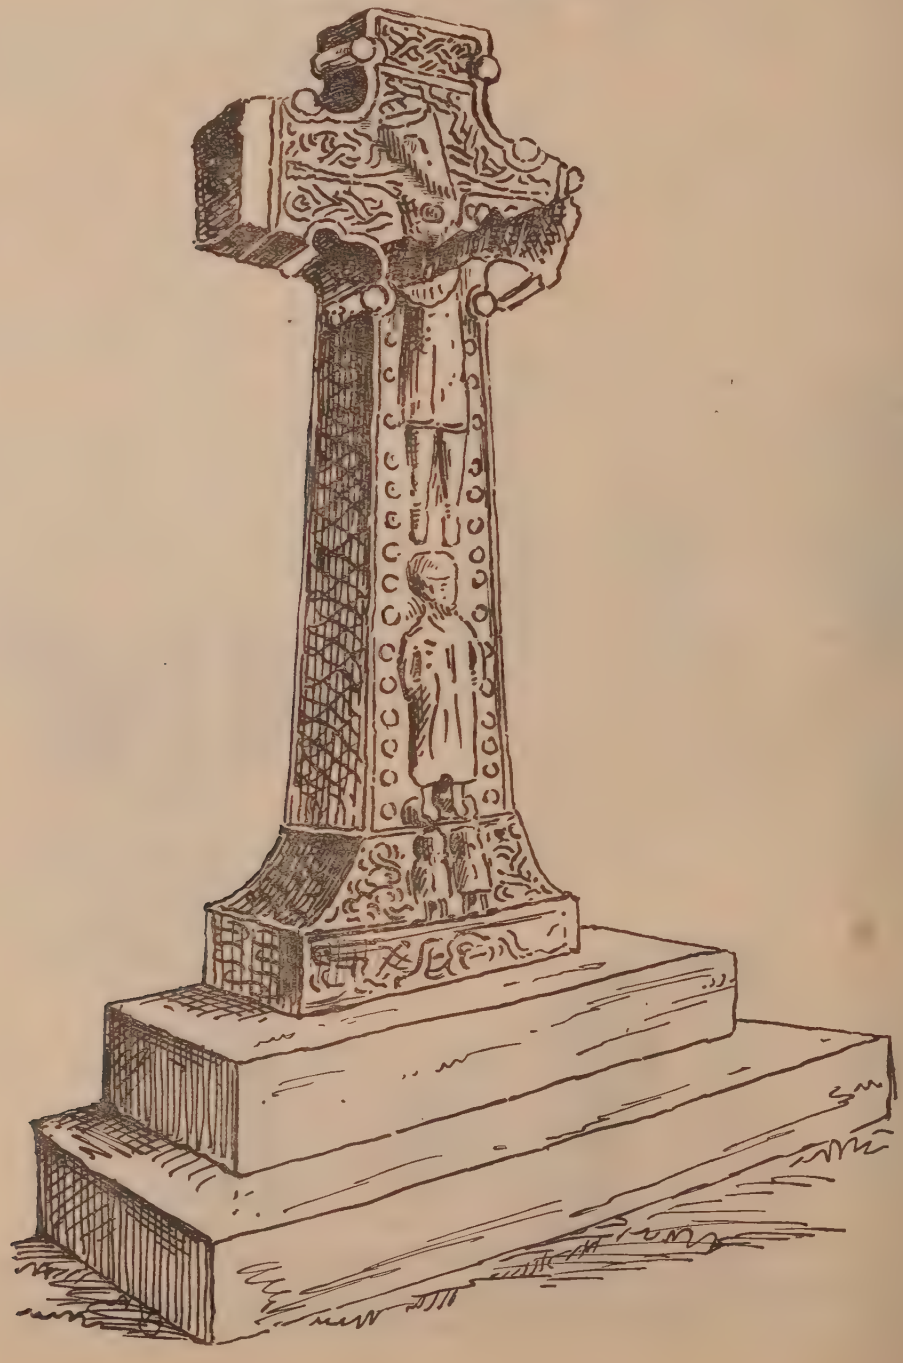
(No. 12.)

(No. 13.)

The Round Tower.

This building was on the verge of ruin, the mortar quite washed out of the walls; the conical top had long since fallen amongst the débris round the base and inside the tower; all the shaped stones of the cone were discovered, and the apex in the cathedral. These have been replaced and the walls carefully pointed in cement.

(No. 14. Cross in St. Kevin's Church.)



Saint Kevin's House.

This building consists of a stone-roofed chamber, with an upper croft and a sacristy on the north-east; the former is surmounted by a tower of small dimensions. The present entrance formed the chancel arch when the eastern entrance was remodelled. The chancel, which is now destroyed, was a subsequent addition. The head of the eastern window of the original church still exists over the more modern chancel arch. Pointing with cement concrete and resetting loose stones in the roof and cone of tower, embraces all the work which has been done.

An iron gate has been put to the eastern opening, and the interior forms the receptacle for various objects of interest which have been found amongst the ruins. Referring to these, I would call attention to the beautiful cross of which I annex an illustration; it was found in fragments in different places; these have now been put together and erected within the oratory.

To the south-east of St. Kevin's House has been discovered what I presume to be St. Kieran's church. The outline of the walls, with the chancel and altar, are perfect.

The surrounding ground has been levelled, and put in decent order.

Our Lady's Church,

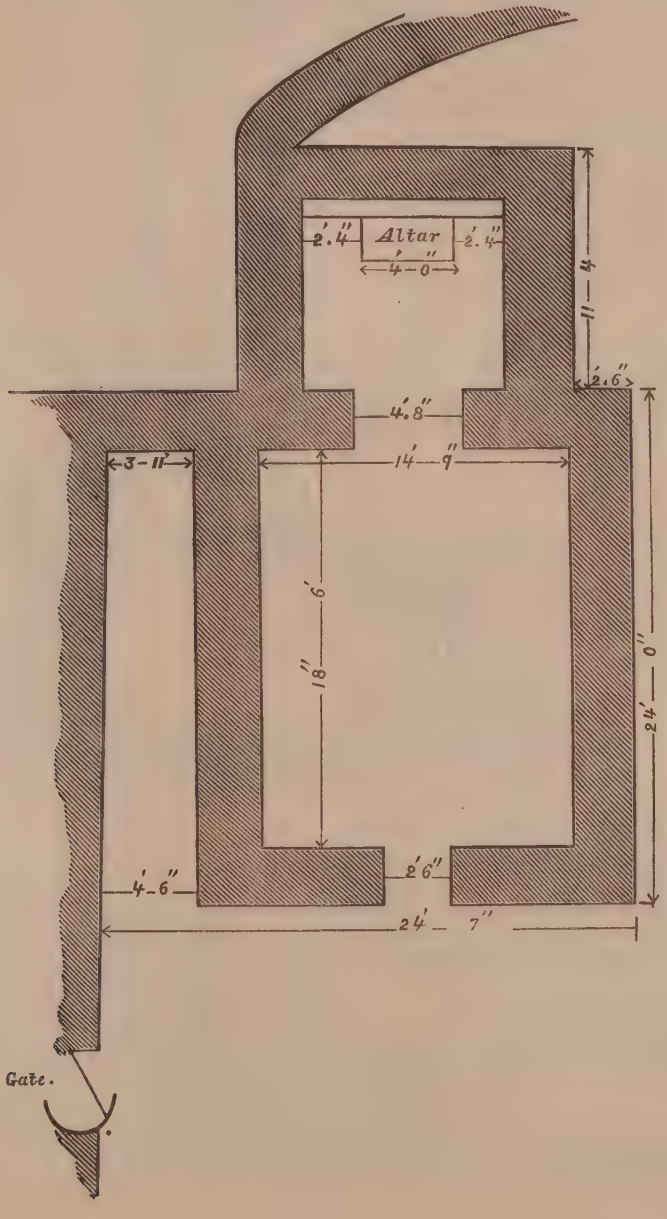
probably the oldest structure in the valley, has little of interest beyond its doorway, which presents all the characteristic features of early work, being narrower at the head than at the base, and formed of massive stones.

The nave has been cleared out and the walls secured from further ruin; little or no architectural detail was found in the excavations.

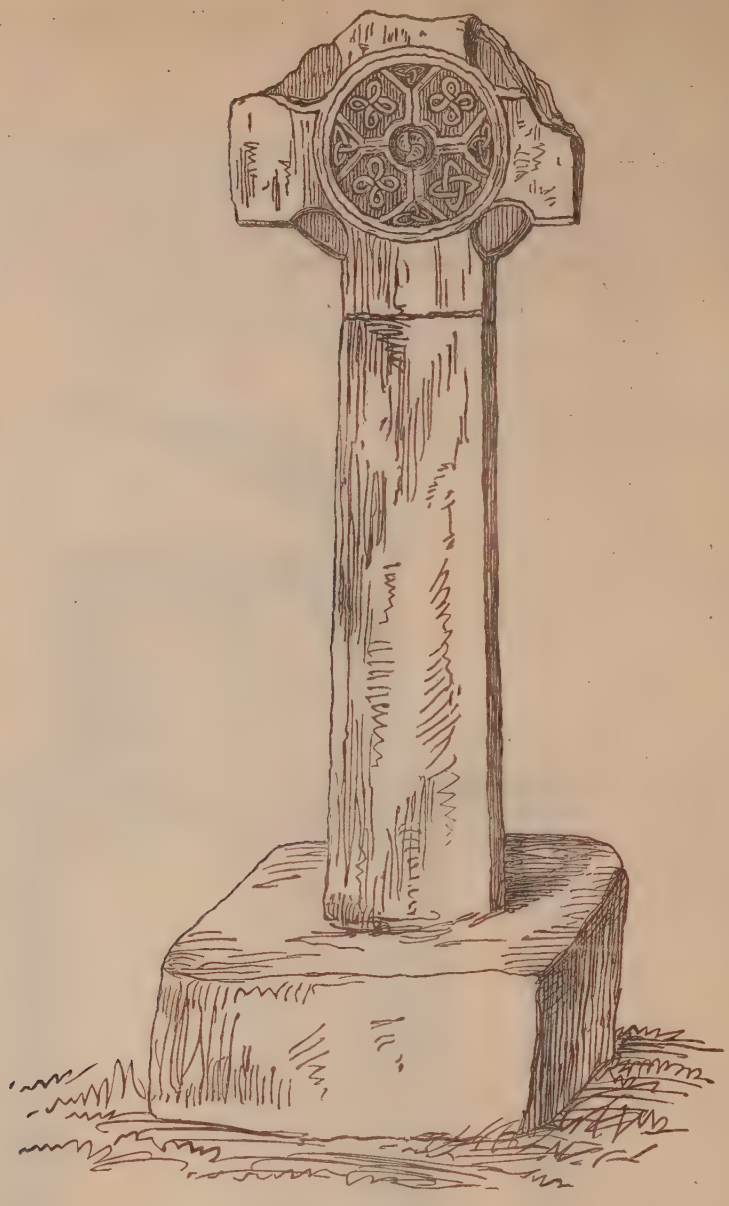
Reefert Church, or Burial-place of the Kings.

Here many sculptured stones and crosses were discovered; amongst others, one flat stone, with an inscribed cross and inscription. The shaft and base of this cross (illustrated in Petrie, page 266), have been

(No. 15. Plan of St. Kieran's Church.)



(No. 16.)



discovered. The cross has been re-erected, and the chancel arch and east window have been restored, all the stones having been found amongst the débris. The interior has been cleared of rubbish and laid in grass; the surrounding fence repaired and the approaches gravelled.

Tempull-na-Skellig.

This church, placed on a cliff over the lake, and generally approached by a boat, is the remains of a small oratory. The débris which have fallen from the mountain side have been removed, and a window, similar in design to the east window in St. Saviour's, has been discovered.

The ancient steps or causeway leading from the lake to the church have also been laid bare.

The foregoing notes describe generally the works which have been done.

THOS. N. DEANE, Architect.

REPORT.

TO THE QUEEN'S MOST EXCELLENT MAJESTY.

MAY IT PLEASE YOUR MAJESTY,

1. WE, the Railway Commissioners, have the honour to lay before Your Majesty our Third Annual Report.

2. A principal object of the "Regulation of Railways Act, 1873," was to facilitate recourse to the Railway and Canal Traffic Act, 1854, the second section of which enjoined railway companies to afford all reasonable facilities for the receiving, forwarding, and delivering of traffic, and to make no unfair distinctions between their customers. It is but a small part of the duties of railway companies not to put impediments in the way of freedom of traffic; nevertheless that part is all that the law of injunctions applies to. The injunction is a remedy against undue preferences or unreasonable modes or conditions of carriage, but it does not entertain complaints, of which the ground is, for example, omission to take precautions against accidents, or to provide adequately for the safety of traffic entrusted to the care of railway companies. Nor did the Act of 1873 alter the earlier Act in that respect; it simply amended the mode of carrying it out. It substituted a special court of three commissioners for the judges of the superior courts on whom the duty was originally imposed, and it was hoped that the manner in which the new tribunal would investigate complaints would cause many more applications than before to be made to enforce the Act where there were infringements of its provisions. So far the change does seem to have had the effect anticipated, for there have been as many applications under the Railway and Canal Traffic Act, 1854, section 2, in the three years since September 1873 as there were between 1854 and that date. In the past year the number, excluding cases not yet heard, has been 11, and we will commence our Report with a summary and analysis of their chief points, having however to observe that they were not all left for our decision, some being unopposed or settled by agreement. Gwendraeth Valleys Railway Company *v.* Burry Port and Gwendraeth Valley Railway Company, Evershed and others *v.* London and North-western Railway Company, Horbury Bridge Coal, Iron, and Waggon Company *v.* Lancashire and Yorkshire Railway Company, and Jackman *v.* Isle of Wight Railway Company were four cases of that class. The facts of the first case were briefly these.—The railway of the Gwendraeth Valleys Company commences by a junction with the South Wales Railway near Kidwelly, and at Tycock, a short distance from Kidwelly, it has a junction also with a branch of the Burry Port Railway. Traffic to and from collieries on the Burry Port Railway and to and from works on the Gwendraeth Valleys Railway, and a proportion of traffic going west from the Burry Port Railway by the South Wales Railway, would, if sent by the shortest route, be sent by the Tycock Junction. The complaint which the Gwendraeth Valleys Company made to us was that the Burry Port Company would not properly use that route, and that they diverted traffic from it to another route more circuitous, but in which they were more interested, and that finally they had cut the through communication by taking up the points at the junction. The case was partly heard before it terminated. The heads of agreement were that the Tycock Junction should be restored, and that the Gwendraeth Valleys Company should in future work the branch line for the Burry Port Company, each company promising fair treatment for through traffic. Half the costs of the application were ordered by us to be paid by the Burry Port Company, as we considered that they should not have taken up the junction lines.

3. In Evershed and others *v.* London and North-western Railway Company, the respondents were charged with allowing brewers at Burton, who loaded and unloaded in their own works and at their own expense, a rebate more than commensurate with the value of the porterage saved to the company, to the undue prejudice of brewers who, like the complainants, employed the company as their carriers to load and unload in the usual way. The case was similar to Bell *v.* London and North-western, which we mentioned in our Second Report, and where we decided that the rebate was excessive, and that so long as the company allowed it they must return to Bell, off the rates at which they carried his goods, the amount per ton which the rebate was more

per ton than it should have been according to the reasonable cost of the service; and guided by the principle there established, the company offered the same terms to Evershed and the others. The offer when the case came on for hearing was accepted. We allowed the complainants their costs.

4. Jackman *v.* Isle of Wight Railway Company was a case of vehicles plying for hire in competition, and of the railway company giving one of them an undue advantage, the vehicle of the complainants being excluded from the station yard at Ventnor, while that of another coach proprietor was admitted. There was no answer to the application, and the case was disposed of by agreement, the company paying costs.

5. Horbury Waggon Company *v.* Lancashire and Yorkshire Railway Company illustrated the indirect use of the Commission in bringing about agreements, the alternative to an amicable settlement being a resort to the Commissioners at the option of either side. The premises of the Horbury Company were close to the Horbury and Ossett Station of the Lancashire and Yorkshire Railway, and a siding to connect them with the railway was necessary to the business of the waggon works. But there were points in regard to the proposed siding about which the waggon company and the railway company could not agree, and eighteen months passed in negotiating and exchanging plans. The waggon company then complained to us that the railway company were not willing to give them as good siding accommodation as they gave to others in like circumstances, nor to afford them reasonable facilities for their traffic. The case ended at the hearing by the parties in court coming to terms, the railway company agreeing to grant the connexion which the applicants desired, upon the latter undertaking to make another and additional connexion at a different point, should the traffic from the works, in the opinion of the railway company, eventually require it.

6. We will now shortly state the cases under the Act of 1854 in which we gave decisions. In Holland and another *v.* Festiniog Railway Company (No. 6 in Appendix, p. 13) an injunction was sought on the ground that the railway company carried slate for the Welsh Slate Company at a lower rate per ton than they charged the complainants. Both the Welsh Slate Company and the complainants were amongst several quarry owners with whom in 1864 the railway company had entered into an agreement by which a quarry owner who agreed to send all his slates by the line of the railway company for the next 14 years was to have his goods carried for 2*s.* 6*d.* a ton. In 1871 the railway company and the Welsh Slate Company made a fresh agreement by which, in consideration of the Welsh company engaging to use no other means of conveyance for their slate for a new term of 30 years, the 2*s.* 6*d.* rate by the Festiniog Railway was reduced in their case to 2*s.* 1½*d.* A similar agreement was offered to the complainants, but declined. We held, first, that the extension of time granted by the Welsh Slate Company did not justify the difference of charge in their favour; and, secondly, that the agreement of 1864 meant that all who signed it should during its continuance have equal treatment, and in particular, as far as rates of charge were concerned, should not any of them be given a preference over the others. And we directed an injunction to be issued.

7. Greenop and others *v.* South-eastern Railway Company (No. 13 in Appendix, p. 29) was another case of undue preference. The applicants were Custom-house agents at Folkestone, and their complaint was that the railway company charged them higher rates on goods shipped from Boulogne for London *viâ* Folkestone and cleared by them through the Custom-house than they charged Messrs. Flageolet frères for shipments of a similar kind. It was admitted that Flageolet frères were allowed a rebate of 15 per cent., besides other advantages; but it appeared that in return for this reduction off the tariff rates they were under a guarantee to send between Boulogne and London, by the South-eastern Company's steamboats and railway, 850 tons of goods each month, dating from 1st January 1867. The guarantee had not the effect of causing the goods forwarded under it to be carried at any less cost to the company than the goods of others; but the company acquired it because as carriers between Boulogne and London they had to maintain a competition with the Thames Steam Navigation Company, and this circumstance, with this in addition, that the applicants and any person could, by guaranteeing traffic of whatever amount, obtain a diminution of the tariff proportionate to the quantity for which the customer made himself responsible, justified, we thought, the course taken by the company, and the application therefore was refused.

8. In the last case the company had steamboat powers, and the Act of 1854 was not less applicable to their traffic at sea than on land. Another Act, 31 & 32 Vict. c. 119, section 16 further provides that a railway company with those powers shall make no distinctions between railway passengers and others using their steamboats, but shall

charge equal tolls to all alike, and that if the company through-book persons using both modes of transit, the tickets they issue shall show how much of the aggregate fare is for the steamboat and how much for the railway. These enactments apply only to railway companies authorised to acquire or use steam vessels, but we think they might well be extended to the traffic on board vessels which are worked by their owners in conjunction with a railway under traffic arrangements with a railway company. In the Southsea and Isle of Wight Steam Ferry Company *v.* London and South-western and London, Brighton, and South Coast Railway Companies (No. 15 in Appendix, p. 35), the railway companies booked through to and from Ryde *viâ* their joint station at Portsmouth by the vessels of the Portsmouth and Ryde Steam Packet Company, but refused to have a corresponding arrangement with the Ferry Company, on the ground that their vessels were inferior to those of the Packet Company and unequal to the requirements of a railway through traffic. The Ferry Company complained of this as an undue preference of one company over the other; but as the objections made to the vessels were supported by the evidence, and the responsibility of a railway company through-booking does not end with its own part of the through route, we did not think that an undue preference was shown to exist. The Ferry Company also complained that the tickets issued did not distinguish the sea portion of the through fare, and that the Packet Company did not impose their rates equally, as they carried local passengers, being the description of traffic for which they had to compete with the Ferry Company, for less than their railway passengers. But these points could not be brought within the prohibition of a statute which, as we have stated, applies only to vessels used by railway companies, and we were unable therefore to interfere in regard to them.

9. Robertson, trading under the name of Fishbourne and Company *v.* Great Southern and Western Railway Company, Ireland, (No. 19 in Appendix, p. 45,) and the same *v.* Midland Great Western Railway of Ireland Company (No. 22 in Appendix, p. 59), were two carriers' cases. The complaint against the Great Southern and Western was that they would not allow to the complainant off their parcels rates, which included collection in Dublin, on parcels he conveyed to their terminus, as much as they allowed to their own carting agent. There was no doubt that the company had been making a difference of that kind to the undue prejudice of the complainant, but they were able to show at the hearing that the difference had already been put an end to, and that they were then paying their agent for collection no more than they allowed to the complainant. An injunction therefore was not needed, but we made an order on the company to state in their notices to the public the particular sum included in their parcels rates for collection, such sum not being payable to the company where they were not employed to collect.

10. In the other case, that against the Midland Great Western, collection in Dublin was included in the parcels rates of that company also, and parcels under 21 pounds were carried any distance on their railway if prepaid by having affixed to them stamps according to weight, which were sold by the company at very reduced rates. The service of collecting parcels, stamped and unstamped, was performed for the company by a carting agent for a payment of one penny per unstamped parcel, and the company made this arrangement the measure of their allowance to those who carted their own parcels. The applicant, however, claimed to receive the same allowance on stamped as on unstamped parcels, and contended that otherwise he was unduly prejudiced and overcharged in respect of stamped parcels. We, however, thought that the company succeeded in showing that they neither made a charge to the public nor an allowance to their agent for the conveyance of stamped parcels to the railway, and we decided therefore not to interpose under the Act.

11. In the Corporation of Reigate *v.* The Brighton Company and the South-Eastern Company the application was to compel the two companies to provide not less adequately for the railway requirements of Reigate than they did for those of other places on their lines which competed with Reigate in offering attractions for the residence of persons who wished to live somewhere in the country where they would be within reach of London for their daily business. It was an undue preference, it was urged, of such places as against Reigate, that Reigate was denied the accommodation afforded to them, as also to many places on the lines of two companies, of joint return tickets without extra charge, entitling the holders to the use of the trains and of the metropolitan termini of either company; and it was also complained that a difference was made between Reigate and other places, to the disadvantage of the borough, in the rates of charge per mile for season tickets to London. The application was made with the approval of the Board of Trade, as required for a complaint by a municipal

corporation, but was ultimately discharged by our order at the instance of the applicants, each side paying its own costs.

12. The Act of 1854 enjoined every railway company to forward traffic with all reasonable facilities. These facilities were declared by the Act of 1873 to include forwarding at through rates from or to other lines at the request of a railway company, and it was at the same time provided that a forwarding company might object to the proposed through rates, and that the Commissioners should then decide whether they should be allowed or not. We stated last year that we had granted through rates under this section in a case of The East and West Junction Railway Company *v.* the Great Western Company, which was an application for through rates for Northamptonshire iron ore from the Blisworth district to South Wales *viâ* the Great Western and Monmouthshire Railways. Another case between the same parties came before us this year, in which through rates for the same traffic to South Wales *viâ* the Great Western and the North-western or Midland Railways were applied for, and the granting of them opposed by the Great Western. It was arranged, however, during the hearing, that the through rates should be allowed, subject to an apportionment as between the two companies, which gave the Great Western ·50 of a penny per ton per mile for ironstone to any place in South Wales carried by the Great Western from the Junction line, and ·55 if the total traffic was under 1,000 tons a week, and a further ·5 per centum as to so much of it as should pass off the Great Western on to a foreign line before reaching Abergavenny. This arrangement was to be terminable by either company at short notice, but while it lasted was to apply to the apportionment of receipts from traffic to the places in South Wales mentioned in our order of 1875, and we made an order embodying this arrangement and modifying during its continuance the order in the previous case.

13. Greenock and Wemyss Bay Company *v.* Caledonian Company was another case, mentioned in our Second Report, in which we granted through rates, and the case No. 2 in the Appendix to our present Report, page 5, was an application by the Caledonian Company for leave to appeal upon points of law from that decision. Some of the points were not, in our opinion, matters for appeal, but others raised questions which were questions of law, viz.: First, whether a railway company which owned but did not work a line could apply for through rates under section 11 of the Act of 1873; and next, whether steamboat traffic between Wemyss Bay and Inellan, and other places on the Clyde, were, as we had held it to be, within that section; and upon those we granted an appeal and stated a case in writing for the opinion of the Court of Session in Scotland.

14. The cases we have next to mention relate to differences between railway companies which under any general or special Act might have been referred to arbitration. Such differences, under section 8 of the Act of 1873, may be referred to us for decision at the instance of any of the parties to them, and it will be evident that considerable use is made of this right to compel a reference, but its exercise is at present restricted to questions which might be settled by arbitration, and we think if a freer course were opened to it, the benefit it is would be increased in proportion. We have also the power, under section 9, with consent, to decide differences of any kind, and between any parties, provided one of the parties is a railway company. The number of cases under these sections 8 and 9 which we decided during the year was 14, of which two were heard at the joint request of both sides.

15. The Isle of Wight (Newport Junction) Railway Company *v.* Ryde and Newport Railway Company, and Ryde and Newport Company *v.* Isle of Wight Company (No. 4 in Appendix, p. 9), were cross references of differences between the two companies. Their railways out of Newport starting from the same station, and for a short distance running side by side, a single company it was thought would best construct the works at Newport for both. Each, therefore, of their special Acts provided that the joint stations and a certain length of each line should be constructed in such manner and upon such terms as an arbitrator should determine. The determination so made was that they should be constructed by the Ryde and Newport Company according to plans annexed to the award, and that the cost should be defrayed by the two companies in equal shares. The contentions before us were, on the part of the Isle of Wight Company, that the works executed by the Ryde and Newport Company were not according to the plans, and in particular that the distance for which the two lines were to be constructed at the joint and equal cost of both companies was longer than the Ryde and Newport Company would allow; and on the part of the Ryde and Newport Company, that the award intended that there should be a concurrent payment

by the two companies of the cost of the works as they proceeded, and that the Isle of Wight Company were not justified in refusing, as they did, to pay by instalments, or until the works should be all completed. The decision we gave will be found in the Appendix, p. 9.

16. In the Caledonian Railway Company *v.* North British Railway Company, No. 1, (No. 5 in Appendix, p. 11,) the Act for the amalgamation of the Scottish Central Railway with the Caledonian system gave power to the North British Company to fix the rates for Scottish east coast traffic, as it was called, or traffic passing partly over the Scottish Central, and partly over the North British, the receipts to be divided by mileage, but minimum sums per mile to be allowed to the Caledonian Company. The issue of season and trader's tickets had been determined by arbitration to be within the power thus given to the North British Company, and the questions referred to us for decision, and upon which we gave judgment, were, first, how the receipts from these tickets were to be apportioned between the two companies, and secondly, what should be the qualifying traffic in respect of which the North British Company might issue a trader's ticket.

17. A bill was brought in last session to authorise the Caledonian Company to construct a number of new lines, and was opposed by the North British Company. Part of an existing agreement between the two companies was as follows: "Each "company shall be at liberty to apply to Parliament for power to construct lines in its "own district for the accommodation of the local traffic in such district, but neither "company shall directly or indirectly promote or support any new line in the district "of the other." And one of the objections of the North British being founded on this agreement, what its signification was, and whether the bill in whole or in part was at variance with it, were the matters referred to us in Caledonian Railway Company *v.* North British Railway Company, No. 2, (No. 7 in Appendix, p. 15). There was no doubt as to the parties having agreed that neither should promote a new line in the district of the other, nor be opposed by the other in applying for power to construct new lines in its own district for local traffic. But, did the agreement leave it open to each company to make applications, that the other might oppose, for new lines in its own district, not confined to local traffic, or for new lines for any purposes in those districts of which both companies were equally in possession, and which could not properly be called the district of either in particular? These questions could, in our opinion, be answered only in the affirmative, and having then proceeded to examine the course of each of the proposed lines, we came to the conclusion that the bill was not inconsistent with the agreement.

18. The suitability of a locomotive engine was the question for decision in the East and West Junction Railway Company *v.* Northampton and Banbury Railway Company (No. 8 in Appendix, p. 17). The Junction Company had running powers over the line of the respondents into Blisworth, and worked their goods traffic with a Fairlie engine. The Railway Clauses Act, 1845, section 115, authorises the settlement by arbitration of differences between a company and the owner of an engine as to its fitness to be used on their railway, and the Fairlie engine was objected to by the respondents on the ground that its great width unfitted it for their railway. We decided that except where less than a space of six feet had been allowed between the sidings in the station yard at Blisworth, the engine was not unfit to be used.

19. The undertaking of the Carnarvonshire Railway Company was vested in the London and North-western Company in 1870. One effect of this transfer was that Afonwen, near Carnarvon, became a place at which traffic could pass direct to the North-western from the lines of the Cambrian Company. And where the North-western receive traffic other than minerals from a Cambrian railway, and there is no other and shorter route, they have to pay 50 per cent. of their own mileage receipts upon such traffic to the Cambrian Company in return for having running powers over that company's lines. Before 1870, the two systems were not in connexion at any point on the coast side, but only at places inland, as Whitchurch, and the North-western refused to extend the payment of the 50 per cent. rebate to traffic passed to them at Afonwen, on the ground that the Act of 1870, which vested in them the railway of the Carnarvonshire Company, took from them at the same time all right to use the Cambrian Railways from the direction of Afonwen, and thus divested them at that end of the Cambrian system of what was their consideration for the payment of the rebate. The matter in difference was referred to us, and we decided (Cambrian Railways Company *v.* London and North-western Railway Company (No. 9 in Appendix, p. 19)) that the Act of 1870 did not operate in the manner supposed by the North-western

Company, and that they were bound to pay the rebate on traffic transferred to them at Afonwen.

20. The Midland Railway Company *v.* Great Western Railway Company (No. 10 in Appendix, p. 21) was another case of difference as to the meaning of an agreement. The Midland were proposing, in conjunction with the South-western Railway Company, to lease and work the Somerset and Dorset Railway, and were met by the Great Western with the objection that they were not at liberty to do so, the district of the Somerset and Dorset being south of Bath and Bristol, and Bath and Bristol being the agreed termini, north and south respectively, of the Great Western and Midland Companies. The agreement bore date 17th March 1863, and had been confirmed by Parliament, and Articles 18 and 19 were those on which the Great Western particularly relied as drawing a line, of which each company was to keep to its own side for all time to come. We were, however, of opinion that the articles were not of this comprehensive character, and that, in fact, they merely embodied the principle of an arrangement which had been come to for the giving up by the Midland of the greater part of a bill which they had brought in, and were at the time endeavouring to get passed. And we held that, read as they should be with reference to that special purpose, obscurely worded though they might be, they did not prevent the Midland Company from taking a lease of the Somerset and Dorset Railway.

21. The Harborne Railway Company *v.* London and North-western Railway Company (No. 14 in Appendix, p. 31) was a dispute as to whether the mode in which the respondents worked the Harborne Railway satisfied the requirements of a working agreement. The railway, according to the agreement, was to be worked so as properly to develope and accommodate both the through and the local traffic of the district, and the Harborne Company complained that the service was not of that kind, and that the times of the passenger trains, and the rates and arrangements for goods traffic, were such that the public preferred to go by omnibus, and to cart their goods by the road. As the road was shorter than the railway, and the distance either way three or four miles only, it was not to be expected that the railway would altogether supersede other modes of transit; but the complaints of the Harborne Company were, in the main, we thought, well founded, and we ordered the service to be improved in certain respects as indicated by them. They further complained of not receiving the share of the receipts or earnings of their line, to which they were entitled by the agreement, the North-western Company deducting terminals before division, and retaining them, whereas, in the opinion of the Harborne Company, the allowance for terminal expenses should have been included in the balance for division. And we decided that their principle of division was the right one.

22. Torbay and Brixham Railway Company *v.* South Devon Railway Company (Nos. 18 and 23, Appendix, pp. 43 and 61) was also about terminals. The South Devon were the agents of the Brixham Company for working and managing their line, collecting its receipts, and, after paying all expenses, accounting to them for the balance. The line formed a short branch from the Churston Station of the South Devon Company to Brixham, and its traffic was almost wholly to and from places beyond the Churston Junction; and according to railway practice, where traffic is carried by two or more companies, the company at each end of the through route has an allowance for terminal expenses out of the gross rate, and only the remainder of the rate is for conveyance and for division by mileage amongst the different companies interested. The Brixham Company accordingly claimed that the terminals allowed to the South Devon Company in the division of the receipts from traffic to or from Brixham should be placed to the credit of the Brixham Company, and also that on traffic between Brixham and South Devon Stations the gross rate should be divided in the same way, as regards terminals, as if the Brixham line and the South Devon line had been worked by separate companies. The reply of the South Devon was that they worked the Brixham line at fixed rates or tolls, which the Brixham Company elected to take in lieu of mileage and terminals, and that the Brixham Company, being credited with the full amount of their local rate deducted before division from the gross rate, had nothing to do with the manner in which the gross rate was afterwards divided between the South Devon and other companies. But, besides that the Brixham Company did not appear to have fixed the local rates with any reference to terminal expenses, nor, indeed, at the time, to have known of the regulations of railway companies for dividing the receipts from through traffic, they had been advised in what they had done by the South Devon Company, and as that company were their agents for working the line, the standing of the South Devon Company in that situation of confidence was, we

thought, a reason why they should not reap any benefit at the expense of their principals, through failure to advise them as to the best method of charging for traffic on the line. We therefore upheld in the main the view taken by the Brixham Company, and ordered the past accounts between the two companies to be corrected.

23. As arbitrators under the "Cheshire Lines Transfer Act, 1865," we decided, on an application of the Manchester, Sheffield, and Lincolnshire, and Midland Railway Companies *v.* Great Northern Railway Company, a difference that had arisen between the members of the committee managing the lines and representing those three companies, on the subject of a plan for the roof of the Manchester Central Station. It appeared to the Great Northern that if the station was to be large enough to accommodate not only the local traffic of the Cheshire lines, but the through traffic of the three companies as well, it would be fair as the Great Northern would not require to use it for their through traffic, that the costs should be separated, and only so much of it as was needed to provide station accommodation for the local traffic paid by the three companies in equal proportions, the rest being charged to the company which should use the station for its through traffic. But the Act which vested the Cheshire lines in the three companies gave to each the right to use them as if they formed part of their own undertaking, and equally for through as for local traffic. We held, therefore, that a third of the entire cost was on any plan of the station chargeable to each company, and as it was not argued that the plan for a roof advocated by the Sheffield and Midland Companies was too large for the probable traffic of every kind, we approved of its adoption.

24. Midland Railway Company *v.* Neath and Brecon Railway Company (No. 17, Appendix, p. 41) came before us under the "Midland Railway (Swansea Vale Railway Lease) Act, 1874," which gave the Midland Company absolute running powers over 29 miles of the Neath and Brecon Railway, and enacted that the Railway Commissioners should settle the amount to be paid for such powers. The circumstances were in some respects of a special character, and we decided that the payment to the Neath and Brecon Company should be the proportion of net receipts due to their mileage, with five per cent. added thereto, and we fixed the allowance to the Midland for working expenses at 40 per cent. of the gross receipts less terminals, such allowance, with reference to the line being one of steep inclines, to be liable to revision after one year's further experience of the cost of working.

25. In the Caledonian Company *v.* Great Northern, North-eastern, and North British Companies (No. 20, Appendix, p. 47), the North British Railway from Edinburgh to Larbert, and the Caledonian Railway from Larbert to Perth and Aberdeen, being continuous to the Railways from London and York, the Great Northern and the North-eastern Companies had a statutory right, if they ran trains expressly for the accommodation of traffic to and from the North *viâ* Larbert, to require the Scotch companies to run trains in conjunction, and trains between London and Perth and London and Aberdeen had long run under the statutory powers. In June last the English companies gave notice to the Scotch companies to alter the times of departure of three down-trains from Edinburgh and one up-train from Perth. The North British Company made no objection; but the proposed alterations were inconvenient to the Caledonian Company, and the difference referred to us was, whether that company was bound to comply with the notice from the English companies. As to two of the trains, the English companies had improved and accelerated their part of the joint service, and their object in doing so would have been defeated, and the service as a whole no better than before, if the times of the Scotch conjunction trains remained unaltered. These trains, therefore, we decided, must be altered to suit the alterations in the trains with which they were in connexion. The two other trains were trains from London to Aberdeen, and as to them there was no alteration in the times they left London or reached Edinburgh or Aberdeen; but there was a long stoppage at Edinburgh, and this stoppage it was desired to abridge, in order that the passengers might arrive earlier and have more time at Perth. This was not convenient to the Caledonian Company, for the reason that at Larbert these trains from Edinburgh met other trains from the west and south, and the whole were sent on together to Perth. A consideration, however, that outweighed this inconvenience, from a public point of view, as to one of the two trains, was that passengers by that particular train were sometimes late for a train leaving Perth a quarter of an hour after the train in question was due there, and as to such train we held that the Caledonian Company must carry out the requisition of the English companies. With regard to the remaining or fourth train, we were of opinion that the duty of giving a fair connexion

did not, under the circumstances, oblige the Caledonian Company to alter the time at which the train had been previously running from Larbert to Perth.

26. In the East London Railway Company *v.* London, Brighton, and South Coast Railway Company (No. 24, Appendix, p. 63), the Brighton Company worked under agreement the East London line from Liverpool Street Station to its junctions with their Brighton and South London Railways at New Cross and Old Kent Road Station, and the complaint of the East London Company was, that the Brighton Company did not make that use of the line for the accommodation of through-passenger traffic for which, as a line in continuous communication with their railways, it was calculated, and which, it was said, was required by the terms of the agreement so to work the line as fairly and efficiently to develope the traffic. Passengers, for example, could not travel through without a change of carriage, nor by trains on one line which were in good and close connexion with trains on the other, nor at as low a charge to Liverpool Street as to London Bridge, and at New Cross Junction the station arrangements of the Brighton Company made it impossible to have an easy and rapid exchange of traffic. We considered these complaints to be well founded, and that the working agreement raised the duty of providing a better service than was being given for through traffic, and our decision indicated the several points which would require to be remedied. No absolute order has as yet been issued in this case, as it was represented to us by the complainants that the intimation of our views made in the decision would perhaps be sufficient without such order.

27. The preceding cases were differences between railway companies, and came before us at the instance of one of the parties to them. But, as already observed, we have also authority to adjudicate upon any question, one of the parties to which is a railway company, and all the parties to which agree in referring it to us. A case of this kind was South Devon Company *v.* Devon and Cornwall Company, Cornwall Company and other Companies *v.* Devon and Cornwall Company, and London and South-western Company *v.* South Devon, Cornwall, Great Western, and Bristol and Exeter Companies (No. 12 and No. 16, Appendix, pp. 27 and 37) which, though confined to railway companies, required the consent of all before we could hear it, because the power of compelling a reference does not apply where an arbitrator has in any general or special Act been designated by name, and a special Act had in that case named certain persons as arbitrators to settle any question that might arise between the companies. The facts of the case were these: the broad gauge railway from Lidford to Plymouth and Devonport, and thence to a junction with a branch to Keyham dockyard, a distance of about 26 miles, had been made mixed gauge by the addition of a third rail, at a cost, as alleged, of 86,000*l.*, and the South Devon Company and the Cornwall Company, by whom the work had been done at the request and on the behalf of the Devon and Cornwall Company pursuant to certain Acts of Parliament, desired to obtain a settlement of their claims against that company for the cost. The Devon and Cornwall had been lately merged in the South-western, and the object of the cross application of the latter company was to have our determination of the conditions upon which the narrow-gauge rails provided as above were to be used by them as representing the Devon and Cornwall, and as exercising, or about to exercise, their running powers. The Great Western Company were made one of the respondents to this application because they had then amalgamated with the South Devon, and were therefore the railway carriers between Plymouth and Exeter, with whom the South-western would be in competition. The main objects for which the South Devon contended were that the amounts to be paid to them for construction and user respectively should each be fixed independently of the other and be cumulative, that is to say, that the Devon and Cornwall should pay full interest upon the capital expended in construction, and that the South-western should pay in addition for the user according to the quantity of traffic it might carry, and that in consideration of the South Devon losing the carriage of all such traffic by their main or coast route between Exeter and Plymouth, the toll for the user should not be a mere mileage proportion of the South-western rates, which besides, if their rates should be low, would not, it was said, pay a company with a comparatively short mileage, but should be a fixed mileage and tonnage rate. These claims, however, we found to be inconsistent with the clear indications in the Company's private Acts of the intention of the Legislature to keep open to competition communication by railway with Plymouth, and to treat the power given to the Devon and Cornwall Company to require the laying down by the South Devon Company of a third rail from Lidford to Plymouth, and to use such line for its narrow-gauge traffic as equivalent to its being given access

into Plymouth by an independent route from Lidford. Accordingly we decided that a proper mode of paying the South Devon for the use of their line would be by a mileage division of the traffic receipts of the South-western Company, the South-western fixing the rates, but with the reservation in favour of the South Devon Company, that so far as the rates applied to their portion of the route they might object to them and have any differences settled by arbitration. We also decided that if their portion of the receipts amounted in a year to eight per centum on the actual cost of the narrow gauging, they would be sufficiently paid both for construction and user, but that they were entitled to that percentage as a minimum payment for construction and maintenance, and that if their division of the receipts fell short in any year of that minimum the deficiency should be made good by the Devon and Cornwall and the South-western Companies.

28. Another case in the same class was the London and North-western Railway Company against the Wigan Union (No. 1, Appendix, p. 1), in which some general questions connected with the rating of railway property were the matters in difference. The company were in the occupation of 11 stations and 32 miles of railway in different parishes of the union. It is the practice to assess the stations separately from the lines of railway, the two assessments together forming the entire rateable value. The lines of railway had been valued in the usual way by ascertaining the gross receipts due to them, and deducting therefrom the working expenses of every kind, and also a percentage as tenant's profits on the present value of the rolling stock and other investments of capital. What this percentage should be, what sum should be allowed as floating capital, whether the working expenses, which had risen at the time through the high prices of coal and iron, should not be calculated on an average of years,—these were some of the points in this part of the case. As to the stations, the main point was whether sidings and extra lines were assessable with and as part of them, or not. Considering that stations are an item of working expenses, and as such figure in the deductions made from gross receipts to find the rateable value of a portion of railway, it was, as we pointed out in our decision, the same to the railway company, whichever view prevailed. But it was by no means so to the rating districts as between one another, and we gave our reasons for holding that in assessing a station only the average quantity of land required for the main tracks, and only the permanent way necessary to such tracks, at any point in their length, should be excluded. Six days were occupied with the hearing of this case.

29. Section 10 makes our approval of working agreements necessary to their validity, and companies about to enter into such agreements are required to give public notice of the time and manner in which objections to them may be brought before us. We confirmed six agreements during the year. Two were contested cases; one a lease of the Sirhowy line to the London and North-western Railway Company, the other a lease of the Ilen Valley Railway, near Skibbereen, to the West Cork Railway Company (No. 11 in Appendix, p. 25). In the Sirhowy case (No. 3 in Appendix, p. 7), it was alleged that the agreement would unduly divert particular traffic, and though we decided to approve, we did so conditionally upon the railway company, the lessees of the line, giving security against the effect apprehended. The Sirhowy line was afterwards vested by an Act of last session, 39 & 40 Vict. c. 133, in the North-western Company, but it was enacted by section 10 that the provisions which had been made under our order for the protection of the traffic over the Monmouthshire Railway, and which were set out in the section, should be observed and have effect given to them. In that particular case we were able indirectly to modify the agreement, but we have no direct power of modification, and we think the present alternative of simple approval or rejection might usefully be enlarged into a power to approve with amendments. We can modify or revise an agreement by section 27 of the Railway Clauses Act, 1863, at the expiration of every 10 years from the date when it was made, and our suggestion would make such a power exerciseable in addition on the occasion of an application being made to us for a first approval of an agreement. In the Harborne Railway Company *v.* London and North-western Company (No. 14 in Appendix, p. 31) it came out incidentally that the Board of Trade, who then exercised the power with respect to the approval of working agreements since transferred to us, had not approved the agreement for working the Harborne line, and although the Railway Clauses Act, 1863, section 25, provides that a working agreement shall have no operation until approved, the Harborne line had been worked under its agreement for a considerable time. It would perhaps be desirable to require that a working agreement should be submitted for approval within a definite time after being entered into, and to impose a penalty if this was omitted to be done.

30. Two orders were issued by us during the year, one on an application, in which we granted costs, against the North-eastern Railway Company, to enforce the observance of section 14 of the Act of 1873, which directs railway companies to keep at each of their stations a book, open to inspection, showing the rates that are being charged for the carriage of traffic from such station and the distance of all the places to which the rates are charged. These books must also show, if we require it, how much of each rate is for conveyance and how much for terminal expenses, and a case of Ivens *v.* London and North-western Railway Company illustrated the usefulness of such information. In pursuance of an order we had made, as mentioned in our last Report, the company's rates for timber from Rugby and Marton were stated in the books kept at those stations to include 2*s.* per ton for station accommodation, and 6*d.* ditto for cranage, &c., upon which the complainant applied to us to determine the right of the company to make such terminable charges, and before coming on for a hearing, the case was settled by the company agreeing to reduce the terminals to 6*d.*, and to adjust accounts with the complainant on that footing for six years back, and also to pay his costs.

31. By section 15 of the Act of 1873 we are authorised to determine any dispute as to terminal charges, and to decide what is a reasonable sum to be paid to a railway company for services of the kind for which such charges are made. The Dunkirk Colliery *v.* Manchester, Sheffield, and Lincolnshire Railway Company (No. 21, Appendix, p. 55) was a case under that section. There it appeared that the railway company carried coal for the complainants from their collieries to places to which the maximum legal charge for conveyance, and everything incidental to conveyance, was 7*d.* in one case, and 6*d.* in the other cases, or at the rate of 1*d.* per ton per mile. The railway company, however, actually charged from 1*s.* to 1*s.* 6*d.* a ton, and their plea in justification was that they performed other services besides conveyance for the coal company, for which as terminal or extraordinary services they had power by their special Act (12 & 13 Vict. c. 81, section 208) to charge reasonable sums. The alleged extra services were of various kinds, but with the exception of two of them, were, we held, such as were incidental to conveyance, and for which no extra charge could be made. For the two services which were terminal or extraordinary within the meaning of the company's toll clauses, we fixed 3*d.* and 2*d.* per ton respectively as reasonable sums to be paid to the company, and as these sums and the maximum mileage rate for conveyance added together did not amount to the rates complained of, and the coal company had been overcharged, we granted them also the costs of their application. This case we think indicates a direction in which an extension of our powers might be useful. At present if a railway company act in a manner unauthorised by their special Acts, we cannot grant an injunction to restrain them unless it can also be shown that in so acting they are infringing some provision of the Act of 1873, and the extension referred to would be to give any aggrieved person a right to complain against a railway company simply for an infringement of the company's special Act, and thus to enable the Commissioners directly to enforce obedience to such Acts, and the observance by railway companies of their provisions.

32. For easier reference we have placed the principal decisions given by us during the year in an Appendix to this Report.

All which is humbly submitted to Your Majesty.

(Signed) FREDERICK PEEL.

JUDGMENTS.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 1.]

THE LONDON AND NORTH-WESTERN RAILWAY COMPANY - - *Appellants*,
against
THE WIGAN UNION - - *Respondents*.

Judgment of the Commissioners, delivered on the 24th day of November 1875.

THIS is an application by the London and North-western Railway Company against the sums at which they have been assessed in the valuation lists of the Wigan Union. They are the occupiers of 11 stations and 32 miles of railway in the Union, and the matter referred for our decision is to find the entire rateable value of this property, inclusive of rates, the Railway Company and the Union being agreed upon the manner in which the whole value when found shall be apportioned amongst the several parishes of which the Union consists.

To find the annual value of the stations which are the part of the property we will take first, it is necessary to determine not only the mode in which the land in occupation, and the offices, sheds, platforms, sidings, and other appendages of a station shall be valued, but also carefully to exclude the lines of railway in a station which are separately assessed. In the case before us the mode of rating has been to take a per-centage upon the present value of the stations, and the evidence did not show that land or structures had been over-valued. As to the other matter of what a station includes, the parties differ upon the point whether all the sidings or only some of them are part of the station and elements of its rateable value. The view of the Respondents is, that the number of lines outside a station should regulate the number inside that should be excluded in rating the station, while the Railway Company, the Appellants, contend for the exclusion, in addition, of all lines not in ordinary use, either as standing room for waggons and carriages, or as sidings for loading and unloading goods, on the ground that if there are more lines in a station than are appropriated to such purposes, they are lines laid down to facilitate the passage of traffic, and existing under the same conditions as the main tracks on which the through traffic runs, and they say that such lines and the space they occupy are taken into account in the separate rating of the railway, and that to rate them as also belonging to a station would be to rate them twice. In this, however, we do not agree, because the use and maintenance of stations and sidings being indispensable to a railway carrier's business they become a cost of carriage for which a deduction is allowed off the receipts from traffic, just as deductions are allowed to meet any other expenses of transit. And this remark shows that the question as to sidings is of importance to the parishes through which a railway passes as between one another, but is unimportant to the Company occupying such railway. Every deduction from the gross receipts in a parish goes to diminish the rateable value of the parochial portion of railway, and a parish therefore is interested in the amount deducted by way of a contribution to the total station assessment, particularly if it is a parish in which no station happens to be situated. The Railway Company will not be rated beyond the rateable value of the whole property, stations, and line taken together, but from the point of view of the parish it is requisite to see that a station does not include more than properly belongs to it, because the gain of one parish is necessarily the loss of another. It is true that one of the agreed points in this case is that the deduction for stations shall be 5½ per cent. upon the gross receipts, but that would be a sufficient per-centage, in our opinion, however the question as to sidnigs might be decided. Now, that question does not turn, as the Railway Company argued it did, on the use that is made of the sidings. No siding nor any other part of a station contributes otherwise than indirectly to the earnings of a railway, the gross earnings including receipts of every kind, and a siding which is used to give free passage to through traffic aids the receipts as effectually as one that is used for warehousing or for loading and unloading. The point to be kept in view is that a parish is entitled to benefit by the value of all the land occupied by the Railway Company, and if land is taken in Parish A. wide enough for the up and down traffic in its ordinary working, and in Parish B. of a width sufficient to give the same accommodation and other accommodation besides, Parish B. will be unequally rated relatively to Parish A. if the additional width counts for nothing in the valuation for poor's rate. The parish will get nothing extra from tolls because these are per mile, and the mileage is the same whether there are relief or alternative lines in a parish or not, and we are of opinion, therefore, that in assessing a station in the Wigan Union, only the average quantity of land required for the main tracks, and only the permanent way necessary to such tracks at any point in their length should be excluded.

The remainder of the questions in dispute relate to the rateable value of the line itself. The gross receipts and the number of train miles due to the Union are agreed figures based upon the Returns for 1874, and the Railway Company claim that the working expenses shall be made out upon the same basis. To this the Union reply that the working expenses of 1874 were exceptionally high owing to the dearness of coal and iron, and that it will be more fair to take the average working expenses in the four years 1871 to 1874. Now, the assessment is for the year 1874, and the valuation was made in the previous year. Owing to the appeal to the Quarter Sessions, the actual figures of 1874 now exist as data by which the estimate can be corrected, and from the stand point of 1873 would appear to be safe figures for that purpose. It is, however, left to us to say, upon consideration of all the information we have received, what a yearly tenant, taking this part of the Company's railway from the end of 1873, would reasonably have estimated his expenses at, and having examined the accounts for last year and checked them by the accounts to the present time, which show no diminution in the rate per cent. of the expenses as a whole, notwithstanding the decreased charges for coal and iron, we do not see that he could reasonably have anticipated that his working expenses would be less than they were for 1874, and we decide this question in favour of the Appellants.

Taking, then, the figures of 1874, it is agreed that the expenses under the heads of locomotive power, and carriage and waggon repairs, to be allocated to the Union, amounted together to 38,240*l*., of which amount 15,135*l*. was the cost price of wages and materials for repairs to engines and to carriages and waggons, and the Railway Company claim that to this latter sum should be added 10 per cent. for trade profits on repairs. It appears to us that so far as the 38,240*l*. is for such repairs as a tenant from year to year would make, ordinary repairs to stock in constant use, he is, in regard to the items of wages

and materials included therein in the same position that he is in as regards wages to the engine drivers, guards, and others concerned with the movement of stock, and that a deduction for profit on the expenses of the first kind could not be allowed any more than it could be for profits on the other kind of expenses, and that if, as alleged by the Respondents, any part of the 38,240*l.* is for repairs or maintenance, such as only an occupier like a railway company, tenant and landlord at one and the same time, would undertake, a point to which we will allude later, a claim to profit in respect of any such part would be still less allowable.

To arrive at the rent of a portion of railway through the medium of deductions from gross receipts, we have to deduct, not only the expenses incurred in earning them, but also the tenant's profit on his stock and capital. The value of the rolling stock in this case is another of the agreed figures, and amounts for the Wigan Union to 186,639*l.* The rolling stock has been valued at its cost price, less only a depreciation of 12½ per cent. all round. The 186,639*l.* is, it appears, inclusive of fixed machinery, which, however, so far as it is permanently attached to the freehold, is rateable property, and not tenant's plant, and the amount therefore must to that extent be reduced. If the value of machinery so attached is for the Wigan Union as much as 6,972*l.* that will be the deduction if less the proportion whatever it may be. The sum thus corrected being the amount of tenant's capital, exclusive of stores and floating capital, the next question is what per-centage shall be allowed him upon it for profit, the railway company claiming 20 per cent., and the Respondents contending that 10 per cent. will be quite sufficient, interest, profit, and deterioration included. Of the 20 per cent. in the Company's claim, one fourth is for deterioration, risk, and insurance, to cover any contingent loss of capital from those causes, and against this we think the Union are entitled to a partial set-off in the circumstance that the expenses for locomotive power, and for carriage and waggon repairs paid out of revenue provide for additions and improvements to rolling stock, the gain from which will compensate the tenant for any loss from deterioration. We infer this from the fact that while the total charge to capital for working stock to December 1874 is 6,929,862*l.*, the agreed value in 1874 exceeds nine millions. Another matter to be considered in fixing the per-centage has reference to the value put upon the rolling stock. That value is a high one compared with the amount at which the stock stands in the capital account, and high also in relation to the earnings of that stock in the Wigan Union, the coal receipts in private waggons forming a considerable part of the gross earnings. While, therefore, we shall allow the Company 15 per cent. for interest and profit, we think the further 5 per cent. claimed by the Company should be reduced to 2 per cent., making 17 per cent. the total allowance.

The Railway Company use the waggon stock of private owners, and the carriages and waggons of other railway companies in the conducting of some of their traffic, and as the rates and charges paid for the conveyance of that portion of traffic form part of the gross receipts credited to the Union, they demand a deduction for profits of trade thereon, and estimate that 10 per cent. upon the value of the stock would be a proper measure of the profits, as in the case of rolling stock of their own. But there is this difference, as it seems to us, between the two cases that as regards at any rate the waggons of private owners, the number of full train miles they run is much less in proportion than the number run by the Company's own rolling stock, and we think 5 per cent. upon value as regards these waggons will give a sufficient sum for profits. We have not been able to make any similar comparison of work done in reference to the stock of other railway companies, and we shall therefore allow the 10 per cent. claimed upon that item.

We also allow 10 per cent. upon the capital locked up in stores, though perhaps a less per-centage would be enough, if, as is probable, the stores as here valued include some which an occupying tenant who was not landlord as well would not require.

As regards a floating capital, we think, notwithstanding the contention to the contrary of the Respondents, that it is necessary that a company should have in hand a working balance over and above traffic receipts, and that interest at 5 per cent. upon it is a fair deduction. The Company estimate the floating capital requisite for their whole undertaking at considerably more than a million. They make their calculation by taking the accounts they have outstanding at the end of each half year, less accounts they owe,—also their cash at bankers or at interest less value of special funds and less also money paid up on capital account but not yet expended, and, lastly, the interest and guaranteed dividends payable after each half-year, and these sums added together exceed a million, and show, they say, as well the amount of floating capital needed, as the transactions in which it would be engaged. But if we look at rent as the return to the landlord on his outlay in creating or improving the hereditament to be rated, the amount a tenant would be prepared to give would be fixed quite independently of the manner in which share or debenture holders might divide it, and no expenses in distributing rent ought to have any place either as landlord's or tenant's deductions in finding rateable value. Still, without this, the Company's account shows a large sum always outstanding—being the balance between what they owe and what is owing to them. But the truth is, the working capital of a tenant does not depend upon the state of a revenue account of assets and liabilities, but on the comparative amount of cash receipts and cash payments. Passenger receipts as a rule are cash receipts, and 20 per cent. of the charges for the carriage of goods is probably about the proportion paid on delivery, traders getting a credit of two or three months for the remainder. Now these ready money payments would about meet the 55 per cent. of receipts absorbed by working expenses, or so much of the 55 per cent. as the Company pay ready money for. On the other hand we must bear in mind that a railway business is not all concentrated in one place, and that the numerous places at which it is carried on require each a small reserve, also that the rent must in a case of guaranteed interests be paid as soon as it is due, and that the tenant of so great an undertaking ought to be prepared for sudden calls upon him to expend freely at once. We may assume that he would take the most economical course to meet such calls, which would be to borrow on the occasions of their happening, and allowing for interest being charged continuously, we think it will be reasonable to fix the amount of the floating capital at 300,000*l.*

Lastly, a deduction has to be made in respect of the landlord's expenses in maintaining his premises in a state to continue to command the same rent. The amount the Railway Company ask for to maintain their way and works and stations is 100*l.* per lineal mile, and the answer of the Union to this claim is that the sums already charged in the working expenses under the head of repairs to way and works are the expenses not only of tenant's repairs but of landlord's maintenance as well. We have no doubt that this is the case to a considerable extent, particularly as regards the line, the renewal of rails and sleepers being a yearly outgoing with which the revenue account is charged. We shall not, therefore, allow the whole of the Company's claim, but we think one half of it may be allowed.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 2.]

GREENOCK AND WEMYSS BAY RAILWAY COMPANY
v.
CALEDONIAN RAILWAY COMPANY.

Decision of the Railway Commissioners on application for leave to appeal to a Superior Court.

WE are of opinion that the Caledonian Company should be allowed to appeal to the Court of Session in Scotland upon the first, second, seventh, and eighth questions mentioned in the notice of their desire to appeal from our decision in this case, and upon those questions only so far as we consider our judgment to involve them.

The first and second questions relate to the title of the Wemyss Bay Company to apply to us for through rates under the 11th section of "The Regulation of Railways Act, 1873." It was stated, upon moving for leave to appeal, that the Caledonian Company desired to have an opportunity of arguing, among other objections to the title of the Wemyss Bay Company to apply to us, that it was an intermediate company between the Caledonian Company and the owners of the steamboats mentioned in the said notice, but we think that this point was not raised at the original hearing, nor does it properly arise upon the judgment, and that it ought not to be stated in a case for the opinion of the Court of Session. These questions must be confined to the single point whether the Wemyss Bay Company are or are not entitled to apply under section 11 for through traffic to be forwarded at through rates, having regard to the fact that their line of railway is worked by the Caledonian Company.

The seventh and eighth questions relate to the steamboat traffic between Wemyss Bay Pier and Inellan, Rothsay, and other places on the Clyde, and we think that the appellants should have an opportunity of contesting the correctness of our judgment to the effect that such traffic is within the said 11th section.

The third question was given up by the appellants upon their moving for leave to appeal. The fourth is whether there was any evidence to justify our finding that the granting of the through rates was a due and reasonable facility? We think that this was a matter entirely for us to decide under sub-section 5 of the said 11th section, and that it was not necessary to bring any specific evidence upon the subject before us. We do not, therefore, consider it a question of law upon which leave to appeal should be granted.

The fifth question is thus worded, "Whether it is "competent for the applicants to apply for, and for "the Commissioners to grant as through rates or to "make an apportionment of the through rates already "existing by agreement?" The statement that the existing rates were "through" and "by agreement" is incorrect; they were cumulative and not by agreement. But further, it was practically left to us to decide the *amount* of the rates, and we were asked to regard the case as one of principle, not of amount, except that the appellants requested us not to raise the fares from their then existing amounts. This was in effect admitted upon the motion for leave to appeal. We, therefore, consider this point to have been waived, and that it cannot now be re-opened.

The sixth question is in substance, as was stated on the motion for appeal, whether the Wemyss Bay Company have not parted with their right to ask us for through fares to the joint committee therein mentioned? We think it a sufficient ground for refusing an appeal upon this question, that it has been decided by the Court of Session against the appellants in a case between these very parties, reported in the eighth volume of the Scottish Law Reporter, page 634.

The ninth question, whether or not the traffic therein mentioned was carried by a like mode of transit on any other line of communication between the same points, we consider to be a question of fact and therefore not the subject of appeal.

Dated this seventh day of December one thousand eight hundred and seventy-five.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 3.]

In the Matter of the Application of the SIRHOWY RAILWAY COMPANY and the LONDON AND NORTH-WESTERN RAILWAY COMPANY for the *Approval of a Working Agreement*; the GREAT WESTERN RAILWAY COMPANY, the MONMOUTHSHIRE RAILWAY COMPANY, the Right Hon. LORD TREDEGAR, and the ALEXANDRA (NEWPORT) DOCK COMPANY *objecting*.

Judgment of the Commissioners, delivered 8th December 1875.

THIS is an application to us to approve a working agreement between two railway companies. The agreement is for the perpetual and exclusive working of the line of the Sirhowy Company by the London and North-western Company, and the Great Western and the Monmouthshire Railway Companies, Lord Tredegar and the Alxandra Dock Company of Newport respectively object to it, and have been heard upon their objections. The Sirhowy line is about 15 miles long, and runs from Nantybwch on the North-western, past Tredegar Junction, where it crosses the Great Western, to Nine Mile Point, whence the route to Newport, the natural outlet of the district, is continued by a railway of the Monmouthshire Company. The Sirhowy has a large traffic in coal and minerals, and the principal objection made to the agreement on its merits is that it will change the course of the traffic which now goes south by the Monmouthshire Railway to Newport, and send it the opposite way by the North-western, and will thus cause the railway and dock companies and Lord Tredegar to lose a large amount of tolls and dues, and in support of the objection reference was made at the hearing to a return of Sirhowy traffic for the quarter to the 30th of September last, which showed a large increase in the interchanged traffic at Nantybwch, both forwarded and received, and also, as it was contended, the effect which the agreement before even it was legally in operation was already having in diverting traffic. But the North-western Company do not admit that their being workers of the Sirhowy line can have any effect in altering the destination of traffic to which Newport affords the best outlet, and as to the increase shown in the return, they say that there is a Sirhowy trade with the north, which is quite distinct from that with Newport, and which has hitherto gone by the Great Western, and that the increase at Nantybwch is due partly to the trade northward being on the increase, and partly to a mere change of route from Great Western to North-western of importance to those companies, but not affecting any interests at Newport. Now so far as the agreement is objected to on the ground of its tendency to give to the North-western competitive traffic of which the Great Western are also carriers, we should not be justified on that account in not approving, but it does not seem to us unreasonable to guard against the introduction of charges or conditions of carriage on the Sirhowy line which might cause traffic that would otherwise go to Newport, to go in the opposite direction. The traffic which passes from the Sirhowy line on to the North-western has a contributive value which does not belong to merely local traffic, and as the traffic which goes south to Newport is local traffic as far as the North-western is concerned, and has not

the value of a feeder of their line, the apprehensions of Newport that traffic may be unduly attracted away may not be altogether unfounded. There is another class of traffic also on which the working of the Sirhowy line by the North-western in lieu of a small and independent company may act unfavourably. The Sirhowy line from Tredegar Junction to Nine Mile Point is much the nearest route to Newport for Neath and Aberdare traffic. It makes a short connexion between the Great Western at Tredegar Junction and the Monmouthshire Railway at Nine Mile Point, and considering the advantage of continuity of transit in one hand and at reasonable rates, and that the Monmouthshire Company have recently entered into an agreement to grant running powers to the Great Western, we feel justified in requiring that the North-western Company as proposed workers of the Sirhowy shall grant running powers also over the section of the Sirhowy interposed between the Great Western and the Monmouthshire. It is a facility in the public interests which the North-western can grant without prejudicing their own, and indeed they will be gainers by any use that may be made of the powers, inasmuch as the Great Western can and do at present carry the traffic in question an unnecessary distance round by Pontypool.

These are the two points against the agreement, for which we think some provisions are necessary. Other objections to it were urged, but it is sufficient to say in reference to them, that they do not seem to us to furnish grounds on which we could withhold or postpone approval, and accordingly, if suitable provisions are made in regard to the two points, we shall be prepared to approve the agreement. Probably a contract to give the running powers might be made under the Railways Clauses Act, 1845, and with regard to Sirhowy traffic for Newport, the North-western and the Monmouthshire Companies should endeavour to agree as to the rates and traffic arrangements, which would give assurance that the object we have in view will be effected. We do not make any order as to costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 4.]

THE ISLE OF WIGHT (NEWPORT JUNCTION) RAILWAY COMPANY *v.* THE RYDE AND NEWPORT RAILWAY COMPANY.

THE RYDE AND NEWPORT RAILWAY COMPANY *v.* THE ISLE OF WIGHT (NEWPORT JUNCTION) RAILWAY COMPANY.

Judgment of the Commissioners, delivered 14th December 1875.

THE differences brought before us in these cross applications are between the Isle of Wight (Newport Junction) Railway Company, and the Ryde and Newport Railway Company, whose railways go from a junction at Newport with the Cowes and Newport Railway, the one to Sandown and the other to Ryde. The station at Newport is a joint one, and the two railways on issuing from it cross the Medina river by the same bridge, and run alongside of or near to each other for a short distance before diverging, and under a special Act of each company passed in 1872, the joint station and the bridge, and so much of each railway as extended from the junction with the Cowes and Newport Railway to the eastern side of the gasworks at Newport, were to be constructed in such manner and upon such terms as an arbitrator, failing agreement, should determine. An arbitrator was appointed, and in November 1873 made two awards, a first with reference to the joint station, and the second with reference to the bridge and portions of railway, and also to certain works agreed to be provided for the Corporation of Newport. Differences arising out of these awards are the subjects of reference to us.

In his second award the arbitrator decided the questions as to which company should construct the bridge, portions of railway, and corporation works, and as to the apportionment of the cost thereof, by determining that they should be constructed by the Ryde and Newport Company, and that the costs and expenses of constructing the same should be borne and paid by the two companies in equal shares and proportions. Upon this award the two companies differ, in the first place, as to how much of the Newport Junction Company's railway is thereby directed to be constructed by the Ryde and Newport Company, whether from the junction with the Cowes and Newport Railway the portion stops eastwards at a point 75 feet short of the eastern side of the gasworks (which is the view of the Ryde and Newport Company), or whether it extends as far as to the eastern side (which is the view of the Newport Junction Company). And this difference we decide without any doubt in favour of the view of the Newport Junction Company. The text of the award is unambiguous, and we do not see that the tracing in the plan annexed to it is not reconcilable with the description in the text. But the boundary of the gasworks must be taken to be that shown in the plan forming part of the award, although as shown on the plans deposited in respect of "The Isle of Wight (Newport Junction) Railway Act, 1872," it is further east.

The other particular in which the application of the Newport Junction Company states that the Ryde and Newport Company are not constructing the works according to the award as regards design, is in substituting an incline for a hoist as a means of raising goods to the high level of the bridge over the Medina from the level of the river quay below. The alteration was made at the suggestion of the corporation, and with the concurrence of the Cowes and Newport Company, and was communicated to the Newport Junction Company, who made no objection to it, and whose consent therefore may be presumed to have been given. It must, however, be understood that the Newport Junction Company are to have the same facilities for passing to and from the incline that the Ryde and Newport and the Cowes and Newport Companies will have. The amended plan showed an incline with a gradient of 1 in 40, and the Newport Company were afraid that at this gradient the summit of the incline and its point of junction would lie outside the limits of their running powers. It must be made clear that they will have as easy access to the incline as if the award plan had been strictly followed, and they will have our authority to defer payment of their share of the expenses of the line and station until this has been done to our satisfaction.

For the construction of the Newport Junction Railway between the point up to which the Ryde and Newport Company admit they ought to construct, and the eastern side of the gasworks, the engineer of the Ryde and Newport line suggests a mode by which it can be done without embanking the river, the award plan showing an embankment, and we recommend that his suggestion should receive the assent of the Newport Junction Company. We grant this company the costs of their application.

In the cross application of the Ryde and Newport Company, the complaint is, that the Newport Junction Company have not complied with the awards by paying their share of the expenses incurred under them, such share to the present time amounting for the line and corporation works to about 4,500*l.*, and for the station to about 1,200*l.*, less value and loss, if any, on re-sale of some small pieces of land, and it is urged that the Newport Junction Company ought to pay these sums before the Ryde and Newport Company execute any further works on their behalf. Taking the awards separately, and first that relating to the line, we have the Act of Parliament directing that if the two companies cannot agree as to the apportionment of the cost of constructing the bridge, railways, and corporation works, the same shall be determined by an arbitrator, and we have the arbitrator's decision that the cost shall be borne and paid by the two companies in equal shares and proportions. The difference here

arising seems to be this, was it meant that the two companies should bear the cost concurrently, or that the company constructing was to advance the whole cost, and to receive back half when, but not before, all the work should be finished and the whole expense ascertained. We think the concurrent payment is the correct view to take, but that there is a condition implied that each company having its own side of the work, both sides shall make simultaneous progress, and that the work as it advances shall be in the equal interests of the two companies. As yet the Ryde and Newport Company have only carried forward their own side of the work, and we think they are bound to bring the side which is the Newport Junction Company's to the same degree of forwardness as their own, to become entitled to be paid one half of their expenses by the Newport Junction Company. But the Ryde and Newport Company ask that in that case they may have security for their being ultimately paid, and under the circumstances we hold the request to be a reasonable one, and therefore direct the Newport Junction Company to give such security.

As regards the award relating to the station, that also we think meant that the Newport Junction Company should contribute their proportion of the expense from time to time according to the progress made. Considering, however, the state of the line and bridge by which the station is to be reached, we are of opinion that they should not now contribute until they become liable, under this decision, to make a first payment on account of the line. They must, however, give security for their then contributing, and in the interval before their contribution will fall due steps might be taken to settle any claim they are likely to have in respect of station land as allowed by the arbitrator.

We disposed at the hearing of so much of this cross application as asked us to enjoin the Newport Junction Company to close a station they have opened at Pan Lane near Newport, and to complete forthwith a railway, No. 1 in their Act, upon the completion of which they become liable to penalties if a further length of railway is not completed within a year following; and we have only to add that upon this application there will be no order as to costs, and that the parties may come before us again in case of their not agreeing as to the plan of any works to be executed or as to the amount and sufficiency of the security to be given under this decision.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 5.]

THE CALEDONIAN RAILWAY COMPANY

v.

THE NORTH BRITISH RAILWAY COMPANY.

(No. 1.)

Judgment of the Commissioners, delivered 23rd December 1875.

THE Caledonian Railway Company, by this application, refer for our decision differences which they have with the North British Railway Company; first, as to the apportionment of receipts from season and traders' tickets issued by the North British Company and available over the Scottish Central Railway conjointly with the North British Railway, and secondly, as to the conditions on which the traders' tickets may be issued.

In 1865 the Scottish Central Railway was merged in the system of the Caledonian Company by an Amalgamation Act, which at the same time gave large powers and facilities over the railway to the North British Company in respect of Scottish East Coast traffic, which was defined to be traffic, which in its transit passed partly over the North British and partly over the Scottish Central Railways. Under these powers the North British Company can fix the rates and fares at which Scottish East Coast traffic is carried, and it was enacted that receipts from the traffic should be divided according to mileage, with the proviso that if the division worked out so as to give to the Caledonian Company less per mile for the distance travelled over the Scottish Central than a certain rate according to the class of traffic, the deficiency should be made good by the North British Company. These minimum rates per mile were to stand at sums which were named in the 78th section of the Act, unless the Caledonian Company itself carried competitive traffic at rates or fares which per mile were below those sums, in which case section 85 provided that the lower sums should be adopted in lieu of the minimum sums fixed by section 78. Under the same powers and facilities the North British Company can also issue season tickets and traders' tickets. The question whether they could issue such tickets was referred to arbitration in 1870, and it was adjudged that they could. Tickets, however, of those kinds are not mentioned in the Amalgamation Act, and hence, although the price of such tickets is not based on a mileage rate, the Caledonian Company are entitled to receive a certain sum per mile in respect of each journey made by their holders. What that sum should be is the question in dispute. The Caledonian Company contend that the sum must be regulated by section 78 alone, while the contention on the part of the North British is that section 78 is in this instance qualified by section 85. We have no doubt that section 85 does apply. The receipts to be divided arise from that Scottish East Coast traffic, with respect to which section 85 enacts that if the Caledonian Company shall, with respect to it or any traffic competitive with it, quote by any route whatever a rate or fare which if divided by mileage over the Larbert route would give a lower rate or fare per mile than the minimum specified in section 78, such lower rate or fare shall be the most that they can claim. The route by which the Caledonian Company carry is not the Larbert route, in the sense in which that expression is used in the section, and we are of opinion that the sum per mile which the Caledonian Company receive in respect of their own season and traders' tickets is the sum and not any higher sum, less than which they are protected against receiving in respect of the season and traders' tickets issued by the North British Company. If there is any difficulty in knowing how many times a holder of those tickets travels, or the distance he travels each time, it will be best that the Caledonian Company should state what their own tickets at their different amounts of issue divide into per mile of the distances they respectively cover, and should agree to a division on that basis as regards similar tickets issued by the North British Company.

The second difference referred to us relates to the qualification for a trader's ticket issued by the North British for use upon the Scottish Central Railway. There is a minimum amount of traffic by which a trader qualifies himself for a ticket. The ticket is one at a reduced rate, and the rate diminishes as the amount of traffic which a trader sends by the Company which grants him the ticket increases. The North British Company admit that they have no right to issue tickets of this kind available over the Scottish Central Railway to persons who have no Scottish East Coast traffic, but they have traders for whom they carry both traffic of that description and North British traffic generally, and they claim to issue these particular tickets and to fix the rates at which they are charged according to the whole amount of the individual trader's traffic over their system; the contention of the Caledonian Company being that only his Scottish East Coast traffic is of qualifying value for the ticket or can count in determining its rate. The 74th section of the Amalgamation Act requires the Caledonian Company to give to the North British in respect of Scottish East Coast traffic great facilities for its conveyance, and to give such facilities and to

forward such traffic as effectually as if it was their own proper traffic, or traffic which they are desirous of cultivating to the utmost. The question whether this section so expressed obliged the Caledonian to recognise North British traders' tickets in respect of Scottish East Coast traffic was referred to arbitration in 1870, and the award was to the effect that the issue of such tickets to persons trading in the goods department in respect of Scottish East Coast traffic was a facility to which the North British were entitled under this section, and it directed that the North British should and might issue to traders in respect of Scottish East Coast traffic tickets available over their own railway and the Scottish Central Railway on the same terms and at the same rates as the Caledonian issued the same description of ticket over their own line. The North British do not dispute that this award, so far as it goes, determines the nature and extent of the privilege they possess in regard to traders' tickets over the Scottish Central Railway, and this being so the award, it seems to us, is conclusive against their present claim. The tickets classed together are the North British tickets to traders in respect of Scottish East Coast traffic, and the same description of tickets (meaning traders' tickets) issued by the Caledonian Company over their own line, and we should not be justified in interpreting as North British tickets, tickets which may be issued by the North British in respect even though only partly of other than Scottish East Coast traffic, nor in putting in a proviso in regard to tickets of the Caledonian Company, requiring them to be in respect only of such traffic over their line as may be similar to or competitive with Scottish East Coast traffic. The tickets of the two companies are to be issued on the same terms and at the same rates; but the kinds of traffic in respect of which they are to be issued in the one case and the other are fixed by the award, and must correspond to the express or implied description contained in it. We decide this difference, therefore, in favour of the Caledonian Company. There will be no order about costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 6.]

HOLLAND AND ANOTHER

v.

THE FESTINIOG RAILWAY COMPANY.

Judgment of the Commissioners, delivered 27th January 1876.

MR. Holland and Mr. Greaves are lessees of slate quarries situated at the upper or inland end of the Festiniog Railway, and their complaint against the Railway Company is that in their rates for the carriage of slates down to the Portmadoc end of the railway they give an undue preference to the Welsh Slate Company, whose quarries are also near the upper terminus.

It appears that, in 1864, the Railway Company for the purpose of securing traffic for their line drew up a printed agreement purporting to be between themselves and the several quarry owners of the district whereby the quarry owners for the next 14 years were to send their produce by no other mode than along the entire length of the railway, and were to pay rates for the carriage varying from 3*s.* 3*d.* per ton to 2*s.* 6*d.* per ton, according to the total quantity carried yearly for them and for others down the railway 2*s.* 6*d.* being the rate when the total quantity should exceed, as in fact it has almost every year exceeded, 110,000 tons. This agreement was offered to the different quarry owners, and was accepted and entered into by, amongst others, the Welsh Slate Company and the Complainants, Mr. Holland and Mr. Greaves.

In 1869 an Act was passed giving powers to the Festiniog Company to improve their railway, and by this Act it was provided (section 64) that the rate to be charged for slates carried to or in the direction of Portmadoc should not in any case exceed the sum of 2*s.* 6*d.* per ton for the whole distance, with a proportionate decrease per mile for any less distance in any year in which the whole quantity of such traffic in slates should amount to 110,000 tons, thus expressly extending the benefit of the 2*s.* 6*d.* rate to freighters who had not signed the agreement, and who before the Act passed were charged a differential rate of 4*s.* a ton.

In 1871 the Railway Company and the Welsh Slate Company entered into a new agreement, by which it was agreed that so far as it regarded them the agreement of 1864 should be terminated, and that thenceforth, and for a term of 30 years, the rate for railway transit to the Welsh Slate Company should be 2*s.* 1½*d.* per ton, and that during that term the Slate Company should not send their slate by any other mode than along the entire length of the railway. This agreement gave the Welsh Slate Company a preference of 4½*d.* per ton, and the further advantage of the 2*s.* 1½*d.* rate not being dependent upon the total quantity carried in a year exceeding any particular figure; and it appears to us that the difference thus made in the respective charges to the Welsh Slate Company and to Messrs. Holland and Greaves is in contravention of section 2 of the Railway Traffic Act of 1854. There is nothing in the consideration as to the exclusive use of the Defendants' Railway, being in the one case for 30 years, and in the other for 14 years, which would justify the difference between 2*s.* 6*d.* and 2*s.* 1½*d.* as charges for railway transit, nor can it be doubted that the freighters who signed the printed agreement of 1864 considered the Railway Company to bind themselves by it to a like treatment of all who signed it, and who, it may be, would not all have signed it had the Company claimed to vary their scale of charge to individuals according to the number of years for which they could get a promise of exclusive employment. The Complainants, therefore, are entitled to an injunction that they shall not be subjected to the prejudice of having to pay a higher charge for the carriage of their slates than the Welsh Slate Company pay for theirs, except so far as there may be circumstances which admit of being taken into account consistently with the agreement of 1864, and which render the cost to the Company of carriage more in the one case than in the other.

The only circumstance of that kind which was brought under notice at the hearing was with regard to the use of the Railway Company's waggons. The Company have two sizes of waggons, and Mr. Holland and Mr. Greaves being only able at present to load in waggons of the smaller size, the Company incur, as they say, extra expense in separating the empty waggons which the Complainants require from time to time to be deposited in their sidings, and in handling a larger number. They say also that even making allowance for the larger waggons used in part by the Welsh Slate Company, that Company use a smaller number of waggons in proportion to tonnage than Messrs. Holland and Greaves, the average load of the waggons from the Company's quarries, probably from the different quality of the slates, being about 10 per cent. heavier. We think the Complainants should, if possible, adapt their works to the improved rolling stock of the Company, and that until this is done a difference of one penny per ton in favour of the Welsh Slate Company would not be unreasonable. In other respects the Railway Company, we think, did not show any appreciable extra cost incurred by them in carrying for the Complainants, or either of them, over their expenses in carrying for the Welsh Slate Company, and we are therefore of opinion that less only one penny per ton for a time, as just referred to, the difference between 2*s.* 6*d.* and the rate at which the Railway Company carry for the Welsh Slate Company must be allowed to the Complainants off the amount

they are charged, as a necessary deduction for their being on an equality with the Slate Company.

The Complainants are granted their costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 7.]

THE CALEDONIAN RAILWAY COMPANY
v.
THE NORTH BRITISH RAILWAY COMPANY.
(No. 2.)

Judgment of the Commissioners delivered 17th February 1876.

THIS is a question as to the construction of an agreement dated 7th June 1873, and made between the Caledonian and North British Railway Companies, and as to whether it prevents the Caledonian Company from promoting certain works and new lines, for which they have a Bill in Parliament this session.

The part of the agreement of which the meaning is in dispute is as follows: "Each Company shall be at "liberty to apply to Parliament for power to con- "struct lines in its own district, for the accommoda- "tion of the local traffic in such district; but neither "Company shall directly or indirectly promote or "support any new line in the district of the other."

It was contended on behalf of the Caledonian Company that the agreement supposes a division of the districts in which the two Companies are interested into three parts, viz., a joint district, and the separate or peculiar district of each Company, and that as regards the construction of new lines by either Company, the separate districts only are protected by the stipulation that neither Company shall promote or support a new line in the district of the other, the joint districts or districts common to both being left open to the enterprise of each. We understand the word "district" in the expressions "each Company's own district" and "the district of the other Company" to mean the district adjacent to a line from which traffic is drawn to that line, and if both Companies draw traffic, as they well may, from the same district, such a district belongs to them both, and is as much the district of one as it is of the other, and consequently if the agreement applies to such districts each Company will have all the liberty in them which the agreement accords to each in its own district, and the other Company will not be able to complain of anything done within that limit as being an infringement of the contract. But the expressions "the Company's own district" and "the district of the other Company" seems to us so little applicable to districts which are occupied in common, that on the whole we consider that these joint districts are outside this part of the agreement.

It was urged by the counsel for the North British Company that in giving to each Company liberty to apply for power to construct lines in its own district for the accommodation of the local traffic of such district, the agreement disallowed the making of lines of any other kind. If that were the case, and the agreement included all districts, joint as well as several, it would, while it lasted, prevent any addition being made to the existing railway accommodation given by the Caledonian and North British systems except for mere local requirements. We, however, think that such a restriction ought to rest on some stronger ground than an implication only, and that the clause referred to should not be taken to mean more than what it plainly expresses, namely, that the making of lines for local traffic is not to be opposed when either Company makes such lines in its own district, the right of opposing if lines not of that character are promoted being reserved.

Such being our construction of the agreement, we will now say whether we consider the lines numbered in the Bill 1, 2, 5, and 6 to be lines in a North British district, the North British Company not insisting on their case as against the lines Nos. 3, 4, 7, and 8, originally also objected to. The lines Nos. 1, 2, 5, and 6 are none of them laid out for merely local traffic, but as we have said the agreement presents no obstacle to such lines being promoted, apart from the provision that no new lines of any kind shall be promoted by either company in its rival's district. As to lines 1 and 2, they are intended to relieve the main passenger lines of the Caledonian Company into Glasgow of a part of their mineral traffic, and the points where they commence are at a very short distance from Glasgow. The lines which converge at Glasgow from all sides are so numerous that it is almost impossible that a new line should keep quite clear of all existing lines, but these two lines, which go direct from one point on Caledonian property to another, merely cross in so doing North British lines, and on this account cannot, we think, properly be said to be lines in a North British district. Further as to No. 2, there are in the district which it crosses, and which is only about five miles wide, besides the Coatbridge Railway of the North British, two main lines of the Caledonian Company, and also their Monkland Canal, all these routes running in the same direction east and west, and, under these circumstances, this district seems to us to be as much a Caledonian district as a North British one, and, in short, to be a district occupied by the two Companies in common.

The railway or siding No. 5, adjoins a station on the North British Company's Glasgow Harbour Branch Railway, and as the Caledonian Company, for the purpose of conveying traffic to and from the Branch Railway and the stations thereon, have, by agreement confirmed by statute, absolute running powers over the railway, and, as if a company carries the traffic of a district, whether over a line of its own, or over a line not its own but used by it under absolute running powers, that district is, we think, as much its district as it is that of the company to whom the line over which the running powers are exercised belongs, we do not consider No. 5 to be contrary to the agreement. The railway No. 6 is a short line, half a mile long, joining the Scottish Central main line of the Caledonian Company with the North British Stirlingshire Midland Junction line, a little to the south of the present junction. The Caledonian Company forward traffic from near Larbert on their central main line to their docks at Grangemouth, over a railway of which part is their own and part North British, and at present if the traffic comes from the south, the engine must be reversed and other delays incurred before it can pass on to the North British line. The proposed south junction will give such traffic the same facilities for transfer that traffic from the North has by the present junction, and, considered with reference to the district it traverses in its short course, it does not seem to us to be a line prohibited by the agreement.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 8.]

THE EAST AND WEST JUNCTION RAILWAY COMPANY
v.
THE NORTHAMPTON AND BANBURY RAILWAY COMPANY.

Judgment of the Commissioners, delivered 2nd March 1876.

THE East and West Junction Railway Company have the right of running over five miles of the Northampton and Banbury railway from their junction with it at Green's Norton to Blisworth, and are desirous of using or bringing upon such railway a Fairlie engine as it is called from the name of the inventor and patentee. This engine the Banbury Company consider to be unfit for their railway, and the question of unfitness has been referred to us under

the 115th Section of the Railway Clauses Act, of 1845, which gives a company power to object to an engine proposed to be used upon their line, and refers any difference between the company and the owner of the engine to arbitration. The reference has been made at the instance of the Junction Company.

The engine carries its own load of fuel and water, and has no tender, and in full working trim weighs from 60 to 70 tons. The Banbury Company do not themselves see at present any prospect of damage from this weight to their permanent way, or bridges, but one of their witnesses, Mr. Jacomb, chief resident engineer of the London and South-western Railway Company, was of opinion that the Towcester Road Bridge of 40 feet span was liable to be overstrained, when the whole weight of the engine which is not of less length than the bridge, rested on the structure. But, as a witness on the other side showed, when that is the case, that is to say, when the engine is placed centrally on the bridge, the weight from the way in which it is carried, falls more on the ends of the girder, and the strain is not so great as when the centre of one bogey is over the centre of the bridge. In this position, however, part of the engine is not on the bridge at all, and thus the maximum strain obtainable is reduced to that caused by an ordinary engine, and as the Fairlie engine has run over the bridge almost daily since last September, and the bridge has stood the test, the weight of the engine does not in our view, disqualify it from coming on the railway.

But the great objection made to the engine is its more than ordinary width. It is 8 feet 7 inches wide for a length of 6 feet at each end, and 9 feet wide for the rest of its length, and where it is 9 feet wide there is besides a footplate or ledge on each side at a height of 4 feet 6 inches from the ground, which projects 6 inches and which makes the extreme width 10 feet. As the line is a single line, it would only be at particular points that an engine of extra width could take up too much room, but the Banbury Company say that there are such points on their line, and they specify the sidings in the goods yard at Blisworth, the passenger platform there and at Towcester Station, and two bridges, as places where the engine cannot be used without special risk of accident being incurred. Since the hearing we have ourselves been over the railway, and inspected each of these places.

The bridges are constructed for a double line, and the single line laid occupies the relative position of one of two lines, its outer rail being 4 feet from the parapet wall, and as the engine projects at the level of the footplate 2 feet 8 inches on either side of the track, a space of 1 foot 4 inches is left between the side of the bridge and the side of the engine. We were referred to a regulation of the Board of Trade as showing that this space ought to be 1 foot more, but the regulation refers to the space between structures on a line and the sides of passenger carriages, and has no bearing on the case we are considering. As there is room to stand in the clear space, we do not think the engine unfit to cross the bridges, but we recommend that the Junction Company should put up a caution to platelayers and others to stand on the open side of the bridges when a train passes, and that the engine should slacken speed before arriving at the bridges, and should not cross them at any greater rate of speed than 10 miles an hour.

We do not think it a likely source of danger that the 6-inch footplate on the side of the engine overlaps the edge of the passenger platforms at the Towcester and Blisworth stations, at a height above them of 2 feet 6 inches in one case, and 2 feet 2 inches in the other. The overlapping is made more apparent by the irregular shape and bulging out of the platforms, which, if they stood in the line of their original construction, would not, with the engine alongside, have the footplate more over them than would be the case if the footplate, which has already been reduced 3 inches in width, were reduced 2 or 3 inches more.

With regard to the sidings at Blisworth, there is more than the usual 6-foot space between them, except at the point of exchange between the railways of the London and North-western Company and the Banbury Company, at which point the interval between the sidings is so contracted as not to be more than 5 feet 8 inches wide. Although an engine moves slowly when shunting, and the Fairlie engine is particularly handy and under control, it should not, we think, be employed upon sidings where the between space is under 6 feet, but as to sidings which are that distance apart from each other, and which belong to the Banbury Company at Blisworth, we do not see that any special danger is to be apprehended from working upon them with this engine.

We decide, therefore, that the engine is not unfit to be used upon the line of the Northampton and Banbury Company over which the East and West Junction Company have running powers under their Act, distinctly at the same time not approving of its being taken upon sidings at the Blisworth terminus where the free space on either side is under 6 feet.

We make no order about costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 9.]

THE CAMBRIAN RAILWAY COMPANY
v.
THE LONDON AND NORTH-WESTERN RAILWAY COMPANY.

Judgment of the Commissioners, delivered 16th March 1876.

UNDER "The Oswestry and Newtown and other Railway Companies (Arrangements) Act, 1864," and an agreement which it confirmed, the Cambrian Railways Company are entitled to receive a rebate of 50 per cent. from the mileage receipts of the North-western Railways upon all traffic, except minerals, sent from the lines forming the undertaking as it existed in 1864 of the Cambrian Company to the lines of the North-western Company where those lines form the shortest railway route. The rebate is an advance to make up, if necessary, the dividend of the Cambrian Company to a certain rate, and is directed to be regarded as a loan which shall be repaid at any time when there may be a balance of receipts after payment of such dividend. In return, the North-western Company have powers, which they may exercise or not, as they please, of using and running over the railways of the Cambrian Company.

By "The Cambrian and Coast Railways Amalgama-" tion Act, 1845," which vested the Aberystwith and Welsh Coast Railway in the Cambrian Company, the agreement above mentioned was extended to the railways which had belonged to the Coast Company, and which were by that Act transferred to the Cambrian Company, section 14 providing that the North-western Company should be entitled to the same powers and facilities over the undertaking of the Coast Company, by that Act amalgamated, as they then possessed over the undertaking of the Cambrian Company, and upon the same terms and conditions. The effect of this was to make the rebate attach to the receipts of the North-western from traffic sent to their lines from the Coast Railways equally, as from the Cambrian Railways proper, the running powers of the North-western being at the same time extended over the Coast Railways. But the places at which traffic could be transferred to the North-western lines continued as before to be places such as Whitchurch, at the inland end only of the Cambrian system.

Under the "Carnarvonshire Railway Act, 1862," and the "Carnarvonshire Railway (Deviations) Act, " 1867," a railway was made by the Carnarvonshire Company from Carnarvon to a junction at Afonwen with the Pwllheli and Portmadoc Railway, part of the coast section of the Cambrian Railways, and by the Act of 1867 the Carnarvonshire Railway Company,

or any company working their railway, were given running powers over the Pwllheli and Portmadoc line, the Cambrian Company, or any company working their railways, being in like manner given running powers over the Carnarvonshire Railway between Afonwen and Carnarvon. In 1870, under the "London and North-western (Additional Powers) Act, 1870," the undertaking of the Carnarvonshire Company and all their rights and obligations were transferred to and vested in the North-western Company, the consequence of which was that the Cambrian Company were for the first time able to send traffic from their lines to the lines of the North-western at the Afonwen or coast end of their system, and they claim that the rebate is payable to them in respect of traffic sent that way.

The North-western Company contend that the 48th section of their Act of 1870 takes away all running powers they had viâ Afonwen, and that the rescission of their running powers releases them from the obligation of paying rebate on the traffic sent to them viâ Afonwen. The contention on the other side is that section 48 has no reference to the running powers given by the Act of 1865 in return for the rebate, and simply repeals the mutual running powers given by the Act of 1867 to the Cambrian Company and the Carnarvonshire Company over each other's lines.

The 48th section is as follows:—"Notwithstanding "anything in this Act or in the 'Carnarvonshire "'Railway (Deviations) Act 1867,' after the Carnarvonshire Railway is vested in the North-western it "shall not be lawful for the North-western, or any other "company, body, or persons working the railways of "the Carnarvonshire Railway Company, to run over, "work, or use viâ Afonwen Junction any portion of "the Cambrian Railways, or of the stations, sidings, or "conveniences connected therewith, without the consent in writing of the Cambrian Railways Company, "nor for the Cambrian Railways Company, or any "other company, body, or persons working their railway to run over, work, or use viâ Afonwen Junction "any portion of the Carnarvonshire Railway, or any "stations, sidings, or conveniences connected there-"with, without the consent in writing of the North-"western Company." The allusion in the words which occur at the beginning of this section, "Notwith-"standing anything in this Act contained," is to the 47th section preceding, which had made the North-western successors to the rights and obligations of the Carnarvonshire Company, and had given them therefore the right to run over the Pwllheli and Portmadoc Railway; and the meaning of section 48 is, we think, that the running powers given by the Act of 1867 to the Carnarvonshire Company and transferred to the North-western by section 47 of the Act of 1870, and the reciprocal running powers given by the Act of 1867 to the Cambrian Company, should not be exercised, except by consent, from the time the North-western became possessors of the Carnarvonshire Railway. It does not, in our opinion, apply at all to the running powers under the Act of 1865, and derived from the agreement scheduled to the Act of 1864, and we think it would have pointed to that Act of 1865 as expressly as it does to the Act of 1867, if it had been intended to bear that larger application. We hold, therefore, that the rebate is payable on traffic sent viâ Afonwen.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 10.]

THE MIDLAND RAILWAY COMPANY
v.
THE GREAT WESTERN RAILWAY COMPANY.

Judgment of the Commissioners, delivered 20th March 1876.

A BILL has been brought in this Session in Parliament to vest the Somerset and Dorset Railway, by way of lease for 999 years, in the South-western and Midland Railway Companies, and subject to the sanction of Parliament the Somerset and Dorset Company have agreed with the other two companies for a lease of the Somerset Railway to them. The agreement was made on the 1st of last November, and it and the application to Parliament are alleged by the Great Western Company to be, so far as the Midland are concerned, a violation of the heads of agreement between the Midland of the one part and the Great Western of the other, bearing date 17th March 1863, and confirmed and made binding upon the parties by the Great Western Railway (West Midland Amalgamation) Act, 1863, section 63. The agreement provides for questions of difference arising out of it being referred to arbitration, and the Midland have caused the present difference to be referred to us for our decision under section 8 of the Railway Traffic Act, 1873.

The particular articles to which the action of the Midland has been stated to be contrary are numbered in the agreement 5, 18, and 19. The fifth article is the following: "The three companies to agree as to "the construction, leasing, working, or subscribing, "(directly or indirectly by rebate or otherwise) to "any new lines which may be necessary to give "proper accommodation to the districts in which the "companies or any two of them are directly interested; and if any difference of opinion arise as to "the necessity of doing so by all or any of the parties "hereto, such difference to be settled by arbitration "in manner herein-after mentioned in article 29; and "if any of the companies decline to become parties to "the construction, leasing, working, or subscribing "as aforesaid to any new line, which it shall be determined on such arbitration ought to be done, then "the other companies or company to be at liberty to "construct, lease, work, or subscribe to it if they "think fit." This article, in the opinion of the Midland, applies only to new lines in the sense of lines proposed but not yet authorised to be constructed. It does not apply, they think, to such a line as the Somerset Railway, for which an Act has been obtained, and as to which the passing of the Act closes any question as to the necessity there may be for the line, or for either of the two companies constructing or aiding in its construction. If, however, the article should be construed by us to apply to new lines in the sense of lines that have come into existence since the date of the agreement, the question that then arises is, they say, whether as regards this Somerset line it cannot be shown to be necessary, in order to carry out the object of giving the accommodation of a railway to the district through which it passes, that the Midland should lease or join in leasing the undertaking, and they called numerous witnesses to speak to this point. The Great Western Company submitted in the 16th paragraph of their answer in this case, that there was no necessity for the Midland Company to lease or acquire power to lease the Somerset Railway within the true intent and meaning of the fifth article of the agreement, but the view which they expressed of this article in argument at the hearing was that the question at issue lay outside of it altogether, taking however quite other ground for their view from those on which the Midland relied. We have come to the same conclusion, our reason being that for the article to apply, the line which is the subject of a difference must give accommodation to districts in which the two Companies are directly interested, words which seem to us to be governing words of the article, and that as the Somerset Railway is a line from Poole to Everceech, *partes ubi se via findit in ambas*, one branch going to Bath, and the other to Highbridge and the Bristol Channel, and as except at its Bath extremity the Midland is nowhere in the district traversed by the line, the Midland, however much interested in the interchange of traffic at Bath with the Somerset line, cannot properly be said to be directly interested in the district extending down to Poole, which that line accommodates, and from which traffic can only be drawn on to the lines of the

Midland through the intervention of another company.

Articles 18 and 19 to which we will now pass, are as follows :—

" Art. 18. The Midland Company to be allowed to make their line from Mangotsfield to Bath, but not beyond, and any application to Parliament for an Act for that purpose not to be opposed by the Great Western Company, except that with respect to any land or property of the Great Western Company which may be affected by any such application to Parliament the Great Western Company may seek such protection or compensation as they may think fit.

" Art. 19. The Midland to complete their proposed junction with the Bristol and Exeter Railway at Bristol without opposition; the works for that purpose, so far as regards the crossing of the Great Western Railway, are to be constructed to the reasonable satisfaction of T. E. Harrison, it being understood that Bristol and Bath are the termini of the companies (north and south respectively) in that district, Bristol being understood to include Clifton and Hotwells and any place to the mouth of the Avon, and either party being at liberty to propose or support lines to any of those places; this not to interfere with the working agreement of the Great Western Company with the Bristol and South Wales Union Railway."

The second of these articles it will be observed says, " it being understood that Bristol and Bath are " the termini of the companies, north and south re- " spectively, in that district," and these words are considered by the Great Western Company to trace a line between them and the Midland in that district, which not only defines where each company may act without being opposed, and where opposition may commence, but also divides them off for good, giving the territory north of the line to the Midland, and that on its south side to the Great Western, and the Great Western say that for the Midland to lease and work, as proposed, the Somerset Railway, is a breach of this 19th article, and as involving an extension of their system " beyond Bath " a breach also of article 18. The opinion of the Midland seems to be that these two articles should be construed as merely putting restrictions upon the right of each company to oppose lines promoted by the other. The Midland, for instance, may promote lines without opposition if they terminate at Bristol or Bath, as the case may be, the right to oppose being reserved to the Great Western if the lines go south of those places. Pressed with the words " they are not to make a line " beyond Bath," and " Bristol and Bath shall be the " termini of their company south," they reply they do not propose to make a line beyond Bath, but only to lease and work one that has long been opened, and that Bath will continue to be their terminus in the sense in which that expression is used in the article, because Bristol is there declared to be the terminus of the Great Western to the north, and yet the Great Western run over the Midland from Bristol to Gloucester.

For an understanding of these articles it is, we think, necessary to go back to the year 1863, and to note how the railway companies were at that time situated with regard to Bristol and Bath. The Great Western were at both places with their main line running in an east and west direction. On the north the Midland had the line from Birmingham to Bristol, and at Bristol they ran into and used the Great Western station, under an agreement for occupying it, the term of which was nearly expired. On the south from Bristol there was the line of the Bristol and Exeter Company, with which the Great Western had a junction in their Bristol station, both Great Western and Bristol and Exeter being broad gauge. On the south again the Great Western had the lines which connected Bath with Salisbury, and with Weymouth and Portland, but from which there were not at that time the branches to Wells and Bristol which there are now. This being how matters stood in 1863, the Midland brought in a Bill in that session to enable them, first, to make a railway from Mangotsfield to Bath; secondly, to make a railway in Bristol to connect the Birmingham and Bristol, and the Bristol and Exeter lines; and, thirdly, to enter into agreements with the Bristol and Exeter Company for the adaptation to the narrow gauge suited to the traffic of the Midland Railway of all or any part of the Bristol and Exeter, and for the use by the Midland of the Bristol station of the Bristol and Exeter Company, and of all or any part of their railway.

As the Great Western looked upon the Bristol and Exeter as practically part of their own system, this application of the Midland for powers to use that line, and the resistance which it was certain to meet with from the Great Western, led to negotiations, which resulted in the two companies making the agreement of March 1863, and as part of the arrangement in the Bill as it afterwards passed (the Midland Railway (Bristol Line) Act, 1863), containing no provision for accommodation to be given by the Bristol and Exeter Company to the Midland, except at Bristol only, and giving the Midland no powers south of Bristol.

The proposed line from Mangotsfield to Bath was also omitted from the Bill, circumstances with which the Great Western had nothing to do rendering it necessary to postpone it till the following year 1864, when it passed. But this branch to Bath was one of the points of the settlement between the companies, and is the subject of the 18th article. The words of that article are, " The Midland to be allowed to make " their line from Mangotsfield to Bath, but not beyond; " and any application to Parliament for a Bill for that " purpose not to be opposed by the Great Western," and in our opinion what these words signify is that a line from Mangotsfield to Bath, but not beyond, is a line which the Midland shall be allowed to make, and which the Great Western will not oppose their making or applying for powers to make, but that neither the allowance to make, nor the provision not to oppose, shall be taken to extend to any line but that.

The other article, article 19, contains the agreement between the companies as to the two other parts of the Midland Bill. The article says, " The Midland " to complete their proposed junction with the Bristol " and Exeter Railway at Bristol without opposition, " it being understood that Bristol and Bath are the " termini of the companies, north and south respect- " ively, in that district." Now it is clear to us that the clause, " it being understood that Bristol and Bath are " the termini," was aimed at that part of the Midland Bill which was to enable that company to run over and use the Bristol and Exeter line south of Bristol. They should complete their junction with the Bristol and Exeter at Bristol without opposition, but Bristol should be their terminus southward, and the scheme of using the Bristol and Exeter line beyond Bristol must be abandoned. And accordingly that part of the Bill was withdrawn, and the Bill as it passed gave the Midland power only to make the junction at Bristol, and to use the station there of the Bristol and Exeter Company.

But though these two articles deal evidently with *then* proposed legislation, is there more than that within them? is it, in short, a part of their intent and object to draw a line of separation between the companies, and to bind each to keep to its own side of that line for all time to come? It throws light, we think, upon this question, that article 18 speaks only of making a line, and is silent as to leasing, working, or subscribing. The inference is that its specific object was the Bill of the Midland then before Parliament; for if its object had been general, it would scarcely have omitted to guard against those other ways of being in a district which are as effectual for competition as making a line, and which are so carefully set out in the fifth article, where there is no doubt of the prospective operation intended.

Similarly there is much in article 19 which does not seem to us consistent with the article referring to more than that same Bill. The clause "it being understood "that Bristol and Bath are the termini," exactly describes the principle upon which the Bill was agreed to be re-cast, but it has neither the wording nor the connexion which we should expect it to have on the assumption that the two companies, the Great Western and the Midland, had agreed to make Bristol and Bath their boundary north and south respectively in perpetuity, and that this clause gave expression to that purpose and intention. The words, too, at the end of article 19, "this not to interfere with the working "arrangement of the Great Western Company with "the Bristol and South Wales Union Railway," are only, we think, quite intelligible when the expression "Bristol to be the terminus" is taken to mean for the Midland, that it should withdraw from its Bill the power of using the Bristol and Exeter line, because then it would also mean for the Great Western that they should not work the Bristol and South Wales Union Railway, and therefore it became necessary expressly to except that working. They (the words we mean at the end of the article) also rather negative the idea of the expression just quoted, viz., Bristol and Bath are the termini being used except as describing the limits within which the Midland were to keep their Bill; for if that was not what it meant, and it was to lay down a general principle, the words at the end of the article were unnecessary, since article 18 refers only to not making a line beyond Bath, and as to Bristol, article 17, which gives the Great Western power of running over the Midland line between Bristol and Gloucester, had already shown that Bristol was not to be a terminus to the Great Western in the sense of not using another company's line, and the presumption therefore in such case would be in favour of working the South Wales Union Railway being allowed.

It is also a significant circumstance that those articles do not seem to anticipate that disputes would arise under them. There is indeed a general article at the end of the agreement under which any disputes arising out of this or any other part of the agreement are to be referred to arbitration, but it is noticeable that almost every article of the agreement, except these two, makes separate provision as well for a decision of differences by arbitration, and we cannot but think that the absence of a like provision in these two articles is an indication that they were not considered to be of continuing efficacy, but as articles of which the main purpose would be exhausted by merely striking out particular parts of a Bill.

Such is our view, and the conclusion to which we have come upon consideration of the various circumstances to which we have adverted is, that article 18 and article 19 do not touch any more than article 5 the case of a transaction such as that which has taken place in regard to the Somerset and Dorset Railway, and that each of the parties to the agreement of 1863 can deal with the application made to Parliament in pursuance of that transaction without hindrance from the agreement.

March 20th, 1876.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 11.]

In the Matter of the Working Agreement between the WEST CORK and ILEN VALLEY RAILWAY COMPANIES, the CORK AND BANDON RAILWAY COMPANY objecting.

Judgment of the Commissioners, delivered, 29th April 1876.

IT appears that under an Act of Parliament obtained in the year 1872 by the Ilen Valley Railway Company, the Public Works Loan Commissioners were authorised to lend money to the Ilen Valley Railway Company for the making of their railway, and it appears also that the Public Works Loan Commissioners and the Treasury are prepared to lend the sum of 40,000*l.* to this Company, and it is believed that with that assistance it will be possible for them to complete their railway within the time limited for its completion by the Act of Parliament, namely, some period in the middle of next year. But a condition is made, and that condition is that the Ilen Valley Company shall enter into a working agreement, that is to say, shall make an agreement with some other Company for the working of their railway, by which they shall be relieved from having to find the rolling stock, and relieved also from the duty of maintaining their railway in repair, and shall receive 48 per cent. of the gross earnings of their line, which will form a security for the repayment with interest of the advance to be made by the Government to the Company. It is in order to comply with that condition that the Ilen Valley Company have entered into this agreement which is now before us for approval, and which they believe will be satisfactory to the Public Works Commissioners, and we mention this circumstance, because first of all it explains what otherwise would seem strange, that so long before the railway will be completed and ready for being worked, the Ilen Valley Company should enter into a working agreement, and also because it furnishes a reason why we should be unwilling, except on some real substantial objection to the agreement, to refuse our approval of it, seeing that the consequence would be perhaps that the Ilen Valley Company would lose the opportunity of being able to complete their railway within the time limited by the Act.

Now the line of the Ilen Valley Company will, with the lines of the Cork and Bandon Company and the West Cork Company, form a continuous railway communication between Cork and Skibbereen, a distance of between 50 and 60 miles, and the Ilen Valley Company could conveniently enter into a working agreement, either with the Cork and Bandon Company, or with the West Cork Company. It would be best for the Ilen Valley Company that the working agreement should be made with the Cork and Bandon Company, and it would be best in the public interests that the Cork and Bandon Company should work all three railways the whole distance from Cork to Skibbereen, but then that involves not only an agreement between the Ilen Valley Company and the Cork and Bandon Company, but also a working agreement between the Cork and Bandon Company and the West Cork Company, and it appears that those two Companies are unable to agree as to the terms on which those two lines should be worked by the Cork and Bandon Company, there being a fundamental difference between them on the question of whether the management of the joint line should be exclusively by the Cork and Bandon Company, or whether it should be vested in a joint committee on which the boards both of the West Cork Company and of the Cork and Bandon Company should be represented. That would be best certainly in the public interests, because it appears that from those two lines being managed by different Companies, great inconvenience is caused to passengers, although we must say, with regard to the statements made by Mr. McCarthy Downing yesterday, that for two companies to cause such inconvenience as he described to passengers travelling between Dunmanway and Cork is directly contrary to the provisions of the Railway Traffic Act of the year 1854, and this Court has been given power upon application made to it to enforce compliance on the part of Railway Companies with the provisions of that Act.

But even if no working agreement can be made between the Cork and Bandon and the West Cork it would still be best for the Ilen Valley Company to have a working agreement with the Cork and Bandon Company, because the Cork and Bandon Company could carry the traffic of the Ilen Valley Company to and from Cork over the line of the West Cork

Company, the intermediate line, under running powers given by the Ilen Valley Act; but then the Cork and Bandon Company are not prepared to work the line of the Ilen Valley Company, and to trust to carrying the through traffic over the line of the West Cork Company, under the running powers given by the Ilen Valley Act, because they say, as we understand them, that they would have to pay tolls to the West Cork Company, of which the amounts would be fixed by arbitration. Unless they can also make a working agreement with the West Cork Company they decline to make one with the Ilen Valley Company, and the Ilen Valley Company therefore, being unable to make a working agreement with the Cork and Bandon Company, have made this working agreement with the West Cork Company, as the next best thing which it was in their power to do.

Now, as far as the agreement itself is concerned, there is no objection to any of the articles in it, with the single exception of the one purporting to entitle the West Cork Company to transfer the right of working the Ilen Valley Railway to another Company at some future time, and under ordinary circumstances I think we should be justified, indeed it would be our duty almost, to require that the two parties should enter into a fresh agreement, leaving out an article of that kind; but we are unwilling, seeing that the time it would take to make a new agreement might involve the non-completion of the railway within the necessary time, on that sole ground to refuse to approve the agreement.

Then with regard to the parties to the agreement, no objection, of course, is made as far as regards the Ilen Valley Company being one of those parties, but objection is made to the agreement on the ground that the other party to it is the West Cork Company, and the reason why objection is made to the West Cork Company being a party to the agreement is that their circumstances are so embarrassed that they are unable to pay a dividend on their capital, and also are unable with their existing resources to keep their line in proper repair, and it is not likely, it is said, that they will efficiently work another line when they are unable to work their own line properly. Now, even if we admit everything that is said on that side of the question, there still remain certain advantages which the West Cork Company have over any other Company who could compete for the working of the Ilen Valley Railway, setting aside the Cork and Bandon Company. Their line adjoins the line of the Ilen Valley Company, and they have a rolling stock to which the small addition that would be required could probably be made without any great difficulty. And with regard to what has been said about their not keeping their own line in repair, if from that we are meant to infer that they would be unable to keep the Ilen Valley line in repair, it must be remembered that the cases are not precisely similar, because the Ilen Valley Company under this agreement would have the power of insisting upon their line being kept in proper repair by the West Cork Company, and if there were any difference between them and the West Cork on the subject they would go to arbitration, and would insist on the line being kept in proper repair. Under all those circumstances, we think that the objections to the West Cork Company being a party to this agreement are not sufficient to prevent our confirming the agreement, and therefore we shall confirm it.

There will be no costs given on either side.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 12.]

THE SOUTH DEVON RAILWAY COMPANY
v.
THE DEVON AND CORNWALL RAILWAY COMPANY.

Interlocutory Judgment of the Commissioners, delivered on the 19th April 1876.

WE have been appointed by the Board of Trade, under section 6 of the 37 & 38 Vict. c. 40, to decide the terms and conditions to be imposed on the Devon and Cornwall Railway Company in consideration of additional rails for the purposes of their narrow gauge traffic having been, on their application, and on their undertaking to comply with any such terms, laid down by the South Devon Railway Company on the Launceston and South Devon, and the South Devon and Tavistock Railways between Lidford and Plymouth. Our appointment was made with the assent of the Devon and Cornwall Railway, who informed the Board of Trade that "they concurred in the proposed "inquiry before the Railway Commissioners as sought "for by the South Devon Railway Company." Their contention, however, now is that the Devon and Cornwall Railway (Extensions to Plymouth and Devonport) Act, 1873, has transferred to others the power to prescribe terms, at first vested in the Board of Trade, and that the Board therefore could not appoint us to adjudicate in the matter.

The authority for the terms being imposed by the Board of Trade comes from the South Devon Railway Act, 1865, section 35, and the Launceston and South Devon Railway Act, 1866, section 14. These sections provide, each in the same words, that the South Devon Company shall, on the application of the Devon and Cornwall Company, and on their undertaking to comply with the terms and conditions to be imposed in default of agreement by the Board of Trade, lay down narrow gauge rails. Application having been made in 1871, and an undertaking given under the Company's common seal in accordance with these sections, the rails have been laid down, but the terms for the laying down cannot now, so it is said, be imposed by the Board of Trade, because certain heads of arrangement between the two Companies, dated in March 1873, were confirmed by the Devon and Cornwall Railway (Extensions to Plymouth and Devonport) Act, 1873, section 46, the seventh of these heads being as follows: "All questions between the Com-"panies under the South Devon Railway Act, 1865, "and the Launceston and South Devon Railway Act, "1866, and these heads shall be settled by A.C Sherriff, "Esq., and T. E. Harrison, Esq., or their umpire, or "in the event of the death or failure of either of them "to act, by arbitration, in the manner provided by the "Railway Companies Arbitration Act, 1859."

It is only by implication, if at all, that the provisions of sections 35 and 14 of the Acts of 1865 and 1866 relating to the Board of Trade, or part of them, have ceased to take effect, and it is not clear to us that, as regards the obligation on the Board to impose terms upon the Devon and Cornwall Company for the laying down of the rails, that is a matter constituting "a question between the Companies." We rather incline to the opinion that so soon as the Devon and Cornwall Company gave the notice for the rails to be laid down, and engaged to comply with the terms the Board of Trade should impose, the Board had, failing agreement, a part to undertake which was something different from the settlement of a "question between the companies." This may be considered to have been the opinion also of the Devon and Cornwall Company themselves, because on their being informed by the Board of Trade of the application made to them to act and of their intention to refer the matter to us, they, the Devon and Cornwall Company, expressed their concurrence in that course being taken. At the same time, as the railways of the Devon and Cornwall Com-

pany, connected with the South Devon Railway, and, as it would seem, their rights and duties also in respect of the narrow gauge accommodation on the South Devon Railway, have been recently, under the authority of Parliament, transferred to the London and South-western Railway Company, and the South-western Company have other questions at issue with the South Devon Company, with which the questions in the present application are stated to be closely connected, and which the South-western and the South Devon Companies have agreed to refer to us for decision, we think the safest and most convenient course will be that all the questions should be brought before us at the same hearing, and that the applications to us to hear them, including that already made, should be joined in by the several companies, parties to the questions.

The learned Counsel for the South Devon Company expressed a wish that the terms for the laying down of the additional rails should not be mixed up with the terms for the right to run over and use such rails. As far as we are at present able to see, these are separate questions.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 13.]

GREENOP AND OTHERS
v.
THE SOUTH-EASTERN RAILWAY COMPANY.

Judgment of the Commissioners, delivered 12th May 1876.

THE Applicants in this case complain that the South-eastern Railway Company charge them higher rates than are charged to Messrs. Flageollet Frères for carrying goods and parcels between Boulogne and London viâ Folkestone. The Respondents, the South-eastern Company, carry traffic by sea as well as on their railway, and they own and work the steamers which run between their coast terminus at Folkestone and Boulogne. The Applicants are Custom House and forwarding agents at Folkestone. Goods are shipped to them by their correspondents at Boulogne, booked through to London, and the Applicants, as the consignees of the goods at Folkestone, clear them through the Custom House, forward them on to London, and pay the Company their tariff rates for the through sea and land carriage. Messrs. Flageollet also book goods locally from Boulogne to London, and they have their own agency at Folkestone to do the Custom House and other work in respect of these goods. The complaint is that these goods are carried by the South-eastern Company at reduced rates, and that Messrs. Flageollet are allowed a rebate of 15 per cent. off the Company's tariff of station to station rates, that they are exempt from a landing charge at Folkestone of 4*d.* a package payable to the Company on goods of particular descriptions, and that on parcels exceeding 56 lbs. in weight they pay from 6*d.* to 1*s.* less than others, the maximum of the parcels scale in ordinary being 3*s.* 6*d.*, but to them only 2*s.* 6*d.* The Company admit making these allowances in favour of Messrs. Flageollet, but they say that they make them by reason of their having a special agreement with Flageollet's, under which Flageollet's "guarantee to "send between Boulogne Quay and London, by the "South-eastern Company's steamers and railway, 850 "tons of goods each calendar month dating from "1 June 1867," and they maintain that in view of that agreement the preferences given are not undue nor in amount disproportionate to the value to a railway and steamboat company of having the conveyance of such a quantity of traffic guaranteed to them.

Messrs. Flageollet's traffic is sent with regularity and in quantities fully answering to their engagement, and if a person was able to supply traffic under such arrangements for the accommodation of a railway company, as that a lower rate in his case was as remunerative to the Company as a higher rate on similar traffic in the case of others, we should probably not consider that the inequality came within the statute, the 17 & 18 Vict. c. 31. Here it is not suggested that the traffic of Messrs. Flageollet is carried by the Railway Company at any less cost per ton per mile than the traffic of the Applicants, and all that is said on the subject of diminished cost is that in clerkage, and in labour in unloading and dealing with Messrs. Flageollet's goods at the Bricklayer's Arms Station, the assistance their people give saves the Railway Company, in the opinion of their general manager, about 1*s.* per ton as against the Applicants, representing from 5 to 6 per cent. upon the actual rates. But the Respondents put forward other grounds as those on which they mainly rely. It appears that for the conveyance of goods between Boulogne and London they have to compete with the Thames Steam Navigation Company, and they consider that a customer who engages to send a large quantity of traffic by their route viâ Folkestone, instead of by the route with which theirs is in competition, may properly be given in return advantages not extended to those who, like the Applicants, decline to enter into any stipulation of that kind. They observe also that the goods sent from Boulogne to London are for the most part brought to Boulogne from a distance. In the case of Messrs. Flageollet's goods they are collected in different towns of France, where Messrs. Flageollet have offices and agencies to collect goods for transmission to London, and it is contended that as Dieppe, and Havre, and Calais are not less convenient than Boulogne, as points of departure from France for such traffic, and Messrs. Flageollet might employ the Brighton line and the lines of other Companies for its conveyance, an undertaking by them to send viâ Boulogne is a valid consideration for advantages being granted to them for doing so. But not only do we not know what proportion of the goods Messrs. Flageollet send by Boulogne might be influenced in the course they take by the competition of other railways with more facilities in point of distance or otherwise, but we doubt also whether a distinction between parties using the same railway, and forwarding traffic by it in exactly the same manner, could be upheld on the ground that they are differently circumstanced in respect of their control over the traffic, prior to its being forwarded by the particular railway. At the same time we think the circumstances bearing on the origin of the goods and the places whence they are first despatched enhance the value of the guarantee of quantity, and that the necessity, as to which there seems no doubt of collecting the goods from a distance, makes it not unreasonable that favourable terms should be offered to those who are willing to bind themselves to go to considerable expense and preparation to earn the preference, and as a proportionate reduction of the Company's tariff is offered for any smaller amount of traffic for which a guarantee is given, we do not think, on the whole, and regard being had to the competition from Boulogne, that we ought in this case to interfere, but it will be without costs that the injunction will be refused.

One of the applicants, Mr. Thorn, besides joining in the application we have been considering, complains separately that the South-eastern Company carry in certain cases at rates which include Custom House agency, and that they give themselves an undue preference in allowing the clearing in these cases to be done only by their own servants, or if done by the Applicant or any other Custom House agent, refusing any rebate. This seems to have reference to goods carried at agreed through rates between London and Paris, as to which the Railway Companies undertake, for the fixed amount paid, every kind of service and change incidental to the transit from point to point. There is no doubt that Custom House agents have no

opportunity of earning commission upon goods carried in this manner, but the plan of delivering goods between London and Paris, at one fixed sum for the entire service, and free of any intermediate charges, is a great convenience to the public, and we do not see that it involves any infringement of the Traffic Act. The application, therefore, on this separate point will not be granted.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 14.]

THE HARBORNE RAILWAY COMPANY

v.

THE LONDON AND NORTH-WESTERN RAILWAY COMPANY.

Judgment of the Commissioners, delivered 23rd May 1876.

The Harborne Railway Company are the owners of a railway which is worked by the London and North-western Company under agreement, and the matters referred for our decision are certain differences between the Company owning the line worked and the working Company, the Harborne Company contending that the North-western Company do not work the line properly and do not carry out the agreement as respects some of its terms. Harborne is a suburb of Birmingham and the route is by the North-western Railway for one mile and a half from New Street station to the junction with the Harborne line near Monument Lane, and thence by the Harborne line two and a half miles to Harborne. The route was opened for traffic in August 1874, and the North-western Company undertook by the agreement to "maintain, manage, man, "stock, work, and use the Harborne Railway so as "properly to develope and accommodate not only the "through traffic but also the local traffic of the dis-"trict to be served by the Harborne Railway."

The first point in the application of the Harborne Company has reference to the trains for passengers. The passenger service consists of eleven trains each way on week days, the down trains occupying 20 minutes, and the up trains 25 minutes. And this the Harborne Company say is so slow a service and so inconveniently timed that people prefer going by road, and using the omnibuses which run every half-hour in 25 minutes, the distance by road being three miles to the four by railway. One respect in which, they say, the service is badly timed is in the trains not fitting in with the times for beginning and leaving off work in Birmingham, and they are of opinion that the railway would be more used if the morning trains arrived ten or fifteen minutes before instead of after the hour, and if the trains in the afternoon which leave exactly at the hour, left sufficiently later to allow of passengers getting from their offices or places of work to the station. By the time table set out in the answer of the North-western, it appears that the first four up trains arrive at 8.10, 9.10, 10.15, and 11.15 A.M. respectively, and that the three afternoon trains leave at 3, 5, and 6. By an arrangement since made, the 6 o'clock train now leaves Birmingham at 6.15, and we think that it would be found to be also for the convenience of the public that alterations in a corresponding sense should be made in the morning trains and in the other afternoon trains and effect so far given to the views of the Harborne Company, but as regards other differences between the present train list, and a time table proposed by the Harborne Company, we should not feel justified upon the evidence in making any order with regard to them. We extend this last remark to the question of putting on trains on Sundays, on which days there are none at present. They were not shown to be clearly requisite, and the North-western Company, it appears, do not run trains on Sundays except so far as a case of necessity or general convenience may be made out. On the subject of accelerating the journeys, the Harborne Company suggest 18 and 20 minutes in lieu of 20 and 25 minutes, and as Mr. Kay, chief goods manager of the North-western Company had no doubt that two or three minutes could be saved in the time of trains not fully loaded we think there should be no difficulty in the working Company carrying out this improvement.

The second ground of complaint is in connexion with goods rates and with delays in the delivery of goods. All goods (coal excepted) that are not carried at carted rates, nor for short distances from places north of Birmingham, as Wolverhampton and Walsall, are charged tenpence more to Harborne than to Birmingham, as for example, 12*s.* 6*d.* is the rate for grain from Liverpool to Birmingham, and 13*s.* 4*d.* to Harborne, and the contention of the Harborne Company is that only the same rate per mile should be charged on their line as is charged on lines of the North-western Company in the same district. The tenpence over in the rate to Harborne is not treated by the North-western Company as being expressly and separately for conveyance on the Harborne line (in many cases indeed tenpence would give a rate per ton per mile in excess of the Parliamentary maximum), but as an integral part of a lump sum for the whole through route, and this lump sum or gross rate is divided by mileage between the two lines. Under this treatment, however, the North-western Company receive more for carriage over their own line for equal distances from goods to Harborne than from goods to Birmingham and we are unable to see how any such differential rate is consistent with their undertaking "so to manage and use the Harborne "Railway as properly to develope and accommodate "both the through and the local traffic of the line." It must, we think, be looked at in relation to the agreement, and in order that effect may be given to the provision in the agreement to which we have just referred, it seems to us to be no more than reasonable to require that when the gross rates are not the same, the rate per ton per mile shall be the same from the same stations whether the goods are carried to Birmingham or Harborne.

The Harborne Company entirely failed to establish a charge which they brought against the North-western Company of delivering traffic from Birmingham by cart which they should have forwarded to Harborne by railway, but in the matters of the quoting of rates, and the detention of traffic in transit, the evidence showed that the line had not been worked in so efficient a manner as it might have been. So late as 24th February last the traffic manager at Birmingham was not prepared to answer an inquiry for rates for bricks from Adderley Park station to various other stations including stations on the Harborne line. These defects, however, may have been partly owing to the line having been but recently in operation or to the attention of the Company not having been particularly directed to them. They will be best dealt with by the Company remedying them of their own accord, and it is probably not necessary under the circumstances that we should interpose with regard to them.

The working agreement provides for the receipts of the Harborne line being equally divided between the Harborne Company and the North-western Company, but the two Companies differ as to the sense in which a direction contained in it with regard to station to station terminals is to be taken. The 6th article is as follows:—"The gross receipts for local and through "traffic on the Harborne Railway, deducting clearing-"house terminal charges with one moiety of station "to station terminals, and also deducting mileage "proportion and terminals due to any other Company "in respect of such traffic, shall be divided equally "between the Harborne Company and the North-"western Company." The North-western Company construe "station to station terminals" in this article,

as not including charges at any terminal station not on the Harborne line, while the Harborne Company consider that the two terminals included in a through rate, the North-western Railway terminal equally with the Harborne Railway terminal are here referred to, and that one moiety of the two or, in other words, the whole of the Harborne end terminal is to form part of the receipts which are to be equally divided. We have, no doubt, ourselves as to the view of the Harborne Company being the correct one, and we think the words "with one moiety of station to station ter- "minals" should be read as part of the clause beginning with the word "deducting" and as importing that of the two terminals which are included in gross receipts one should be deducted and the other remain for division. We also think that the words "any "other Company" in the clause "and also deducting "mileage proportion and terminals due to any other "Company in respect of such traffic" refer to any third Company interested in particular traffic, and not to the North-western Company.

In 1874 the North-western Company supplied the stations on the Harborne line with gas fittings and furniture at a cost of about 874*l*. This amount they claim to have repaid to them by the Harborne Company, who, however, say that it is the duty of the North-western Company as the working company to provide all such furniture and fittings as are included in the claim. The question turns more, as to a large part of the amount, upon what the Harborne Company bound themselves to do by agreement. They were at their own expense to complete the railway, stations, buildings, and works authorised by their Act, including stations for goods and passengers, with the necessary conveniences thereto, and any differences were to be determined by arbitration. Differences did arise in 1873 as to what was necessary to complete the railway within the meaning of the agreement, and on the application of the Harborne Company, an arbitrator was appointed by the Board of Trade, and on 5th March 1874 made an award directing that the Harborne Company should at their own expense, amongst other works, cause the signals to be lighted with gas, and the rooms of the station buildings to be provided with gas fittings, and the booking offices with cupboards. The Harborne Company argued that it was *ultra vires* for the arbitrator to give a decision to that effect, but he was careful to point out that he held the things he ordered to be done to be necessary to complete the railway within the meaning of the agreement, and we do not see that he exceeded his powers. We propose, therefore, to allow the claim of the North-western Company, so far as it is in conformity with the award of March 1874, as in fact *res judicata*. Any portion of it which may be for expenditure on other articles should, we think, be borne by the North-western Company.

With reference to a point which arose in the course of the hearing, we have since been informed by the Board of Trade, that they have no record of their having approved of this agreement, and considering the importance of maintaining the principle of the Railway Clauses Act, 1863, that the public shall have an opportunity of bringing objections against working agreements and being heard upon them, we think if this agreement has not yet been formally confirmed that steps should be taken to bring it before us for that purpose.

The Harborne Company having established some, though not every part of their application, we grant them one half of their costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 15.]

THE SOUTHSEA AND ISLE OF WIGHT STEAM FERRY COMPANY

v.

THE LONDON AND SOUTH-WESTERN RAILWAY COMPANY,

AND

THE LONDON, BRIGHTON, AND SOUTH COAST RAILWAY COMPANY.

Judgment of the Commissioners, delivered 31st May 1876.

THE Southsea and Isle of Wight Steam Ferry Company and the Portsmouth and Ryde Steam Packet Company are two steamboat companies carrying passengers between Southsea and Ryde, and the Brighton Railway Company and the South-western Railway Company, desirous of providing for the continuous conveyance between their joint terminus at Portsmouth and the Isle of Wight of through passengers to and from London and other stations on their lines, have a traffic arrangement with the Steam Packet Company that their vessels shall run between Southsea and Ryde in connexion with the railways, and that the Railway Companies shall book through passengers and their luggage at an aggregate rate or charge for the whole distance. The through tickets so isued are available only by the vessels of the Packet Company, the Railway Companies refusing to book through by the vessels of the Ferry Company. This, the Ferry Company say, interferes with their profits, and subjects them to an undue prejudice, and they apply for an injunction under the 2nd section of the Act of 1854. Further, they say that the portion of the through fares attributed to the sea route greatly exceeds the rates charged by the Packet Company to persons who have not through tickets, and that the monopoly of the through traffic is used to lower the sea fares for the class of traffic by sea which the Ferry Company could carry as competing traders were it not that the low fares for this local traffic, which in the case of the Packet Company are compensated to them by the profits on their portion of the through fares, are so unremunerative that all competition on this particular line by sea is extinguished and driven off. Neither Railway Company have steamboat powers to run to the Isle of Wight, and the case does not come within section 16 of the Regulation Act of 1868, which obliges railway companies conducting a steam navigation to convey all persons by their vessels equally and after the same rate. But that section is referred to as showing the restrictions which are put upon railway companies exercising powers to engage in a sea service in combination with their railways, and the Ferry Company claim to have the benefit of any like safeguards which Parliament may have made applicable to the working of arrangements such as that of which they complain.

Upon the question of undue preference and prejudice, it appears that the arrangement between the two Railway Companies and the Packet Company, by which a through service is given and only one charge made to the passenger, has existed for many years. The arrangement is a verbal one, and, according to Mr. Scott and Mr. Knight, the general managers of the railways, the Packet Company have no exclusive right under it, nor any bias or feeling in their favour on the part of the Railway Companies, who wish only to procure the best boats that can be had for carrying passengers between Southsea and Ryde, and Mr. Knight added that, all things being equal with reference to the question of accommodation, through booking by the boats of the Ferry Company would at once be given. But the Railway Companies say that the boats of the Ferry Company are not equal to the boats of the Packet Company, and are not in size, power, and construction adapted to carry on a continuous

and regular service of a proper character for passengers between Southsea and Ryde, and that as the railway companies incur a responsibility beyond the limits of their railways by booking to an ulterior point, they give no undue preference, nor protect themselves more than is reasonable, if they deal only with carriers able to deliver traffic entrusted to them with speed, safety, and punctuality.

The Ferry Company commenced running in 1873, and has four screw vessels averaging 96 feet long, gross tonnage 61 tons, horse-power 28, and a space accommodation for 158 passengers. The vessels are duly certified as able to ply with safety between the mainland and the Isle of Wight, and as fit also to carry passengers, and the number of persons they carried last year was 130,000. But Mr. Scott and Mr. Knight say that, however fit the vessels may be for local traffic, they are not suited to railway through traffic, which requires room to be found on board for luggage as well as passengers, and that in rough weather they roll so considerably that complaints would be made of the discomforts and annoyances of the passage. For this particular traffic Mr. Scott and Mr. Knight consider them to be decidedly inferior to the boats of the Packet Company, which are eight in number, all paddle steamers, and which, though not by any means of the best class or so good as the railway general managers would wish to see running, are still steadier and larger than the screws, averaging 141 feet long, 120 tons gross tonnage, 60 horse-power, and a carrying capacity equal to 296 passengers. Independent evidence to the same effect was given both as to the relative merits of the two sets of boats, and also as to those of the Ferry Company being wanting in some of the conditions of fitness for the kind of traffic carried by the Railway Companies. Under these circumstances, the Respondents have, we think, justified themselves from the imputation of showing undue preference by their arrangement with the Packet Company, and we shall only suggest that passengers with through tickets and no luggage shall have the option at their own risk of crossing if it suits them by the boats of the Ferry Company, the Railway Companies in such cases accounting to the Ferry Company for what they have received for the sea transit. At present, if a railway passenger with a through ticket walks on board the boat of the wrong company, the other boat company receives from the Railway Companies the sea portion of the through fare just the same, while the passenger is called upon to pay a second time for his passage across.

As to the second head of complaint, we doubt our power of entertaining it, except so far as it raises a question of the reasonableness of the sum attributed to the sea portion of the whole distance traversed. Ordinary steamboat undertakings are not under our control, and the laws for securing equality of treatment, and the transmission of traffic at reasonable charges, do not apply to carriers at sea not being railway companies, or in closer alliance with them than is the case here. It appears that the part of the one payment for the whole distance which belongs to the Packet Company is first class 1*s.* 2*d.* single journey, and 2*s.* 4*d.* return or double journey, and second and third classes 10*d.* single, and 1*s.* 8*d.* return. These were also the old local rates, but when the Ferry Company was established in 1873, and competition for the open or local traffic ensued, the Packet Company reduced its local rates to first class 9*d.* single and 1*s.* return, and second and third classes 6*d.* single and 9*d.* return, these rates, moreover, including a toll of two or three pence to the Ryde Pier Company, which is an extra charge to the through passenger by railway. Thus, such a passenger taking a through ticket pays for his sea transit a sum largely exceeding what he would pay if he used the steamboat without also using the railway, or if he booked by the railway as far as its terminus and then re-booked by the boat, and the difference certainly seems more than can be accounted for by what may be allowed to the Packet Company as consideration for conveying luggage free, and for meeting the trains. The Railway Companies say in their Answer that they have no control over the management of the Packet Company or over their boats, or over the fares charged in respect thereof, but they book through by them, and if in consequence, as they argue on the preceding question of who should be their agents, they have a continuing liability up to the point of final delivery, it does not lessen that liability that the question has reference not to delays in conveying the passenger, or to damage to his luggage, but to the reasonableness of the sum charged him for his passage. However, this is a consideration which relates rather to what under certain circumstances a railway company is bound to do for its passengers. We do not think we can treat the allegation that the railway passenger pays more for his transit by sea than he should in fairness be charged as a question between the Ferry Company and the Railway Companies, and we must decline therefore on the application before us to make an order upon the Railway Companies to charge no more than a reasonable amount in their through fares for the boat service, regard being had to the fares charged by the Packet Company to their other passengers. This is not a case in our opinion in which costs should be given.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 16.]

THE SOUTH DEVON RAILWAY COMPANY

v.

THE DEVON AND CORNWALL RAILWAY COMPANY.

THE LONDON AND SOUTH-WESTERN RAILWAY COMPANY

v.

THE SOUTH DEVON RAILWAY COMPANY AND THE GREAT WESTERN RAILWAY COMPANY, THE BRISTOL AND EXETER RAILWAY COMPANY, THE SOUTH DEVON RAILWAY COMPANY, and THE CORNWALL RAILWAY COMPANY.

THE CORNWALL RAILWAY COMPANY AND THE GREAT WESTERN RAILWAY COMPANY, THE BRISTOL AND EXETER RAILWAY COMPANY, AND THE SOUTH DEVON RAILWAY COMPANY

v.

THE DEVON AND CORNWALL RAILWAY COMPANY.

Judgment of the Commissioners, delivered 20th day of June 1876.

Sir F. Peel: The railway on the broad gauge from Launceston by Lidford to Tavistock, and from Tavistock to a junction near Plymouth with the main line of the South Devon Company from Exeter to Plymouth was constructed subject by statute to the condition that the Board of Trade might at any time, in the interest of the public service, require an additional rail to be laid down over which in combination with one of the broad gauge rails, narrow gauge traffic might be carried. This railway was by Acts passed in 1865 and 1869 vested in the South Devon Company, and both it and the main line of that Company are now worked by the Great Western Railway Company.

A railway on the narrow gauge called the Devon and Cornwall Railway, and commencing at Yeoford on the North Devon Railway, was in 1863 authorised to be extended to the broad gauge railway at Lidford, and under Acts passed in 1865, 1866, and 1869 the owners of this Devon and Cornwall Railway had the power of requiring independently of the Board of Trade, that from Lidford to the junction near Plymouth, a length of 23 miles, the broad gauge railway should be made capable by the addition of a third rail of

being used for narrow gauge purposes, and upon their giving an undertaking that they would comply with such terms and conditions as the Board of Trade might impose, the work was to be executed by the South Devon Company. By the Act of 1865 the Devon and Cornwall Company could also require the South Devon to lay down a third rail on their main line from the junction near Plymouth into Plymouth, and they had power to run as well over the branch from Lidford as over the piece of main line, and also to use the Mill Bay and Sutton Harbour Stations of the South Devon Company at Plymouth. But in 1873 the right of using these terminal stations was withdrawn, and instead the Devon and Cornwall Company were authorised to make stations of their own both in Plymouth and Devonport, and for further facilities to them the South Devon Company were directed to add a rail for the narrow gauge to a loop line at Plymouth connecting their railway with the Cornwall Railway and the Cornwall Railway Company the same to their line as far as to a junction with the government branch to Keyham Docks. The Devon and Cornwall Company were also given power to run to that junction, but they were not to use the Cornwall Railway except for traffic to and from the Government Dockyard. As to the mode in which the expenses of the South Devon Company under these various Acts were to be paid, provisions were inserted that the terms for the construction and the terms for the user of the additional rail should, in case of disagreement, be settled by the Board of Trade. It is a contention of the South Devon Company that the way in which these provisions are drawn clearly indicates that the terms (that is as to construction and user) are to be separate and cumulative. But the language, as we read it, conveys no absolute or unqualified directions on the subject. Its particular form seems to have been suggested by the expectation that the Company causing the work to be done and the Company using the work when done would be different Companies, but we think it leaves the whole subject of terms and their incidence to be settled in any way that circumstances may require. In 1871 the Devon and Cornwall Company exercised the power given them by the Acts of 1865, 1866, and 1869, and required the South Devon to put down a third rail from Lidford to Plymouth. The South Devon Company complied, and their estimate of the cost which the doing of this work has involved, making it amount to 86,000*l.*, the object of their application against the Devon and Cornwall Company is to obtain from us, as standing in the place of the Board of Trade, an order fixing the consideration to be paid by the Devon and Cornwall Company in respect of this outlay having been incurred at their request and for their accommodation. Meanwhile the railway of the Devon and Cornwall Company has ceased to be their property, it has become vested in the London and South-western Railway Company, and, as a consequence, the running powers from Lidford to Plymouth and Devonport will be used by the South-western Company and not by the Devon and Cornwall Company. No agreement has been come to between the South Devon and the South-western Companies as to the consideration to be paid for the user, and the terms and conditions to be observed, and the South-western Company bring that matter forward at the present time, and as a cross application to that of the South Devon in order that we may have the two claims for construction and user before us together in case each may appear to us to be not without bearing on the other, and to be an element of mutual account.

The principal question raised by the application of the South Devon Company is this, assuming their line to be used under the running powers and full payment to be made to them for the user, have they good grounds for claiming in addition to be paid interest on the cost of laying down the third rail and the extra expense of maintenance? They say they have, and that they ought to receive from the Devon and Cornwall Company as the Company on whose requisition the outlay took place at the rate of 7 per cent. on its amount for interest and maintenance, and this quite apart from any payment for user. They argue that they are a broad gauge Company and that the toll the South-western Company will pay for user will be no more than any broad gauge Company with running powers would pay, but that while their line, just as it was finished for their own purpose, would have sufficed for the running over it by a broad gauge company, they have been obliged to expend £86,000 in fitting it for narrow gauge traffic, and that this extra expense ought not to fall on themselves, but to be defrayed by the Company for whose benefit it was incurred. Now it is evident from the several Acts of Parliament which have been referred to that reservations were made in them respecting the gauge on which a railway connecting the North Devon and the South Devon Railways and approaching Plymouth from the direction of Tavistock should be constructed. Power was given in 1854 and 1856 to make a railway on the broad gauge from the South Devon near Plymouth to Tavistock and Launceston, but with the proviso that the Board of Trade might at any time cause it to be converted into a railway of a mixed gauge. In 1862 and 1863 a Company obtained power to make a railway on the narrow gauge from the North Devon line as far as to Lidford on the line coming from the South Devon, and in 1865 this Company, the Devon and Cornwall Company, proposed to extend its narrow gauge railway to Plymouth, and to make the extension by an independent route. The Bill with that object did not pass, and it was arranged instead, with the consent of the South Devon Company, that their railway from Lidford to Plymouth should, if required, serve as a continuation of the Devon and Cornwall line, and should be made mixed gauge on the demand of the Devon and Cornwall Company; the rights and obligations of all parties as to expenses to be determined by the Board of Trade. Considering then that there was from the first power to compel the Company making the line from Plymouth to Lidford to add a rail for narrow gauge traffic, and that the further powers over the line granted in 1865 were in lieu of a scheme for a separate route into Plymouth, we think the case of the South Devon Company has not as full force by any means as it would have had, supposing at the outset they had had unconditional possession of their district and its communications by railway, and had afterwards been required to cede running powers to a competitive Company and to prepare for their being exercised by substantially altering and adding to a line constructed with no prospect or notice that such a state of things might supervene. We think indeed they are entitled to be guaranteed a fair return upon the money they have expended, but at the same time that a fair return may be made to them by payment for the user, and that the claim to receive interest and tolls as a twofold consideration ought not to be allowed. We shall decide, therefore, that the Devon and Cornwall Company are responsible, that the annual payment to the South Devon shall not be less than such a sum as will give them 5 per cent. upon their expenditure, but that the guarantee shall only take effect when and so far as the receipts from the running Company fall short of that sum as a minimum.

The cross application of the South-western Company is upon the matter of user by the running Company, and the mode in which user should be paid for is the next subject of difference to which we will advert. The South-western Company propose that the South Devon should receive a mileage proportion of the through rates less working expenses. The South Devon Company object to this both as regards the principle of remuneration involved in it, and also on minor grounds connected with the fixing of the through rates, and the allowance to be made for working expenses, and they propose instead that they shall have a toll on all goods at a rate per ton per mile, varying according to their class from three farthings to three pence half-penny on the ground that the new route is competitive with the coast route from Plymouth to Exeter

the latter being their own for its entire length of 53 miles, the former for only a length of 24 miles, and that whilst they must lose as to all traffic on which they do not receive the mileage of their longer distance they may also be further losers unless they have the security of a fixed toll by the rates over the other route being reduced below their own, on competitive traffic for instance from beyond Exeter, or if remaining the same, being diluted by a longer run, and yielding a lower mileage rate. But, in our opinion, were we to give effect to considerations of this kind, we should act contrary to the true intent of the several enactments. These seem to us to require that the South-western Company should be regarded as having rights of access to Plymouth equivalent to those which an independent route of its own would give it, and to lead to the conclusion that the case ought not to be treated as though it were one of through rates, not to be properly adjusted, except with the concurrence and in the common interest of the several parties concerned, but that the principle should be to confine the payment strictly to the object of remunerating the South Devon Company for the use of its line, and not to look to making it a means of thwarting the running Company or putting hindrances in the way of its competition. Accordingly, we think the right mode of paying the South Devon Company for the use of their line will be by a mileage division of the traffic receipts.

The remarks we have just made as to regarding the South Devon Company not as being in a partnership with the South-western for the carriage of traffic, but as entitled in respect of ownership to payment for use made of their line bear also on the question of whether the rates at which the South-western Company carry shall be agreed rates or not. We think that the South-western Company should not be required to obtain the consent of the South Devon Company before rates can be made, except as regards local traffic and traffic between South Devon stations and the stations at Devonport of the Devon and Cornwall Company. If, however, the South Devon dissent from rates made as they affect the receipts on their portion of line, we propose they may demand a reference of the difference to arbitration, the disputed rates remaining in force pending the decision. As to the deduction to be made for working expenses we think it should be the same for all receipts of which the South Devon Company are to have a mileage proportion, and taking into account that much of the traffic will be carried for long distances, that the rate should be 27½ per cent. It was observed by the South Devon Company that if the sum they are guaranteed for interest merges in their proportion of traffic receipts, and the proportion accruing to them should not be more than sufficient to cover interest, part of their line would be used without payment. To guard against this contingency, we propose that during the exercise of running powers the South Devon Company shall be secured in addition to the 5 per cent. on their outlay for interest, a sum equal for 3 per cent. thereon as for maintenance of the extra rail, and the rail common to both gauges, and for general wear and tear of road, the 3 per cent. equally with the 5 per cent. merging in the proportion of receipts from traffic payable to the South Devon, if not falling short of the aggregate per centage, and any deficiency not met by the minimum payment for which the Devon and Cornwall are to be liable being made good by the South-western Company.

Engines and carriages on the narrow gauge did not run between Lidford and Plymouth before the middle of last month, and a claim for interest to that date is made by the South Devon Company. They commenced to adapt their railway in March 1872, having had notice from the Devon and Cornwall Company that their line to Lidford would be opened for traffic in September 1872. It was not completed and opened till October 1874, and the Devon and Cornwall Company are responsible for having fixed too early a date in their notice to the South Devon. There was then a further delay due to the passing of the Devon and Cornwall Act of 1873, by which powers to the Devon and Cornwall Company to construct their own stations at Plymouth and Devonport were substituted for their previous powers of running into and using the stations of the South Devon Company. We shall not attribute the whole of this additional delay to the Devon and Cornwall Company, and deducting for the part not so attributed, and also for the time that would necessarily be spent in mixing the gauge of a railway, and during which no interest should be allowed, we think the sums expended by the South Devon Company should carry interest at five per cent. to the end of October 1874, that is to about 18 months before the South-western Company had completed their Devonport branch and were prepared to run to Devonport. We do not propose to make any separate allowance for depreciation prior to user.

The sum upon which interest and the minimum payments are to be calculated is that which the narrow gauging has actually cost, and the Devon and Cornwall Company have not yet it seems had an opportunity of satisfying themselves as to the correctness of the claims made by the South Devon Company and amounting altogether to 86,372*l.*, including work on the Cornwall Railway and on the Laira sidings. We approve of the suggestion which received the assent of both sides, that these claims should be examined and checked by the engineers of the two Companies with provision for their referring differences to an independent engineer as umpire, to be appointed, in default of their making an appointment, by us, and as it may be inferred from part of the evidence that questions may arise as to whether the South Devon Company have not included in their account some expenses which have more connexion with requirements of their own line than with the necessary cost of adapting it to the narrow gauge, we reserve to each Company power to refer to us to decide the principle upon which any disputed points of that kind should be settled.

Upon the question of the consideration to be paid for the narrow gauge rails laid down on the Cornwall Railway, and the running powers over that railway under the Act of 1873, we think the Devon and Cornwall and the South-western Companies should come under like terms as regards division of traffic receipts and the minimum rents for construction and maintenance to those we have placed them under in regard to the railways of the South Devon Company.

Lastly, looking to the possibility of the narrow gauge lines laid down by the South Devon becoming useful for their own traffic, and to the working of a through route to Plymouth by the South-western Company being as yet undeveloped, we make this decision subject at any time after the expiration of three years to revision upon the application of any of the Companies interested.

Mr. Davey: The terms of that reference to which you have alluded, Sir, in your judgment, have not been settled between the parties, and partly for the reason that until we had the advantage of hearing your judgment there were questions which could not be determined.

Sir F. Peel: The reference to the engineers?

Mr. Davey: Yes. I anticipate that counsel will be able to settle it between themselves, but in case they should differ as to the particular terms of it, perhaps you will allow us to refer the matter to the Commissioners to settle it?

Sir F. Peel: Yes.

Mr. Clerk: I should hope we should be able to settle it. My learned friend knows we hesitated to accept proposals, because we wanted to wait; it must have depended on the judgment to-day what would be the terms to be submitted to the engineer hereafter, but I should hope we should be able to agree.

Mr. Davey: I fully anticipate so, but in case of difference there will be a reference to the Commissioners to settle the terms of the reference.

Sir F. Peel: Any reference to us afterwards may be considered as part of the present proceedings.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 17.]

THE MIDLAND RAILWAY COMPANY
v.
THE NEATH AND BRECON RAILWAY COMPANY.

Judgment of the Commissioners, delivered 29th June 1876.

Under the Midland Railway (Swansea Vale Railway Lease) Act, 1874, the Midland Company have absolute running powers over the lines of the Neath and Brecon Railway Company at such through rates as may be fixed by the Midland Company on their own responsibility, and the question for our decision is the amount to be paid for such running powers.

The route by which the Midland gets to Swansea runs from Hereford by Brecon over the Hereford, Hay, and Brecon, the Mid-Wales, the Brecon and Merthyr Tydvil, the Neath and Brecon, and the Swansea Vale Railways, the respective lengths of these railways, as parts of the continuous route, being 26, 8, 4, 29, and 11 miles. By Acts passed in 1874 the Midland became lessees in perpetuity of the first and last of these railways, viz., the Hereford, Hay, and Brecon, and the Swansea Vale, the link by which their working was to be connected being running powers over the three intervening railways. The Midland acquired these running powers as regards the Mid-Wales and the Brecon and Merthyr simply as a company working the Hereford, Hay, and Brecon, the Hereford, Hay, and Brecon Company, and any company working their line, having statutory power to run to Brecon. But the power to run over the remaining line, the Neath and Brecon, was given by the Swansea Vale Lease Act of 1874, and the circumstances under which the power was granted are a material part of the case.

The Neath and Brecon Company made an agreement with the Swansea Vale Company in 1864 for mutual running powers over each other's line, with provisions in it for settling the allowance for working expenses to be made to the company which should exercise the powers, and for dividing traffic receipts in mileage proportion or otherwise.

This agreement was confirmed by an Act passed in 1864, and, subject to the alterations made in it by the Act of 1874, is still in operation. The alterations that were made were these:—The Midland was by implication substituted for the Swansea Vale Company as the party to the agreement, and their running powers under it were enlarged and made absolute. Moreover, they were authorised to carry at through rates fixed on their own responsibility, and without the concurrence of the Neath and Brecon. No reciprocal enlargement of powers was conceded to the other side, but it was enacted that the amount to be paid for the running powers given to the Midland should be settled by the Railway Commissioners. The wording of this reference to us is quite general. It allows of any form of payment being adopted, no one form in particular being suggested, as in the agreement scheduled to the Act of 1864, and it leaves the amount of the payment to be calculated, not only with reference to the Neath and Brecon Company being owners of part of the route over which the through Midland traffic is conveyed, but with reference also to its having been without their consent, that their agreement of 1864 was modified by the Act of 1874.

Now we have no doubt that the traffic which will be conveyed on the Neath and Brecon as part of a through route to Swansea worked by and in connexion with the whole system of the Midland will, both in quantity and in receipts earned, compare favourably with estimated traffic under any different arrangement which it was feasible for the Neath and Brecon to make. The London and North-western, and the Great Western Companies have each their own route to Swansea, and the route viâ Brecon could not possibly compete for through traffic on equal terms with those other routes except under similar advantages as regards uniformity of management, and an association of interest with a large company. On the other hand the Neath and Brecon Company are owners of a line connecting Brecon with the Swansea Vale Railway and which it suited the purpose of the Midland to make use of in preference to resorting to any other mode of bridging over the distance between those two points. Apart from the Act of 1874 the Midland could not have used, or fixed rates, over the Neath and Brecon without first coming to an arrangement as to terms with the owning company, and an owning company free to concede or withhold as it pleased could, the Neath and Brecon think, have obtained much better terms than they are offered, which is to share in the receipts in proportion to their mileage. We think this probable, but it materially alters the case that under the Act of 1874 the Midland has not to treat with the Neath and Brecon for the use of the latter company's line, but has the use of it granted absolutely, and that the payment to be made in return is to be such as may be settled by the Railway Commissioners, with whom the question must be not so much what the Midland might have given under pressure and supposing them not to have obtained the Act of 1874, but what is a proper sum for that Company to give upon a view of the case in all its different stages. The Neath and Brecon propose that we should fix the payment at such an amount as will pay them interest at some rate per cent. upon the cost of their line, but if a partnership or alliance with the Midland is, as we believe it to be, the way to turn that line to the most profitable account, it seems to us more fair in principle that the payment should be in proportion to the receipts from time to time, and where a line is of the length of 29 miles, the proportion by mileage may be taken generally to be sufficient. If there is anything special in the case, it is the circumstance that the Act of 1874 grants to the Midland power to fix through rates on its own responsibility. It may be true that the rates will be chiefly governed by the rates on the competitive routes, but still it is an advantage to the Midland to be able without consent to fix the rates over the Neath and Brecon, and on this account we propose to add 5 per cent. to the Neath and Brecon Company's share of net receipts by mileage.

The severe gradients of this line make the expenses of working it higher than usual. The bulk of the traffic is inland from Swansea, and the line rises that way 1,070 feet in 10 miles, the rise to the summit the other way being 790 feet in 7 miles. Such steep inclines continued for such long distances reduce, it is said, the number of waggons to a full train load to one half the usual average, and the Midland calculate the cost of working their trains over this line at 50 per cent., or only five per cent. under the average working expenses of all kinds including maintenance of way of their whole system. But they admit that, pending a settlement of the amount they are to pay to the Neath and Brecon, they have not been striving to develope traffic on that line, and we think at present that it will be sufficient to allow a deduction for working expenses at the rate of 40 per cent. of the gross receipts less terminals, but we shall be ready after a year's further experience of the cost of working to readjust the allowance, if it should be proved that the line cannot be worked without loss at the rate of 40 per cent.

The Act of Parliament directs us to fix the amount to be paid for working both in the past and prospectively, and we decide that the above-mentioned rates of payment and deduction shall apply to both cases.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 18.]

THE TORBAY AND BRIXHAM RAILWAY COMPANY
v.
THE SOUTH DEVON RAILWAY COMPANY.

Interlocutory Judgment of the Commissioners, delivered 4th July 1876.

UPON an application made to us by the Torbay and Brixham Railway Company to determine certain matters in difference between them and the South Devon Railway Company, the question of jurisdiction has been raised by the South Devon Company, and having considered their objections, eight in number, we proceed to give our decision.

By the 8th section of our Act of 1873, any differences between railway companies, which, under any general or special Act are required or authorised to be referred to arbitration, may, instead, be referred to us at the instance of any of the parties to them. The Railway Companies' Arbitration Act, 1859, is a general Act, and gives power to railway companies to agree in writing to refer matters in difference as they arise to arbitration. No agreement in accordance with the Act is in existence between the Companies before us, but it was contended on behalf of the Brixham Company that it was not necessary there should be, that it was enough for our jurisdiction that there was power to agree, and that it could properly be said that differences were under the general Act of 1859 authorised to be referred to arbitration, whether or not Companies agreed to adopt it, and notwithstanding that except as agreed differences could not be referred to arbitration under it. This view gives a wide scope to the 8th section of our Act of 1873, but the argument to establish its correctness was not quite conclusive to our minds, and it would not be without hesitation that we should act upon it.

Half the objections of the South Devon Company are directed against the validity of an agreement made 26th March 1868, between them and the Brixham Company. This agreement adopted the Railway Arbitrations Act, 1859, but as it was expressed to be made for one year only, and there has been no subsequent renewal in writing of the article relating to arbitration, nothing in fact turns as to our powers upon that agreement being valid or otherwise.

A railway company can also force a reference to us of differences as to which any special Act has provided for their being settled by arbitration. A provision of that kind is contained in the Torbay and Brixham Railway Act, 1864, the 40th section of which is as follows: "All matters in difference between the "Brixham Company and the Dartmouth and Torbay "Railway by this Act directed to be settled or deter- "mined by arbitration, or as to the construction or "effect of the preceding enactments, or the performance "or observance or non-performance or non-observance "of any of the provisions thereof shall as and when "the same arise be referred to and determined by "arbitration in the manner provided by the Railway "Companies Arbitration Act, 1859, and as if the two "Companies had agreed to refer the same to arbitration "in accordance with that Act." The Brixham Company is the owner of the short railway from Brixham to a junction with the railway from Dartmouth to Torbay of the Dartmouth Company. The Dartmouth Company is now amalgamated with the South Devon Company. The Brixham Company is still independent, but it hires all its waggons and carriages and its whole staff from the South Devon Company who are also its agents to collect rates and fares, rendering accounts of the receipts, and debiting the Brixham Company with the charges for the hiring. Now the chief complaint in the application of the Brixham Company has reference to these accounts and is to the effect that the South Devon Company have omitted to give credit for that part of the receipts which represents terminal charges, and have indeed treated that part as being their own in respect of their junction station at Churston. Churston, as we have mentioned, is on the Dartmouth and Torbay Railway, and the Dartmouth Company has been amalgamated with the South Devon Company. But, inasmuch as the South Devon Railway Act, 1866, sec. 22, enacts that on amalgamation and thenceforth the South Devon Company shall to all intents represent the Dartmouth Company, and that Act besides incorporates Part V. of the Railway Clauses Act, 1863, one provision of which is that—"Every special Act, so far "as it relates to or affects the dissolved company or "their undertaking, shall be read and construed as if "the name of the amalgamated company (that is, in "this case the South Devon Company) had been used "therein in relation to that undertaking, instead of "the name of the dissolved company," it seems to us that a difference about charges at the Churston Station is since amalgamation a difference between the Brixham Company and the South Devon Company as representing the Dartmouth Company, and that the 40th section above cited must now be read as referring to the South Devon Company so far as it represents the Dartmouth Company not less than to that Company. Section 40, however, applies only to certain kinds of difference, and the difference submitted to us is, it is said, of a kind not within that section. But as the Brixham Railway was authorised to commence by a junction with the Dartmouth Railway at Churston, and the two railways are in the position of a single one, in consequence of the relations established between the three companies under the Torbay and Brixham Act, 1864, and the South Devon Act, 1866, a claim to make a charge on the Brixham Company in respect of traffic exchanged at Churston, or to retain in respect thereof that part of the receipts of the Brixham railway which stands for terminals, does, we think, primâ facie affect the observance of the Brixham Act, a matter of difference seeming to arise as to the effect or construction of its enactments, or as to the performance or observance or non-performance or non-observance of the provisions thereof. Under these circumstances we hold that we have jurisdiction to deal with the complaint in the application, so far as it relates to the particular matter we have mentioned.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 19.]

HENRY ROBERTSON (trading under the name of "FISHBOURNE AND COMPANY")
against
THE GREAT SOUTHERN AND WESTERN RAILWAY COMPANY, IRELAND.

Judgment of the Commissioners, delivered on the 14*th July* 1876.

THE rates for parcels by the Great Southern and Western Railway of Ireland include collection in Dublin, and the Railway Company receive parcels not only at their Kingsbridge terminus, but also at a railway parcels' office which is situated in the middle of the town, and which was opened in January last. They employ Messrs. Wallis, carriers, to convey parcels from this office to the Kingsbridge terminus, and allow them for the service one penny per parcel, irrespective of weight. Messrs. Wallis convey parcels also to the Kingsbridge terminus from receiving offices of their own in Dublin, and the Company allow them on these parcels the same sum of one penny each parcel.

The applicant, like Messrs. Wallis, the Company's agents, is a railway and general carrier in Dublin and elsewhere, and he complains, under section 2 of the Traffic Act of 1854, of being unduly prejudiced in the conduct of his business by the arrangement between the Railway Company and their agents. He applies

for an order enjoining the Company to desist from giving any undue preference or advantage over him to any other person in the matter of collection and cartage in Dublin, and requiring them under section 14 of the Act of 1873 to distinguish in their book of rates at the Kingsbridge terminus how much of their parcels' rates is for conveyance by railway, and how much for collection or cartage in Dublin.

As the applicant and any person taking parcels to the Kingsbridge terminus should pay only for conveyance on the railway, and the Company's parcel rates include charges for other services besides conveyance we shall make an order upon the Company to distinguish in the book of rates, kept at the Kingsbridge terminus, how much of the parcels' rates is for conveyance on the railway, and how much for other expenses, and to specify the nature and detail of such other expenses.

As to the charge of undue preference, we are of opinion that it was not made out, but that the applicant was not without excuse for bringing it forward. He had an offer in writing from the Company, dated 5th February 1876, to allow him on parcels brought by him to their terminus at Kingsbridge one halfpenny for each parcel weighing 18 lbs. or under, and one penny over that weight, and on his declining that offer another offer was made to him, dated 18th February, of one penny on all parcels, irrespective of their weight. At this time the Company were under agreement to pay to Messrs. Wallis on parcels brought by them to Kingsbridge from their own offices one penny as to parcels under 7 lbs. and twopence over 7 lbs., and had Messrs. Wallis been still receiving those rates of allowance there would have been a clear case of undue preference. On February 19th, however, the Company wrote to Messrs. Wallis to make a new agreement with them by which they were to receive one penny each on all parcels, whatever their weight, and whether brought by them to Kingsbridge from their own offices or from the railway parcels' office; but it was not till June 14, and after being served with notice of the application in this case, that the Company informed the applicant that the allowance they were then making to their agents was the same as they had last offered him.

The applicant seemed to think that cartage to the terminus in Dublin could not be done at so low a rate as one penny per parcel, but the evidence was to the effect that such was bonâ fide the remuneration for which the Company's agents were performing the service, and that the Company were not paying them more for collection than they were prepared to allow to the applicant.

There will be no order as to costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 20.]

THE CALEDONIAN RAILWAY COMPANY

v.

THE GREAT NORTHERN RAILWAY COMPANY, THE NORTH-EASTERN RAILWAY COMPANY, AND THE NORTH BRITISH RAILWAY COMPANY.

Judgment of the Commissioners, delivered 18th July 1876.

Sir Frederick Peel: The clearness with which the attention of the Commissioners has been called to the various points that are raised in this case, and to the important parts of the several acts of parliament to which reference has had to be made, and the opportunity which the time occupied by the hearing of the case has given us to consider these points ourselves, seem to make it possible for us to do what probably it will be convenient should be done, namely, to give our opinion upon the case without taking further time for deliberation.

When Parliament authorised the Edinburgh and Glasgow line, in the year 1865, to be amalgamated with the North British, and in the same year authorised the amalgamation of the Scottish Central Line with the Caledonian, and in the year following, in 1866, of the Scottish North-eastern with the Caledonian, it made special provisions for the transmission of traffic by the east coast route. It seemed to have been made a condition of the amalgamations which were authorised in those years that traffic by that east coast route should have the securities provided for it which are contained in the special Acts. The east coast route was defined to be a route which commenced at Larbert and went by Edinburgh and Berwick to London by the lines of the North-eastern and Great Northern Railway Companies. The Scottish Central line was a continuation of that route to the north, in the same way as it was a continuation to the north of the west coast route by Carlisle. The East Coast Companies were the two English Companies, the North-eastern and the Great Northern, and the East Coast traffic was traffic which passed from or from beyond the Scottish Central Railway by Larbert, and by Edinburgh and Berwick, on to the lines of the North-eastern and Great Northern Railway Companies or either of those lines.

That was the East Coast traffic, and the provisions which were made with reference to its transmission by the amalgamation Acts were these: The East Coast Companies were to be at liberty in the first place to work East Coast traffic by their own engines and carriages over the lines of the North British and Caledonian Companies from Edinburgh to Larbert and to Glasgow in one direction, and to Perth and Aberdeen in the other; and if they did not desire to exercise those running powers, then the North British and Caledonian Companies were to convey such East Coast traffic with the same diligence with which they would convey traffic of their own, or traffic which it was their interest to foster to the utmost.

But under certain circumstances much more than that was to be done for East Coast traffic, because if the East Coast Companies chose to run trains specially for its accommodation from York or from London, then it was the duty and was made an obligation on the North British and Caledonian Railway Companies to run trains in conjunction with the trains run by the Great Northern and North Eastern Railway Companies. The duty of the Caledonian and North British Companies in such case is to run trains in conjunction, and the East Coast Companies are given the right to require that trains shall be run in conjunction with their trains from or to the south, the provision in the Acts being that the trains shall be run in conjunction or connection, and so run as to make a continuous communication.

But it is asked what is the meaning of being required, or having the right to require that trains shall be run in conjunction. The contention of the applicants in their application certainly goes too far when they say, in one of their paragraphs, "That "according to the true meaning and intent of these "Acts the East Coast Companies are not at liberty of "their own mere will and motion to enforce an altera-"tion in the service of trains agreed between the "several parties, either without their consent, or"—so on. We should say, on the contrary, that the duty of the Caledonian and North British Companies waits entirely, as regards this matter, upon the mere will and motion of the East Coast Companies. The East Coast Companies are not bound to run any trains at all for the accommodation of East Coast traffic, nor to run them at any particular time, nor at the same time one month with another; but if they do run them, then it is made obligatory upon the Caledonian and North British Companies to run trains in conjunction with those trains so run by the English Companies.

On the other hand, we think that the East Coast Companies claim too much in insisting that their general power to require trains to be run in conjunction involves also that of fixing the times when those

trains shall arrive and depart on the Caledonian and North British lines. It is possible that that power may be included by implication in the words "trains "to run in conjunction." But we must regard rather what we find expressed in the sections of the respective Acts; and there we find that they may require trains to be run in conjunction, whatever that may mean, and that trains being run pursuant to their orders, they shall be run at particular speeds, and that, as to stopping at stations, they shall stop at such stations as may be designated by the East Coast Companies. Had it been intended that they should also have the power to fix the times for the arrival and departure of trains in connection with the accommodation trains run from York or London, it would, we think, have been clearly so expressed in one of the sub-sections to this section 98. In the section referring to their running powers there is provision made for fixing the hours of arrival and departure of trains run by the East Coast Companies, and we do not see why, if that was what Parliament meant, it should not have been said in one of those sub-sections that the hours of arrival and departure of the trains run in conjunction should also be fixed by them. To us it appears that the way in which this obligation is expressed leaves room for differences to arise with regard to the manner in which the trains must be timed in order that they may fulfil the condition of being in conjunction with the trains run for the accommodation of East Coast traffic. The trains may fit more or less closely as to time, but, for all that, may still be in conjunction; and the Act seems to provide that if differences should arise, those differences shall be settled by arbitration. We would even say that the mode of expression allows of matters of a general kind—such, for instance, as the public convenience, or even the convenience of the Caledonian Company, without at all subordinating through traffic from York or London to Scotch local traffic, or the relative importance of different train services and their several connexions, being taken into consideration. We think that the power to fix times which is claimed for the East Coast Companies would in practice be too absolute a power, and that the matter of it is, in fact, part of what is made subject to arbitration. At the same time the arbitrator, if he has a question of that kind brought before him, ought to take care to provide as far as possible against preferences as between the East and the West Coast routes.

Mr. Thesiger asked where, upon that view, was the difference between sections 88 and 98, and in what respect did section 98 give greater advantage to the East Coast Companies than had already been given to them by section 88. It occurs to us that the difference between those two sections is this:—That the trains which are run under section 88 are merely trains run in the manner that is usual and useful; while the trains that are run under section 98 are trains to be run at particular speeds in a particular manner and in the way most advantageous to the East Coast Companies.

Well now, that being the state of the case with regard to those Acts and our view as to the construction of them, I pass on to what has been done under them since they were enacted. Nothing appears to have been done between the years 1865 and 1869; but in 1869 the East Coast Companies called upon the two Scotch Companies to run under this 98th section and the corresponding sections in the two other Acts three trains each way daily; and it appears that in the years 1873 and 1874 the full number which they had power to require, or four trains each way, were run upon their requisition. On different occasions the times of running those trains had been altered by directions from the East Coast Companies; and about the middle of last month, on the 21st of June, a telegram was sent to the Caledonian Company by the North-eastern Company intimating that certain alterations would be made on and after 1st July in the trains run by the English Companies for this traffic, and that corresponding alterations would have to be made in the trains run in connexion with them. That telegram of the 21st was followed by a letter containing a time-table of all the proposed alterations. It was also dated the 21st, but not forwarded till the 23rd, and was not received till the evening of the 24th, after the business of the day was over, and consequently was not available for being acted upon till the morning of the 26th, which was Monday. And the view of the Caledonian Company (for the North British Company made no objection to the alterations) seems to have been that, besides the notice being too short, the East Coast Company had not that absolute power which they claimed of altering the times at which those notice trains were run.

Now the alterations applied to four out of the eight trains; three of them had reference to the down trains, and the fourth had reference to an up train from Perth to London; two applied to trains which ran between London and Perth as the Scotch terminus, and the other two to trains between London and Aberdeen as the Scotch terminus. We will consider each of the alterations in turn.

The East Coast Companies in the month of June had a train which left London at 10 o'clock in the morning, and arrived at about half-past 7 in Edinburgh; and they made arrangements by which that train was expedited on the route between London and Edinburgh, and arrived at Edinburgh in the month of July at 7 o'clock instead of at half-past 7 as in the month of June; and what they desired was that the half hour which they gained on the route between London and Edinburgh should not be lost in the last 70 miles or so of the distance between London and Perth through the train in connexion making no earlier start from Edinburgh for Perth than before, but that it should leave half an hour earlier.

The second train was a train which in the month of June left Perth at 8.45 in the morning and arrived in London at 9 o'clock in the evening. The Great Northern and North Eastern Companies proposed to accelerate that train by 50 minutes in actual travelling, and to make it arrive at King's Cross at 7 o'clock in the evening instead of 9 o'clock, as had been its time of arrival in the month of June; they gained 50 minutes on the road in greater speed, and the other one hour and ten minutes was to be obtained by making the train leave Perth at 7.35 in the morning instead of 8.45, as had been the case during the month of June.

Now in both those cases we think that the East Coast Companies are entitled to have the times of the Caledonian and North British trains altered as they propose. They have given an improved accommodation for the East Coast traffic so far as they are concerned, and unless the Companies who run the trains in conjunction with theirs respond to that improvement by adapting to it their part of the joint service, the service as a whole will derive no benefit.

Then the other two alterations refer to the trains which run between London and Aberdeen, both down trains, and leaving London at present at the same time that they did in the month of June, and also arriving at Edinburgh and Aberdeen at the same time as they did before. But the East Coast Companies appear to be able to make more sure of the time at which those trains arrive at Edinburgh, and they have therefore required that the trains which run in conjunction with them, and which now leave, the first, half an hour after the arrival of the first night-train at 6 o'clock in the morning, namely, at 6.30, shall leave instead at 6.15, and that the other, which now leaves at 55 minutes after the arrival of the second train from King's Cross in the evening, the train leaving King's Cross at 9 o'clock p.m. and arriving at 7.40 a.m. shall leave at 8.10 instead of at 8.35.

The Caledonian Company say that those alterations of the trains run in conjunction will not give any great additional convenience to the public, while they will be attended with great inconvenience to themselves. They point out that, as regards the passengers going to Aberdeen or going beyond Perth, it is a

mere question of redistribution of the time allowed for stoppage on the journey; that instead of stopping so much time at Edinburgh and so much time at Perth, they are to stop less time at Edinburgh and a longer time at Perth; while as regards passengers who are going no further than Perth, though they cannot dispute the advantage to them of arriving 15 or 20 minutes earlier, still they say practically there are none such by those trains, or too few to outweigh the objections to altering the time of leaving Edinburgh.

The inconvenience to themselves to which they refer is this, that the trains which leave at the old times, namely, at 6.30 and 8.35 from Edinburgh, when they get to Larbert are, the first of them at all events, connected not only with a train from Glasgow leaving at 6.45 in the morning, but also with the limited mail train leaving Euston Station at 8.40 in the evening and going on by this train to Perth.

Then as regards the second train, the train that now leaves at 8.35, that at Larbert connects also with a train from Glasgow, leaving Glasgow at 9 o'clock; but it does not appear to have anything to do with any train coming from the south by Carlisle.

Now if the question stood there, we might be inclined to hold that the Caledonian Company had shown reasons why those alterations should in neither case be carried out; but it appears, taking the first of those two trains, that the train that leaves at half-past six in the morning only arrives at Perth at 9 o'clock, and that the trains that leave Perth for the north in different directions go at 9.15 to Dundee, 9.20 to Aberdeen, 9.30 to Inverness, and it has been stated that it has occasionally happened that passengers going by this 6.30 train due at Perth at 9 o'clock have been late, at all events for the earliest of those departures, namely, the 9.15 to Dundee. It is also stated that the train from Euston Station which leaves about the same time as the train from King's Cross in the evening, and which used to arrive at Perth by this same 9 o'clock train, now arrives at Perth, under some new arrangements that have been made, at 8.30 in the morning; and that if passengers by the East Coast route are not to arrive at Perth till half an hour later, with the knowledge that occasionally they have been too late for those trains leaving Perth for the north, the East Coast route would be placed at a disadvantage compared with the West Coast route. Under these circumstances we think that the East Coast Companies are entitled to have this demand of theirs complied with, that the train in connexion with their train from London at 8·30 should leave at 6·15 instead of 6·30.

With reference to the other train that now leaves Edinburgh at 8·35, it connects, as I have said, with a train from Glasgow, leaving Glasgow at 9 o'clock, and the two trains go on together from Larbert to Perth, and arrive at Perth, it appears, at about a quarter past 11; and the first train out from Perth to the north does not go till ten minutes before 12, so that there is a margin of thirty-five minutes. It is true that a train that leaves Euston Station and that goes by the West Coast route arrives at Perth as early as 10 o'clock, which is two hours or an hour and fifty minutes before the first train out to the north. But upon the whole we do not see that there is any necessity for this alteration being made in their train by the Caledonian Company. I believe that I have now noticed all the questions that are at issue between the Companies.

Mr. Venables: Might I suggest the question of the 7·45 train?

Sir Frederick Peel: With regard to that the Caledonian Company ask that if they are required to run a train from Perth to the south, leaving at 7.35 instead of 8.45, it should be made subject to the condition that the North British Company should run a train to Edinburgh in connection with a local train, or at least not a notice train, which leaves Perth for Larbert at 7.45, or only ten minutes after the notice train leaving at 7.35. But we think that the obligation to run the train leaving at 7.35 is of an absolute character, and that we should not be justified in making it a condition of running that train, that the North British Company under another Act should run a train in connection with the 7·45 train.

I do not know whether we ought to refer to the remarks which have been made upon the subject of the shortness of the notice, which was given by the East Coast Companies to the Caledonian Company the latter end of the month of June. There does not appear to have been any rule or practice observed with reference to notices of alterations for the first of the following month being given not later than some particular day in the current month. Mr. Kempt, I think, stated that notices had been given 10, 14, and even 17 days before, and that there was an agreement between the North British and Caledonian Companies that as regards alterations of their trains they should give notice to each other about the 21st or the 22nd of the current month for the first of the following month. We should say that, considering that the alterations in the present case affected four of the eight trains, and that it was known that some of those trains that were to be altered were trains that were running in connection with other trains besides those trains run by the East Coast Companies, that a longer notice might have been given, and that it has not been shown that a longer notice could not have been given. At the same time we cannot say that the notice was so short that the Caledonian Company could not have made the alterations required of them in time, if not for the first of the following month, at all events within a few days after the month had commenced.

Lastly, as regards the questions between the North British and Caledonian Companies no alterations seem to have been made by the North British Company, except those which were dictated to them by the East Coast Companies, and we do not think that notices given by them of alterations so required to be made by them should be treated as if they were altering trains, settled between the two Companies under their agreement. The North British Company, as I understand, say that if there is any difference between the two Companies it is a difference that should be determined under an agreement made in the year 1873, and which provided for the appointment of a Joint Committee of four members of the Board of each Company; but there does not seem to be anything in that agreement which supersedes the provision made in the Amalgamation Act of 1865, by which the differences may be referred to arbitration under the 26th section of that Act of the North British Railway Company. But there really appears to be no difference at present between the North British Company and the Caledonian Company. The North British Company do not refuse, at all events as yet, to run a train in conjunction with the train leaving Perth at 7.45.

Under these circumstances we do not see what order we could make with reference to any difference between the North British and Caledonian Companies.

Mr. Thesiger: Perhaps you will allow me to ask you one question with reference to that train, which you say does not require alteration. I do not understand the Commissioners in any way to decide that the East Coast have not any right to make an alteration as regards the train up to Larbert.

Sir Frederick Peel: No.

Mr. Thesiger: Do I understand the Commissioners to decide that inasmuch as that train, under the altered circumstances, would arrive at 8.23, leaving at 8.40, would under the circumstances be a fair conjunction? Under the accelerated circumstances of that train, it would arrive now at 8.23 at Larbert. I understand that following out the principles of the Commissioners' decision, the decision as regards that particular train is that it is a fair conjunction under the circumstances if it leaves Larbert at 8.40. I do not understand the Commissioners in any way by their decision to negative the right of the East Coast Companies to accele-

rate their portion of the route so far as Larbert is concerned.

Sir Frederick Peel: No.

Mr. Thesiger: Therefore, supposing they carried it out and went to Larbert, they would have 17 minutes to wait.

Sir Frederick Peel: I should have thought that matter might have been arranged between the two Companies, because it is only the train from Glasgow that is carried on by this train from Larbert to Perth.

Mr. Thesiger: The Commissioners see that they have separated the West Coast route from that heavy traffic; they have attached that heavy traffic on to the East Coast train, and therefore have carried their West Coast train up at 10 o'clock; whereas now, according to the decision of the Commissioners, if we go to Larbert and arrive at 8.23, as we have a right to do, we shall have to wait till 8.40 until that Glasgow train leaves.

Mr. Venables: In answer to my learned friend I may suggest that that was one of our reasons for including the North British in the application. We should be subject to great inconvenience if the North British were to alter the time at Edinburgh, which really is what matters to us; and we ask you, under the North British Act of 1865, which is included in our application, that they should not make this alteration from Edinburgh.

Sir Frederick Peel: If they choose to comply, how could they be prevented?

Mr. Pember: It seems to me that there is some confusion. It is the 9 train from King's Cross that is not to be altered—that does arrive at Larbert at 9.23.

Mr. Thesiger: It is exactly the same. We have a longer wait. What time does it leave Edinburgh? I am told 8.10. Then it arrives at Larbert, and it makes my case stronger even as regards that. I understand the Commissioners to decide that we have a right to accelerate our service. The only question is as to how far we can say that the Caledonian Company are not giving us a fair conjunction. According to the decision of the Commissioners we arrive at Larbert at 9.10 under an accelerated train service, and we have to wait there 35 minutes, till 9.45.

Mr. Venables: The East Coast Companies do not arrive at Larbert at all; it is the North British Company that arrives at Larbert; and one of our applications is that the North British Company should not be allowed to alter the time of that train at any rate; that the East Coast Companies have no right to call upon them to alter the time of that train to Edinburgh. I understand that to be the decision of the Commissioners as to that train.

Mr. Pember: The North British cannot be allowed to acquiesce to our disadvantage.

Mr. Venables: If their contention is right, as the Commissioners seem to have decided, surely it is a very great hardship upon us that the North British should inflict the whole injury upon us of which we complain, by starting the train from Edinburgh at an altered time. The East Coast Companies have nothing to say to that at all; indeed I cannot see what reason they can have for requiring it; but whether they have a reason or not, it is the North British Company that starts that train from Edinburgh.

Mr. Thesiger: I do not understand that in any way the Caledonian Company has a right to interfere as between the North British and the East Coast Companies; the East Coast Companies give notice to the North British, and the North British assents to that notice under the arrangement between those two Companies; and the train would arrive at Larbert at 9.10. I have not disputed, and I may say I do not at all dispute, the principle that conjunction of trains may differ according to the different trains. I think I must have been misunderstood if that argument were supposed to be used by me; but I understood the Commissioners to decide, as regards this train, that it is a fair conjunction under the circumstances leaving Larbert at 9.45, although according to our accelerated train service we shall arrive there at ten minutes past nine.

Sir Frederick Peel: It is not your service; it is the North British service between Edinburgh and Larbert.

Mr. Thesiger: We have running powers, and we could run a train onwards. The North British does not dispute the acceleration; they are ready to carry our train on.

Mr. Clerk: We have always doubted our power of dissenting; it was not a matter of arrangement at all.

Mr. Venables: The arbitrator has the power to fix the time at Edinburgh as much as at Larbert, and if the Commissioners decide that the proper time to start from Edinburgh is at 8.35, then the North British will be covered against the East Coast Companies clearly.

Mr. Clerk: If there was a complaint on the part of the North British, then, unless the North British is to prevent the acceleration of the train from Edinburgh, it would be a matter which would come under your consideration; but the Caledonian Company cannot possibly complain that the North British Company comply with the requirements on the part of the East Coast to start a train, because they only come into action when the train arrives at Larbert, and whatever the East Coast Companies call upon the North British to do they may object to, but the Caledonian cannot.

Mr. Venables: The Caledonian are persons interested, and all parties are now before the Commissioners. The North British Company profess to be at the absolute disposal of the East Coast Companies, clearly if the Commissioners decide, that is to say, they have in substance decided that 8.35 is a reasonable time to start from Edinburgh, the East Coast Companies can have no further power to interfere with the North British Company as to that train. We have stated that this is the most important of all trains for Edinburgh passengers to go north, and the whole of the damage would be inflicted upon us, and inflicted for the purpose of damaging us, if they made an alteration at Edinburgh and remained as they are at Larbert, which would be one of the most wanton things to do, merely for the purpose of doing injury to our passengers and to our traffic. If they were to start unreasonably early from Edinburgh and bring them to Larbert——

Mr. Clerk: As far as the North British are concerned, this is a train which is going, as far as the local traffic is concerned, for the advantage and accommodation of the traffic from Edinburgh and traffic from Glasgow, and therefore the Glasgow traffic can be easily so arranged as to meet at Larbert to join on with the train going north, if it causes this, that the traffic carried from Glasgow, whether by the North British or by the Caledonian, gets a start about 15 minutes earlier, so that it would meet at Larbert a train which is accelerated, not for our advantage in the slightest degree, but for the accommodation of the East Coast.

Mr. Venables: It is asking to alter the whole decision, which I understood was that 8.35 was the proper time to start from Edinburgh.

Sir Frederick Peel: We cannot prevent the North British leaving Edinburgh when they please; surely they can leave Edinburgh when they please.

Mr. Venables: Certainly not; they are bound, even on their own showing, by this agreement not to alter the trains except with our consent or by going before an arbitrator; we are entitled to facilities and convenient arrangement of traffic under that Act, which we have included in our application, and we ask that the North British should be directed to leave Edinburgh at 8.35. That is our application under the Act of 1865, and that where there is a difference about the accommodation it is to be fixed by arbitration.

Mr. Thesiger: That does not touch the question of the East Coast. The East Coast give notice to the North British Company, and the North British Company consent, that the train shall leave Edinburgh at a certain time. No doubt, according to the decision

of the Commissioners, the North British Company might raise a question about the conjunction of our train under a parallel section, but they have not; therefore I venture to submit it does not lie in the mouth of the Caledonian Company to make any objections against the East Coast Companies.

Mr. Venables: The whole injury of which we complain entirely affects Edinburgh, and not Larbert at all. We complained that we were required to leave Edinburgh unreasonably early, and the Commissioners decided substantially that we were in the right. Now if the train nevertheless does, at the instance of these East Coast Companies, or by the will of the North British Company, leave too early, we incur the whole of that inconvenience of which we complain. The North British Company are just as much before the Commissioners as we are, with as ample power in the Commissioners to determine what is a reasonable time for starting.

Mr. Clerk: This is my learned friend's fallacy—the Caledonian Company do not leave Edinburgh; the arrangement is between us and the Caledonian that we should meet at Larbert, and that we should run north.

Mr. Venables: They are bound to give us conveniently timed and arranged trains, and this is an arbitration on the question whether it is a conveniently timed and arranged train or not; and we ask, as against the North British Company as well as against the East Coast Companies, that it should be timed at 8.35.

Mr. Thesiger: If I might suggest, without having a formal decision upon this point, if the Caledonian Company would meet us, and expedite their train a little from Glasgow, we giving them a little, the whole matter might be arranged without any difficulty.

Sir Frederick Peel: I think that would be the best course; we did not think that there was sufficient ground to require the Caledonian Company to alter their train.

Mr. Clerk: We feel, on behalf of the North British Company, that by starting a little earlier from Glasgow the public would be accommodated.

Mr. Venables: The 8.35 train is as much our train as it is the North British; it is one of those conveniently timed and arranged trains which the North British Company is bound to give us. My learned friend Mr. Thesiger has no interest in the matter now, because he admits that if the train does start earlier from Edinburgh it will only be that they will wait at Larbert; and what does he want that for except to damage us. It can be no advantage to the East Coast Companies, and, on the other hand, for all I know, the North British Company may have an object in view. What we contend is that the whole injury will be done to us by starting earlier from Edinburgh. What happens at Larbert is of no importance to us at all.

Mr. Clerk: I think if the parties were to meet they would settle it in five minutes.

Mr. Venables: We ask the Commissioners to settle it in this case. The case of the North British Company is that they are absolutely bound to comply with the intimation of the East Coast Companies. You have decided that they were not absolutely bound, and that in this particular case the East Coast Companies were not in the right on the merits, in the case of this train, as to the starting of this one train. Now, Mr. Thesiger, having, as I say no interest, and not getting a bit earlier to Perth by it, contends that merely for the purpose of injuring the Caledonian Company we should start earlier from Edinburgh. Can they, for that purpose, require the North British Company to do it? On the other hand, if it was reasonable, as against the East Coast Companies, that it should be started at 8.35, is it not reasonable, under our powers against the North British Company, that they should do it? In both cases they are inflicting very serious injury upon us, and in opposition to what the Commissioners have decided.

Mr. Clerk: There is no application before the Court with regard to starting the 8.35 train. Of course if the North British Company complained that the East Coast Companies called upon them to do something which was inconvenient, we should have raised that question, but it is not before you at all. The East Coast Companies have stated their reason for expediting from Larbert to Perth. That you have given your decision about, but the other matter of whether the East Coast Companies can call upon the North British Company to start at 8.35 or earlier is not a matter at all before you.

Mr. Venables: We apply as against the North British Company for "an order enforcing the defen-"dants to desist from altering the arrangements for "the running of trains in connexion with their respec-"tive systems which existed during the month of June "last." This is one of the arrangements that existed during the month of June, and we distinctly apply for that. You have already decided that it was unnecessary to alter, and I do not understand exactly what my learned friend Mr. Thesiger has to do with it, or what his interest is in re-opening the case.

Sir Frederick Peel: There would be no difficulty in the train leaving at 8.10 and going on to Perth under the running powers that these Companies have; and if the North British Company leave Edinburgh at 8.10, and you require them to leave also at 8.35, you can make an application for that purpose, I suppose?

Mr. Venables: That we shall have to do.

Mr. Clerk: Now, with regard to this matter, I stated to you when you first met that I really could not see how you could make an order with regard to the North British Company, because there was really no matter in difference; you have not concluded your decision with any expression of opinion upon that subject, and I think you will see that under the circumstances we should certainly be entitled to receive our costs.

Mr. Venables: In this particular case, with regard to what you said just now, the evidence and arguments would be all exactly what have been brought before you now; nor would the North British Company be more fully before you than they are now. We have nothing to say against their starting as often as they like, and taking running powers; that is a matter for their own consideration. All we care about is that they should continue the 8.35 train; and according to the prayer of our application they should not disturb (they having shown no reason for disturbing) the arrangements which prevailed in June.

Mr. Clerk: There is nothing with regard to starting trains from Edinburgh.

Mr. Venables: The arrangement in June is included in the notice.

Mr. Clerk: The Court have decided the matter, and I merely make my application under the circumstances.

Mr. Thesiger: Appearing for the East Coast Companies I do not propose to say anything upon the subject of costs; the Commissioners will deal with that matter in the way they think proper.

Sir Frederick Peel: We think the North British Company are entitled to their costs.

Mr. Venables: Do you fix any time at which these alterations should take place. I am told that for various reasons the most convenient time would be the beginning of next month; it is now the 18th, I think.

Sir Frederick Peel: The beginning of next month.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 21.]

DUNKIRK COLLIERY COMPANY
v.
MANCHESTER, SHEFFIELD, AND LINCOLNSHIRE RAILWAY COMPANY.

Judgment of the Commissioners, delivered 22nd July 1876.

By the special Act of the Manchester, Sheffield, and Lincolnshire Railway Company, 12 & 13 Vict. c. 81. section 208, the Railway Company, where they carry coal, not providing the waggons for the coal, and not being, in fact, bound to provide the waggons, are authorised, first of all, to charge a rate not exceeding one penny per ton per mile for conveyance and for everything incidental to conveyance, and next, reasonable sums for certain terminal and extraordinary services. Those terminal and extraordinary services are particularised in a clause of the 208th section, and are as follows: "Loading, covering, and unloading of "goods, delivery and collection, and any other services "incidental to the business or duty of a carrier where "such services, or any of them, are or is performed "by the Company, and warehousing and wharfage of "goods, or any other extraordinary services performed "by the Company."

The complainants in this case are colliery proprietors, and the lessees of two coal pits which are opposite to each other at a point on the main line of the Manchester, Sheffield, and Lincolnshire Company's Railway, with which main line their pits are connected by sidings which are their own and on their own property. The Railway Company carry coal from these sidings in different directions, and amongst other places to the four places which are named in the application, namely, Ashbury, Ardwick, Mottram, and Stockport. The distance from the pits to Stockport is a little over six miles. The distance to the three other places is under six miles. At the rate of one penny per ton per mile the mileage rate to Stockport would be not exceeding 7*d.* per ton, and to the other places not exceeding 6*d.* per ton, because although the distance to the other places is short of six miles, yet the Railway Company under a short-distance clause in this Act are empowered to charge as for the full distance of six miles. But the actual charge which the Railway Company make for conveyance of this coal is, to Ashbury 1*s.* instead of 6*d.*, to Ardwick and Mottram 1*s.* 3*d.* in lieu of 6*d.*, and to Stockport 1*s.* 6*d.* instead of the mileage rate of 7*d.* It is these differences between the mileage rate and the tonnage rate of which complaint is made in this application.

The questions, and the only questions, which arise upon the application, therefore, are these. First, what is the work over and above conveyance, and anything which may be considered as incidental to conveyance, which the Railway Company perform in carrying the coal for the complainants? secondly, is the work, if any, which they do of that kind, work that comes within the exception clause of this 208th section which I have read? is it one or other of those services that are particularised in that exception clause? and in the third place, if so, is the sum which the Railway Company charge for such extra services a reasonable sum or not, we having power under the 15th section of the Regulation of Railways Act, 1873, to fix what we consider a reasonable sum for terminal and extraordinary services?

Now, if I take the answer of the Railway Company I find that they state there that the traffic from these collieries has to be worked into Guidebridge before it can be marshalled and arranged, "and owing to this "and to the nature of the traffic itself considerable "additional haulage has to be performed by the re-"spondents." It appears to us, however, that any charge for additional haulage belongs to that portion of the tonnage rate which is mileage rate. As it happens, Guidebridge is on the way to two of the stations, namely, Ardwick and Ashbury, and coal from these pits would necessarily pass that way; but it is in the opposite direction to that which coal would take going direct from the pits to Stockport or to Mottram. Even, however, including this additional haulage the distance to Stockport does not exceed seven miles, and the distance to Mottram does not exceed six miles. Therefore any expense that this additional haulage puts the Railway Company to can count for nothing in the total of the tonnage rate.

Then mention was made at the hearing of the marshalling and shunting which were done by the Railway Company for the complainants in respect of their coal. We consider that services of that kind have been decided by that case which was referred to yesterday (Lancashire and Yorkshire Railway Company *v.* Gidlow, 7 Law Reports, English and Irish Appeal Cases) to be services incidental to conveyance, and at any rate not to be services coming within the exception clause of this 208th section.

In the next place the Railway Company, in the answer, refer to the back haulage of empty waggons as a service which they perform free of charge. The proprietors of the colliery supply the waggons in which their coal is carried along the Company's railway. These waggons are taken to their destinations, there they are unloaded, and then they are brought back by the Railway Company free of charge to the premises of the colliery proprietors. We are of opinion that there is no authority in the 208th section or any other part of the special Act for the Railway Company to charge in the tonnage rate for the service which they render in bringing back empty waggons, and that, in fact, the back haulage of empty waggons has nothing whatever in common with any one of the particular services which are enumerated in the exception clause.

Now, where a private siding communicates with a passenger railway, the opening into that railway and the switches by which the passage of traffic between the railway and the private siding is regulated are required by the Railways Clauses Act of 1845, which was referred to yesterday, to be provided and renewed from time to time upon the most approved plan by the owners of the private siding. But then the Railway Company say that the existence of the junction of the private siding with the railway obliges them over and above the junction works to provide and maintain an expensive signalling and interlocking apparatus, and to pay for pointsmen and signalmen to manage the points and the signals. That is a service which the Railway Company state puts them to considerable expense, and they also say that it is an extraordinary service coming within the exception in this 208th section, and that they charge for that service in their tonnage rate upon these coals. In their contention on this point we are of opinion that they are right, and that a service of that kind is an extraordinary service within the exception referred to. It is so, we think, because it is a service from which the general public using the railway derive no benefit, and which is rendered by the Railway Company for the particular benefit of the owners of the siding; and also because it is rendered by the Railway Company at a place where they have no station of their own, and where, if it was not that the collieries of the Company are situated at that particular spot, they would not find it necessary to maintain a signalling and interlocking apparatus. We are empowered to state what we consider to be a reasonable sum for a railway company to charge for an extraordinary service of that sort. Upon the whole we are of opinion that of the tonnage rate 3*d.* per ton may be assigned as a fair charge to be made for the extraordinary service performed for the benefit of the colliery lessees.

When the coal has been conveyed to the stations which are its destinations it is placed by the Railway Company in sidings at the different stations. I think it was stated that at Ashbury the sidings belong to

the complainants, but at the other three stations the sidings are the property of the Railway Company, and, in fact, part of their railway. But at one of these stations, namely, Stockport, the Railway Company have provided coal-shoots or coal-drops for unloading and discharging the waggons, and they say that part of their tonnage rate is on account of these coal-shoots, and that the providing of them is another extra service rendered by them, and for which, under this 208th section, they are authorised to charge.

Now it seems to us that providing coal-shoots is something over and above the accommodation which a station of a railway company must necessarily contain. There are several of these coal-shoots at the Stockport Station, and it appears that for an annual payment of 10*l.* they allow a coal dealer to have the exclusive use of one of their number. The complainants in this case pay 30*l.* a year, and they have the exclusive use of three coal-shoots at the station at Stockport. The Railway Company say that that payment is not for the use of the coal-shoots, but that it is, as it were, an acknowledgment for having the right of user reserved to them in particular, to the exclusion of other persons, and that it does not include payment for the actual use of the coal-shoot.

We think that the Railway Company made out that point satisfactorily, and judging of the matter by the evidence which was given by Mr. Oakley, we think that the Railway Company may reasonably charge for the use of those coal-shoots at the rate of 2*d.* per ton. The coal-shoots at the Ashbury Station do not belong to the Railway Company. They, like the sidings there, belong to the proprietors of these collieries. At the other two stations it seems, as far as we could understand the evidence, that the complainants consign all their coal to single customers, who receive the coal at the station, and pay the Company for using coal-shoots to unload the coals. If that is the case, of course it would not be right to make a second charge for the same services to the proprietors of these collieries. But as to the principle itself, just as a railway company, if it undertakes collection and delivery, and actually performs the service, may include a reasonable sum for doing that in the tonnage rate at which it carries goods, granting a rebate if it does not perform the service, so we say that under this section a railway company may include in their tonnage rate a something, which we fix in this case at 2*d.* per ton, for providing coal-shoots, which are an assistance to people in unloading and in warehousing their coal, and in that sense come within the clause of this 208th section.

With those exceptions, we think that the excess in the tonnage rate charged by the Railway Company over the mileage rate is not authorised by anything that we can find in their Act. We therefore are of opinion that, subject to what we have said, the tonnage rates charged by the Railway Company must be reduced accordingly.

We are of opinion also that the complainants are entitled to their costs.

Mr. Hibbert: May I ask on behalf of the applicants whether the 2*d.* per ton is in addition to the 30*l.* per annum?

Sir Frederick Peel: Yes, in addition.

Mr. Underdown: Will you allow me to say a word? Our counsel are not here. With regard to Ashbury I think you said that the sidings as well as the drops belong to the complainants?

Mr. Frederick Peel: The sidings on to which the coal trucks are pushed in order to be unloaded.

Mr. Underdown: But the siding that has access to those drops belong to the Railway Company.

Sir Frederick Peel: Yes; I look upon sidings as part of the railway, in fact.

Mr. Underdown: I only wish it to be quite clear. With regard to Mottram the Railway Company provide the drops there, and they have received nothing from any one for them.

Sir Frederick Peel: You would be entitled to make the charge.

Mr. Underdown: And at Ardwick as well?

Sir Frederick Peel: If that is the case.

Mr. Benjamin Ashton: May I ask whether the shorthand writers' notes as to the tariffs will fix them?

Sir Frederick Peel: We shall draw up an order.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 22.]

HENRY ROBERTSON (trading under the name "FISHBOURNE AND COMPANY")

v.

THE MIDLAND GREAT WESTERN RAILWAY OF IRELAND COMPANY.

Judgment of the Commissioners, delivered 3rd August 1876.

THE Midland Great Western Railway Company, the defendants in this case, have two scales of charges for the carriage of parcels by their line. One of these scales varies in amount according to the weight of the parcel carried, and according to the distance for which it is carried; the other scale varies also according to weight, but is irrespective of distance. This latter scale is much lower in amount than the first, but it can be used only under particular circumstances and upon certain conditions. The parcels to be carried by it must not exceed given dimensions, nor be of more than a certain value, and they must be prepaid by having adhesive stamps affixed to them. Both these parcel rates are stated in the Company's printed notice to include delivery at the Broadstone terminus. It appears that since the commencement of this year the Railway Company have opened an office of their own in Dublin, where they receive parcels, and from which the parcels are carried to their terminus in Dublin. The parcels are carried by their agents, Messrs. Wallis, who have similar receiving offices of their own; and whether the parcels are carried by Messrs. Wallis from their own or from the Company's offices, the railway rate charged to the public covers the cost of conveyance by cart from the receiving offices to the railway terminus. But here a distinction is made by the Company between stamped and unstamped parcels; for the latter they pay to Messrs. Wallis for cartage 1*d.* per parcel: for the former they pay them nothing at all; and they deal with all other carriers and private persons carting for themselves upon the same principle. The question is, whether the Railway Company are justified in drawing this distinction between stamped and unstamped parcels. At first sight it is not clear why, if it is reasonable to make a rebate or an allowance of 1*d.* on every unstamped parcel that is carried to their railway terminus, they should not do the same with regard to parcels that are stamped. These latter when collected or delivered in other towns than Dublin, are, according to the Company's notice, charged an extra sum of 2*d.* for collection or delivery, and Mr. Robertson, the plaintiff, says that it makes no difference to him, as far as the trouble and expense caused to him are concerned, whether the parcels are stamped or unstamped. There is, however, this difference between the two, that while the latter may be of any weight up to 1 cwt. or more, and yet go at the unstamped parcels' rate, the former get the benefit of the reduced or stamped parcels' rate only when they are of a weight not exceeding 21 lbs. There is that difference as far as the trouble and expense to the carrier is concerned between the two sets of parcels. The explanation which the Company give is this:—They say that the stamped parcels' rate includes nothing for collection in Dublin, and that they pay also nothing to their carting agent for carrying such parcels between their and his receiving offices and their railway terminus. They charge the public nothing for collection, and collection costs themselves nothing, because in consideration of their paying 1*d.* for

every unstamped parcel, Messrs. Wallis consent to carry stamped parcels gratis; and the Chairman of the Company and Mr Wallis have both given evidence to the effect that neither directly nor indirectly does the latter receive anything more than this penny. We could hardly go so far as to say that an arrangement of that sort could not, under certain circumstances, cause a prejudice and an undue preference to others, because one might suppose the case of a carrier who carted parcels only that were stamped. But the case is not a very probable one to occur, and upon the whole we think that the explanation of the Company is not an unreasonable one, and that it has not been shown that they have given by this arrangement an undue preference either to themselves or to the person they employ as their carting agent, and we must decline to grant the injunction. With regard to the application made under section 14 that we would require the Company to distinguish in their book of rates how much of this rate is for the conveyance of parcels on the line, and how much for other expenses, we have already stated that there is nothing, in fact, included in the rate for anything except the carriage on the railway, and under these circumstances we do not think it necessary to make an order under that section. As the point raised was one not without difficulty each side will bear their own costs.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 23.]

THE TORBAY AND BRIXHAM RAILWAY COMPANY
v.
THE SOUTH DEVON RAILWAY COMPANY.

Judgment of the Commissioners, delivered on the 10th of August 1876.

THE railway of the Torbay and Brixham Company is a short line of two miles and one chain from Brixham to a junction at Churston, with the South Devon Railway. It was opened for traffic early in 1868. Rolling stock and a staff for working the railway were provided by the South Devon Company, and that Company through its officials collected the receipts from traffic, and paid out of them the expenses of the line for wages, maintenance, hire of stock, and other services. There was no working agreement in the sense of the Railway Clauses Act, 1863, Part 3, and the arrangement in form seems to have been that the South Devon Company should work and manage the line for and on behalf of the Brixham Company, and as their agents. The shares of the latter Company were at first nearly all held by Mr. R. W. Wolston, of Brixham, and the terms upon which the line was worked were those to which he individually gave his assent. The various rates and fares charged by the South Devon Company were settled with his concurrence. The rate on consignments of fish by passenger train was made 1*s.* 8*d.* a ton, and on station to station goods and minerals 6*d.* and 4*d.* per ton respectively at first, and at a later time 8*d.* and 6*d.*, or 2*d.* more in each case. In regard to the charge on tonnage goods above 500 lbs. in weight, Mr. Wolston acted on the advice of the South Devon Company, who suggested to him that it should be a uniform rate of 1*d.* per cwt. or 1*s.* 8*d.* per ton from Brixham to Churston. Whether these several rates are to be deemed to have included terminals, or to have referred only to carrying, is the subject of difference between the parties before us.

The Brixham line has little, if any, local traffic. Its traffic is carried from Brixham to places beyond the line, and at the time we are concerned with was either consigned to stations of the South Devon Company, or passed over that Company's line on to the Bristol and Exeter and other lines. The South Devon, which has now become Great Western, booked the traffic through to its destination, and the railway charge in each case was the sum of the rate or through rate in force from Churston Junction, and of the local rate from Brixham to Churston. But notwithstanding that the traffic was despatched from Brixham, and all documents regarding it prepared at the Brixham Station, the way bills and invoices and the returns to the clearing house were made out as from the South Devon Station at the Churston Junction, and as if the traffic had originated and been booked there, and not at Brixham, and the local rate for the distance between Brixham and Churston, if not paid by the consignor was inserted in a 'paid on' column, and if paid did not appear at all in the advices, and was entered only in a separate account kept by the South Devon Company for the Brixham line. If the traffic went no further than to a South Devon Station, the Brixham Company was credited in that account with their local rate, and all else that was paid as railway charge was retained by the South Devon Company as due to their own line; and if the traffic was partly carried by other Companies, for instance, if it was fish from Brixham to Paddington, the South Devon Company deducted the Brixham share of the joint earnings, viz., the added local rate, accounting for it separately to the Brixham Company, and returned the rest of the earnings to the clearing house for division amongst the other Companies interested, their own included. The mode in which the clearing house divide is to give, in the first place, out of the receipts to be divided an allowance for terminal services to the two terminal companies,—the companies, that is, at either end of the through route traversed by the particular traffic,—and to apportion the remainder amongst the carrying companies according to their respective mileages. The traffic from Brixham appearing in the returns sent up to the clearing house by the South Devon Company as traffic from Churston, the South Devon Company received terminal allowances for that end; but as a matter of fact Churston was not a terminal station for Brixham traffic, nor were any terminal services performed there. The services of that kind, such as loading, were done at Brixham, and their cost charged in the expenses of the Brixham line. The Brixham Company say that, in relation to through Brixham traffic, the South Devon Company occupied the position of an intermediate company, and were not entitled to a terminal for themselves, and that the terminals they received ought to be treated as received by them in their capacity of agents of the Brixham Company, and an account rendered of them accordingly. For the South Devon, on the other hand, it is said that the Brixham Company were credited with all the receipts of the line according to the charges fixed for the use of it by Mr. Wolston as representing his Company, and that the manner of invoicing the traffic was a matter which they had no title to interfere in.

The Brixham line was opened in 1868, and it was not till 1873 that Mr. Wolston claimed that the South Devon Company should allow him terminals on the traffic of his line. But he states that it was not till then that he became aware of the railway practice, that where traffic is carried at through rates by two or more companies, the company at each end of the route receives out of the gross receipts prior to their division by mileage an allowance for terminal services; and he denies that in fixing the tonnage rates of 1*s.* 8*d.*, or the other rates, he had in his view the handling of traffic which took place at the Brixham Station, or the making of any charge for that or for any service other than carrying. It is true that as regards goods 1*s.* 8*d.* for merely carrying would have been at a rate per mile in excess of the authorised maximum for goods of any class; but, as we have said, he adopted that rate at the suggestion of the South Devon Company, and there is no evidence that in so doing he accepted the amount by which the maximum was exceeded as the sum he was to receive for or in lieu of terminals. The South Devon Company say that he could have had terminals if he would have consented that receipts derived partly from his line

and partly from other lines should be divided in due mileage proportions, and that he preferred his local rate without a terminal to a terminal, and the same mileage rate as other companies had. But this was denied by Mr. Wolston in his evidence, and was not, we think, made out; nor would such a course have been a reasonable one to take, considering the small difference on a line of such short length between its maximum charge per mile, and the charge per mile of any through rate, however low. Mr. Wolston seems, indeed, not to have been sufficiently well informed to be able to act for the best in the interests of the Brixham line, but we think it was for the South Devon Company, under the circumstances, to have advised him more clearly and fully than they did, and that as to the matter of terminals they should have allowed him to benefit by their being able to work the Brixham line as regards goods traffic as a through line in connexion with their own line. Nor is there any doubt that had that line been an integral part of their own line, the way bills and clearing house returns they used would not have appeared to emanate from Churston, but would have been headed with the name of the place from which they were in fact issued; and as the South Devon Company were only at the Brixham Station as the agents of the Brixham Company, we think the terminals should go as they would have gone if the way bills and returns had been made out in conformity with the real state of things. We think also that on traffic between Brixham and South Devon Stations, the receipts from which, the South Devon Company working the whole distance, did not pass through the clearing house, the Brixham Company, no agreement to the contrary having existed, and their line being used by the South Devon Company as the agents of its owners, should receive the terminals they would have had supposing their line and the South Devon line had been worked by separate companies on a similar basis of through booking.

In the application it is stated that the terminal on fish received by the South Devon Company was 8*s.* a ton. But this appears to have been a special terminal agreed to by certain companies, and the allowance to the Brixham Company should be at the ordinary rate for fish traffic conveyed by passenger train and not carted. As regards also the claim in the application to a terminal of 4*s.* per ton on carted goods, that allowance covers cartage, and the amount for cartage should be deducted, because the South Devon Company, with Mr. Wolston's assent, performed or undertook to perform the cartage of traffic at Brixham, and employed an agent for the business at their own expense. With respect to the remainder of that terminal, and with respect to the usual station to station and mineral terminals, we are of opinion that their respective amounts should be accounted for to the Brixham Company; but that so far as the sums already credited to that Company have exceeded their parliamentary maximum rates for carriage, the excess should be taken as a part payment of the terminals now awarded.

BEFORE THE RAILWAY COMMISSIONERS.

[No. 24.]

THE EAST LONDON RAILWAY COMPANY
v.
THE LONDON, BRIGHTON, AND SOUTH COAST RAILWAY COMPANY.

Judgment of the Commissioners, delivered on the 28th of August 1876.

THE questions in this case arise under an agreement for working the East London Railways, entered into between the East London Company and the Brighton Company, and dated November 1869. These railways form junctions at New Cross and Old Kent Road Station with the Brighton and the South London Railways of the Brighton Company, and the agreement was confirmed in 1870 by Act of Parliament, and the Brighton Company empowered to use, work, and manage the East London Railways. It is part of the agreement that "the Brighton Company shall so work the railways as fairly and efficiently to develope the traffic," and that "the number of trains, the fares, and all other matters affecting the working, shall from time to time be settled by agreement between the two Companies, or failing agreement, by arbitration." The complaint of the East London Company is that the railways are not worked in conformity with this article.

The East London extends from the junctions with the Brighton Company's railways northwards, and through the Thames Tunnel to a junction at Shoreditch with the Great Eastern Railway into the Liverpool Street Station. It was at first intended that the East London should itself be continued to the Liverpool Street Station, by being constructed under the Great Eastern Railway, but in 1869 the plan of a junction at Shoreditch was adopted instead, and the Great Eastern and the East London Companies made an agreement (dated December 1869 and afterwards confirmed by Act of Parliament) which granted to the East London Company, subject as to all arrangements of detail to the absolute control of the Great Eastern Company, running powers over the Great Eastern Railway between the junction and the station in Liverpool Street, and the use also of that station. The distance from the junction to the station is 51 chains.

The East London was completed and opened for traffic for its whole length in April last, and since the opening trains have been run by the Brighton Company between Liverpool Street and New Cross or Old Kent Road Station at intervals of about a quarter of an hour through the day from 5 a.m. to 11 p.m., the number each way daily being 68, or at the rate of four per hour. These trains stop at all the six intermediate stations on the line, and are, it is admitted, sufficiently frequent to satisfy the requirements of local traffic. But the East London Company complain of the mode of working as being unfavourable to the through traffic of their line, that is to say, to passenger traffic, viâ the East London between Liverpool Street as a City terminus, and suburban places on the South London line, or Brighton, Croydon, and other places on the main Brighton Railway and its branches. In the first place, the East London trains are not allowed to use the up and down junctions with the Brighton Railway at New Cross, but are run on a short branch line into a separate low-level station near the New Cross Station of the Brighton Company, and connected with it by a subway. In the next place, the times of the trains, both on the Brighton lines and on the South London line, fit so badly to the times of the East London trains, and the interval between the arrival at New Cross or Old Kent Road Station of a train on one line and the next departure of a train on the other is so considerable, that through journeys cannot be accomplished in any reasonable time. Thirdly, through fares from the same places to London Bridge and Liverpool Street are different, and lower considerably to London Bridge, in addition to which the Brighton Company do not divide the receipts by mileage as they should do according to the agreement.

The Brighton Company do not object to their present arrangements for working the East London, being regarded as to some extent provisional and capable of improvement, but they say that, considering the recent opening of that line, they give an adequate accommodation to the traffic. They have endeavoured to make the connexions at New Cross and Old Kent Road as good as possible, but the times of trains in and out of Liverpool Street are, they observe, controlled by the Great Eastern Company, which the joint user which the South Eastern Railway Company has of the line from London Bridge past New Cross to Redhill makes any alteration in the times of the Brighton trains at New Cross dependent on the con-

currence of the South Eastern Company. They say that it is to their interest so to work the East London as to make it a source of a through or contributory traffic to their own railways, and that, partly on this account and partly to meet the complaints of a want of correspondence of trains, they have since 1st of July run six trains each way daily, without change of carriage, between Liverpool Street and Croydon, where most of the fast Brighton trains stop, and since 1st of August have put on an additional or seventh up through train from Croydon daily.

As, however, the East London Company urge the necessity of more through trains, and of a timing of them more consonant with the exigencies of City traffic, and the Brighton Company deny that they can be required to run any trains of that kind, or that the trains of that kind at present running are run on compulsion, the first question to be determined is, what duty in this respect is imposed by the agreement on the working Company. The Brighton Company contend that it is enough if they work the East London as the East London Company would work it considered as an independent company, admitting at the same time that, as to the connection of trains, they must have regard to the Brighton and East London lines forming a continuous communication. It appears to us that what can be required of railway companies to work a line efficiently must vary according to their respective powers, and that a mode of working which would be sufficient in one case would not be so in another. It is only reasonable to suppose that the East London Company, in making junctions with the Brighton Company, and arranging with them to work the East London line, counted on the advantage of getting it worked as part of a large system; and the Brighton Company engaging to work it efficiently may, we think, fairly be regarded as engaging to do so, as the Brighton Company, and as the owners of the railways to which it was one of the objects of the East London line, to give a new access from the City. We find, indeed, no provisions which necessarily suppose through trains to be run, or which make it impossible for the agreement to be carried into effect without them. But the Brighton Company have so to work the line as fairly and efficiently to develop the traffic, and the expression "the traffic" must be taken to apply both to through and to local traffic. If through traffic can be sufficiently encouraged by having a good correspondence between trains, then, however convenient it may be to avoid a change of carriages, through trains are an accommodation which the Brighton Company can withhold if they think fit. If, on the other hand, by reason of the restrictions on the Brighton Company arising from their having to work in conjunction with the Great Eastern Company at one end and the South Eastern Company at the other, the establishment of a good through communication by means of an interchange of trains is prevented, other means by which that object may be achieved and which the Brighton Company can exercise, must be used instead; and if the agreement would be rendered inoperative except through trains were run, there would seem to be the same obligation to run them as if they had been expressly mentioned.

Taking this view of the principle to be followed, we pass from the question of construction and come now to what it is in practice of which complaint is made. Trains cannot arrive at New Cross in as few minutes after leaving Liverpool Street as after leaving London Bridge. The East London is one mile and a quarter longer, and trains call at every station, the same as on the Metropolitan Railway. But subject to this difference, the through traffic between Liverpool Street and the main and suburban lines of the Brighton Company ought, it appears to us, to be accommodated as far as possible not less satisfactorily than similar traffic from London Bridge. At present so much time is lost in the case of the East London line, partly by the many stoppages which have been mentioned, but principally in making the connexion at New Cross and Old Kent Road, that the slowness of the through journey drives away passengers, and the line loses the benefit of terminating in so central a station in the City as Liverpool Street. To passengers to and from suburban line stations of the Brighton Company viâ New Cross or viâ Old Kent Road a delay of a quarter of an hour in changing trains at those points can hardly fail to be more inconvenient than using the London Bridge Station instead of Liverpool Street, and yet in respect to half the trains shown in the East London time-table as keeping up a through communication viâ either New Cross or Old Kent Road with the suburban line stations, there is a delay in changing trains ranging from 15 minutes to half an hour, or even a longer time. A closer coincidence of trains at the junctions could be effected by altering the trains either of the suburban line trains or of the East London trains, and we suggest as the best of these two courses a rearrangement by the two Companies of the times of the East London trains, in concert of course with the Great Eastern Company with reference to the use by those trains of the station at Liverpool Street being subject as to time and in other respects to that Company's control.

As regards Liverpool Street traffic for places on the Brighton Railway not reached by suburban trains, or in other words for main line stations, the Brighton Company have since the 1st of July last improved the through communication viâ New Cross, by running six through trains without change of carriage to and from Croydon, and since 1st August by adding a seventh up train leaving at 7.50 a.m. and arriving at Liverpool Street at 8.35. But the times of these trains are represented by the East London Company as not being such as to accommodate local residents having places of business in the City, and requiring to travel by trains timed to arrive in London in the morning between 9 and 11, and to leave in the evening between 4 and 6; none of these trains, with the exception of one down, fitting in with those hours. We think this is a defect in the service, and that if two up trains and a second down train could be arranged to run so as to suit those times the through communication would not be put on more than an adequate footing, considering the absence of facilities, especially as regards speed, in that part of it which is carried on by an interchange of trains at New Cross. And with reference to the rate at which the through trains run we notice that 45 minutes are allowed for the journey between Croydon and Liverpool Street. This is not quick travelling for a distance of 11 miles 44 chains, and is very slow in comparison with the time in which trains pass between Croydon and London Bridge; and we think the time that would be saved would make it worth while to arrange for these through trains making fewer stops on the East London line than in the case of the ordinary local trains. It was suggested by the Brighton Company that there were serious obstacles to the working of both a through and a local traffic on a line laid with two pairs of rails only; but the difficulties do not seem to be insuperable where, as in the present case, trains follow each other at stated intervals, and starting from either end about every 15 minutes occupy under 20 minutes in going from end to end.

There is not at present any good through communication either way with Brighton by the East London line; and as that line has a Brighton traffic, and its development should be one of the objects with which the line is worked, we think that by some arrangement for connecting trains passengers should have at least one opportunity daily to go up and return by trains fixed at suitable times and affording a reasonably quick service.

The East London Company complain of the impediment in the way of an interchange of traffic at New Cross caused by none of the East London trains being brought into the Brighton Company's station. It is evident that passengers would change carriages more easily if trains meant to correspond drew up on opposite sides of the same platform, or near each other instead of running as at present into separate stations

and on lines at different levels ; and the East London Company say that their New Cross Station and the short branch to it were constructed with the object of providing temporarily for the working of the first portion of line that was opened, and that it was always intended that when the whole line should be completed to Liverpool Street the mode of working at New Cross should be by the junctions with the Brighton Company's lines. The Brighton Company admit that it was always intended to run some of the trains into their New Cross Station, so as to facilitate the interchange of passengers, but they say that the accommodation at their station is at present insufficient for the traffic of the East London line, and that that line has been so recently opened that they have not yet had time to determine on the new works and alterations of platforms and sidings which must be carried out. They are at the same time about to enlarge their station, and have obtained powers from Parliament this year to widen their bridge under the New Cross road which bounds one side of the station yard. We are of opinion that the Brighton Company should have a reasonable time allowed them to make their contemplated alterations, and that then the use of the low-level station of the East London Company should, if that Company desire it, be discontinued, and the East London trains, local as well as through, be run into the Brighton Company's station.

As regards the complaint about the through fares being higher to Liverpool Street than to London Bridge, and the receipts not being divided as provided for in the agreement, it seems to have been with the concurrence of the chairman of the East London Company that the through fares were fixed on the principle of charging the two local fares ; but Mr. Hawes stated that he was not aware at the time that the local rates charged by the Brighton Company to New Cross, from Croydon for example, were the same as to London Bridge, and that the through fares to Liverpool Street would thus be higher than to London Bridge by the amount of the East London local fares. As a matter of fact, the through fares generally are considerably higher to Liverpool Street than to London Bridge, and as we do not think that competitive traffic can, under the burden of higher fares, be fairly developed in terms of the second article of the agreement, the fares viâ London Bridge and the fares viâ Liverpool Street ought to be at the same mileage rate ; and as respects the division of receipts, instead of each Company receiving its local fare the division should be by the mileage principle, pursuant to the provision on this subject contained in the agreement.

APPENDIX No. 2.

List of the Working Agreements approved by the Railway Commissioners between the 1st of September 1875 and the 31st of August 1876.

1.
The Cowbridge Railway Company
with
The Taff Vale Railway Company.
Approved 18th January 1876.

2.
The Sirhowy Railway Company
with
The London and North Western Railway Company.
Approved 26th April 1876.

3.
The Portpatrick Railway Company
with
The Caledonian Railway Company.
Approved 29th April 1876.

4.
The West Cork Railway Company
with
The Ilen Valley Railway Company.
Approved 29th April 1876.

5.
The Culm Valley Light Railway Company
with
The Bristol and Exeter Railway Company.
Approved 15th June 1876.

6.
The Kington and Eardisley Railway Company
with
The Great Western Railway Company.
Approved 14th July 1876.

TITHE COMMISSION.

COPY of the REPORT of the TITHE COMMISSIONERS to Her Majesty's Secretary of State for the Home Department, dated 31st January 1877.

[For the Year 1876.]

Presented to both Houses of Parliament by Command of Her Majesty.

Copyhold, Inclosure, and Tithe Consolidated Commission,
31st January 1877.

SIR,

IT is our duty to forward to you the Report of our Proceedings in the Tithe Department of this Consolidated Commission to the close of the year 1876.

We have received 7,070 Agreements, and confirmed 6,778.

We have made 5,650 Drafts of compulsory Awards, and confirmed 5,452.

In 12,230 Districts, as will be seen from the above statement, the Tithes have been commuted by confirmed Agreements or confirmed Awards.

In 416 of these Districts the Rentcharges have been disposed of by Redemption or Merger.

We have received 11,788 Apportionments, and confirmed 11,784.

We have made 5,073 Altered Apportionments, and confirmed 4,456; and of these 141 have been received and 127 confirmed during the year 1876.

We have received 1,353 Applications for the Exchange of Glebe Lands, and confirmed 1,220 of such Exchanges; and of these 19 Applications were received and 12 Exchanges confirmed during the past year.

We have received 2,515 Applications for the Redemption of Rentcharge, and have completed 2,061 of such Redemptions; and of these 215 were received and 218 completed during the year 1876.

We have received 13 Applications to convert variable Corn-rents payable under local Acts of Parliament into Rentcharges to be henceforth payable in like manner as ordinary Tithe Rentcharges, and have completed Awards in 9 of these cases.

At the close of 1876 we had confirmed 15,185 distinct Mergers of Tithes or Rentcharges.

We annex an Abstract.

We have the honour to be,
Sir,
Your very obedient Servants,

G. DARBY.
G. RIDLEY.
JAMES CAIRD.

To the Right Honourable
The Secretary of State for the Home Department,
&c. &c. &c.

41571.

TITHE COMMISSION.

COPY of the REPORT of the TITHE COMMISSIONERS to Her Majesty's Secretary of State for the Home Department, dated 31st Jan. 1877.

[For the Year 1876.]

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
Printed by GEORGE E. EYRE and WILLIAM SPOTTISWOODE,
Printers to the Queen's most Excellent Majesty.
For Her Majesty's Stationery Office.

1877.

ROYAL COMMISSION

ON THE

PRACTICE OF SUBJECTING LIVE ANIMALS TO EXPERIMENTS FOR SCIENTIFIC PURPOSES.

GENERAL ANALYTICAL INDEX TO REPORTS, EVIDENCE, AND APPENDICES.

Presented to both Houses of Parliament by Command of Her Majesty.

LONDON:
PRINTED BY GEORGE EDWARD EYRE AND WILLIAM SPOTTISWOODE,
PRINTERS TO THE QUEEN'S MOST EXCELLENT MAJESTY.
FOR HER MAJESTY'S STATIONERY OFFICE.

GENERAL ANALYTICAL INDEX.

References to the Report are in Black Type.

ABUSES.

I. Generally.
II. By incompetent persons.

I. Generally.

There have been great abuses which should be put a stop to, *Burrows*, 156–8. From the English medical press it would appear that there is much to condemn in this country, *Walker*, 1711. Animals are kept alive much longer than they ought to be; instances frogs under electric and other experiments, *ibid.*, 1729–31. Vivisection is abused, but should not be forbidden; it should be controlled, and experiments might be lessened without injury to science, *Rolleston*, 1293. These experiments are liable to abuse from the enthusiasm of investigators in their researches, *ibid.*, 1226–7; is of opinion that some experiments performed should not have been undertaken, *Sharpey*, 580. Many experiments are not justified by the objects in view, *Colam*, 1549. Lecturers in these experiments are tempted to show off their skill, *Rolleston*, 1287. Hopes such experiments as those on dogs with regard to suspended animation will be forbidden, *Colam*, 1655. Once saw galvanism tried, but not by a medical man, in a cellar as a cure for poisoning by strychnine, *Hoggan*, 3462, 3465–9.

Scientific men would concur in supporting a remedy for any existing abuses, *Simon*, 1383. If abuses exist they should be restricted, even if the advancement of science were retarded thereby, *M'Kendrick*, 4013–4. Thinks abuses are very rare, that the tone of scientific feeling is good, and that the control and discretion of professors is a sufficient safeguard, *Acland*, 930–1, 969, 998. Has never known an instance of cruelty to animals by medical men in their own houses, *Colam*, 1632–3. Does not admit that abuses have increased in the same ratio as vivisection itself, *Sibson*, 4733–6. Does not consider Sir Charles Bell's assertion that a great many useless experiments were performed in his day as of any weight, *ibid.*, 4737–9. Believes there is no abuse in England, *Gamgee*, 5383; *Gull*, 5478–80; nor is there any danger of inhuman vivisection here, *Lister*, 4401–3. Some continental practices might be forbidden, *Burdon-Sanderson*, 2218–9, 2292; otherwise experiments as cruel as that of Paul Bert on a curarised dog would be undertaken, *Hoggan*, 4164. Anyone may hire a room and experiment, provided he does not contravene the Act for the Prevention of Cruelty to Animals, *Turner*, 3115–7. Does not think purposeless experiments are made by scientific men, *ibid.*, 2117–8. Thinks no one would make such experiments without a definite object, and that they do not deaden humane feelings; gives instance, *Humphry*, 618–22. Educated men do not inflict pain without good reason, *ibid.*, 676. There is no inherent attraction in vivisection, *Garrod*, 1988. Physiologists give as little pain as possible and well consider their experiments before performing them, so as to avoid repetition, *Sibson*, 4685–7, 4716–7. Painful experiments should never be performed unless the experimenter is satisfied that good would result, *Ferrier*, 3426; but thinks the majority of mankind may be trusted on that point, *ibid.*, 3400.

II. By incompetent persons.

Incompetent persons should be restrained from performing experiments, *Acland*, 930; *Gamgee*, 5376; *Burdon-Sanderson*, 2290–1; *Watson*, 37–8. An excess of cruelty by ignorant experimenters should be punished, though quacks and bone-setters might thereby attain the popularity of martyrs, *Fergusson*, 1136–7. Painful experiments should be undertaken only by most competent persons, but it is difficult to decide on competency, and legislation might retard research, *Lister*, 4297a–301. Is not opposed to incompetent persons being restricted; although it is difficult to decide as to competency; considers a student of psychology should not be restrained, even if not up to a medical standard, *Ferrier*, 3262–8, 3395, 3399. Drawing a hard and fast line would exclude many good men; gives instances, *Gamgee*, 5378–80, 5393–5, 5404–5. If men are to be forbidden to experiment because they are unknown to fame, the experiments of such men as Davy and Faraday would be stopped, *Lister*, 4324–7. There are very few who are competent or who should be allowed to conduct such experiments, *Watson*, 106. Only persons who have a thorough knowledge of anatomy and physiology should be allowed to experiment, *Burrows*, 149–51, 198. Only persons trained in a laboratory of research should be allowed to experiment, *Burdon-Sanderson*, 2241–2. None but experts should attempt these experiments, *Acland*, 927, 947. Considers a thoroughly instructed medical student "competent," *Lister*, 4303. What is required is painstaking carefulness, and an exact record of facts, *McDonnell*, 4575, 4580. A man will become competent by two or three experiments, or abandon the practice, *Garrod*, 1984, 1987. Veterinary surgeons might in some cases be competent, but not ordinarily, *Sharpey*, 429–30. Disputes the assertion that nine tenths of these experiments are made by men incompetent to make discoveries, *Lister*, 4399–400; the converse would be more accurate, *McDonnell*, 4579–84. Believes that only competent men undertake these experiments in England, *Lister*, 4302, 4401–3, 4426; *Turner*, 3129; *Pavy*, 2064–7. Considers experiment is in the hands of competent men, and that it is done humanely and for definite purposes, *Gamgee*, 5371; and that there is no experimentation by incompetent persons to restrain, *Gull*, 5478–80, 5494; *Pye-Smith*, 2058–9. Ordinary students should not be allowed to experiment, *Gamgee*, 5378; *Acland*, 968, although some might advance knowledge, *Burrows*, 200–3, 211. Private experimentation among students need not be forbidden; it does not exist, *Pavy*, 2064–8, 2086–7; *Purser*, 4817–20.

Believes a large number of painful experiments are performed by incompetent persons, *Walker*, 1800. Bernard complains that science is encumbered with a mass of contradictory results from incompetent persons experimenting, *Hoggan*, 4238–41. Much useless suffering is caused by inferior minds not discerning where further development is possible; men like Hunter, Brodie, and Davy seem to have been instinctively restrained from unsuccessful experiments, *Acland*, 1005–7. Vivisection is valueless unless performed and observed by competent persons; performed by others it inflicts useless suffering, *Humphry*, 607–8, 629, 634. Experiments by ignorant or incompetent persons are not likely to be of any use, *Ferrier*, 3260–1; *Watson*, 37. Knows one or two cases of useless experimentation by incompetent persons; gives details, *Burdon-Sanderson*, 2615–7.

Vivisection is by its nature capable of great abuse, and ought to be subjected to due regulation and control. Its abuse by inhuman or unskilful persons is justly abhorrent to the moral sense, and the most distinguished physiologists as well as the most eminent physicians and surgeons may, as well as the general public, be confidently expected to support any reasonable measure to prevent abuse.—Report, pp. 17, 18.

ALLEGED CALLOUSNESS OF VIVISECTORS TO ANIMAL SUFFERING.

Medical men are humane and anxious to check abuses, *Burrows*, 146–8; they know from observation more accurately than others what suffering is, and are therefore likely to be more considerate with regard to animal suffering, *Lister*, 4330, 4395. The increasing class of pure physiologists is naturally not brought into such frequent contact with suffering, *ibid.*, 4396–8; believes, however, that they are as humane as medical men, *Gull*, 5522–4.

English experimenters are not regardless of animal suffering, *Acland*, 948; *Gull*, 5465; experiments are from a sense of duty conducted in England as humanely as possible, *Carpenter*, 5583–4, 5628–9.

Experimenters do not become hardened by their practice, some of them are most humane, *Ferrier*, 3249–50; *Simon*, 1493; neither does witnessing these experiments blunt humane feelings, *Pavy*, 2197–9; *Sharpey*, 585–6; gives instance, *ibid.*, 503. Many severe and painful but necessary experiments are and have been made by men of kind and gentle natures; gives names of several, *Acland*, 921–6;

Lister, 4286–90, 4370–1; *Simon*, 1475–7, 1493. Refers to the reluctance of Sir Chas. Bell and Dr. Jones to undertake experiments on living animals; resorts to such experiments himself only when it is of paramount importance, and believes other experimenters are equally careful to avoid giving unnecessary pain, *Turner*, 3079–80. Reads passages showing the painful nature of some of Dr. John Reid's experiments and referring to his abandonment of several experiments on account of their painful nature, *Jesse*, *pages* 273–5. Refers also to certain books to show Dr. Reid's remorse at having inflicted such suffering, *Jesse*, *page* 223. Witness is in possession of letters written by Dr. John Reid a few weeks before his death, in which he expresses his thankfulness for having been permitted to so far complete his physiological researches, *Carpenter*, 5630–1.

In spite of a temporary downward tendency there is a growth of moral feeling both generally and individually as to the infliction of pain, *Rolleston*, 1290. Has found physiologists, especially abroad, among the kindest and most gentlemanly of men, and yet their feelings were entirely blunted with regard to the infliction of pain, *Hoggan*, 4244.

Regards vivisection as a moral ulcer, *Jesse*, 4438–9, and believes that it tends to divorce intellect from moral principle; gives reasons for this statement, *ibid.*, 6475. Contends that it demoralizes the experimenters, *ibid.*, *page* 271, and that Professor Huxley's "Elementary Physiology for Boys and Girls" shows that the rising generation is being actually taught cruelty, *ibid.*, 6475–7. Reads extracts to show the demoralizing effects of certain books, *ibid.*, *page* 272, 275. Considers vivisection mentally degrading; instances Spalanzani, Bracket, &c.; gives quotations supporting this view, *ibid.*, 6475. Abernethy himself censured Spalanzani for his cruelty, *ibid.*, 6436–40.

Vivisectors become morally and physically hardened; instances a case, *Walker*, 4908–9.

Many experiments, such as some of Majendie's for instance, have been made simply to see what will happen; witness has himself seen, before the introduction of anæsthetics, perfect callousness to animal suffering on the part of the experimenter, *Carpenter*, 5624–7.

ANIMALS, RELATIVE SENSIBILITY OF, TO PAIN.

Man is the most sensitive of all creatures, but a great amount of human suffering is in the anticipation and retrospect, *Humphry*, 655; for which reason chloroform is much more necessary for adults than for infants; instances the operation for harelip as an example, *ibid.*, 704–6. Doubts the skin being the seat of sensibility in man, *ibid.*, 711–5. The lower animals have diminished sensibility; warm-blooded animals are more sensitive than cold-blooded ones, *ibid.*, 641–8, 655, 702–4.

Believes the lower animals have but little sensibility; experiments can be performed after the brain has been removed, as in frogs, *Paget*, 357; on which observations of the widest extent can be made, *Sharpey*, 525.

A frog's restlessness when irritated by a parasite may be partly due to reflex action, *Schäfer*, 3860–3; it is difficult to prove that they *suffer* from parasites, *Lister*, 4392. The irritation produced in a small animal, however, is as great as that in a large animal, *Pritchard*, 846–50. In painful experiments frogs should be anæsthetised or their heads cut off, *Handyside*, 5986–92.

In experimenting on frogs he kills them first, *Gamgee*, 5414; *McKendrick*, 3915; believes there is no evidence that they suffer after the section of the spinal chord, *Carpenter*, 5614.

Does not think it necessary to give frogs anæsthetics, *Lister*, 4415.

Thinks anæsthetics might be as painful to frogs as an operation, and chloroform a great irritant to the skin, *Schäfer*, 3797, 3816; a diluted solution of chloroform renders them rapidly insensible, *Gamgee*, 5415.

Considers that the sensibility of frogs and other animals varies with the development of the nervous system, and the excitement of the motor nerves does not necessarily imply pain, *Taylor*, 1854–5.

Does not think the frog as sensitive as the higher animals, *Schäfer*, 3791; *Rutherford*, 2871–2; *Klein*, 3583–9, 3707–16; nor the feeling of pain comparable, gives reasons in detail, *Cleland*, 4626–32; besides frogs cannot reason about their sensation, *Schäfer*, 3859.

Thinks the frog insensible to much pain, and that it has from this reason become "the physiologist's animal," *Lister*, 4390, 4411–4; *Carpenter*, 5613; the smallness of its sensory system justifies such an opinion, *Burdon-Sanderson*, 2379, 2382–5.

A frog's sensibility to pain is a matter of speculation, *Cleland*, 4614–6; does not doubt its susceptibility to pain, but it is difficult to compare it with other animals, *Simon*, 1499.

But for the insensibility of frogs many experiments would be very painful, *Schäfer*, 3795–6, 3801; at University College anæsthetics are seldom given to frogs, but they are often made insensible without them so as to facilitate the operation, *ibid.*, 3788–90, 3798–800, 3809–10, 3837, 3865–7.

The destruction of the upper part of the spinal cord destroys sensation in the parts below the *medulla oblongata*, but organic life may be maintained for days in cold-blood animals as practised by Sir Benjamin Brodie, *Sharpey*, 490–5.

The struggling of a brainless frog or a worm on a hook is not evidence of pain, any more than the unconscious movement of a paralysed limb or of the sensitive plant, *Lister*, 4380–1, 4384–5; it may simply be the result of muscular excitement, *Sharpey*, 512–4. Contortion does not necessarily imply pain; gives instances, *Humphry*, 649–55.

Cannot give an opinion as to the relative sensitiveness of animals to pain, or say how it could be ascertained, *Watson*, 100–3; thinks the sensibility in human and other animals, including frogs, much the same, *Pritchard*, 846–9. Believes sensibility among men differs in individuals, and also probably among animals, but not to the same extent as among human beings, *Humphry*, 751–2.

The lower the organization, the lower the sensibility; gives reasons and examples, *Lister*, 4374–8; instances the dividing a polyp into pieces, *Sharpey*, 513.

Has often been surprised at the stillness of animals under the knife, *Humphry*, 707–10, but it does not prove absence of pain, *ibid.*, 711; it is doubtful if their movements indicate pain or not, *Sharpey*, 516.

Cannot say if vertebrate suffer more than invertebrate animals, *Sharpey*, 512–4; sensibility in vertebrate animals appears to be more acute, but the manifestations of pain differ in individuals of the same species, *ibid.*, 496–7, 502.

ANÆSTHETICS. *See also* EXPERIMENTS, *Sub-head* III.

I. Extent to which used in experimentation.
II. Experiments in which they cannot be used.
III. Kinds and nature of anæsthetics used.
IV. Effects of, on animals.

I. Extent to which used in experimentation.

Anæsthetics are always used by physiologists when possible, *Gull*, 5466–7; *Handyside*, 5957, 5975; *Pye-Smith*, 2052–4; except for frogs, *Simon*, 1498. Most experiments in this country are under anæsthetics, and therefore painless, *Pavy*, 2031–2; *Pye-Smith*, 2048–9, 2052–4.

Has never seen nor performed a painful experiment except under anæsthetics, *Pye-Smith*, 2056; always uses anæsthetics when possible, *Handyside*, 5957, 5975, *Pavy*, 2140–2, *McDonnell*, 4518, with the object of saving pain, *Sinclair*, 5825–8.

Never met with a man who used them simply for convenience sake, *Handyside*, 5976; such a spirit should be repressed, *Sibson*, 1718–20; any unnecessary infliction of pain by omission of anæsthetics deserves detestation and abhorrence, *Darwin*, 4672. The good feeling of the profession and the public is against experiments without chloroform, *Sinclair*, 5909–10, and renders their habitual performance impossible, *Acland*, 940–4.

Believes anæsthetics are used, but it is often a delusion to believe the animals are kept insensible, *Walker*, 1810. Believes anæsthetics are used very imperfectly, and dropped altogether when the controlling eye is gone, *Haughton*, 1884. Chloroform is really given to narcotize the public mind, and make the patient helpless, *Jesse*, *page* 221.

Most experiments and severe operations should be rendered painless, *Burrows*, 160, 249–50; *Paget*; *Simon*, 1374–7; *Lister*, 4293–4. Anæsthetics can be used wholly or partially in a large proportion of experiments, *Turner*, 3029, 3034–6; *Sharpey*, 392, 448–51, 534, 590; *Humphry*, 631–2, 725–6; including nearly all that are necessary, *Acland*, 932–9. The most painful part, if not the whole, of an experiment can generally be done under anæsthetics, *Burrows*, 192–3; *McDonnell*, 4466–9, 4585–6; *Allman*, 5435–8, *Watson*, 19–24, 42–3; gives instances, *Cleland*, 4644; *Pavy*, 2182; *Pye-Smith*, 2055–7.

Anæsthetics should always be used unless likely to interfere with the result, *Acland*, 932–9; *Burdon-Sanderson*, 2221–2; *Ferrier*, 3230–3, 3245–8; *Allman*, 5432–4; certainly in all experiments on mammals, *Cleland*, 4611–3, 4617, 4643, 4647–8. Their use should be compulsory, *Watson*,

29–30. Agrees on the whole with the Committee of the British Association as to their use, *Acland*, 947.

Where anæsthetics have not been used in painful operations it has been probably because they would have defeated the object of the experiment, *Colam*, 1540–2; although they are sometimes neglected when they might be used, *ibid.*, 1530–2, 1543.

As to the use of anæsthetics in medical schools, veterinary colleges, &c., see Appendix III. § 8, also as to their use at St. Bartholomew's, *Brunton*, 5693, 5700–1; *Colam*, 1568–9; at Guy's, *ibid.*, 1568, and at Edinburgh, *Sinclair*, 5826–8, 5833, 5839–40.

II. Experiments in which they cannot be used.

It is difficult to draw a definite line when chloroform can or cannot be used, *Pavy*, 2177–9.

Experiments in which disease is induced by innoculation, *Gamgee*, 5364–6, and those with regard to the action of drugs are necessarily painful, *McKendrick*, 3899–905, 3933; *Gamgee*, 5359–63.

In pathological experiments anæsthetics can be given before the operation unless the pain is too trivial to require them, *Sibson*, 4678–80, and in addition many diseases have an anæsthetic effect; gives instances, *ibid.*, 4681–4. The more painful ailments, such as carbuncle, are never made the object of experiment, *ibid.*, 4730–2. Does not consider that the use of anæsthetics should be compulsory in pathological experiments, *Humphry*, 670–1.

Nearly all Harvey's experiments would now be rendered painless, *Turner*, 3065–8; *Watson*, 35–35c; *Burrows*, 38; and also, except as regards the pain during recovery, those performed by Hunter, *Paget*, 296.

Painful experiments are sometimes necessary in the promotion of science, *Paget*, 293–7; *Gamgee*, 5358; *Turner*, 3138; *Burrows*, 162; but the pain would usually be of short duration, *Lister*, 4296–7, 4315–6; *McDonnell*, 4489, 4570; and be minimised by operators, *Turner*, 3438. The number of very painful experiments necessary in research is very small, *Sibson*, 4744. Some experiments on the nerves of sensation are necessarily painful, *Pavy*, 2182–4; *McDonnell*, 4586–8; *Burrows*, 144, 194–7, 251; *Watson*, 53–6; *Sharpey*, 533. Anæsthetics would have frustrated Sir C. Bell's experiments on the nerves for instance, *Watson*, 47–50; *Sharpey*, 408–9. They would also possibly interfere with the object of many experiments as to the action of poisons, but is not aware of any other classes of experiments in which they cannot be used, *Watson*, 53–6.

Many experiments on the nerves are, however, not of a serious nature, *Burrows*, 140. Bell's experiments on the facial nerve, for instance, were almost painless, *Sharpey*, 408–9; and some may be performed under partial anæsthesia, *McKendrick*, 3944. The number of necessarily painful experiments is very small, *McDonnell*, 4470–1, 4490, 4587; and when the result has been obtained the animal should be at once killed, *Pavy*, 2182–4; *Allman*, 5455–6. Lingering pain is neither necessary nor justifiable, *Watson*, 25–6, 44, 94–5; *Taylor*, 1181–3; *McDonnell*, 4474, 4490, 4587.

Anæsthetics are not much used in toxicological experiments, *Taylor*, 1241; they would interfere with the results, *ibid.*, 1188–9; but protracted suffering is never necessary, *ibid.*, 1181–3; *Watson*, 55–6.

The effects of drugs or of operations can only be judged of after recovery from anæsthesia, *Pye-Smith*, 2053.

There is a considerable latitude of opinion amongst physiologists as to the amount of pain which it is justifiable to inflict, *McKendrick*, 4009.

In investigation anæsthetics should not be used except for convenience sake; gives instances, *Klein*, 3538, 3562–3, 3599, 3602–5, 3660–1. Investigators have no time to consider the sufferings of animals, *ibid.*, 3538–44. Believes that investigators in pure physiology share his views on this point, *ibid.*, 3606, 3700–6; and thinks that there is little difference of opinion between English and foreign physiologists on the subject, *Klein*, 3553. Admits, however, that Dr. Sanderson does not agree with him, *Klein*, 3750–2. Considers also that some experiments are performed with less pain without chloroform than with; gives instances, *Klein*, 3560–1, 3741–5.

Correspondence as to emendations in Dr. Klein's evidence, and amended copy, *Appendix II.* § 2.

III. Kinds and nature of anæsthetics used.

Claude Bernard has recently published a book on the use and effects of anæsthetics, *Gamgee*, 5419. Chloroform is the anæsthetic best understood, *Watson*, 63. Chloral is not safe, *Brunton*, 5769–70. Alcohol acts as a strong narcotic on frogs; chloroform and chloral are more powerful, but cannot be used in many experiments; opium is more available, *Sharpey*, 532, 556.

Opium is an anæsthetic, but more dangerous than chloroform, *Brunton*, 5771–5. Maintains that under morphia or opium pain is felt but forgotten, *Hoggan*, 4184–93. Quotes Claude Bernard's opinion that the action of morphia is "stupéfiant," producing immobility, but not insensibility; points out that the dog referred to by Bernard cried when pinched; quotes passage on the point, *Hoggan*, 4133, 4194–5. It is certainly erroneous to assert that "there is "no real insensibility to pain from narcotism by morphia "or opium," or that narcotized animals are sensible to pain, *Brunton*, 5809–10.

Opium, chloral, and chloroform, all destroy pain if given in sufficient doses, *Rutherford*, 3010–1; *Garrod*, 1919. Animals can easily be kept under the influence of chloroform for three or four hours, *Pavy*, 2205; death under their influence is painless, *Paget*, 381.

Thinks anæsthetics do more to lull public opinion than to mitigate animal suffering; gives reasons, *Hoggan*, 4107–8. There is an uncertainty about the question of anæsthetizing animals; it is difficult to know when an animal is anæsthetized, *Rolleston*, 1349–50. Regards perfect quiet during an important skin section as a sign of complete anæsthesia, *Garrod*, 2022–6.

Irrespective of feeling, anæsthetics are of great use to operators, *Pavy*, 2099, and would be used if only to facilitate operations, *Colam*, 1568 (*page* 81); pain complicates results, *Gull*, 5469–70, and the removal of sensation is generally necessary to the success of an experiment, *ibid.*, 5466–7; *Turner*, 3153–5. A severe operation introduces abnormal conditions, and the physiologist has to choose between that and the disturbance caused by the anæsthetic, *McKendrick*, 3934–8.

Considers that experiments under anæsthesia are, with some exceptions, of but little value, the conditions being abnormal, *Fergusson*, 1077, 1083–5.

IV. Effects on various kinds of animals.

Believes there is no difficulty in anæsthetizing animals if the anæsthetic be varied; instances the giraffe, *Garrod*, 2006–9. Has tried to produce anæsthesia in lions and tigers without effect, *Haughton*, 1947.

Sometimes chloroform, sometimes local anæsthetics, such as ether spray or iced water, are used in operations on animals at the Royal Veterinary College, *Pritchard*, 791–3, 889.

Describes the means by which cats, dogs, and frogs are put under chloroform, *Brunton*, 5737–9. Giving chloroform to dogs is a long and painful operation, *Klein*, 3601, 3654–5, and often kills them; would use it on cats, *Pritchard*, 797–822.

It is difficult to chloroform a horse, and only necessary in severe operations, *Lister*, 4331–7; it injures horses and poisons their blood, but it is almost impossible to destroy them by it, *Pritchard*, 794–5, 804–5. There is no difficulty in giving chloroform to a horse if it be done with care, *Mills*, 5050. Oxen and sheep do not require so much chloroform as horses, *Pritchard*, 812–4.

It is difficult to give anæsthetics to the lower animals without destroying them, *Haughton*, 1947. Thinks frogs and the lower animals may be put under anæsthetics, but has not had much experience on that point, *Humphry*, 727–34. Has no knowledge of the effects of anæsthetics on the lower animals, *Watson*, 74. Can give no information as to effect of anæsthetics on frogs, *Burrows*, 228–9.

Frogs and even tadpoles can easily be rendered insensible by immersion in chloroform and water, *McDonnell*, 4563–5; *Gamgee*, 5415; or by means of ether, *Garrod*, 2028. It is difficult to get frogs under chloroform, *Burdon-Sanderson*, 2378, or ether, and probably causes considerable pain, *Lister*, 4379, 4416–9. Frogs can generally be pithed, *Cleland*, 4632, 4658–9; *Sharpey*, 535; except in experiments on the nerves, in which chloroform could not be used either, *Haughton*, 1948–50.

Proper care should be taken to insist upon the removal of sensibility to pain even in cold-blooded animals.—Report, p. 19.

THE BROWN INSTITUTION

Is an institution for the study and cure of maladies and injuries of animals serviceable to man; latterly investigations into the nature of diseases have also been carried on there, *Carpenter*, 5646–50; *Burdon-Sanderson*, 2625–6.

The senate of the University of London are trustees, and some points connected with the trust will be dealt with by that body, when the Commission have reported, *Carpenter*, 5647, 5651–4.

Witness describes his position with regard to the University of London, *Klein*, 3574, 3612, 3615–7, and states that

he has with Dr. Sanderson the direction of those who come to the Brown Institution to make special researches, *ibid.*, 3572, 3620, and has during the last three years performed certain experiments, including three or four painful ones, *ibid.*, 3664–70, in his private room, *ibid.*, 3612, before students from the hospitals, to assist them in microscopic or histological anatomy, *ibid.*, 3626; there is no class, and the experiments are sometimes performed for a single student only, *ibid.*, 3663, 3675. Anæsthetics are used if more convenient for the operator, but frogs are not pithed, *ibid.*, 3631–3, 3681–3, as their sensibility is of a low order, *ibid.*, 3583–9, 3707–16.

About 10 or 12 animals are consumed during the year in the experiments for teaching purposes, *Klein*, 3676–80.

Some other experiments of a private nature were formerly made at the institution, but they have lately been discontinued, *Burdon-Sanderson*, 2796–800.

The pathological researches made by witness have been for the medical officer of the Privy Council alone, *Klein*, 3620–1.

Witness keeps a private stock of rats, guinea-pigs, and rabbits at the institute for his own and Dr. Klein's use, but they do not interfere with the reception of animals for cure, *Burdon-Sanderson*, 2801–20.

BURDON-SANDERSON'S, Dr., HANDBOOK.

Is well acquainted with Dr. Burdon-Sanderson's handbook. Considers it suitable for professors, not for students, *Pavy*, 2080–5, 2150–1; *Pye-Smith*, 2170. It is a book for experts, not for beginners, *Paget*, 354–6; *Simon*, 1500. Has purposely avoided it, *Fergusson*, 1110–1. It is of very considerable reputation, *Taylor*, 1270. It appears designed for learners to pursue experiments for themselves, *Acland*, 970–1, 999, and would encourage them to do so, *Colam*, 1623–6. Does not think it leads students to try experiments themselves, *Humphry*, 767.

Many of the experiments are misleadingly described, *Pavy*, 2081–2, and are not adapted for repetition, *ibid.*, 2163–5, 2168–9. Most of them are taken from continental sources, and had probably been tried by the editors, *ibid.*, 2083, 2156. They are obviously intended to be performed, *Rolleston*, 1346–9, and should be shown for the purposes of demonstration, but to a select class only, *Cleland*, 4650–2. There is an absence of sufficient directions with regard to anæsthetics and the duration of some of the experiments, *Scott*, 5194.

Does not agree with every line, but thinks all the experiments justifiable in teaching students pure physiology, *Pye-Smith*, 2175. Refers to several experiments "suited for demonstration," and points out that, with two exceptions, they are painless, *Brunton*, 5776–90. Does not think that it has tended to increase the practice of vivisection, *Pavy*, 2084, 2155. Considers it valuable, but believes that it tends to encourage vivisection both by students and generally, *Haughton*, 1939–42. Thinks it warrants the public feeling against vivisection, and misrepresents its authors, *Rolleston*, 1351. Knows all the contributors to be men of humanity and judgment, *Pye-Smith*, 2176.

Gives a general statement of the object and intentions of various experiments, and thinks the publication of the details prevents their being repeated, *Burdon-Sanderson*, 2280, 2640–8, 2650. The object of the book is to advance physiological science by experimental and other methods, *Foster*, 2414. It was designed to give a new start to physiology, and as a statement of the objective basis of physiological doctrine, as well as a guide in experimentation, *Burdon-Sanderson*, 2214–5, 2666–8. There ought to have been a distinction drawn between these basis experiments and those for demonstrations and patterns, *ibid.*, 2372. The title indicates that it is for students in laboratories under the control of skilled physiologists, and makes no reference to experiments for education, *ibid.*, 2639, 2662–5. The book "is intended for beginners" in research, not for students of medicine, *ibid.*, 2239–40, 2243, 2638. It was designed for physiological readers only; the use of anæsthetics was assumed; should have been more explicit on that point, *ibid.*, 2265–73. Would be glad to see his real views placed before the public more clearly than they are in the book, and the mistakes therein rectified, *ibid.*, 2284, 2367–70. In writing the book again he would be more careful about anæsthetics, and give additional cautions to prevent pain, *Foster*, 2333–9. Was somewhat regardless about directions for the use of anæsthetics in each experiment, as it was intended they should be under competent supervision, *ibid.*, 2332. Does not believe that it will tend to introduce continental methods, *ibid.*, 2411, 2415.

The book is intended as a guide to students working under proper supervision, *Klein*, 3533, 3537, 3565. It is assumed that anæsthetics will be used whenever possible, *ibid.*, 3566–7.

The handbook is in the publisher's hands; cannot say how many copies have been sold; the only edition is dated 1873, *Burdon-Sanderson*, 2364–6, 2634–5. Cannot say how many of the experiments are painful and how many not; many of them have not been verified by himself, *ibid.*, 2746–9. Very few of them could be conducted without exceptional instrumental aid, *ibid.*, 2684.

In these experiments the frogs are pithed or put under the action of curari only, *Rolleston*, 1352–4. The experiments on a frog exposing the heart after inserting two needles would cause but extremely little pain, even if not curarised, *Burdon-Sanderson*, 2253–4. The experiments being for a definite object, it would have been absurd to use any other anæsthetic, *ibid.*, 2256–8. The action of curari is not yet thoroughly understood; it is not treated as an anæsthetic for the higher animals, but frogs are influenced by it, *ibid.*, 2244–53, 2636–7. At the time the handbook was written the action of curari was more doubtful, *Foster*, 2327–9, 2331.

In demonstrating the functions of the chorda tympani, points can be shown under curari which cannot be demonstrated under chloroform, *Brunton*, 5811.

In experiment 74 the brain of the frog should have been directed to be destroyed, *Burdon-Sanderson*, 2259–61. Refers to a painful experiment on a rabbit, in which an anæsthetic should also be used, although not mentioned, *ibid.*, 2262–5. The division of the vagus nerves (Ex. 101) produces inflammation of the lungs, entails pain, and results in death; some doubts having been thrown on the alleged results, its repetition may be necessary, *ibid.*, 2274–82, 2771.

The recurrent sensibility experiment is suggested as one for the lecturer, but it would not be performed at Guy's, nor tolerated by any body of English students, *Pavy*, 2152–4, 2157, 2193–6. The experiment demonstrating recurrent sensibility referred to in the handbook would be under chloroform; the subsequent excitation of the nerve roots under consciousness; does not think them described for repeating as demonstrations, *Humphry*, 746–8. The recurrent sensibility experiment was inserted to complete the section and not meant for demonstration; has never performed it himself, *Foster*, 2419–20.

The "excitation and section of the spinal chord in the rabbit," referred to in the handbook, would be lingering and painful; cannot say if anæsthetics would interfere with its object, *Burrows*, 208–10.

CURARI.

I. As to its being an Anæsthetic.
II. Generally.

I. As to its being an Anæsthetic.

Considers curari an anæsthetic; gives reasons, and details of Dr. Schiff's experiments in support of his view, *Klein*, 3718–20; but is unaware of Bernard's reasons for holding an opposite opinion, *ibid.*, 3753–4.

Considers curari, for reasons given, to some extent an anæsthetic, although its exact properties are involved in doubt, *Brunton*, 5693–9, 5791–5. It affects the sensory nerves of frogs, *ibid.*, 5699, 5791; *Burdon-Sanderson*, 2380–1; and probably also those of the higher animals, *Brunton*, 5796–8. Animals do not appear to have suffered pain when recovered from its effects, *ibid.*, 5796.

Recent experiments indicate that curari affects the sensory system as well as the motor nerves, *Rutherford*, 2909–10, 2934, 2939, when given in sufficient quantity, *Sibson*, 4752–9, *Rolleston*, 1350; although in ordinary doses it does not affect the sensory nerves of any animals, *Burdon-Sanderson*, 2380–1.

There is tolerably conclusive evidence that it destroys consciousness, at any rate in frogs; gives reasons in detail, *Foster*, 2323–6. Curari renders animals insensible, but also destroys life; therefore it is not an anæsthetic, *Burrows*, 135–7; *Hoggan*, 4175–83. Has never heard of any human being poisoned by an arrow dipped in it recovering from it, *Taylor*, 1191–4. Is fully convinced that curari is not an anæsthetic, *Hoggan*, 4115–6, 4199. Quotes Professor Vulpian in support of this opinion, *ibid.*, 4175–83. Considers Bernard's experiments and opinions decisive, *ibid.*, 4172–4; and that the conclusion based on Mr. Yule's experiments are invalid; gives details, *ibid.*, 4121–31.

Considers curari is not an anæsthetic, *Watson*, 75–83, *Walker*, 1731–4. Quotes Claude Bernard, that animals under its influence "feel pain, but cannot manifest it," *ibid.*, 1735; but rather as witness heard in a French laboratory, "feel doubly," *Hoggan*, 4234–7. Bernard

expresses himself as if it were "horrible beyond all conception" to be under its influence, *ibid.*, 4116–7.

Claude Bernard's opinion that sensation remains is of much weight, *Sharpey*, 440–3.

Does not agree with Bernard, *Foster*, 233–6. Both he and Kölliker go beyond the premises on which the conclusions are based, *Sibson*, 4762–77.

Doubts the anæsthetic properties of curari, *Schäfer*, 3780–1; gives reasons, *Gamgee*, 5403, 5407, 5411.

Whether curari destroys sensibility is doubtful, *Acland*, 973; *Fergusson*, 10.

Considers that at present the consciousness or unconsciousness to pain of the animal under curari cannot be decided; it appears from Mr. Yule's experiments, however, to deaden the reflex action of the spinal chord, *Sibson*, 4752, 4778–82. Does not think the desire to believe it to be an anæsthetic has led to its being so regarded, *ibid.*, 4761.

Considers curari does not destroy consciousness; it may sensation. That is a most important point requiring further investigation, *Sharpey*, 435–9, 462–3.

It is not a proved anæsthetic like chloroform, *ibid.*, 468–73; and it should not be treated as one, *Gamgee*, 5413; *Taylor*, 1242–3; *Sharpey*, 440–3.

Some to avoid doubt give opium also, *Sibson*, 4758, 4779; does so when possible, *Foster*, 2332; *Schäfer*, 3780–1; gives instances, *ibid.*, 3838–49.

Thinks the variation in the preparation itself diversifies opinions, *Taylor*, 1239.

II. Generally.

Curari is used to eliminate certain disturbing influences, *Gamgee*, 5412, resulting from the irritation of the nerve centres; gives example, *Brunton*, 5742, 5744; and to keep the animals still, *Sharpey*, 468–73.

The curari poison deprives an animal of motion, and facilitates experiments, *Acland*, 972–4; *Watson*, 75–83. Is disposed to think that it acts on the muscles through the nerves, *Taylor*, 1191–4.

Curari might be given to prevent manifestations of pain or disapproval by the students, but a known anæsthetic should always be used in experiments for demonstrations, *Rutherford*, 2933–5.

Its action on the respiratory organs prevents its use in some instances, *Klein*, 3600. In some experiments curari is necessary, in others chloroform; administering both is often impossible; gives reasons, *Brunton*, 5741–5; but sometimes they can be given together, *Rutherford*, 2935a–6.

It is commonly used in physiological laboratories in England, *Taylor*, 1240, as Dr. Sanderson's work shows, *Scott*, 5226.

In demonstrations uses it for frogs only, *Brunton*, 5693–9.

It is not now used at the Royal Veterinary College, *Pritchard*, 816–9, 885–7.

Bernard deplores the excessive use made of it, *Hoggan*, 4239–40.

Refers to accounts of cases in which human beings put under curari lost the power of movement but retained consciousness, and subsequently described their sensations, one who had been operated on under it complaining of "douleurs atroces," *Hoggan*, 4119.

Refers to experiments at La Salpétrière, in Paris, mentioned to witness by Bernard, *Gamgee*, 5409–10.

Gives details of an experiment on two children at Manchester with curari, in which partial paralysis was produced, sensibility remaining unimpaired, *Gamgee*, 5407–8.

Refers to the accounts given by Bernard of the deaths of Indians from curari, *Rutherford*, 2937–9.

Is not aware of any facts showing that curari affects differently different classes of animals, *Rutherford*, 2911.

Curari, as a sedative, is said to counteract the excessive stimulus of strychnine, *Taylor*, 1204, 1238; and has been suggested as a remedy for tetanus, *Sharpey*, 571.

Curari appears to destroy sensation; it is a poison, and its effects are not sufficiently known to warrant its general use, *Taylor*, 1244–7.

Until the question as to the anæsthetic properties of curari shall be very much better settled than it is at present, this poison ought not to be regarded as an anæsthetic by those who administer the law in respect of experiments on animals.—Report, p. 19.

DRUGS.

The knowledge of the action of most drugs has been ascertained by experiment, *McKendrick*, 3921. Such experiments are sometimes necessary for the advancement of knowledge, and have been most useful, *Burrows*, 153–4, 219–20; and many valuable remedies have been discovered by them, *Brunton*, 5666–70; gives examples, *ibid.*, 5670–4. They are necessary for the discovery both of antidotes and of the properties of new drugs, *Taylor*, 1188, 1203.

Although the knowledge obtained is valuable, it is imperfect, *Burrows*, 259–61; *Sharpey*, 504–6. One cannot argue by analogy from one animal to another; gives instance of this, *Haughton*, 1875, 1911–2. The knowledge acquired at the expense of one animal may be the means of saving many others, *Watson*, 59–61.

Refers to the value of experiments under this head made by Dr. Hughes Bennett, &c., *McKendrick*, 3879.

Experiments on animals are not necessary for ascertaining the properties of drugs, *Gull*, 5545–6. The effects of poisons and drugs cannot be studied under chloroform, *Paget*, 278; *Humphry*, 698, 701. Sometimes, however, they can be observed under anæsthesia, and an allowance made for the anæsthetic, *Brunton*, 5675–7. The number of experiments is increasing, *Paget*, 345–7.

To discover the action of drugs, operations, which are generally performed under anæsthetics, are often necessary, *Brunton*, 5660–2; the pain resulting therefrom is rare, and probably of small amount, *ibid.*, 5687–8; the chief pain is from the action of the drug, *ibid.*, 5664–6; after the result is obtained the animal is destroyed, *ibid.*, 5801–2.

Testing the action of poisons on animals is sometimes necessary in legal investigations, *Burrows*, 153–4; *Ferrier*, 3300–2; *Watson*, 35*e*; as in Palmer's case, or when a man has died after eating some substance, the nature of which was unknown, *Rolleston*, 1280; and if chemical tests fail, it may be necessary to apply a part of the suspected substance to a living animal; gives an instance, *Taylor*, 1188.

Refers to various discoveries by experiment with regard to the antagonism of certain poisons, *Sibson*, 4783. Refers to the discovery by experiment of an antidote for pycrotoxine, and also as to the value (*concerning which, see* "Results") of nitrite of amyl in *angina pectoris*. In the two series of experiments he operated on 46 animals, *Browne*, 3161–8.

Believes an antidote to snake poison can only be discovered by experiment, *Brunton*, 5689, and has inoculated a large number of animals and birds, in the hope of discovering a remedy, *ibid.*, 5746–5750; describes the symptoms, *ibid.*, 5681–4. Anæsthetics cannot be used, *ibid.*, 5683; but it is doubtful whether the pain be as great as in poisoning by strychnia, *ibid.*, 5685–6. Considers the discovery of an antidote unlikely, *Taylor*, 1205. He proved by experiment that the poison of the cobra di capello operates by absorption through a wound, and not through the stomach, *ibid.*, 1160–1.

It is seldom necessary to place an animal under the action of poison, *Paget*, 344. There is much useless toxicological experiment abroad, especially in France, *Taylor*, 1175–8; but, except in great trials, not in England, *ibid.*, 1235–7, 1263–7. In Palmer's case one witness experimented on 60 animals without obtaining any additional knowledge, *ibid.*, 1158, 1165–8, 1195–9. Considers the results arrived at by experiments with poisons are not to be relied on, inasmuch as the poisons are so often introduced into the system in methods which could not occur naturally; gives numerous instances, *Walker*, 4888, *page* 244.

Refers to Towell's case, *Taylor*, 1200–1; to chronic poisoning, *ibid.*, 1207; and to poisons which cannot be detected chemically, *ibid.*, 1208–11.

Strychnine kills vertebrate animals, but not invertebrate; gives instance, *Taylor*, 1174. Its action was not known before the trial of Palmer, *ibid.*, 1220–1. The cause of death in poisoning by strychnine was ascertained by experiment, *Pavy*, 2143–6. Refers to the probability of hydrate of chloral proving an antidote for strychnine and for the Calabar bean, *McKendrick*, 3879. In resuscitating by sustained artificial respiration an animal poisoned by strychnia probably no acute pain is felt, *Pavy*, 2148–9. Refers to a curious case of poisoning by arsenic, and to the proof obtained by experiment of its being accidental, in spite of apparently overwhelming evidence to the contrary, *Taylor*, 1162–4.

In Palmer's case experiment proved that absorption of a quantity of poison too small to be detected produced death, and that detection depended on the interval between its administration and death, *Taylor*, 1157.

Refers to his discovery by experiment of the anæsthetic properties of chinoline, *McKendrick*, 3906–28. Refers to his investigations with regard to the properties of podophyllin, *Rutherford*, 2945–6; and to the value of the experiments with regard to it, *ibid.*, 3016–7, 3020–1.

Regards the experiments on the biliary secretion of the dog as a very important one, *Rutherford*, 2002–8, 2959, 2961, 2964. Before this experiment, the action of rhubarb was involved in doubt, *ibid.*, 2955–6. Considers the knowledge of its effects on the dog a guide to its probable action on man, *ibid.*, 2956–9, 2962–7; and therefore calculated to

prolong human life and diminish suffering, *ibid.*, 2960. The operation was performed under curari, and took about half an hour, the dog was killed eight hours after; does not think the experiment involved great pain, *ibid.*, 2917–31; either chloroform or opium would have interfered with the result, *ibid.*, 2912–3. About 30 experiments were previously performed on the same subject under chloroform, *ibid.*, 2932. It is a moot point whether the action of calomel on a dog and on the human subject is similar, *ibid.*, 3012–4. Thinks testing the effect of rhubarb and other drugs on the secretion of bile in a dog a most important experiment, and one which should be performed both with and without anæsthetics, *Carpenter*, 5632–4.

Thinks the experiment on a dog as to the effects of rhubarb on its liver justifiable, *Lister*, 4404–7. Such an experiment should not be repeated for teaching purposes, *Rutherford*, 2943.

Reads detailed description of the experiments in which information was sought as to the effects of aloes and rhubarb on the secretion of bile, and contends that these experiments show the necessity of the measures advocated by the Society for the Abolition of Vivisection, *Jesse, pages* 277–8. Characterises such experiments as useless and cruel in the extreme; gives reasons, *Hoggan*, 3464, 4052–61.

Does not think the experiment of establishing a biliary fistula in dogs under curari would be very painful; gives reasons, *Sibson*, 4752, 4760. Dr. Rutherford first tried the effect of curari on the liver; and in other experiments under its influence made allowance for it; cannot say if an allowance could be made for an anæsthetic, *McKendrick*, 4003–8. Does not think chloroform could have been used in Dr. Rutherford's experiments, *Brunton*, 5760–8.

Gives details of Dr. Hughes Bennett's experiments with theine on a cat; urges that it shows the need of forbidding such experiments, *Jesse*, 4443.

Refers to Dr. Bennett's long and tedious experiments at Edinburgh as to the effect of mercury on the flow of bile, *Sharpey*, 575. Voted for the grant for these experiments, but was disappointed at the smallness of the result, *Haughton*, 1955. They were of great value for sick dogs, but none for sick men, *ibid.*, 1875. The old notion of the action of mercury on the liver has been disposed of by these experiments, *Humphry*, 699.

Experiments with regard to the properties of new drugs were going on at Guy's Hospital at the time of witness' visit, *Colam*, 1658.

EXPERIMENTS.

I. Experiments in general, necessity for.
II. Statements and opinions regarding certain specified experiments.
III. Experiments for demonstrations.
(i.) *As to their necessity.*
(ii.) *Painful experiments.*
(iii.) *As to the use of anæsthetics.*
(iv.) *Effect of experiments on students.*

I. Experiments in general, necessity for.

Vivisection is essential for the development of physiology, *Acland*, 920, 923; *Darwin*, 4668; *Sharpey*, 393; *Watson*, 41; *Carpenter*, 5601; *Humphry*, 630; *Handyside*, 5949–50; *Burrows*, 134; *Pye-Smith*, 2040; *Allman*, 5430–3.

Some painful experiments have elucidated points which could not otherwise have been ascertained, *Acland*, 915–22; they are necessary in novel cases of injury, *Paget*, 271–5; and in new ground, even if painful; gives instances, *Hayden*, 4601–2. Most eminent men agree that these experiments are necessary, but they should be conducted humanely, *Simon*, 1368; *Handyside*, 5949–50.

Civilization causes increase of disease, and consequently a necessary increase of experiments, *Humphry*, 724.

Without vivisection a knowledge of the functions and relations of the several parts of the body could not be obtained, *Humphry*, 602; and our ignorance of the vital processes would be barbarous, *ibid.*, 685–8. The practical observation of the living structure gives very different conceptions from those obtained by studying the dead subject, *Acland*, 990; and has revolutionized the theories of animal economy, *ibid.*, 922.

Most eminent surgeons have experimented on animals for investigating definite points; gives instances, *Turner*, 3141–5; those who have not, probably did so on their human patients, *Simon*, 1459. Experiments on animals obviate needless experiments on man, *ibid.*, 1442.

Vivisection establishes certainty, where otherwise surmises only exist; instances the circulation of the blood, *Darwin*, 4668. Reads extracts from Haller with regard to the necessity for vivisection, *Sharpey*, 692–3.

Knows what is being done generally, and the great advantage experiment has been to physiology, *Cleland*, 4609–10.

True scientific investigations develop medical and surgical improvement, and are useful in explaining observations on the human subject, *Sharpey*, 398–407.

The method of study, which may suffice for surgery, is not applicable to physiology, *Pavy*, 2113–5.

Deductions from anatomical observations can only be tested by experiment; refers to some of Sir C. Bell's erroneous deductions as examples, *Carpenter*, 5601. Observes that although anatomy traced the nerve fibres of the spinal chord, it was physiology which showed that the fibres on each side were connected with the opposite side of the brain, *McKendrick*, 3878–9. Has found his own investigations with regard to the respiratory organs of every-day service, *Sibson*, 4709–10.

Refers in detail to various investigations and researches, and argues that the resulting advantages are a justification of vivisection, *Handyside*, 5951–94; and the fact of eminent men experimenting on themselves shows its necessity, *ibid.*, 5994.

Is of opinion that many things essential for the preservation of human life can be ascertained only by experiments on animals, *Paget*, 382–5.

Fears lest in preventing abuses undue restraints should be put on scientific research, *Paget*, 382–5. The present state of surgical knowledge, *Watson*, 34, and our present knowledge of several of the vital functions of various organs and nerves could only have been reached by vivisection, *Turner*, 3081–8.

Refers to the desirability of speedily finding an antidote for snake poison as illustrating the necessity for experiments, *Paget*, 305. Advance of science necessitates new experiments, which lead to new discoveries, such as the use of anæsthetics, but they should be directed by skilled persons, *Sharpey*, 543–7.

Experiments on animals increase knowledge, and increased knowledge brings improved treatment, *Burrows*, 233; *Sharpey*, 394; *Simon*, 1462. Such as the use of the stethoscope, the improved treatment consequent on Harvey's and Sir Charles Bell's discoveries, the tying of large arteries, and the functions of the periosteum, *Sharpey*, 394–7. Lays stress on the additional knowledge derived rather than on the improvements resulting from vivisection, *ibid.*, 394–7, which often cannot be foreseen, *McKendrick*, 3795, as in the case of chloroform, *Carpenter*, 5615, and in the important results from Harvey's discovery of the circulation of the blood, *Burrows*, 244–8. Considers experiments on living animals one of the most important means of acquiring knowledge, *Lister*, 4291–2.

Gives instances of improved treatment resulting from increase of knowledge by experimentation, *Burdon-Sanderson*, 2296–300. Refers to the discoveries of the physiological antagonism between hydrate of chloral and strychnine, and also between the former drug or sulphate of atropia and the Calabar bean, *McKendrick*, 3879.

Most of his physiological experiments were for the relief of pain and cure of disease; those on the eye were for purely scientific ends, *McKendrick*, 3972. The advance of physiological science will also tend to mitigate the sufferings of animals, *ibid.*, 4020–1.

It is not the present applicability of physiological research, so much as the certainty of its ultimate guidance to the best treatment in medicine and surgery which manifests its utility, *Burdon-Sanderson*, 2296, 2704–6. Exact knowledge is the basis of preventive or curative treatment, and hence experiments are most desirable, *Simon*, 1417, 1420–1. The practice of medicine and surgery is based on clinical observations, physiological research, and experimentation, *ibid.*, 1444–5. Relies more on the knowledge derived from these experiments as to the nature of inflammation and fever than on that obtained from any other sources, *ibid.*, 1443. The knowledge obtained by the physiologist is used by the general practitioner, *ibid.*, 1460–1.

Putting animals to pain or death is justifiable, if likely to benefit man or increase knowledge, even if there be a doubt as to the practical use of that knowledge, *Acland*, 956–9, 992–3; *Humphry*, 778–9; *Simon*, 1358, 1409, and if undertaken with a definite object in view, *Haughton*, 1952–3.

Considers physiology the true basis on which pathology rests, *Sibson*, 4706–8. Experiment is the basis of medicine, *Handyside*, 5951. The practice of medicine and the foundation of the treatment of disease are based on physiology; a knowledge of healthy action is essential to a knowledge of diseased action; gives instance, *Pavy*, 2122–4, 2128.

It is not necessary to experiment on human beings to acquire thorough knowledge; there is no essential difference between the great functions in man and the lower animals; the physiology of the brain would be different, *Pavy*, 2133–9.

The phenomena in horses and calves being similar to those in the human being, the results would be analogous, *Lister*, 4363–6. The symptoms and effects of poisons on dogs and human beings are much the same, and so is the quantity which will produce death, *Taylor*, 1202. Drugs do not necessarily produce the same effect on human beings as on animals, *Pritchard*, 907–10. A drug may poison a dog, but not a man, *Watson*, 57. The effect of drugs on animals often differs widely from that on man, *Watson*, 35 *f*, *g*, 58. A drug may prove a poison to small birds and frogs, but an experiment with it may not yield much further information, *Taylor*, 1171–2. The effects of drugs on animals and on man sometimes vary; a rabbit will eat without injury sufficient belladonna to poison a dozen men, *Rolleston*, 1280. Dr. Hughes Bennett's experiments on dogs were of great value for sick dogs, but none for sick men, *Haughton*, 1875.

Dead animals are of little use in the study of anatomy, *Paget*, 342–3. Vivisection, though sometimes necessary, *Burrows*, 134, is comparatively rarely so, *ibid.*, 174. The present medical men who have never practised vivisection are efficient, *Cape*, 1817–8. Reads passage from Pichot's "Life and Labours of Sir Charles Bell," showing his reluctance to experiment and his objections to vivisection; reads also passages as to the necessity of pain, and refers to Collier's Translation of Celsus, *Jesse*, 6423–7. Puts in a reference to a sermon by Dr. Chalmers against vivisection, *ibid.*, 5553–6. Reads extracts giving Sir Charles Bell's opinion on causing protracted suffering, and one referring to mental and moral attributes of animals, *ibid.*, *page* 272. Quotes passages from Dr. Elliotson's "Human Physiology," showing that Dr. Majendie was unnecessarily cruel; also that the experiments of various eminent men were unsatisfactory, and that Gall and Sir C. Bell objected to vivisection, *ibid.*, *page* 271.

Prohibition of experiments would lead to general evasion of the law or to the flight of students to foreign schools. But an effectual restraint should be placed upon experiments made either in excessive numbers, or to establish what has been already proved, as well as upon experiments attended with great pain, and defeating the very object in view, and upon those undertaken merely for the sake of notoriety.—Report, pp. 11, 14.

II. Statements and opinions regarding certain specified experiments.

Experiments on arterial pressure should be performed under anæsthetics, *Humphry*, 749–50; without anæsthetics experiments as to pressure of the blood must be very painful; starving to death would be protracted suffering, *Sharpey*, 470.

Doubts the veracity of the description of the experiment in the *Doctor* demonstrating the structure of the cornea of a frog, *Humphry*, 656–66. Such an experiment would not have taken place under the control of any eminent man, *ibid.*, 673. Causing inflammation in the cornea of a frog's eye may not be very painful, and might be done after the brain is destroyed, *Sharpey*, 548–51. Nitrate of silver applied to the cornea of a frog to produce inflammation would not be very painful, *Taylor*, 1256–7.

Does not know whether administering curari to frogs, slitting them open, and dragging out the mesentery would be justifiable without seeing the experiment and knowing the conditions, *Burrows*, 243. It would be a cruel and useless experiment, the result being already known, *Acland*, 922–3. Cannot see what object the painful mesenteric operation referred to in Dr. Sanderson's handbook can serve, *Taylor*, 1271. Has performed the mesenteric experiment on a frog, twice for teaching, and several times for pathological purposes, under curari, which witness considers an anæsthetic, *Klein*, 2723, 3719–26.

Reads passages as to the intensity of the respiratory efforts when the animal is deprived of air, and the various phenomena observable during apnæa, *Jesse*, 6465.

Instances experiments by the Medical and Chirurgical Society on dogs, partially drowning them, then resuscitating and half drowning them again; it was very cruel, and, as it proved, useless, *Colam*, 1533.

Asphyxia is now well understood; painful experiments to prove known facts should not be made, *Burdon-Sanderson*, 2283.

Was at Norwich when absinthe was injected into a dog's veins. The animal did not appear to suffer much, *Humphry*, 707–17. Considers the knowledge obtained by the experiment was of some value, *ibid.*, 717–23. Considers the Norwich experiments were most cruel and unjustifiable, *Taylor*, 1188. The Norwich experiment was unnecessarily cruel; if the object was to ascertain the effect of absinthe on men, doubtless one of the purchasable voters would have got drunk on it for a consideration, *Haughton*, 1874–5. The majority of the Medical Association would have forbidden such experiments, *ibid.*, 1874. Did not witness the Norwich experiments; thinks they were founded on wrong views; the dogs were kept strapped down until relieved by a surgeon, *Fergusson*, 1086, 1106–7.

Some of the experiments proposed by Professor Magnan at Oxford were prohibited by the committee, *Haughton*, 1951.

Instances the injection of boiling water into the stomach and sand into the veins of dogs as wanton cruelty, *Walker*, 1802–8, 4888. Would not like to offer an opinion on the experiment of introducing boiling water into the stomach of a dog, without knowing its object, *Carpenter*, 5620.

Reads translated details of Paul Bert's prolonged experiment on the nerves of a curarised dog, kept alive by artificial respiration, and states results, *Hoggan*, 4109–11, 4235, 4140–1. According to the received theory of reflex action, there may not have been sensation, but has doubts as to the correctness of the theory, *ibid.*, 4143–53. Does not for an instant suppose that Paul Bert considered curari an anæsthetic, *ibid.*, 4154–6. Considers that tying the nerves would cause great pain; that experimentation was carried on during 10 hours; that the sufferings were the most excruciating and atrocious conceivable, and the results most trivial, *ibid.*, 4111–4, 4165–9, 4196–7, 4229–32. Contraction of the bladder is sometimes produced by the pain from a pinch; to obtain the same effect by such an immensity of pain was an inadequate result, *ibid.*, 4163. The fact that the pneumo-gastric and sympathetic nerves remained intact is an instance of the previously known action of curari, and proves that in this case the dose was small, an important fact, *ibid.*, 4157–61. Thinks the translation perfectly fair, and that his own remarks on it would be justified if ten times stronger, *ibid.*, 4170–1. In M. Paul Bert's experiments on the pneumo-gastric and sciatic nerves, there was not sufficient regard to the infliction of the smallest amount of pain necessary, *Burdon-Sanderson*, 2778.

Reads passages relating to the extremes of temperature which animals can endure, the phenomena attending starvation and other experiments, also as to the functions of the pneumo-gastric nerve, &c., *Jesse*, 6473.

Chosat's experiments on starvation have given valuable results, but should not be repeated unless doubted, *Burdon-Sanderson*, 2774–6. Considers Chosat's starvation experiments were carefully planned, and have shown that a certain temperature is necessary to preserve life, *Sibson*, 4751. The experiment of starving an animal to death might be tried once, but should not be repeated; would not have undertaken one, *Sharpe*, 572–4. Thinks that no great pain was given, starvation at one stage deadening the nerves, and thus stopping pain, *Sibson*, 4787–9.

Considers that the animals baked and frozen to death by Delaroche and Berger soon ceased to feel, *Burdon-Sanderson*, 2778–9. Thinks the experiment of raising or reducing the temperature of the body until death supervenes cannot be very painful, as the animal would soon become unconscious, *Sibson*, 4745–9. On raising the temperature of an animal to 112° or 113° it practically dies; when it sinks to about 70° it becomes unconscious, *ibid.*, 4784–6. In Dr. Legg's experiments on cats the temperature never exceeded fever heat, *Burdon-Sanderson*, 2388.

Goltz's experiment of boiling a frog to death is horrible, *Sibson*, 4750. Considers putting a frog into water and raising the temperature to 100° Fahrenheit a cruel and purposeless experiment, *Taylor*, 1258–9. A frog would be killed by placing it in water and raising the temperature to 100° Fahrenheit; such an experiment should not be repeated, *Rolleston*, 1345–6. A frog put into water and the temperature gradually raised should be removed directly it becomes uneasy; this is not specified in the directions in Dr. Sanderson's handbook, *Foster*, 2421–4. Argues that placing a frog in cold water and raising the temperature would not give much pain, *Parry*, 2159–62. Placing a frog in water and raising the temperature would be painful, but does not think the suffering worth serious consideration, *Lister*, 4420. Not knowing the particulars, declines to give an opinion on the experiments for ascertaining what temperature animals can endure, *Foster*, 2408–9.

Starving a dog in sight of food and water would not produce rabies, but would be unjustifiable from the ignorance displayed more than from the pain; does not know of any foreign experiment so painful, *Burdon-Sanderson*, 2764–70.

Majendie's experiments in feeding animals on gelatine or

on albumen were dietetic rather than therapeutic, *Walker*, 1783–4.

Is aware that in Norway stockfish and cow dung are given to cows in winter and sometimes lemons, *Walker*, 4900–1; but considers forcing Liebig's extract of meat into the stomachs of rabbits an experiment against nature, *ibid.*, 4888, and starving rabbits until they ate dead frogs cruel and unnecessary, *ibid.*, 4888, 4898–9. Admits that birds swallow frogs alive, but thinks it goes to prove the experiment unnecessary, *ibid.*, 4902–3. The experiment to show that the gastric juice will dissolve living substances might have been less cruelly performed; and its repetition for demonstration was cruel and unnecessary, *ibid.*, 4888.

Anæsthetics were used in his experiment as to the effect of light on the retina; had it failed, it would have been tried once without anæsthetics, *McKendrick*, 4015–6.

Refers to Baker's edition of Kirke's "Handbook of Physiology" as containing records of very cruel experiments, and tending to induce young men to practise private experimentation, *Jesse*, 6460*a*, 6466–70. Reads particulars of Dr. Hughes Bennett's experiment with théine on a cat, and various extracts to prove the correctness of the Society's views, *ibid.*, 4443. Reads passages from Hansard showing the great disgust and sensation of the House of Commons on hearing details of some experiments, thereby proving that the cruelties of vivisection are not exaggerated, *ibid.*, *page* 223. Gives details of experiments for testing the effects of aloes and rhubarb on the biliary secretion of the dog, and extracts from the British Medical Journal to show that painful experiments are being carried on, *ibid.*, *pages* 277–8.

Instances cruel and useless experiments on dogs, rabbits, doves, and frogs; puts in a sketch of a frog nailed to a board and starved, so as to test the nervous exhaustion, *Walker*, 4888. The descriptions are taken from various writers, but there is no reference in them to anæsthetics, *ibid.*, 4888–90. Refers to "one of the frightful struggles so common in physiological laboratories" when meat steeped in colocynth was thrust down a cat's throat, *ibid.*, 4888, 4891–7.

Thinks the extirpation of the kidneys as described by Béclard justifiable, being likely to produce scientific results, *Foster*, 2406.

Testing the action of the inhibitory nerves on the secretions was tried with and without anæsthetics, the results being the same; anæsthetics were subsequently used, *Sinclair*, 5829–32. They would have been used at first had there not been doubt as to the result, *ibid.*, 5905–6.

Thinks a repetition of the experiment on the chorda tympani, described by Claude Bernard, criminal; believes anæsthetics would effect the result, *Hoggan*, 4034–51.

Quotes from a work by the editor of the "Veterinarian" an account of various painful experiments on the functions of the brain in birds and dogs, some lasting from six to 16 days, *Jesse*, *pages* 271–2. Refers to various experiments on dogs, especially to one of eight hours duration, in which various portions of the brain were successively removed, and consciousness partially retained, *ibid.*, *page* 221.

Considers the experiment of making two animals grow together might be of importance in the treatment of ulcers, *Carpenter*, 5621–2.

A surgeon abroad trephined the skulls of six goats to discover its effect by post-mortem examination; considers this purposeless, *Walker*, 1721–6, 1791–2. Gooch excised the rib of a dog to see if it might be possible in a human subject, *ibid.*, 1793–4.

A lobster moving its limbs when cut is not a proof of cruelty, but ignorance on the part of those who allege it, *Turner*, 3108–9.

Some of Sir B. Brodie's experiments were on animals just killed rather than live animals, *Acland*, 921.

In some of Brown-Séquard's experiments animals were kept suffering for weeks, *Colam*, 1544. Believes Brown-Séquard's experiment of producing epilepsy artificially is painless; gives reasons, *McDonnell*, 4571.

Has performed some operations on live animals to elucidate the condition of the blood-vessels of the brain under different modes of dying; death ensued in less than five minutes, sensation ceased before death, and the pain was less than from the ordinary modes of killing, *Burrows*, 125–8, 130–1.

Professor Syme's experiments were few, very judiciously chosen, and humanely conducted, *Sharpey*, 410–1.

Schwann of Louvain tried some severe experiments on the gall bladder, *Sharpey*, 575. He connected the gall bladder with an opening in the side to discover the use of the bile; the experiment would last some weeks, but the operation would be performed under chloroform, *ibid.*, 420–7.

Has never experimented on the injecting small mammalian animals, nor on arterial pressure in England, *Klein*, 3727–9.

III. Experiments for demonstration.

(i.) *As to their necessity.*
(ii.) *Painful experiments.*
(iii.) *As to the use of anæsthetics.*
(iv.) *Effect of experiments on students.*

(i.) *As to their necessity.*

Considers that no definite line can be drawn between experiments for demonstration and for investigation, *Humphry*, 735, 739.

Experimental illustration is as necessary for teaching physiology as it is for teaching chemistry, *Pavy*, 2109–13; or as bedside practice is for the medical student, *ibid.*, 2130–2; or as dissection for learning the structure of the body, *Turner*, 3092–8; *Cleland*, 4638. Knowledge gained by seeing, hearing, and reading is better than knowledge gained by hearing and reading only, *Pavy*, 2125–6, 2129; gives instance, *Brunton*, 5716–7. A desire to impress facts on the mind by demonstration sometimes leads to extravagant experimentation, *Rolleston*, 1286.

The knowledge gained by seeing the action of a living heart, and the peristaltic action of the intestines, is of inestimable value to a medical man, and can be obtained only by vivisection, *ibib.*, 2200–4; *Pye-Smith*, 2108–21; *Simon*, 1464, 1455–8. In this respect the study of physiology is analogous to that of chemistry; experiment is essential in both; while for surgical operations the knowledge required is rather of the mechanical structure of the parts, and can be obtained by anatomy, *Pye-Smith*, 2108–21.

Believes it impossible to teach physiology by lectures only, *Sibson*, 4705. Experiments are essential, *Rutherford*, 2940–2; *Brunton*, 5716–7; *McDonnell*, 4505–8; *Purser*, 4793–9*a*; *Gamgee*, 5386–7. Reasons and instances given, *Burdon-Sanderson*, 2658–9; *Brunton*, 5716–7; *McDonnell*, 4505–8, 4528.

Is of opinion that the circulation of the blood is more easily learnt from description than from ocular demonstration, *Garrod*, 2000–3. Admits that no one could understand the action of the living muscle from seeing a dead one, but considers that it is not necessary to teach it by demonstration, *ibid.*, 1999. Points out that although in chemistry, experiment is necessary for the student, surgery is taught by text-books without experiment, *ibid.*, 1996–8. Except for senior students, experiments for demonstration are unnecessary, *Hayden*, 4598–9, 4603. Performed some experiments before his class when he first became professor; gives details; the higher animals were always anæsthetized, *ibid.*, 4595–7, 4600. Has never exhibited experiments, except on frogs, but has seen vivisection in Professor Ludwig's laboratory at Leipsic, *Cleland*, 4653–4.

Has never demonstrated on live animals, *Sinclair*, 5849–50; but in his investigations has used 30 or 40 frogs, but not anæsthetised; they were pithed when possible, *ibid.*, 5847–8, 5900–4; some of his pupils were present at these investigations, *ibid.*, 5851–3.

Thinks experiments necessary for the advance of science, but not for teaching if painful, *Allman*, 5430–3; has never made experiments on live animals for demonstration, and for private experiments has used frogs only, *ibid.*, 5448.

Objects to all experiments for mere instruction, *Acland*, 947; *Haughton*, 1872, 1876–7, 1963; they are unnecessary, *ibid.* 1897, 1943; *Hoggan*, 4244. Instruction can be adequately conveyed by diagrams, dissections, *Ackland*, 933, 939, 947, 965–7; mechanical contrivances, *Hoggan*, 4244; and descriptions, *Walker*, 1809; *Garrod*, 1986, 1993, 1995.

Classes generally may be as well taught without experiments as with them, *Paget*, 375; besides the abnormal conditions introduced by the operation often affect the result, *Haughton*, 1897. An organized course of practical instruction minimizes the number of experiments, one animal being sufficient for a whole class, *Rutherford*, 2867–8, 2891, 2894–5. Witness has been told by students that seeing these experiments has taken away that desire they might otherwise have felt to make experiments for themselves, *Burdon-Sanderson*, 2613.

Some of the experiments demonstrating the mechanism of the human body are even more necessary than those showing the action of poisons, *Rutherford*, 2981.

Details his method of instruction; never performs a painful experiment for demonstration, and always destroys the animal before sensibility returns, *Gamgee*, 5356–7, 5373, 5397–400; performs experiments before his class with regard to arterial pressure, but always under anæsthetics, *ibid.*, 5401–2.

Considers that the action of poisons is so marked, and the descriptions so clear, that demonstration is unnecessary, *Allman*, 5449–51.

The dreadful action and operation of strychnine can be described without experiments, *Taylor*, 1218–9, 1222; such

experiments for demonstration are purposeless cruelty, *ibid.*, 1179–80, 1260; cannot remember an instance where the death of an animal is necessary for medico-legal teaching, *ibid.*, 1229. Has never performed such experiments for demonstration, with the exception of one or two as to the action of mineral acids, *ibid.*, 1227; but as these did not prove more instructive than drawings and models he discontinued them, *ibid.*, 1261. Considers wax models and drawings, together with verbal descriptions, sufficient for enabling students to recognize the action of ordinary poisons, *ibid.*, 1223–7, 1261–2. Used a large number of stomachs of human beings who have been poisoned, for demonstration, *ibid.*, 1228.

Would not like to consider such an eminent man as Dr. Taylor wrong in saying that experiment on live animals was not necessary in toxicological education, *Simon*, 1463.

The action of the most important poisons should be shown to students so as to give them a vivid conception of their action; anæsthetics could not be used, but the pain is of short duration, *Burdon-Sanderson*, 2231–8, 2618, 2620–2.

Students should be shown the action of poisons, so as to recognize them in the human subject; the experiments are of short duration, and give a completeness of knowledge which cannot be communicated by oral instruction, *Ferrier*, 3237–42, 3244, 3299, 3303. In such experiments uses such poisons as have marked characteristics and act speedily; enumerates the kinds of animals experimented on, *ibid.*, 3401–5.

Students should see the effects of poisons, so as to recognize them in man; one animal is sufficient for 300 students; chloroform cannot be used, but death would be speedy, *Sharpey*, 507–11. They are necessary on frogs to show the action of poisons, *Rutherford*, 2858–9, 2862. Considers ocular demonstration of the action of poisons, such as strychnine, &c., essential, *ibid.*, 2980–2. It is desirable that students should see the action of strychnine, so as to recognize its effects on the human subject, and to understand tetanus, *ibid.*, 2860–1, 2976–9.

Advanced students only, require to be shown such experiments as those showing the action of strychnine, or that of hydrate of chloral as an antidote, *McKendrick*, 3886–92, 3966–9; such experiments are not very painful, and are soon over, *ibid.*, 3880–5.

It is seldom necessary to show the action of posions, but the desirability of doing so should be left to the discretion of the teacher, *Gull*, 5507–10.

Poisoning by prussic acid is the only experiment witness performs at present without chloroform; uses rabbits and cats for these demonstrations, *Brunton*, 5704–7. The pain from poisoning by carbonic oxide or carbonic acid gas is in the recovery, and is probably not great, *ibid.*, 5710–5. Poisoning by strychnine and picrotoxine and other organic poisons is shown at St. Bartholomew's by the lecturer on forensic medicine; the pain is much the same in either, *ibid.*, 5708–9, 5814; thinks the action of strychnine could not be shown under chloroform; gives reasons, *ibid.*, 5803, 5813. Having ascertained the cause of death in poisoning by strychnine, witness demonstrates it under chloroform in lecturing, *Pavy*, 2143–6.

Experiments for the induction of disease are unsuited for demonstration, *Ferrier*, 3243–4.

Attaches very great importance to demonstration as a means of instruction; gives instances of its advantages, *Lister*, 4312–3, 4339–43; but has only once experimented himself for demonstration, his subject, practical surgery, not requiring it, *ibid.*, 4308–9, 4317–23. Some demonstration by experiments is desirable, but students should be prohibited from operating, *Gull*, 5476–8. Instances various desirable and painless experiments and gives details, and also particulars as to the duration of mobility after death or after severance from the living body, *Handyside*, 5930–6.

(ii.) *Painful experiments.*

Some painful experiments are most important in teaching, *Cleland*, 4635–7, 4657; *Purser*, 4793–9*a*; but very few such are necessary, *Gull*, 5505–7; *McDonnell*, 4568. Believes painful experiments are more numerous than is necessary, and that the knowledge gained has not been commensurate with the pain given, *Ferguson*, 1016–8.

The fundamental facts of physiology can be demonstrated on insensible animals, *Sibson*, 4714.

Painless experiments only are necessary for demonstration, *McKendrick*, 3898, 3933; is himself contented with demonstrations on decapitated frogs, *ibid.*, 3897. Believes that allowing painful experiments in research would be useless practically, as any experiments might be held to come under that head, *Hoggan*, 4244.

Painful experiments should not be allowed for demonstration, *Paget*, 282–4, 290; *Sharpey*, 466–7; they are unnecessary, *Rutherford*, 2940–2; *Carpenter*, 5602, 5620; and might be forbidden without disadvantage, *Burdon-Sanderson*, 2619; *Pavy*, 2191–2; but if painless they are most desirable for teaching purposes, *Carpenter*, 5602, 5620.

There is a general agreement among physiologists that painful experiments are neither necessary nor desirable for demonstration, *Burdon-Sanderson*, 2618, 2756–62.

Painful experiments to demonstrate facts should not be repeated for demonstration, *McDonnell*, 4472–3, 4587; such repetition is cruel and useless, *Watson*, 39–40, 67, 70.

Considers the repetition of a painful experiment to demonstrate admitted results an abuse; gives an instance, *Hoggan*, 3454–8.

(iii.) *As to the use of anæsthetics.*

Considers that in demonstration anæsthetics should be used on the higher animals in deference to the feelings of those present, *Klein*, 3538, 3542, 3563; cannot say, however, whether the efficiency of the demonstration is affected by their use, *ibid.*, 3555. When chloroform cannot be used, witness asks if any of the students object to the experiment being performed, *ibid.*, 3550–2, 3627–8; on one occasion, objection having been taken, the experiment was not performed, *ibid.*, 3671–5. Does not consider it necessary to pith frogs for demonstration, *ibid.*, 3681–3.

Experiments before classes should be very few, and most of them be performed under anæsthetics, *Turner*, 3138. A few cardinal experiments confined to those which can be performed under anæsthetics may be desirable for students, *Rolleston*, 1283, 1291–5; but the animals should be killed before recovering consciousness, *ibid.*, 1315–6; *Walker*, 4910.

Experiments for teaching should be limited even under anæsthetics to facts which cannot be illustrated by description or diagrams such as the action of the heart, *Paget*, 291–2.

Thinks that the exposition of the movements of the heart and similar experiments ought not to be undertaken without anæsthetics in addition to curari, *Scott*, 5195–9.

Has an instinctive aversion from demonstrational experiments before classes in special physiology, *Garrod*, 1980, 1992; does not object to those on pithed or decapitated animals, *ibid.*, 2004; but does to those under anæsthetics, because the animals can return to the normal state, *ibid.*, 2005. Performs experiments for his own instruction, but always under anæsthetics, *ibid.*, 1976–8.

Always uses anæsthetics himself, *Burdon-Sanderson*, 2230.

A known anæsthetic should always be used in experiments for demonstration, *Rutherford*, 2933–5.

Believes that no large body of English students would tolerate experiments unless anæsthesia is produced and maintained, *Pavy*, 2035–6; gives instances, *Rutherford*, 2898–900. In England animals are never "crucified" for several days, *Ferrier*, 3333–8; has never seen any "frightful" experiments, before students, *ibid.*, 3351–2; students have a repugnance to experiments for demonstration, and would rebel against painful ones even under anæsthesia, *ibid.*, 3340–4, 3354–5.

Has seen formidable but not "frightful" experiments performed before students, but always under anæsthesia; they would manifest great repugnance if anæsthetics were not used, *Schäfer*, 3828–36.

Anæsthetics should be used in class demonstration; they prevent the demoralizing effects of seeing unnecessary pain inflicted, *Lister*, 4328; but does not believe that properly conducted experiments demoralize students, or that there is any levity at class demonstrations, *ibid.*, 4311, 4314, 4367–9. Believes students would not object to any properly conducted experiments even if painful, *Purser*, 4304. Has occasionally given painless demonstrations when teaching privately, and saw a few when a student, *ibid.*, 4826–33, 4881. Practically all experiments for demonstration can be performed under anæsthesia, *Ferrier*, 3234–5, 3244, 3297, 3353; with the exception of those with poisons, *Sharpey*, 300, 539–42; *Carpenter*, 5602, 5620.

Considers it most undesirable to forbid experiments on living animals when deprived of sensation, *Carpenter*, 5642–3.

In painful experiments for demonstration witness always uses anæsthetics, *Foster*, 2338–42, 2417–8.

Experimentation without the use of anæsthetics is not a fitting exhibition for teaching purposes, but where demonstrations are exhibited under anæsthetics the sense of humanity of the students is not impaired.—Report, p. 18.

(iv.) *Effect of experiments on students.*

Sees no reason why experiments before classes should exert a bad influence on students, *Simon*, 1497. Considers,

on the contrary, that the impression on a class that good will result from an experiment has a humanizing effect, although passively witnessing suffering is brutalizing, *McDonnell*, 4480–3. Does not think witnessing these experiments blunts humane feelings; gives instances to the contrary, *Sharpey*, 503, 585–6.

Students should study in a physiological laboratory, learn how knowledge is acquired by demonstrative experiments and see some painful ones; very few would suffice, except in pathology, *Humphry*, 736–8. Scientific education is to a great extent based on the evidences of the senses, and it is a question whether students should individually experiment or collectively, *Simon*, 1454.

Is convinced that in many cases vivisection in the presence of students would have a hardening and degrading effect, *Haughton*, 1888.

Painful demonstrations are demoralizing, *Rolleston*, 1299–300; *Walker*, 4910; quotes Kingsley and Lipsius in support of this, *Rolleston*, 1287, 1338; they should be forbidden, *ibid.*, 1306–14; *Burrows*, 139, 175, 199; *Walker*, 1701, 1731, under heavy penalties, *Hoggan*, 4244.

Considers that the teacher should decide as to the repetition of such experiments as those of Sir Charles Bell on the nerves, but believes they would not be tolerated by students or teachers, *Gull*, 5471, 5511–5. Teachers of physiology should be the sole judges as to the propriety of performing experiments, *Purser*, 4800–9.

EXTENT OF PRACTICE OF EXPERIMENTS ON LIVE ANIMALS.

I. Generally.

II. In the United Kingdom.
(i.) *Generally.*
(ii.) *In the medical schools.*
(iii.) *In private laboratories.*

III. Abroad.

I. Generally.

Vivisection is not a new thing; Galen describes it as it existed in the second century, and gives details with regard to his experiments on the spinal chord, *Sharpey*, 499–500. Vesalius devotes a chapter of his work, published in 1543, to it, and appears to have exhibited his experiments to a class, *ibid.*, 497, 501.

In England it has long been recognised as a method of research. Harvey demonstrated the circulation to Charles I. and his family by experiment on the living animal, *Burrows*, 138; and in more recent times the labours of such men as Sir Benjamin Brodie, Dr. Hope, and Sir Charles Bell have been recognised by the profession as well as encouraged by the learned societies of the country, *Acland*, 985–6; and it is doubtful whether experiments on living animals are now more numerous than in former years, *Watson*, 104–5; *Pavy*, 2037.

The method of investigation has not changed, but it is more completely carried out, and the schools of physiology are more completely organized than formerly, *Burdon-Sanderson*, 2212–3, 2672–6.

The practice of vivisection is a new phase of research, and is extending, *Walker*, 1717. Enumerates the various kinds of experiments, classified according to their objects, which are comprised under the term vivisection, *ibid.*, 1721.

Formerly medical men made experiments with the object of being enabled to relieve human suffering; now there are professed biologists whose object is to obtain abstract knowledge, irrespective of ulterior advantages, *Walker*, 1777; *Acland*, 944, 978–84; fears that this results in animals being treated as if they were unconscious inorganic substances, *ibid.*, 944–5.

Considers physiological experiments have much increased since Sir Charles Bell's time; but believes that when Sir Charles spoke of their being then monstrously prevalent he referred to the French school and Majendie, whose experiments, although they led to the saving of lives, were needlessly repeated to classes, *Paget*, 349.

Vivisection has increased because teaching generally has become more thorough and practical, and because there are more workers, *Turner*, 3090–1, and more purely physiological investigators, *Rutherford*, 2848.

Physiological laboratories are the outcome of the zeal of physiologists, *Acland*, 978–80; and special appliances will follow the growing refinement of research, and make experiments by students improbable, *Burdon-Sanderson*, 2680–5; as well as tend to produce men of higher scientific attainments, *ibid.*, 2732–4.

The improvement of the microscope, *Acland*, 922, the increase of investigators, and the discovery of anæsthetics have all tended to extend the practice of experiment, *Humphry*, 604, 675–9.

Reads memorial from the medical profession in Dublin, referring to the enormous extension of vivisection, its liability to abuse, &c., *Haughton*, 1867.

Refers to the publication of such works as Huxley's "Elementary Physiology for Boys and Girls" as an evidence of the spread of the practice of vivisection, *Jesse*, 6465–7.

Believes that the progress of discovery is likely to be rapid, *McKendrick*, 3930, and that as science advances vivisection will decrease; instances a case in point, *ibid.*, 3905–6.

Vivisection is much discouraged by eminent men, except when absolutely necessary, *Sharpey*, 445.

As a rule medical men have neither time nor inclination to vivisect, *Turner*, 3077–8. Many eminent men have never either performed or seen a vivisection, *Watson*, 32–3, 62; *Walker*, 1778; *Darwin*, 4661, 4670.

The number of persons competent to undertake original research is comparatively limited, *Fergusson*, 1023.

Thinks from published accounts that the number of experiments is excessive, *Walker*, 1810, and that they are often ill-conducted and useless, *ibid.*, 1726, especially among French experimenters, *Taylor*, 1178. It is very difficult to judge when an experiment is needless, but there have been such, *Foster*, 2405.

Experiment on live animals is frequently resorted to prematurely, and before other available means have been exhausted, *Paget*, 302.

It would be as easy to inquire into freemasonry as to seek information with regard to private experimentation, *Hoggan*, 4225–8. Admission into laboratories is refused to those who are known to be opposed to the practice of vivisection; gives instances, *Walker*, 4904–9. Medical men naturally refuse to collect evidence against scientific brethren, *Haughton*, 1867.

Believes if the details of these experiments were known public indignation would be as much roused as it was at body snatching, *Fergusson*, 1036, 1040–8; and that even in the London laboratories there is great recklessness in performing experiments. Is of opinion that inquiries should be made with regard to what is done in them, *ibid.*, 1035, 1112–6, 1125.

Puts in statement, with references, of a large number of experiments attended by pain, and of others entailing prolonged suffering (Appendix IV.), *Colam*, 1533–9. Foreign experiments are omitted, except when recommended in English publications, *ibid.*, 1569.

The study of physiology in England has extended since witness first came over, *Klein*, 3567–70; formerly one had to go abroad to learn it, *Hoggan*, 4205.

The performance of such experiments as Professor Rutherford's, *ibid.*, 4203–5, and the "liberal" supply of animals for experiment at the West Riding Lunatic Asylum, *Walker*, 4888, and the provisions made at the New University, Edinburgh, for these experiments, *Fergusson*, 1115, are all evidences of the extension of experimental physiology, *ibid.*, 1016. It is even taught in girls' schools by lady physiologists; instance and particulars given, *Colam*, 1569, 1614–21; *Turner*, 3108–9.

Believes that the number of experiments for ascertaining the action of drugs and poisons is increasing, but those for physiological and surgical purposes diminishing, *Paget*, 345–7.

The comparatively large number of experiments arises from the increased rapidity of investigation, *Burdon-Sanderson*, 2786–9; believes, however, that the number will decrease as organisation increases, *ibid.*, 2825, and as knowledge becomes methodised and the number of facts on which it rests smaller, *ibid.*, 2783–5.

The elaborate nature of the appliances now required will tend to diminish private experimentation, *Gamgee*, 5377, 5421–3.

II. In the United Kingdom.

(i.) *Generally.*

Believes painful experiments in this country are very few, *Sharpey*, 584; and that no one in England performs them on the same scale that Mayo did in Majendie's time, *Simon*, 1372–3, 1478–80. Mayo's experiments, if not great experiments, were certainly justifiable ones, *Sibson*, 4740–2.

Twenty years ago there was very little physiological work done in England, but from 1810–20 there was probably as much done here as abroad, *Foster*, 2413.

Doubts if there be more vivisection in the way of research than formerly; instances the time of Harvey, *Gull*, 5487.

In the last 20 years only three papers of the Royal Society, out of 18 or 19, on physiological subjects have related to painful experiments on animals, *Burdon-Sanderson*, 2605–7. Until lately the only pure physio-

logical office in Great Britain was at Edinburgh, and now there are three only, *ibid.*, 2301.

Does not think there is any private experimentation out of a laboratory, *Klein*, 3571, and very little out of the physiological schools, *Humphry*, 638–40; *Fergusson*, 1139–40; *Sharpey*, 482–4; *Paget*, 307; *Gamgee*, 5370.

The physiological investigators in England are very few, *Ferrier*, 3256, *Gamgee*, 5370, and are mostly eminent, *Ferrier*, 3257–9, as well as competent and careful men, *Simon*, 1369–71, 1378–81, who experiment for the purpose of discovering actual benefits only. Believes they would support any legislation for restraining vivisection within these limits, *Taylor*, 1184.

In England these experiments are in the hands of a comparatively few competent persons only, *Sharpey*, 431–4.

Believes English experimenters generally are humane, *Turner*, 3139–40, and more considerate than foreign physiologists, *Foster*, 2410. Experiments are in England, as far as possible, performed under anæsthetics, *Pye-Smith*, 2048–9. The tone of English feeling on this point is higher than that abroad, *Rutherford*, 2850–4. The English public has considerable regard for the feelings of animals, *Klein*, 3547–8, 3554; and this feeling tends to prevent the infliction of unnecessary pain, *Burdon-Sanderson*, 2285–7. Does not believe there is any cruel experimentation in England, *ibid.*, 2688. Does not believe that abuses exist in English schools, and thinks they may be safely trusted to prevent them and to minimize pain, *Foster*, 2320–1, 2346–7, 2416. Severe experiments are seldom performed in England, *Sharpey*, 479.

English physiologists are more considerate than foreign physiologists in inflicting pain, *Foster*, 2410; *Burdon-Sanderson*, 2227–9. Does not know of any case of wanton cruelty, 1543–8.

Does not believe the opinions held abroad will make progress here, *Burdon-Sanderson*, 2759.

Any abuse in experiments on live animals is greatly exaggerated; believes these investigations are properly conducted by competent persons in England, *Humphry*, 619–20. There is no basis for the present popular excitement, *Handyside*, 5948.

Thinks it probable young English physiologists who have studied abroad, particularly at Leipsic, might introduce the methods used there, *Sharpey*, 538; but they are not common in English schools, *Paget*, 351.

Considers that medical journals and works of physiologists prove vivisection to be frequent in this country; that students are instructed by means of handbooks; and hat the experiments are often useless and cruel, *Colam*, 1569. Believes also that continental views of vivisection are rapidly spreading in this country, *ibid.*, 1569.

The course of experiment in England and abroad is much the same; and such experiments as Paul Bert's will certainly be undertaken here unless they are forbidden, *Hoggan*, 3459–61, 4164.

Refers to the appointment of a French physiologist at the college for the medical education of women, *Burdon-Sanderson*, 2790–5.

(ii.) *In the medical schools.*

Does not know half a dozen schools in England in which experimental physiology is carried on, *Humphry*, 763–5. The number of laboratories in London is very small; the largest are at University College, Guy's Hospital, King's College, and the Brown Institute, *Schäfer*, 3820–3. Hopes, however, that the number of laboratories will increase, as vivisection is now much too infrequent, *Gamgee*, 5383. There is very little physiological work now done in England, *Humphry*, 763–8. Believes that less pain would be inflicted if physiology were as well studied here as abroad, *Cleland*. 4660.

Vivisection is carried on at some colleges and hospitals in London; also by Dr. Richardson at his residence and at Owen's College, Manchester, at Edinburgh, and by Professor Foster at Cambridge, who is much employed in that way, *Sharpey*, 457.

The medical school in Edinburgh is the largest in the kingdom, and physiology is taught there by a course of lectures, a practical course and a few experiments on live animals, *Rutherford*, 2830–1. All experiments at Edinburgh are performed as humanely as possible, *Handyside*, 5928–9, 5931.

Reads, as evidence of the growth of the practice of vivisection, particulars with regard to the plans for the physiological laboratory in the new university buildings at Edinburgh, *Jesse, page* 223. These buildings are designed not to increase vivisection but to give greater convenience for experiments, *Rutherford*, 2890, 2892–3; the larger number of which are on the dead tissues, the chemistry of digestion, &c., *ibid.*, 2869–70.

States the number of dogs, rabbits, and frogs used in the systematic and practical courses at the University of Edinburgh, *Rutherford*, 2990–2, 2838. In both courses the dogs and rabbits are rendered unconscious, and the frogs generally pithed; those not pithed are used to illustrate the action of poisons, *ibid.*, 2832–9.

Experiments for original research are either performed by himself or his assistant, or some one under their immediate superintendence, *Rutherford*, 2840. During the last year 40 dogs and 8 rabbits were used for purposes of research; the number of dogs was, however, exceptionally high, *ibid.*, 2993–5. On the average about half these experiments are painful, *ibid.*, 2841–6.

Quotes from the "Scotsman" a passage by Dr. Rutherford as to the practice at Edinburgh University of making experiments without narcotics when necessary for research or verification of results, *Jesse, page* 223.

Has never known a student desirous of undertaking an original research; at Edinburgh the only experiment by students is that of demonstrating the circulation of the blood under the microscope, *Rutherford*, 2997.

Deprecates the practice of requiring theses from students before giving them the M. D. degree at the University of Edinburgh, on the ground that it leads to vivisection by the M. B.'s in order that they may have something original to write about, *Hoggan*, 4238; admits, however, that the number of theses at Edinburgh on experimental physiology is relatively small, *ibid.*, 4242–3.

Refers in detail to an experiment on a curarised frog, which formed part of the course at Edinburgh in June 1871, and with which witness was so disgusted that he never went again, *Scott*, 5188–93, 5200–3, 5221–3, 5227–8, 5233–6.

Experimental research has been long and humanely pursued in Ireland, *McDonnell*, 4511, but experiments for teaching are very few indeed, although some are desirable; the number of animals witness has used altogether is very small, *ibid.*, 4509–10.

The Dublin University forbids vivisection and will not recognise the certificates of schools in which students are permitted to practise it, or in which it is used as a means of demonstration, *Haughton*, 1867, 1869. All experiments on live animals, even if under anæsthetics, are included in the prohibition, but not experiments on animals just killed, *Purser*, 4839–43, 4847–9, 4867–8, 4886; *Haughton*, 1919–23; and as artificial respiration can be kept up, a considerable number of experiments can be performed under these conditions, *Haughton*, 1917–8. These regulations were made a year and a half ago, when the physiology class was first started, *ibid.*, 1898. Professor Purser conducts the classes in physiology and histology without experiments on live animals, and finds no practical difficulty, although he would as a matter of feeling prefer being unfettered, *ibid.*, 1903–7. Is considerably impeded in his physiological lectures by the University regulation, forbidding experiments on live animals, *Purser*, 4792–3, gives instances, *ibid.*, 4843, 4851–5, 4876; thinks that if the regulation were repealed the control of the University authorities would prevent abuse, *ibid.*, 4834–5.

Students do not perform experiments at Dublin; considers that they should not be allowed to do so, unless under the direction of a professor, *Purser*, 4812–6, 4835–8.

The professors in the five extra schools agree that vivisection is unnecessary in lecturing, *Haughton*, 1900–2. Describes the government, &c. of the school of physic, *ibid.*, 1868.

At Oxford no one in particular is authorised to perform experiments, *Acland*, 960, but students are not allowed to undertake them, *ibid.*, 961–2, *Rolleston*, 1334, and there is no reckless experimentation, *ibid.*, 1335. The experiments shown to students have been very few, and always under anæsthetics, *ibid.*, 1336–7.

Experiments at Cambridge are not under control of the authorities, but of one of the professors, *Humphry*, 757–61, under whom senior students, many of them men advanced in years, are sometimes deputed to perform vivisection, but always under anæsthesia, *ibid.*, 694–6.

There is no physiological laboratory at St. Bartholomew's, but a private room of Dr. Brunton's is used for experiments, *Legg*, 5257–8.

At St. Bartholomew's saw Dr. Brunton perform several experiments on cats and frogs to ascertain the action of certain poisons, and to endeavour to find an antidote; the animals were wholly or almost entirely insensible, and were destroyed, *Colam*, 1568–9.

In the first series of investigations with regard to cholera, gives details, witness used 90 cats, *Brunton*, 5721–7; is now proceeding with the third series of experiments; no beneficial discovery has yet been made, *ibid.*, 5728–30, 5747. Has never sewn up the lips of any of the cats, *ibid.*, 5731–6. Observes that the number of animals required in original research varies enormously, *ibid.*,

5720; has himself used about 150 animals in all, *ibid.*, 5748–9.

Has performed four or five series of experiments, all referring to diseases which may occur in man, *Legg*, 5255, 5320–2; gives particulars, *ibid.*, 5295–314. Reads up his subject well before experimenting, and employs anæsthetics, where practicable, *ibid.*, 5286, 5331, 5342. Performed a series of experiments as to the effect of ligature of the biliary duct on 16 cats, *ibid.*, 5256–9; this was the largest number of animals in any one series of experiments, but not, witness considers, too large for securing accurate results, *ibid.*, 5265–7, 5313. The experiments were conducted as humanely as possible, but the results could not have been obtained by killing the animals after three or four days, *ibid.*, 5277, 5290–1. Judging from human experience, does not think, however, that the experiments could have been very painful, *ibid.*, 5269–80; gives details and particulars, and enumerates the main results, which he considers new and important, *ibid.*, 5260–5, 5284–6, 5292, considering the great differences of opinion which exist with regard to liver diseases, *ibid.*, 5322–4.

Has not read the details, but thinks it quite possible these experiments were not advisable, *Sharpey*, 577.

Reads extracts from St. Bartholomew's Hospital reports, 1873, as to Dr. Legg's experiments on biliary fistula in cats, giving details with regard to some of the more protracted ones, and adverting to the differences of opinion as to the cause of death, *Jesse, page* 277.

Considers that a man who would perform such an experiment ought not to be licensed, *Walker*, 1810.

Is employed at University College solely in lecturing and original research; gives a course annually of 75 lectures of an hour each, in which no experiments on animals are performed, *Burdon-Sanderson*, 2651–4, 2660; also goes through a practical course of chemical and other experiments, some on the living tissues of dead animals, others on insensible live animals, *ibid.*, 2654; besides frogs, five or six rabbits, at the outside, are used, *ibid.*, 2655–7. The ordinary students attend both courses, *ibid.*, 2714–5; gives particulars, *ibid.*, 2660–1, 2357. The experiments are very rarely performed in the lecturing theatre, although they may be exhibited there; nearly all are performed under anæsthetics, *Sharpey*, 453.

In experiments for scientific purposes, occasionally uses cats as well as frogs, dogs, and rabbits, *ibid.*, 2586–8. A gas engine is used for keeping up artificial respiration, *Sharpey*, 552.

Will put in a statement showing the number of animals experimented on at University College, and the nature of the experiments, *Burdon-Sanderson*, 2739–42.

There are a few persons of no profession, but pursuing scientific research, who attend the physiological laboratory, *ibid.*, 2716–22, but the majority are young medical men, who stay on to make themselves more efficient; the studies in the laboratory are connected as far as possible with the bedside practice of the hospital, *ibid.*, 2723–5.

Gives details of a visit to Guy's Hospital. Students are never permitted to perform experiments or to see them, except on insensible animals. About 18 animals a term are used for demonstration under anæsthetics, which are always used. The animals experimented on are usually killed before consciousness returns; even when allowed to recover there is very little, if any, pain; gives instances, *Colam*, 1568, *page* 81.

Has always illustrated his lectures by experiments, *Pavy*, 2108, and uses about 20 dogs and 8 or 10 rabbits, besides frogs, during the six months' winter session, *ibid.*, 2096; uses dogs, rabbits, guinea-pigs, and frogs for his experiments, *ibid.*, 2089–90.

Finds it necessary at the commencement of the course to tell the students that there will be no experiments to wound their feelings, *Pavy*, 2062–3. For lecture purposes complete anæsthesia is maintained throughout the whole of every painful experiment, *ibid.*, 2033, 2091–2, 2097–100, 2141. A member of the Society for the Prevention of Cruelty to Animals might be present at any lecture, *ibid.*, 2105–7. A great number of the experiments are chemical and physical, and involve no operation, *ibid.*, 2093–5, 2118.

Students at Guy's Hospital do not perform experiments on living animals, *Simon*, 1451–2, although probably advanced students occasionally use frogs for observations causing pain, *ibid.*, 1495.

Details the special efforts made at Owen's College to encourage physiological research, *Gamgee*, 5385. Gives two courses of lectures; for the first year's students a few experiments are performed, but always under anæsthetics, and for the second year's students every painless method of investigation is illustrated, *ibid.*, 5356. There are about 40 students in each class, *ibid.*, 5384. Students are not allowed, as students, to perform physiological experiments, *ibid.*, 5373.

(iii.) *In private laboratories.*

Does not know of any private laboratories, *Pavy*, 2076–7, *Pye-Smith*, 2078, *Schäfer*, 3817–9, except the one at Wakefield, *Browne*, 3182*a*–3, and his own, *Ferrier*, 3327–31.

Does not know of any private experimentation by students, *Schäfer*, 3824–7.

Knows that private experimentation exists, but not its extent, *Rolleston*, 1332; the number of private investigators in Great Britain is very small, *Humphry*, 763–8; *Gamgee*, 5370; there are not more than a dozen, *Sharpey*, 453, or more accurately not more than 16 persons (names given) now engaged in physiological research in Great Britain, *Burdon-Sanderson*, 2607–12.

Original research is not carried on merely for individual satisfaction or advantage, *Sharpey*, 458–60; any discovery of importance is speedily made public, *Humphry*, 774–6; *McKendrick*, 3984. Doubts whether this publication of results arrived at has much effect on the number of experiments undertaken, *Taylor*, 1212.

Private research, although it has produced valuable results, is open to the objection that discoveries made in this manner are not so easily verified as those arrived at in a more public way, *Burdon-Sanderson*, 2302, 2309.

Many English surgeons have performed experiments to elucidate definite points, but such cases are exceptional, *Fergusson*, 1026, 1091.

Gives details of the experiments made at Wakefield with the object of ascertaining the functions of different parts of the brain, *Ferrier*, 3227–9, by the application of electricity to the convolutions of the brain, under anæsthetics; the longest experiment lasted six or seven hours, *Browne*, 3169–78, and all were painless, *ibid.*, 3193–4, 3221–2. Chloroform was given far more freely than would have been safe with human beings; entirely denies that it was insufficiently administered, *ibid.*, 3184–5, 3190–1; gives particulars, *Ferrier*, 3363–4, 3383–6.

Does not believe the stimulus produced pain in these experiments, although it induced the signs of it, *Ferrier*, 3406–7; if pain were caused it would only be transient, *ibid.*, 3408–12. Points out that part of the human skull may be removed without the slightest pain being felt, *ibid.*, 3377, and that in a mesmeric state persons answer rationally, *ibid.*, 3419–23, and yet actions usually regarded as manifestations of pain can be produced without their being conscious of it on awakening, *Browne*, 3197–204. Refers to the phenomena produced by chloroform in the human subject, *ibid.*, 3208–12; observes that under it consciousness returns before sensibility to pain, and that patients observe during an operation without feeling pain, *Ferrier*, 3427–32. There is no proof that sensation is felt, although forgotten, under mesmerism and chloroform, *Browne*, 3206–7. Gives details of consciousness during fits and paralysis, where no sensation of pain has accompanied the usual manifestations of it, *Browne*, 3217–8.

The object of these experiments was to elucidate brain and nerve diseases, and the knowledge acquired has been most useful, *Browne*, 3195–6, 3217; refers in detail to th important and interesting results arrived at, *ibid.*, 3213–6. Gives reasons for believing that the results may be relied on, *Ferrier*, 3381, 3387–8.

Twenty-nine animals were operated on, of which five died from the anæsthetic; gives details as to publication of the results, and repetition of the experiments, *Browne*, 3178–82.

The experiment on a dog, where one hemisphere was removed, need not be repeated, and the apparent consciousness in that and other experiments is not certain proof of pain; a frog for instance deprived of both hemispheres may be made to croak by stroking its back, *Ferrier*, 3365–72, 3374–7, 3379–82.

Reads details of a four hours' experiment by Dr. Ferrier on a strong cat, referring to its gnawing its legs, crying, spitting, screaming, &c., under electricity, and contends that these facts show that intense agony was inflicted, *Jesse, pages* 220–21. Points out that the cat was under deep narcosis, and considers that these things were no more signs of pain than the cries of a patient under chloroform, *Browne*, 3189.

Admits that another cat was only partially narcotised (*see Jesse, page* 220), but points out that deep narcosis is all but death, *Browne*, 3192, and that the experiment proved that the non-manifestation of pain was not attributable to the anæsthetic, *Ferrier*, 3378.

Reads extracts from the proceedings of the Royal Society relating to Dr. Ferrier's experiments, and draws attention to the fact that unconsciousness was only partial, *Jesse, pages* 275–7; thinks from some of the expressions used in describing these experiments (gives quotations) it is fairly to be inferred that many of the experiments were performed without anæsthetics, *ibid., pages* 220, 230.

In 10 years has operated on 46 animals, as to the action of nitrite of amyl and pycrotoxine, *Browne*, 3161–8.

III. Abroad.

Vivisection is more frequent abroad than in England, *Watson*, 117; *Sharpey*, 517.

Believes that nine tenths of our physiological knowledge has been obtained from experiments performed in foreign schools, *Burdon-Sanderson*, 2216–7, and that there are more great men at work in them now than ever, *ibid.*, 2211; admits, however, that there are things done abroad, both in teaching and research, which cannot be justified, *ibid.*, 2217. Does not deny that vivisection is abused abroad, *Pye-Smith*, 2044–5.

The experiments abroad are conducted on a more extensive scale, and are more repugnant to our feelings, than those performed in this country, *Acland*, 946, 999. Much is done abroad which would not be tolerated here, *Pavy*, 2060–2. From accounts of vivisections in the "Gazette Medicale de Paris" believes there is a great deal of wanton experiment and unnecessary suffering in foreign laboratories, *Walker*, 1710–16. In some parts of the continent there is also less delicacy in treating human patients than in England, *Rutherford*, 2851, 3001–4.

Living animals are treated simply as forms of matter, and there is a consequent disregard of suffering, *Acland*, 999; their feelings are entirely disregarded, except when interfering with the operation, *Klein*, 3546, 3739. Believes that chloroform is frequently not given abroad even n very painful operations, *Acland*, 941.

Knows many foreign physiologists, and thinks them as humane as any English experimenters; believes anæsthetics are used when possible, *Gamgee*, 5418. Believes that foreign physiologists endeavour to minimise pain, *Schäfer*, 3856–7, and although there are more painful demonstrative experiments abroad than in England, yet they are but few in number, *ibid.*, 3858. Has studied in Berlin and Leipsic, and has no personal knowledge of any cruelty by vivisectors there, *Rutherford*, 2754.

Cannot give any information as to the number of animals consumed in foreign laboratories, *Rutherford*, 2998–3000; *Burdon-Sanderson*, 2735, 2743–4. Vivisection was formerly carried on secretly in Paris, the practice not being recognised by the authorities, *Cape*, 1820, 1835. Research in France is mainly carried on at the laboratories of Lyons and Paris, *Foster*, 2400.

Attended the first of a series of lectures by Majendie, but was so repelled that he did not go again, *Sharpey*, 444. His researches might have been prosecuted with less animal suffering, *Paget*, 368–74. Some of his experiments were perfectly unjustifiable, *Sharpey*, 474–5. Believes that Majendie had an object in every experiment, but thinks he was perfectly regardless of the pain inflicted, *Sibson*, 4739, 4743.

Does not think experiments in France are now so purposeless and cruel as many of Majendie's, *Sharpey*, 480–1. Claude Bernard has been most active and successful in his researches, *ibid.*, 518. Flourens, by removing portions of the brains of animals and keeping them still alive, made discoveries not easily otherwise made, *ibid.*, 476–8.

Believes that the practice of the University of France in requiring theses containing original remarks is a fruitful source of vivisection, *Hoggan*, 4238.

Experiments in Paris are very numerous, and at Alfort, it is said, very cruel, *Taylor*, 1269. Instances hundreds of experiments with poisons by an eminent French physiologist, quite useless because observed under a non-natural condition, *ibid.*, 1171.

Refers to an extract describing the horrors formerly perpetrated at Alfort, *Jesse*, 4446–55.

In Germany research is principally confined to public laboratories, *Foster*, 2399. The German universities afford scope for experiment, and their scientific men are zealous and numerous, *Sharpey*, 517, and although the advancement of science is the primary object they are also largely engaged in the verification of results, *ibid.*, 519–22.

Did not see any reckless vivisection abroad, but thinks the Germans less careful than the English in repeating painful experiments, *Rutherford*, 2983–6, 2989; at Leipsic and at Berlin vivisection was most humanely conducted, and the instruction given ample, *ibid.*, 2914–5.

Most recent discoveries have been made in Germany, and the best practical instruction is given there, *Turner*, 3100–1.

At Professor Ludwig's laboratory more than 100 dogs and rabbits, besides frogs, are used annually, *Schäfer*, 3850–5; he has a gas engine for sustaining artificial respiration in animals, *Sharpey*, 552–5.

Alludes to the size of Professor Stricker's laboratory at Vienna, and states there are no lectures given, *Klein*, 3693, 3734–8, but the amount of work done is very considerable and the number of animals used large, *ibid.*, 3695–9, 3730–3.

It is stated that 700 animals are sacrificed yearly in Dr. Schiff's laboratory at Florence, *Rolleston*, 1343. Points out a discrepancy in Professor Schiff's statements; one to the effect that the dogs under operation made no noise, because not in pain; the other that their nerves of vocalization had been cut, so as to prevent their disturbing the neighbourhood, *ibid.*, 1287.

FERRIER'S, Dr., LECTURE.

Professor Ferrier gave a humorous description at the London Institution of the involuntary contortions produced in a monkey by irritation of certain parts of the cerebral hemispheres after a portion of the brain had been removed, *Colam*, 1569, 1573–92, 1595.

Admits that the experiment would be painless, but contends that such descriptions show the levity with which these things are regarded, *ibid.*, 1596–613.

Heard one of Dr. Ferrier's lectures at the London Institution, and considered it very interesting; from 50 to 70 persons were present, *Sawyer*, 4249–59, 4264–5, 4270; did not think Dr. Ferrier covered the "grim character of his experiments by his humour," *ibid.*, 4276, and does not recollect concurring in the report of the Society for the Prevention of Cruelty to Animals on these lectures, *ibid.*, 4272–81.

The reference to the "stupidity" of the monkey must have been at the second lecture, at which witness was not present, *ibid.*, 4282–3.

Believes that the experiments on the brain of the insensible monkey went to show that the excitation of certain portions of the brain produced movements usually denotative of pain, *ibid.*, 4267–9, but understood Dr. Ferrier to say that the animals had been rendered insensible to pain, *ibid.*, 4253–5, 4257–8.

Was sorry to hear Dr. Ferrier's smiling remark that he was "afraid to say how many cats he had" experimented on received with a titter, *Sawyer*, 4253, 4266, 4274–5. Dr. Ferrier seemed to think himself justified in sacrificing any number of animals for his investigations, *ibid.*, 4256.

Denies *in toto* that there was anything comic, jocose, or ludicrous in his lecture on the functions of the brain, delivered at the London Institution, and referred to by the Secretary for the Prevention of Cruelty to Animals; gives etails, *Ferrier*, 3274–95, 3314–9, 3358–62, 3381.

HUMAN BEINGS, EXPERIMENTS ON.

Believes physiologists would dissect living human beings if they dared; gives instances in which it has been done, *Jesse*, 6475. Human vivisection is said to have been performed by Herophilus of Alexandria. This was denounced by Tertullian; inoculation was first tried on criminals, but thinks experiments on criminals can never become a practical question, *Sharpey*, 558–67.

Refers to an experiment on an Irish servant in America, whose brain was exposed, in which electricity was applied to the convolution laid bare, *Ferrier*, 3390–1. Objects altogether to experiments on human beings, *ibid*, 3397.

Has himself made experiments on men with various medicines, and instances Dr. Stak's, Dr. Parker's, Sir James Simpson's, and Spallanzani's experiments on themselves, *Sharpey*, 594–6. Believes Sir James Simpson experimented on animals with chloroform and other substances; but he also experimented on himself and on his assistants, and was often ill in consequence, *McKendrick*, 3945–2.

Has himself submitted to very painful experiments from a conviction of their necessity, *McDonnell*, 4575.

All novel operations on human beings are experiments; instances Hunter's tying an artery for aneurism, *Sharpey*, 596.

Experiments on men as to anæsthetic properties of curari are unnecessary; safe anæsthetics already exist, *Sharpey*, 56–70. Refers to two human beings put under curari, and one who had been operated on under it: the latter complained of "douleur atroces;" the former of loss of power to move, although perfectly conscious, *Hoggan*, 4119. Refers to experiments at La Salpétrière in Paris, mentioned to witness by Bernard, *Gamgee*, 5409–10. Refers to the accounts of the deaths of Indians from curari, *Rutherford*, 2937–9. Gives details of an experiment on two children at Manchester with curari, in which partial paralysis was produced, sensibility remaining unimpaired, *Gamgee*, 5407–8.

INDUCTION OF DISEASE.

The induction of disease in animals by competent persons is necessary to prevent human suffering, *Humphry*,

615, 634; but thinks disease more painful in man, *ibid.*, 616–8.

Pathological experiments are necessary to form a basis of scientific knowledge of medicine, *Humphry*, 611, although they are sometimes painful and distressing, *ibid.*, 740–2, and cannot be mitigated, from the length of the experiment, *ibid.*, 667–9, and the inapplicability of anæsthetics, *ibid.*, 615; *Paget*, 278. Considers the induction of disease quite justifiable, notwithstanding the suffering, *Burrows*, 216–8.

Agrees that the microscope and pathological experiments jointly must be the means of further advancing pathology, *Walker*, 1787–8; *Burdon-Sanderson*, 2707–13. Civilization necessitates an increase of pathological experiments, *Humphry*, 635, although but few are actually made; he knows of only one or two persons engaged in them, *ibid.*, 771. A competent operator is more necessary than in physiological experiments, *ibid.*, 614.

Inoculation is often performed under chloroform; there is no pain, except from the disease, *Legg*, 5332–4. Believes experiments are conducted as humanely as possible in this country, *ibid.*, 5343–5. Is not in favour of such experiments except as to determining infection or contagion, *Pritchard*, 901–3. Producing disease artificially does not affect the results, *Legg*, 5339–41; you get the complete natural history of the disease; in examining the dead human body you have only the *débris* of disease, *ibid.*, 5325–30. Pathological experiments sometimes give fallacious results, *Simon*, 1482. Adverts to their duration, and gives examples, *Scott*, 5193.

The animal is usually killed before the malady has run its course, *Gamgee*, 5367–9.

In investigations for some years as to tuberculosis, 200 or 300 rabbits may have been used, and in another course of research about 50 animals were used, *Burdon-Sanderson*, 2737–8. These experiments and Brown-Séquard's as to epilepsy in pigs were possibly productive of beneficial results, *Acland*, 952. Believes that, as a consequence of experiment, the nature of tubercle is beginning to be understood; even cancer may one day be found preventable, *Humphry*, 615. Thinks all experiments have failed to show the nature of tubercle, and rather prove what it is not than what it is. Refers to the conflicting theories of MM. Crocq and Villemin, *Hoggan*, 4134–9. Tuberculosis is sometimes painful, but often not, *Legg*, 5335–8.

Consumption has been proved by experiments to be inoculable; this gives weight to instances of apparent infection in human beings, *Simon*, 1420–4.

Refers to the advantages of a knowledge of the processes of inflammation, of tubercle and vaccination; the latter has saved more lives than Napoleon's wars destroyed, *Gull*, 5530–2. A full knowledge of the processes of small-pox and other diseases would be desirable, if possible, but it would not point out the remedy, *Walker*, 1761, 1764, 1767. Physiology discovered the existence of the *acarus scabies*, but pathology the remedy, *ibid.*, 1761. The knowledge that sheep-pox is the work of an organism is important as pointing to prevention, though not suggesting a cure, *ibid.*, 1765–6.

Typhoid fever has been induced in pigs to determine points not otherwise ascertainable, *Pritchard*, 842–3. Dr. Cobbold made experiments with regard to parasites, *ibid.*, 829–31.

Experiments have been tried on sheep as to the development of fluke disease, and in what animals trichinæ would live, no cure was found, but some means of its prevention, *Pritchard*, 853–68. Inoculation for pleuro-pneumonia has not been satisfactory; but for small-pox in sheep it has been, *ibid.*, 896, 904–6. Cannot state result of experiments as to foot and mouth disease, *ibid.*, 897–900. Tried many remedies for the cattle plague, but without success, *ibid.*, 888–95. Is not aware of any experiments as to the cause of it; but there have been some with regard to glanders, *ibid.*, 832–3. All experiments have been with regard to diseases of animals only, *ibid.*, 841.

The experiments with regard to sheep-pox have had in view the treatment of small-pox, of which it is a type, *Burdon-Sanderson*, 2629–33; and the knowledge gained by experiments as to the nature of diseases must eventuate in allaying human and animal suffering, *ibid.*, 2626–33.

Is not aware of any experiments having been made on grouse or animals as to induction of disease, *Watson*, 96–7.

Has never experimented with regard to hydrophobia, *Brunton*, 5690–1.

The experiments made at the request of the medical officer of the Privy Council were very few, and of a pathological nature, *Klein*, 3609, 3611, 3620–5, 3649–51.

States the diseases to which the experiments related, *Klein*, 3581; the only operation was making an incision for injecting, *ibid.*, 3590–3, 3595, 3652–3, 3662. No anæsthetics were given to the dogs, but the cats were chloroformed, *ibid.*, 3597–8, 3636–43. Some of the diseases induced have been painful, *ibid.*, 3630, 3634–40; but chloroform could not be used, *ibid.*, 3656–9. Various animals bought at the Government expense have been used, *ibid.*, 3576–7, 3590–3, 3684–5. The total number used in 1874 was 14 or 15, *ibid.*, 3614. Mr. Foster's minute did not apply to these experiments, *ibid.*, 3645–8, 3746–9. Witness has not performed any other private experiments, *ibid.*, 3579–80, 3607–8.

Reports are made on all the experiments, and generally the number and kind of animals, and the objects of the experiments are stated, *Simon*, 1397–405. Puts in a return of the investigations for the last four years, *ibid.*, 1368, 1398. There is an annual grant for medical scientific investigation, one half of which is to aid pathological experiments on animals which are necessary, but many are on dead subjects, *ibid.*, 1360–4.

Painful experiments made at the cost of the State should, according to Mr. Foster's official note, be made under anæsthetics, and a record kept stating their aim and necessity, *Simon*, 1367. This minute was referred to Dr. Sanderson "to read and note as an instruction," *ibid.*, 1511.

Approves of grants of money being made for experiments made with definite purposes, *Acland*, 986, 1003–4.

Reads from his own official report as to the necessity of these experiments for ascertaining the causes of various diseases, names some, and also to test the value of remedies; they are seldom painful, and anæsthetics should be used when possible, *Simon*, 1367. Gives the names of the investigators, *ibid.*, 1473–4.

Thinks it probable there is considerable pain with sheep-pox, but inoculation renders it milder, and the animals generally recover, *Simon*, 1431–6. The treatment has not been improved, though prevention is easier, *ibid.*, 1417–9.

Mice were generally selected to test the infectability of choleraic discharges; no pain but that of the disease was produced, *Simon*, 1364–6. Considers the advice given by the Government to prevent the spread of cholera was entirely arrived at by experiments on animals, *ibid.*, 1406–16.

Has been engaged in a series of investigations with regard to cholera, gives details; is now occupied with the third series, but no beneficial result has yet been arrived at, *Brunton*, 5721–30, 5747. In the first series 90 cats were used, *ibid.*, 5721.

The duration of very painful experiments would be reckoned in hours, *Simon*, 1466–8. Is now making investigations, but not on animals, as to the causes and prevention of scarlet fever, *ibid.*, 1425–9. Has never performed a severe surgical operation in Government investigations; in lingering diseases the animals are put out of pain as soon as possible, *ibid.*, 1430, 1438–9.

Intends publishing some experiments in pyæmia, by which results important in practice have been obtained, *Simon*, 1465, 1469.

Typhoid fever is a form of blood-poisoning, but has not been artificially produced, *Simon*, 1470–1.

Experiments with regard to disinfectants have been and are valuable; they will form the basis of advice for years to come, *Simon*, 1474. The practice of experiment by induction of disease is too recent for much beneficial result, *Walker*, 1785–6.

A correct diagnosis of many diseases would be impossible, but for the knowledge gained by Bell's and Brown-Séquard's experiments, *McKendrick*, 3878.

A perfect knowledge of the nature and origin of disease is essential to its prevention and cure, *McKendrick*, 3992–4; it must be gained by experimental methods, *ibid.*, 3987–92.

The subject of hereditary transmission is very important, and experiments relating to it should not be forbidden; refers to an observation made when president of the "Clinical Society" as purely hypothetical, also to "relicta of ancestral relations," *Gull*, 5533–44.

The Commissioners cannot recommend the total prohibition of experiments involving the production of disease in animals.—Report, p. 15.

LIMITS OF JUSTIFIABLE EXPERIMENT.

Experiments made simply to see what will happen are inexcusable, *Watson*, 12; they are purposeless inflictions of pain, *Sharpey*, 402–3, and should not be permitted, *Burrows*, 239–40, although conceivably a discovery might possibly result from such experiments, *Sharpey*, 523–4.

Painful experiments are unavoidable for the discovery and verification of facts, *Rutherford*, 2856–7, but only highly qualified men are competent to undertake them, *ibid.*, 2863–6.

Painful experiments are only justifiable when undertaken

with a definite object, and by competent persons with proper appliances, *Watson*, 9–10, 13–6, 18, 71; *Sharpey*, 416–9, 446–7, 576–9; *Turner*, 3039–40. The use of anæsthetics, *Colam*, 1569, and the destruction of the animals, if recovery would be painful, should also be insisted on, *Sharpey*, 451–2.

The number of experiments entailing severe pain is very small, *ibid.*, 415, and the painful part can generally be kept within small limits, *Foster*, 2343–5.

If an experiment be likely to advance knowledge or settle a doubt it should be performed, *Watson*, 91–3, *Acland*, 1005, 1008, regardless of ulterior practical benefits, *Burrows*, 235–9, 242, *Ferrier*, 3392–7, which often cannot be foreseen, as in the case of chloroform, *Carpenter*, 5615, and of the important results flowing from Harvey's discovery of the circulation of the blood, *Burrows*, 244–8. Even severe or protracted pain may be justifiable; refers to Dr. Reid's investigations as to the functions of the *par vagum*, and Dr. Brown-Séquard's as to those of the spinal cord, as examples, *ibid.*, 5603–15.

Experiments on animals should be the last resource for settling a moot point; thinks they are frequently resorted to prematurely, *Paget*, 302. Experiments should only be undertaken in cases of great necessity and under anæsthesia, *Acland*, 953–4, 966–89.

Painful experiments are only justifiable when a great advantage can be obtained thereby, *McKendrick*, 3895–6; they should be performed in such a manner as to minimize pain, *Paget*, 298, 301.

Painful experiments are essential only in original research, *Burdon-Sanderson*, 2289, they should be performed in the presence of a few individuals only, *Rolleston*, 1279, 1308–11. The number of necessarily painful experiments is very small, and it is very seldom necessary to undertake their performance, *Humphry*, 604–6.

Experimenters should always have a clear and definite object in view, *Lister*, 4328; use chloroform whenever possible, *ibid.*, 4321–2, and sacrifice any personal reluctance to experimenting, when there is a prospect of a gain to the human race, *ibid.*, 4329.

Experiments should be limited to those from which the discovery of new facts may be expected, *Paget*, 363, and to those necessary for educating competent medical men, *Acland*, 975.

To justify an experiment, the importance of the object should be compared with the probable amount of pain, which should be reduced to a minimum, *Burrows*, 145; *Simon*, 1483–4; *Burdon-Sanderson*, 2750–5, 2763; *McKendrick*, 4017–8; much must, however, be left to the individual conscience, influenced perhaps by that of the educated public, but certainly not by that of the mob, *Simon*, 1485–7.

Complicated and useless experiments should not be allowed, *Watson*, 35*i*–36.

Considers that, as a large number of animals live by killing others, man is justified in inflicting death or pain on them if he can benefit thereby, *Humphry*, 599, 601, and vivisection is often less painful than the ordinary methods of killing, *ibid.*, 604.

Vivisection may be both lawfully and mercifully practised within certain limits and under certain specified restrictions, *Watson*, Appendix III. § 1.

MEDICAL EDUCATION.

Believes that the practical teaching of various branches of medical science has been the cause of the vital improvements of late years, *Sibson*, 4698–704, 4713. Thirty or forty years ago laboratories for practical chemistry were unknown, and twenty years ago there was no physical laboratory, *Burdon-Sanderson*, 2677–8. The practical nature of education at the present day is not confined to physiology, but extends also to chemistry, physics, and other sciences, *ibid.*, 2679. Scientific instruction is much better as well as more practical than it was twenty years since, *McDonnell*, 4524–6.

The experimental method is thought more of than formerly, and is growing in physiological laboratories, although not in medical schools, *Burrows*, 230–2.

Physiology is now taught practically in a way it was not taught before, *Burrows*, 230–2. The old teaching was no teaching, and the knowledge of anatomy even, formerly required by examiners, was very slight, *Sibson*, 4711–2.

Advocates the practical instruction of medical students, and thinks that such teaching of those who desire to be future physiologists would tend to prevent abuses and secure the verification of results, *Burdon-Sanderson*, 2302–8. Students are now required to have a practical knowledge of physiology, but not to perform experiments, *Paget*, 285–9; *Sharpey*, 485.

Does not consider that medical students need to go through the physiological laboratory unless they wish to become consulting physicians or surgeons, *Burdon-Sanderson*, 2728–31. Considers the curriculum of medical education is already very heavily weighted, *Cleland*, 4640.

Believes there would be less pain given if physiology were as well studied here as abroad, *Cleland*, 4660.

Does not consider experiments on live animals necessary for a complete physiological education, *Haughton*, 1944–5. Does not think any educational benefit likely to result from their introduction into the medical schools, *Cape*, 1821, 1836.

The General Medical Council has the supervision of medical education, and doubtless the question of requiring practical experimentation from students will come before it when the whole plan of medical education is considered, *Acland*, 951, 967, 976–9.

In Sir Jno. Lubbock's bill, and in the recommendations of the committee for forming a uniportal system of examination, students are expressly excepted from examination in vivisection, *Rolleston*, 1275, 1283; is glad that the College of Surgeons is also of this opinion, *Jesse*, 6550–1.

Experiments are becoming more physical in character, *Sharpey*, 525; approves of this as well as of the growing practice of making exact measurements and numerical determinations, *ibid.*, 526–8. Is of opinion that medical students should be taught the application of chemistry and physics to the explanation of living phenomena, *Burdon-Sanderson*, 2302.

Physiology being now a recognised branch of study, physiological laboratories are attached to hospitals, *Paget*, 316; and in all large schools there are pathological as well as physiological laboratories, *Burdon-Sanderson*, 2727.

A great part of a student's work is microscopic examination of the tissues, *Sharpey*, 486–7, *Paget*, 317–9, and chemical examination of the animal fluids, not vivisection, *ibid.*, 319; and many of the experiments on live animals are painless, such, for instance, as observing the circulation of the blood in a frog's foot, *Acland*, 922. Observations of the widest extent may be made on frogs, *Sharpey*, 525.

Does not approve of experimenting on the living tissues of animals unless a distinct object likely to benefit human beings were in view, *Watson*, 89–90. The pain necessarily caused in studying the process of inflammation in the tissues of a bat or frog is not great, *Paget*, 358–62.

In schools the operations before classes are few, but there are frequent exhibitions of animals under anæsthetics after operations, *Colam*, 1569.

In the London schools the animals are always operated on in the laboratory, and then brought out for exhibition, *Colam*, 1550.

Among the London schools practical physiology is taught at Guy's, King's College, and University College hospitals only, *Burdon-Sanderson*, 2286–8.

There is no practical course in any of the Irish schools; witness, however, sometimes permits some of his more intelligent students to be present during his own private experiments, *McDonnell*, 4484–5, 4502–4. Careful instruction in a laboratory tends to minimise the infliction of pain; ignorance, not knowledge, is cruel, *Gull*, 5498.

Students have not time for the experimentation necessary for thoroughly studying physiology; neither have professors who have two such subjects as anatomy and physiology, *Cleland*, 4639, 4641–2, 4655–6.

Admits that he was unaware that the charity funds of the hospital were distinct from those of the medical school; but contends that the money given to cure the sick would seem to be misappropriated for torturing animals, *Jesse*, 6475, 6528–49.

Believes experiment for the sake of acquiring manual dexterity is never practised in England, *Walker*, 1793–5, *Fergusson*, 1087–9, although formerly carried on to a large extent in France at Lyons and Alfort, *Garrod*, 1989–90. Considers the practice would be useless, *Fergusson*, 1026, 1090, and should not be allowed, *Watson*, 72–3; *Rolleston*, 1273.

NON-SCIENTIFIC VIVISECTION.

The study of physiology necessarily involves a limited sacrifice of animal life; but that is nothing compared with the uses to which animals are put, *Simon*, 1458.

Although Brown-Séquard's experiments were very numerous, thinks public opinion might deal with the larger amount of suffering caused by field sports and "innocent amusements," *Acland*, 944–5.

A single day's pheasant shooting produces more pain than is caused by a year's vivisection in Great Britain, *Lister*, 4328, 4401.

Operations for scientific ends stand on much higher ground than the castration of animals for human comfort and convenience, *Lister*, 4328.

Popular feeling acquiesces in the removal of a blemish from a horse, *Lister*, 4408–10.

Is aware of the extent of farm vivisection, but does not consider it a valid argument in favour of scientific vivisection; any law against needless infliction of pain should have a general bearing, *Purser*, 4877–80.

POPULAR FEELING AS TO VIVISECTION.

The present popular feeling is based on ignorance of what is really done, *Gull*, 5463; *Rutherford*, 2849; *Burrows*, 159. There would be less exaggeration and misstatement if the experiments in the laboratories were more generally known, *Humphry*, 762. It should be made known that a very large number of experiments involved no more severe operation than the inoculation of a poison or a disease, and often only the administration of a drug, *Burrows*, 155.

Almost painless experiments are described as horrible, and it is often difficult to recognise an experiment from the description of it, *Pavy*, 2116; *Pye Smith*, 2121.

Believes any abuse of experiments on live animals in this country is greatly exaggerated, *Simon*, 1382, 1384; *Humphry*, 619–20.

Believes public excitement arises from the discovery of the existence of a certain number of abuses, *Burrows*, 159, from reports of vivisections on the continent, *Sharpey*, 454-6, and from the addition of "practical physiology" (really consisting principally of microscopic work on the dead tissues) to the list of subjects taught in the schools, *Pavy*, 2037.

Thinks that a belief that the mysteries of life are beyond the pale of legitimate inquiry is at the bottom of public sentiment on the matter, *Gull*, 5499. Objections were made to vivisection, even in Harvey's time, *Turner*, 3025.

Witness has been denounced for his cruelty in his experiments in search of an antidote for picrotoxine, because the animal dies in convulsions, and yet the same drug is the active ingredient in a favourite "poisoned wheat" largely used by farmers for destroying small birds, *Browne*, 3218.

The feeling of educated Irish people is very strong on the subject of animal suffering, *Hayden*, 4604–5.

REGULATION.

I. Generally.
II. By means of licenses.
III. By means of inspection.

I. Generally.

Considers state intervention decidedly necessary, *Walker*, 1718; *Rolleston*, 1317–31; *Haughton*, 1874–5; on the ground that scientific research could be conducted with much less pain than it is, *Walker*, 1735–6; that there has been a great increase of experimentation, *Rolleston*, 1340–1, much useless repetition, needless cruelty, as in the Norwich experiments by M. Magnan, want of proper forethought and care, and, specially, an over-estimation of the value of the results, *Haughton*, 1874–5. Thinks it reasonable that society should control individuals in these experiments, on the ground that in maturer years a man often condemns as cruel things done by himself in earlier years, *Rolleston*, 1296–8.

Experiments under anæsthesia should be equally under control with others, *Haughton*, 1882–4. Enthusiastic experimenters cannot be trusted to maintain the use of anæsthetics, *ibid.*, 1892–5. An operator in public may often pay less attention to the feelings of the animal than is desirable, *Garrod*, 1994. Fears any provision rendering the employment of anæsthetics compulsory would be laxly carried out, *ibid.*, 1924–6; and thinks that painful experiments should be forbidden where other methods of investigation are possible, *ibid.*, 1967.

There should be no restriction where anæsthetics are used, or the brain destroyed, *Sharpey*, 451–3.

A reasonable measure for preventing abuses would be supported by scientific men, *Humphry*, 609–10, and both branches of the medical profession, *Watson*, 27–8, 45–6; and although legislation is surrounded by difficulties it would improve the position of physiologists, *McDonnell*, 4475–9, 4490, 4523, 4588; it would not interfere with research, but the reverse, *Walker*, 1718.

Effectual regulation would be desirable if it did not interfere with investigation, *Carpenter*, 5585–7, 5596, *Hoggan*, 4065, or proper education, *Rutherford*, 2916.

Does not object to legislation, *Handyside*, 5938, *Foster*, 2321, if it does not interfere with private research, *Lister*, 4431.

Does not think legislation necessary, *Sibson*, 4690; *Burdon-Sanderson*, 2687, 2689; *Foster*, 2348; *Lister*, 4425–9,

Believes the laboratories attached to the various public institutions are as well controlled by the managing bodies as they would be by law, *Burdon-Sanderson*, 2311.

Legislation would check scientific inquiry, *Sibson*, 4688; *Gull*, 5472–5. Efficient inspection and non-interference with the advancement of science are incompatible, *McDonnell*, 4478, 4589. The tendency to rest content with present knowledge is already too strong, *Gull*, 5476; although legislation would not, under proper organization, interfere with eminent men, it would, he fears, stifle private investigation, *Burdon-Sanderson*, 2826–7.

Approves of the resolution adopted by the British Association in 1871; but feels some anxiety, lest in any legislation against abuses, undue restraint should be put on scientific research, *Paget*, 267, 382–5. Considers legislation unnecessary, both as regards public and private experiments, *Foster*, 2393–4, and thinks the good feeling of Englishmen will render it equally unnecessary in years to come, *ibid.*, 2415.

Thinks legislation applying to scientific experiments only, would be a slur on the profession, *Burdon-Sanderson*, 2690–3, and imply a fault where none exists, *Lister*, 4344, 4393, 4430; *Gull*, 5472–5, 5484–6.

Cannot consider that reasonable regulations would be a slur on the profession, *Gamgee*, 5425–7; any more than some of the clauses under the "Anatomy Act," *Handyside*, 5962–3.

Does not see how legislation can regulate vivisection, and fears it would retard science, *McKendrick*, 3953–4, 4012.

Prefers leaving matters to men's consciences and public opinion, *Sibson*, 4690–5. The influence of public opinion is at present sufficient to check abuses without legislation, *Pye-Smith*, 2176; *Sharpey*, 453, 591; *Paget*, 329–41; men would avoid gaining a reputation for indifference to anima' suffering, *Fergusson*, 1118–9.

The leading medical practitioners and physiologists are as desirous as others to prevent abuses, but are somewhat doubtful as to whether public opinion would not be a better restraint than the law, *Paget*, 279–81.

If public opinion were not a sufficient restraint, legislation might be needed, *Gull*, 5518–21.

The right feeling of competent persons is better than legislation for regulating vivisection, *Humphry*, 672; if there be an evil, conscience is the remedy, not legislation, *Simon*, 1501. Leaving English investigators alone will show foreign physiologists that great scientific results can be reached with greater humanity, *Sibson*, 4739.

The public should be informed as to the experiments, so as to give force to their opinion, which, with an expression of the Government, and the action of the Society for Suppressing Cruelty to Animals, and the present restraints, would suffice, *Fergusson*, 1120–31.

Thinks it would suffice for the Commission to strongly express their views on the subject, leaving the rest to public opinion, which so influences the treatment in English hospitals, and which is better than legislation, *Fergusson*, 1041–63. Doubts how far it is possible to bring private vivisection under control, *Rolleston*, 1291–2, 1301.

Deprecates legislation with regard to vivisection; refers to the difficulty of defining the term "live" animals, *Turner*, 3048–9; in a pithed frog some of the organs may be considered living when the animal is virtually dead, 3113–4.

Fears legislation may check the progress of discovery, *Turner*, 3055–6; in the interests of science, would not approve of any legislative limitation, *Taylor*, 1213–6.

Thinks a law would be needless, *Gamgee*, 5376, and inexpedient, *Paget*, 337–40. Does not object to the Cruelty to Animals Act, *Sibson*, 4692.

There is no case for legislation, *Lister*, 4394, as there are no such abuses as those popularly reported, *Rutherford*, 2953. Vivisection is not abused in this county, and therefore legislation is unnecessary, *Pye-Smith*, 2042–3; *Purser*, 4825.

Public opinion is exaggerated in the matter, and special legislation is unnecessary, *Simon*, 1382–4.

Thinks few but competent persons perform experiments, and that no control is needed, *Sharpey*, 431–4. Objects altogether to legislation, and thinks the teachers of physiology should be the sole judges as to the propriety of an experiment, *Purser*, 4800–9; his own experience of university restriction makes him deprecate any further restraint, *ibid.*, 4850.

Any legislation restraining scientific experimentation only, would be class legislation, and leave the vastly larger class of unscientific persons, as well as farm vivisectors, untouched, *Turner*, 3102–3, 3050. The pain given in snaring and trapping rabbits and by gunshot wounds is vastly greater than that given by the physiologist, *Burdon-Sanderson*, 2698–703. Putting a hare to such torture as

that inflicted by coursing would be considered unjustifiable for scientific purposes unless very important, *ibid.*, 2695–7.

It would be a slur on the medical profession that while the sportsman is not controlled in the infliction of pain, in the pursuit of amusement, medical men should be restained in the pursuit of science, *Burdon-Sanderson*, 2690–3.

Thinks it monstrous that it should be proposed to license and regulate physiologists like publicans and prostitutes, while society itself kills and wounds animals, without stint, for its food or pleasure, *Simon*, 1491–2, 1504–8. Objects to the separation of pain caused by the physiologist from the vivisection and castration of animals performed by farmers, &c., for which the resulting human advantage is the only justification, *ibid.*, 1502.

At Billingsgate lobsters are killed instantaneously by being put into boiling water, *Colam*, 1644–6.

Sensibility is destroyed more speedily by the physiologist than by the butcher or the sportsman, *Rolleston*, 1273.

Physiologists have quite as much interest in causing as little disturbance as possible to an animal as farmers have, *Turner*, 3134–7.

Admits that the "Cruelty to Animals Act" is not regarded as a slur on England; but contends, although the law applies to both, that highly educated men will be restrained by their own humanity, while the more ignorant may require to be so by law, *Gull*, 5481–3, 5503–4; does not take his stand on any legislation being class legislation, but on the higher ground, that vivisection is justifiable on its merits, *ibid.*, 5495–7.

Is unwilling to admit that observations for scientific purposes should be under or dinary legislation, *Acland*, 928–9, 975. If wanton cruelty exist among teachers it should be suppressed, but not necessarily by penal legislation; if it is found among students they should be punished under the Cruelty to Animals Act; if it occurred in schools they should be closed, *ibid.*, 949–50, 1002.

Surgery is so perfect that but few surgical experiments can be necessary; no control is necessary with regard to them, except that they should be by clinical surgeons only, *Walker*, 1721.

Persons of high scientific attainments only should be allowed to perform experiments, *Paget*, 364–6.

Would rather dissuade experimenters from the practice than restrain them by law, but they should either be competent physiologists or under one, *McKendrick*, 4010–11.

Competent persons should be under no restriction in making investigations, *Paget*, 364–6; *Garrod*, 19801, 1991; *Turner*, 3127–8; but a satisfactory standard of competency is almost impossible, *ibid.*, 3127–8; therefore limiting experiments to competent men would act as a restriction on original research; has no other objection to legislation, *Ferrier*, 3251–5, 3262.

The choice of experiments, *Pye-Smith*, 2171–2, *Cleland*, 4618–9, and the use of anæsthetics should be left to qualified teachers, *Cleland*, 4611.

Investigators must decide as to the method of research and the use of anæsthetics, *Gull*, 5506, 5517. Does not approve of the arrangements as to experiments being left in the hands of the lecturer, *Paget*, 320–5.

It is difficult to decide between permissible and cruel experiments, and to regulate private experimentation, *Carpenter*, 5594–5, 5644; many private experimenters are very talented, and should not be interfered with unless guilty of cruelty, *Fergusson*, 1064–6, 1141; they should be restricted in the same way as public experimenters, *Foster*, 2348–51.

As to private experiments, he is inclined to say "*de minimis non curat lex*," *Rolleston*, 1323–6; they would be indirectly controlled by the restraint on public experimentation, *ibid.*, 1303–5, 1330. In a country like England private experiments could not be forbidden, *Burdon-Sanderson*, 2302, 2309.

Private experimentation cannot be put down like cock-fighting, and even that would be stopped more by healthy public opinion than by a law which would be inoperative, *Carpenter*, 5598–600.

A proper supervision is required of animals which have been operated on, *Walker*, 4888.

The Society for the Prevention of Cruelty to Animals does not advocate the entire abolition of experiments, *Colam*, 1567.

Does not advocate the abolition of vivisection, but its regulation, *Hoggan*, 3435–7, and restriction, *Cape*, 1819, 1832; its prohibition would be a great evil, *Darwin*, 4669–71.

Would like to see vivisection forbidden, but being a necessary evil he advocates its restriction, *Walker*, 1737.

The Society for the Abolition of Vivisection abstains as much as possible from referring to continental practice, *Jesse*, 6473. Thousands of educated persons have urged on the society the abolition of vivisection, *ibid.*, 6475.

Deprecates any legislation short of forbidding vivisection, *ibid.*, 6475; has made this statement on behalf of the society, but declines giving any particulars as to its constitution; considers it a private matter; states, however, that it was formed during 1875 and the names of the committee advertised in the papers, *ibid.*, 6478–502. Can give a list of the members of the society except a few who do not wish their names known, *ibid.*, 4440–2.

Is not a member of, but to a certain extent agrees with the Society for the Abolition of Vivisection, *Cape*, 1813–6.

Laboratories should be licensed or registered, *Handyside*, 5940, 5942; *Burrows*, 173, and inspected by a competent board, *Allman*, 5457.

Certain places and persons should be licensed as in Lord Henniker's bill, *Colam*, 1563–4, 1566. Experiments might be confined to public laboratories without much inconvenience except in poisoning cases, and even these might be sent there, *Rolleston*, 1327–9, 1331, except in cases of emergency, which might be specially provided for, *Taylor*, 1248–53.

Skilled persons should be allowed to conduct experiments elsewhere, as delay in obtaining leave might in some cases be serious, *Burrows*, 176–9. Limiting experiments to certain places and persons would drive investigators abroad or be useless, *Simon*, 1488, and would specially interfere with country practitioners, *Ferrier*, 3326–7.

Has a private laboratory himself; does not object to licensing persons, but does object to licensing places, *McKendrick*, 3955–8, 3960–5, 4012, 4019.

Thinks inspection of private laboratories impracticable, but there should be some legal sanction for experiments, *Browne*, 3218–24.

Refers to former abuses in practice of anatomy, and the good effect of the Anatomy Act, and of the appointment of inspectors, *Burrows*, 167–71. Would not object to the inspectors of anatomy inspecting his experiments and reporting to the licensing body, *Rutherford*, 2874, 2883, 2951–2.

Thinks a record of all painful experiments, or perhaps, still better, a record of all experiments, *Allman*, 5441–3, 5452–4, should be kept, which would show the reasons for making them, *Rolleston*, 1317–8.

There would be no hardship in requiring a record of all experiments to be kept; it is done at Edinburgh, *Rutherford*, 2884–7, 2949–50.

A record of all experiments should be kept, provided the Commission finds experimentation carried to a great extent, *Fergusson*, 1044, 1142–8. Such a record would tend to stop the proceedings of incompetent persons, *Rutherford*, 2888, and to prevent objectionable experiments, *Sharpey*, 583.

There should be two yearly returns, one of the experiments proposed to be performed, and the other showing the results of those that had been performed; the latter should also state whether anæsthetics were used and how long the animal was kept alive; one return would prevent unnecessary, the other careless experimentation, *Walker*, 1729; a competent inspector on seeing the list of proposed experiments would object to any repetition, unless the previous experiments were defective, *ibid.*, 1796, in which case he would be able to point out the previous failure, *ibid.*, 1800.

Governors of hospitals should appoint some of their number to prevent unnecessary cruelty, *Fergusson*, 1138.

The head of a physiological school might be held responsible for preventing abuses, but not answerable for the acts of others, *Burdon-Sanderson*, 2389–92; experiments on living animals should be made under the sanction of a committee of the hospital staff, *Paget*, 320–1, 326, or in case of no medical school the propriety of experiments might be left to a body of surgeons, *ibid.*, 322–4.

Experiments on living animals without a definite object should be forbidden; the advantage of such prohibition would counteract the possible prevention of useful ones, *Walker*, 1797–9, 1801. Each experimenter should be limited to the number of animals yearly, to prevent experiments by unlicensed assistants and the present unnecessary repetitions, *ibid.*, 1729. Inclines to the institution of a board of control, comprising physiologists, physicians, surgeons, pathologists, and a chemist, *ibid.*, 1771–4.

Does not consider a lay element necessary in the licensing or inspecting bodies, *Rutherford*, 2953.

Has discussed the question with numerous other persons who agree with witness, *Hoggan*, 3442–52, 4083, 4088, 4100, in thinking that private vivisection should be forbidden under penalties of imprisonment, and that experiments on live animals should only be allowed in certain places; the use of anæsthetics should be compulsory, that of curari forbidden, *ibid.*, 3438–41, 4084–7, and five or ten students and a like number of the general public should be admitted to a gallery overlooking the experiments; contends that

such a course would prevent misrepresentation of the objects and nature of the experiments, *ibid.*, 4067–73, Does not think animals being used for pathological experiments would be disturbed by seeing the public, *ibid.*, 4096–9. Contends that this system would prevent carelessness and cruelty, but admits that vivisectors might object to be overlooked, *ibid.*, 4074–9, and that the spectators might resort to manifestations of disapproval; but thinks that under proper regulations they would not be repeated; the scheme proposes that complaints may be made to the superintendents, *ibid.*, 4092–5; admits also that the public spectators might from their ignorance be mistaken as to the existence of actual pain, *ibid.*, 4091; many movements, resulting from reflex action, would by the ignorant be ascribed to pain; gives instances, *McDonnell*, 4531–4.

Thinks a system limiting experiments to public laboratories, and providing for the admission of an uninstructed public, most undesirable; gives reasons, *Lister*, 4348–9. The admission of the public would be useless, induce private experimentation, and render many delicate experiments impossible, *McDonnell*, 4530.

Considers what is needed is the enforcement of the Cruelty to Animals Act, *Jesse*, 5556. Thinks this Act might be made to include all mammals, without further legislation, *Cleland*, 4620–5. All animals, domestic and otherwise, including frogs and mice, should be protected by it; the law would have more elasticity, and the degree of suffering would be decided by the magistrates, *Simon*, 1388–95, 1503. Wild as well as domestic animals should be included under the Cruelty to Animals Act; does not think an alteration in this direction would stop field sports, *Fergusson*, 1066, 1070.

Thinks an incompetent or careless experimenter on a domestic animal, not having a reasonable beneficial result in view, would be liable under the Cruelty to Animals Act, *Simon*, 1385–6.

Thinks a law drawing a clear distinction between experiments for research, and the cruelty to animals aimed at by Martin's Act, desirable, *Ferrier*, 3273.

Does not desire any alteration in the Cruelty to Animals Act, *Hoggan*, 3441.

The difficulty of getting evidence under Martin's Act tends to promote the suffering of animals, *Haughton*, 1891. The present law protects certain animals only, *ibid.*, 1885.

Thinks that the classes of animals to be exempted from experiments, except under restriction, should be defined by law, *Taylor*, 1185. Dogs and other highly organised creatures, *Cape*, 1822–5, 1828, such animals as horses, monkeys, and cats should be exempted from experiment, *Hoggan*, 3441. Thinks it would be undesirable to exempt domestic animals from experiment, *Lister*, 4421–4; such an exemption would prevent many experiments from being shown; the pressure of the blood, for instance, *Rutherford*, 3005–9; both dogs and rabbits as well as frogs are necessary, *ibid.*, 3018–9.

The Society for the Prevention of Cruelty to Animals has embodied its wishes in a bill, adopting some of the provisions both of Lord Henniker's and of Dr. Playfair's bill, *Colam*, 1520–2, 1557–8; it provides that *no* painful experiments shall be allowed even for purposes of investigation, *ibid.*, 1527–9, 1559, 1561–2, 1565; that animals experimented on under anæsthesia shall be destroyed before recovering consciousness, *ibid.*, 1523–6; and that a record of all experiments shall be kept, and the results published, so as to avoid unnecessary repetition, *ibid.*, 1560, 1664–6, 1668. The society generally objects to experiments for investigation when performed partially under anæsthesia, *ibid.*, 1552–6. Does not wish to imply that the society should act as judges on physiological investigators, *ibid.*, 1665–7, but believes the society could judge as to the utility of the results, without technical knowledge, *ibid.*, 1669–70, and would be able to decide whether a case deserved prosecution or not. It would rest with the court to determine as to the existence of cruelty, experts being, as in the Norwich case, called on either or both sides, if necessary, *ibid.*, 1672–5. Admits that the section of a polyp, if such an operation caused pain, would be forbidden by the bill, *ibid.*, 1659–60, and also the experiments with regard to choleraic discharges, which had such beneficial results, *ibid.*, 1678–81, the inoculation of sheep with the small-pox, *ibid.*, 1656–8, and of various animals with snake poison, now being conducted under the sanction of the Government of India; but quotes Sir W. Fergusson's opinion that these experiments are useless, *ibid.*, 1689–91, and urges that an antidote might possibly be discovered in some other way, *ibid.*, 1697. The society would not prosecute in such a case as the choleraic discharges experiment, but believes the committee considered the question of snake poison, *ibid.*, 1696. Admits that Bell's great experiment on the roots of the spinal nerves and any similar experiments, although of equal importance, would be stopped by the proposed bill, but contends that Bell's experiment was only performed once to convince people who did not use inductive reasoning, *ibid.*, 1647–8. Admits also that such experiments as those which led to the condemnation of Palmer would be forbidden by the bill, *ibid.*, 1692–4.

Does not think demonstrating the circulation of the blood in a frog's foot would be considered a painful experiment, *ibid.*, 1661–2. Points out that the Cruelty to Animals Act is liable to the same theoretical objection with regard to the determination of what amounts to torturing or ill-treating an animal, but public opinion does not sanction an unreasonable interpretation of the Act, *ibid.*, 1663.

The society does not wish the bill qualified as to painful experiments, but that the word *cruelty* should have a reasonable interpretation, *ibid.*, 1671–6, and would like the bill passed unaltered; failing this, in as nearly as possible its present form, *ibid.*, 1695.

Approves in the main of Dr. Playfair's bill on the subject, *Darwin*, 4662–4; *Allman*, 5439–40; assents to its general scope, *Burdon-Sanderson*, 2220, 2293–5, 2312–3, 2686; its passing would pacify public feeling without interfering with legitimate vivisection, *Pavy*, 2074–9; it would not stop the experiments now performed in the London and other schools, *ibid.*, 2070–3, 2185; *Pye-Smith*, 2075; sees no difficulty in working the bill, if it be required, *ibid.*, 2186–90, but thinks it would cast an undeserved stigma on the leading physiologists, *ibid.*, 2075.

Has not studied the details of Dr. Playfair's bill, but fears there would be grave difficulties in working it, *Carpenter*, 5594; some parts are of doubtful interpretation, and likely to narrow the extent of investigation, *Burdon-Sanderson*, 2314–6. Gives example, *Sharpey*, 453. If passed, it would prevent the advancement of science; considers it arbitrary, complex, and indefinite, and calculated to drive students abroad; prefers Lord Henniker's bill, *Rutherford*, 2877–9, 2880–2. Thinks the originators of the bill did not sufficiently consider its operation, *Simon*, 1508; by section 5, clause 3, individual physiologists might be held up to popular odium, *ibid.*, 1509–10.

Objects to the clause in Dr. Playfair's bill empowering the presidents of the Royal Society and of the College of Physicians and Surgeons to grant licenses; there would be no control under such a provision, *Haughton*, 1881.

Objects to unlicensed assistants being allowed at these experiments; such a course would tend to extend experimentation among the students, *Haughton*, 1881. Thinks the clause allowing experiments under licensed supervision would be handing experiments over to youngsters, *ibid.*, 1887.

Lord Henniker's bill would have prevented experimentation by incompetent persons, and not have interfered with competent men, except as to the licensing, *Rutherford*, 2875–6. Objects to Lord Henniker's bill, *Haughton*, 1880–1. Neither of the bills of last year would well meet the case, *McDonnell*, 4477.

Cordially approves of the resolutions of the British Association in 1871 with regard to vivisection, *Darwin*, 4662–4; believes they are supported by all the leading scientific men, who would support any reasonable law passed on them, *Paget*, 267–70.

For copies of the bills proposed by the Royal Society for the Prevention of Cruelty to Animals, Lord Hartismere and Dr. Playfair, *see* Appendix III., §§ 5, 6, *and* 7.

II. By means of licenses.

Approves of a system of licenses, *Taylor*, 1186–7; *Walker*, 1729; *Haughton*, 1913–5; *Gamgee*, 5381–3; *Handyside*, 5940; *Watson*, 107–14; *Cape*, 1826–7, 1831; but much must be left to scientific men, who, as a rule, are humane, *Taylor*, 1186–7.

If there be any legislation, competent persons only should be licensed, records of experiments kept, and licenses withdrawn if abused, *Sharpey*, 453, 591.

Does not advocate licensing persons, *Hoggan*, 4082.

Thinks a medical man should be forbidden under penalty to make experiments unless licensed, *Haughton*, 1913–5; *Walker*, 1729; exception should be made in favour of analysts in cases of poisoning, *ibid.*, 1729, but teachers should be conditionally free, *Handyside*, 5940. To compel competent men to apply for permission seems unreasonable, *Paget*, 327. If legislation is undertaken, granting general licenses to competent persons would be the best course to adopt, *Rutherford*, 2882; *Paget*, 328–32. Does not object to this proposal, *Burdon-Sanderson*, 2352, as it would not interfere with research in England, *ibid.*, 2619; unless inspection and keeping records of experiments were insisted on, it would not interfere much with original research, *Ferrier*, 3272, and although objectionable it would be the best compromise possible, *ibid.*, 3311.

Confining experiments to competent persons would prevent a country practitioner from giving a suspected substance to an animal to test if it contained poison, although other means had failed, a question which should be dealt with at once, and on the spot, *Turner*, 3051–4, 3118–20. Considers this an objection founded on a case which must be purely hypothetical, *Haughton*, 1972–4.

Incompetent persons should be prohibited from attempting experiments, and anæsthesia should be insisted on, *Colam*, 1569.

If licenses are granted, there should also be a provision for search warrants; has known many cases of suspicion, *Colam*, 1634–6; in one instance, at least, there was reason to believe the law was being infringed, *ibid.*, 1559–60.

Licenses should be general, not for particular experiments, *Rutherford*, 2882; *Foster*, 2395–6; and subject to revocation if abused, *Watson*, 118–9.

Requiring permission for every experiment would be unadvisable, but a series of experiments and painful operations should only be allowed under authority competently advised, *Burrows*, 152, 163, 252–4. Licenses should be granted by the Home Secretary or some other high authority on recommendation by the Inspector of Anatomical Schools or some similar adviser, *Watson*, 107–11, 113–4; *Paget*, 336.

Only persons of judgment and discretion should be licensed, *Sharpey*, 583. Licenses should be granted to competent persons having a definite object in view, and under regulations only, *Haughton*, 1946, 1964–6.

Considers it essential that the licensing authority should act under the advice of a person commanding the respect of the profession, *Burrows*, 164–6, who should have a knowledge of the fitness of the operator, be himself of good ability, and retain office *quamdiu se bene gesserit*, *ibid.*, 172.

Certificates of ability from a professional teacher, and a recommendation from two laymen, to represent the public, should be produced, *Handyside*, 5940–2.

Thinks the Councils of the Colleges of Physicians and Surgeons and of the Royal Society should have the power of granting licenses, not the Secretary of State, *Rutherford*, 2873–4.

Thinks it would be an invidious task for the College of Physicians or College of Surgeons to grant such licenses, *Watson*, 115, 121. Although the professors of medical schools would know most persons competent, they would not know all, although there are very few such, *Turner*, 3041–7.

An efficient measure for the prevention of abuses may be founded upon the basis of license and adequate inspection. Experiments upon living animals, whether for original research or for demonstration, should be placed under the control of the Secretary of State, who should have power to grant and to withdraw licenses, without which no one should be permitted to perform experiments. The responsibility of the Secretary of State should be undivided; but the Minister should from time to time nominate competent advisers, by whom he would be guided in the granting of licenses. The holders of licenses should be bound by conditions, any violation of which should entail a forfeiture of the license. Generally, the object of the conditions, which might be modified from time to time, should be to minimize suffering, where it cannot be altogether prevented, and it might be desirable that one of the conditions should be that experiments should be conducted in a particular place. Any place in which experiments are performed must be registered and open to efficient inspection, and magistrates should be empowered to authorise the police to enter and search the premises of persons suspected of carrying on experiments without a license, which unlicensed experimenting should be penal. But in order to meet cases where experiments have been indispensable for the purposes either of cure or of medico-legal investigations, the Secretary of State should have the power of putting his veto on a prosecution. On notice of the withdrawal of a license the holder of it should be entitled to appeal to one of the Judges of the Supreme Court, who should conduct a legal investigation in conjunction with two assessors, to be appointed by the Secretary of State. On the result of this inquiry the Secretary of State should determine whether the license should be withdrawn, and if he decides in the negative, should have the power of giving the holder of the license the reasonable costs of his defence.—Report, pp. 20, 21.

III. By means of inspection.

Thinks it desirable that inspectors of these experiments should be appointed, having duties analogous to those of inspectors of anatomy, *Burrows*, 167; *Fergusson*, 1145; *Rolleston*, 1319–22, 1324; *Haughton*, 1873, 1908–10, 1916, 1968; *Handyside*, 5943–8, and leave the rest to the conscience and humanity of the experimenter rather than the restraints of a law, *Watson*, 116.

Thinks the Anatomy Act of 1834 is an important guide in the whole question, *Haughton*, 1878; and that if the inspector of anatomy were to act as inspector of physiological experiments in conjunction with a colleague appointed locally by the public it would work well, *ibid.*, 1886. Considers it important that the supervision should not be vested solely in a fellow physiologist, *ibid.*, 1957–60, and that the control should be partly under the influence of public opinion, *ibid.*, 1969–70.

Any inspection should be under scientific persons, or the most unfounded charges would be made from ignorance, *Turner*, 3110–1.

Objects to inspection as useless, *Ferrier*, 3272, 3320–5, *Sinclair*, 5836–8, 5911–3, and very undesirable; an inspector might, for instance, think facts insignificant, though really pregnant with important results; instances Galvani's observations of a frog, *ibid.*, 3424–5.

Does not object to publicity, *Burdon-Sanderson*, 2353–6, 2358; but considers that the inspection of laboratories would be impracticable and keeping a list of animals useless, and in some cases impossible, *ibid.*, 2352. Considers it difficult to suggest a remedy for abuses, *Fergusson*, 1046–7; the appointment of an officer to attend experiments would be offensive, *ibid.*, 1058, and granting licenses questionable, *ibid.*, 1060–1; scientific men should be untrammelled, but enthusiasts restrained, *ibid.*, 1045.

There is no analogy between the duties of an inspector of anatomy and the suggested inspection of physiological laboratories, *Turner*, 3104–6; *Acland*, 1000–3.

An Act for the physiologist, parallel to the Anatomy Act, would regulate the supply of live animals without interfering with the experiments on them, *Turner*, 3107, 3159. Deprecates inspection as likely to impede scientific discovery, *ibid.*, 3146–52.

The Anatomy Act forbids the dissection of human bodies except in licensed places, but cats and dogs and parts of human bodies are constantly dissected in private houses, *Carpenter*, 5597, although no private practitioner can have a body for dissection, *Paget*, 333–5.

RESULTS.

I. Statements of alleged results; favourable opinions regarding them.
II. Opinions that they are of small practical value.

I. Statements of alleged results; favourable opinions regarding them.

Knowledge of all the most valuable physiological facts has been obtained by experiments on animals, *Gamgee*, 5351–2. Great results have been obtained from experiments on animals, and both they and men have benefited thereby, *Humphry*, 677, 683–4. Human pain may be mitigated, or even life preserved, by a small amount of animal suffering, *Watson*, 8. Reads portion of his article in the British Medical Journal, "What has vivisection done for humanity"? I. *It has advanced physiological knowledge.* II. *It has aided medicine and surgery.* III. *It has advanced therapeutics.* Gives some details, *McKendrick*, 3878, 3916–21, and observes that the more important advantages only are enumerated, *ibid.*, 3917–21. The discovery by Galen that the arteries contained blood, the circulation of the blood and true nature of the motions of the heart, the capillaries from the arteries into the veins, the pressure of the blood and its rate of circulation were ascertained by vivisection, *Sharpey*, 394. Our knowledge of dropsy, pulmonary apoplexy, engorgement of the liver, and a host of other diseases flowed from Harvey's great discovery, *Gull*, 5525–8. Refers to the improvements in surgery since the time of Ambrose Paré, to the discovery of chloroform, and the treatment of aneurism as proofs of the benefits resulting from vivisection, *McDonnell*, 4537–8, 4539–40. Experiments on animals have immensely advanced surgical science, *Simon*, 1442; instances Hunter's, *Fergusson*, 1024–5, and some of Sir Astley Cooper's and Sir Jas. Simpson's operations, *ibid.*, 1026, 1033–4. The possibility of tying an artery without starving the limb is an instance of its usefulness, *Rolleston*, 1280; neither the actual tying of the artery nor the process of recovery need be attended with much pain, *Sharpey*, 414; *Lister*, 4359–62. Refers to the improved treatment resulting

from Dr. Jones' vivisectional observations with regard to the best form of ligature, and the means of avoiding secondary hæmorrhage, and of obliterating arteries; quotes various passages on the point, *Turner*, 3025–7. Mr. Jones' experiments in connection with the ligature of arteries were the foundation of the present practice, *Simon*, 1446–7. Hunter himself lost patients for want of knowledge on this point, *ibid.*, 1448–9. Considers Mr. Jones' experiments were valuable, but believes that as much doubt remains now as before they were made, *Fergusson*, 1094–9, 1108–9.

The cure of aneurism followed from the discovery of the circulation of the blood, and Harvey was enabled to get rid of a dangerous tumour by tying the artery feeding it, *Watson*, 35. The cure of aneurism was learnt from the vivisections by Hunter and others; formerly lives were lost from want of such knowledge, *Paget*, 294–5, *Gull*, 5525. The method might have been learnt from observations on human patients, but not so quickly nor completely as by experiments on animals, *Paget*, 294. Refers to the value of Dr. Hunter's experiments on aneurism, *Turner*, 3027.

Refers in detail to the benefits derived from experiments on animals as to the transfusion of blood, and to torsion in lieu of the ligature of arteries, *McDonnell*, 4541–62*a*. The transfusion of blood would have been abandoned long since on account of the many dangers attending it, had not experiments on animals shown the manner in which these might be obviated, *Paget*, 380.

Refers to the mitigation of suffering in *angina pectoris*, consequent on his own observations as to the action of nitrite of amyl, *Brunton*, 5669. Considers that in such experiments chloroform would have complicated the result, that its residual action even would have interfered with that of the amyl, *ibid.*, 5753–9. Regards these experiments as ranking, among those performed by him, next to those with regard to snake poison; the number of animals used was much smaller, *ibid.*, 5751–2.

Dr. Brunton's experiments for the relief of *angina pectoris* could not have been attempted on the human body, but nearly all might be performed under chloroform, *Paget*, 308–15.

Has found great advantage from his own experiments, *Lister*, 4303–6, 4338, some of which led to the development of the antiseptic mode of treatment, *ibid.*, 4350–8.

The cause of asphyxia and the methods of resuscitation, and the effects of certain gases on the blood have been ascertained by experiments on live animals, *Sharpey*, 394. Experiments on animals were of much value to witness in forming the views expressed in his book on dietetics, *Pavy*, 2119–20, and have furnished results which could not otherwise have been obtained; particulars given, *Turner*, 3121–4.

Witness considers that Mr. Erichsen's experiments on dogs with regard to asphyxia show that the views of the Society for the Abolition of Vivisection with regard to experiments on live animals are correct, *Jesse*, 6453–8. Was aware that the results of these experiments were reported to the British Association, but not that the Fothergillian gold medal was awarded to Mr. Erichsen for them by the Royal Humane Society, *ibid.*, 6459. Reads passages from Dr. John Reid's researches, to show the contradictory opinions as to the cause of death and nature of asphyxia, *ibid.*, *page* 273.

The reproductive functions of the periosteum and repair of bone have been mostly arrived at by experiment, *Turner*, 3124. Doubts the beneficial influence of Mr. Symes' experiments on this point, *Fergusson*, 1027. Mr. Symes was subsequently opposed to experiments on live animals. Considers the mature opinion of such a man of great weight, *ibid.*, 1027–30, 1039.

Harvey did not discover the circulation of the blood by vivisection, but from Fabricius' discovery of valves in the veins; the fact of a fluid, when injected into the arteries of a dead body, returning by the veins demonstrates the circulation of the blood, *Macilwain*, 1845–6. Harvey's, Hunter's, and Bell's great discoveries were not made by vivisection; and such men as Gull, Curwin, Bell, &c. have said that vivisection is useless and misleading, *Jesse*, 6475. It is not certain whether observations on live or dead subjects led Harvey to his great discovery, *Acland*, 991. The discovery of the circulation of the blood was aided and perfected, rather than made, by Harvey's innumerable vivisections and microscopic investigations into the hearts of animals, *Watson*, 35, 84–8. The discovery of the circulation of the blood by Harvey, that of the capillaries by Malpighi, that of the lymphatic system by Ascellius in 1662, and its course and objects by Pecquet in 1649, are results obtained by vivisection, *Turner*, 3025, and, as well as many others, could have been obtained in no other manner, *ibid.*, 3057–64. Refers to Professor Rivière's assertion "that the discovery of the circulation of the blood had not advanced medicine a single step," *Walker*, 1721. Does not think this observation was meant to include surgery, *ibid.*, 1789–90. The discovery of the circulation of the blood, though at the time a matter of pure science, has since borne practical results, *Scott*, 5224–5.

Refers to Dr. Brown-Séquard's discoveries as to possible recovery after section of the spinal cord; details given, *Carpenter*, 5604–14; and the artificial production of epilepsy, *McDonnell*, 4491–8; points out the value of the latter, *Rolleston*, 1280. Observes that although no remedy has yet been discovered for diabetes and epilepsy, yet great light has been thrown on them by vivisection, *ibid.*, 1280, 1302; the former has thus been proved not to be a disease of the kidneys, *Turner*, 3126. Dr. Brown-Séquard's great skill in the treatment of nervous diseases was due to the knowledge he had acquired by his physiological experiments, *Carpenter*, 5635–41. Refers to the negative evidence that no certain means of averting the fatal effects of chloroform exist, and points out that by experiments on animals a convenient and safe anæsthetic is being sought for, *Paget*, 380.

Refers to the value of the discovery of vaccination by Jenner, and the important investigations by Galvani with regard to animal electricity, *Turner*, 3027–8.

Witness was present at the experiments made by Dr. Hope and Dr. Williams to determine the cause of the sounds of the heart in health and disease, which resulted in the present improved method of treatment of heart disease. The animals were rendered insensible by curari before being operated on, *Burrows*, 132–3. The sounds produced by the heart might possibly have been arrived at by comparing a large number of carefully tabulated cases; but, as a fact, no such result was obtained by that method, *ibid.*, 214. Refers to the valuable and useful results of these experiments, *Turner*, 3027–8; *McKendrick*, 3879.

Without vivisection our knowledge of the processes of inflammation would not have been dreamed of, *Humphry*, 603. Has witnessed experiments where an inflammatory state has been artificially induced; thinks the knowledge gained in such cases useless, and the experiments painful and distressing, *Walker*, 1727–8. Refers at length to the knowledge gained by painful experiments on animals as to the mechanism of inflammation and tuberculosis, *Burdon-Sanderson*, 2296–9. The causes and treatment of inflammation can only be learned by observations on living animals; the passage of the blood corpuscles through the walls of the vessels could only have been discovered by seeing it in a diseased living animal, *Humphry*, 615, 743–5.

Claude Bernard's vivisections proved an action of the liver which could not probably have been arrived at in any other way, and could not, in the main, have been performed on the human subject without resulting in death, *Burrows*, 188–91.

The functions belonging to the roots of the spinal nerves, the functions of the spinal cord, and other nervous centres, the reflex action of nerves and their various functions, have been discovered by vivisection, the treatment of tic-doloreux changed, and blushing explained, *Sharpey*, 394.

From experiments on the nervous system drugs were applied in new ways for the soothing of pain and lessening the danger to life, *Watson*, 35.

The respective functions of the anterior and posterior roots of the spinal nerves were definitely proved by the experiments of Sir Charles Bell and Majendie, *Turner*, 3025.

Refers to the abandonment of the section of the seventh nerve for neuralgia; also to Dr. John Reid's experiments on the cranial nerves; to his own and Dr. Dewar's experiments on the retina, *McKendrick*, 3879.

Dr. Marshall Hall, by severing the spinal cord, discovered its reflex action and the functions of the part below the section, thereby proving that many symptoms arose from the state of the spinal cord and not of the brain as previously supposed; gives instances, *Burrows*, 184–7.

Sir Charles Bell's experiment on the facial nerve was comparatively painless, yet it enabled a temporary facial paralysis to be distinguished from a serious one proceeding from a diseased brain, and showed that the division of the facial nerve in tic-doloreux was useless, *Burrows*, 141–3, 215. Thinks Sir Charles Bell's reluctance to perform certain experiments on account of the pain refers to some performed by Majendie about the same time, *ibid.*, 221–2.

II. Opinions that they are of small practical value.

Considers that the practice of medicine is based upon clinical and pathological observations rather than physiological experiments; has not himself gained any knowledge from these experiments, and is guided in practice by his own observations on the human subject, *Fergusson*, 1101–3;

does not think pathological experiments have much bearing on medical science, *ibid.*, 1100. In these experiments animals are disturbed by the pain and the anæsthetic. The products of the blood and secretions differ greatly from those of animals in health, *Haughton*, 1894–7. Many toxicological experiments, even by eminent men, have no useful result, *Taylor*, 1170.

The value of these experiments is often exaggerated; instances Dr. Hughes Bennett's experiments on dogs, which, though of great value to sick dogs, were of none to sick men, *Haughton*, 1875. Quotes Sir Charles Bell's opinion that vivisection is a source of error, and that his discoveries were deduced from anatomy, *Jesse*, 6423–5; reads passages showing the difference of the results arrived at by different vivisectors, and the contradictory opinions held by vivisectors, *ibid.*, 6460*a*, 6473; contends that if the value of the discoveries of each individual by vivisection were tested by the opinion of impartial men, the results would not be found to justify the cruelty, *ibid.*, 6475.

Has not any personal experience as to vivisection for surgical purposes, but believes the transfusion of blood and all similar discoveries were made by physicians and surgeons, not by physiologists, *Walker*, 1721. Thinks the experiments as to transfusion of blood referred to by Sir J. Paget had no practical value, *Fergusson*, 1104–5.

Contends that physiology is not the foundation stone of pathology, *Walker*, 1721.

A knowledge of the functions of an organ in health is no guide of itself to the treatment in disease, *Walker*, 1721, 1738. Quotes Sir W. Gull's opinion "that the phenomena of disease are not explained by the phenomena of healthy texture nor by the action of healthy organs," *ibid.*, 1749. The knowledge of the functions of the liver and kidneys is no use in diagnosing their diseases, *ibid*, 1739–42, 1758.

Refers to several diseases, and points out that the remedies were discovered by the physician, not suggested by the physiologist, *Walker*, 1721. Admits that the discovery that ringworm was produced by a parasite was a great advantage, it placed a definite object before the pathologist, but contends that efficient remedies were previously known, *ibid*, 1762–3, 1769. The knowledge of the process of inflammation is due to experiment; but it has not discovered a remedy, *ibid.*, 1760.

Thinks the discovery that nitrite of amyl was a remedy for *angina pectoris* was a lucky guess, *Walker*, 1781–2.

Considers that the part of physiology is to localise disease, *Walker*, 4911–2; admits that the functions of the various parts of the nervous system have been ascertained by experiment, *ibid.*, 1754–6; and that in nervous affections physiology usually, but not always, enables the disease to be localised, but it is of no further use, *ibid.*, 1721, 1739, 1750–3, 1757–9.

Considers Hunter's experiments as to aneurism of the heart fallacious, because aneurism cannot be induced in animals, *Macilwain*, 1845–6. The possibility of the deligation of an artery was discovered by clinical surgeons, not professed physiologists, *Walker*, 1721. Was not aware that physiologists discovered the cause of the second sounds of the heart; but maintains, that although anatomy and physiology may help to determine the seat of disease, they are no further help, *ibid.*, 1749. Physicians discovered the action of digitalis, &c. on the heart, and physiologists cannot explain their action or suggest analogous substances, *ibid.*, 1721.

Would not say physiology is of no use; but maintains it has never led to the discovery of a single remedy, or to improved treatment, *Walker*, 1721.

Considers it demonstrable that vivisection has been not only useless but misleading, *Macilwain*, 1859. Experiments on animals have led to serious practical errors, and have not, as it is alleged, conduced to the cure of human infirmities, *ibid.*, 1847, 1850. Prefers, however, to rest his condemnation of vivisection solely on the ground that it is a fallacious mode of investigation, *ibid.*, 1855–8, as he should have been glad to have had an opportunity of urging in public, *ibid.*, 1845–6, 1854, 1858. Refers to Mr. Travers' surgical experiments on the intestines of dogs; points out the erroneous deductions made, and the want of analogy between them and the operation for strangulated hernia in the human subject; believes hundreds of lives have been saved by giving up the treatment; quotes Mr. Stanley of St. Bartholomew's in support of this statement, *ibid.*, 1850–2. From studying the writings of Hunter and Lord Bacon, witness became much impressed with the fallacies of the medical world, *ibid.*, 1845–6. Puts in one of his books (since republished in America) advocating the inductive method in medical science, and pointing out the uselessness of vivisection, *ibid.*, 1845–7, 1849, 1859.

The value of experiments upon living animals, though great, has been altogether exaggerated, *Fergusson*, 1015, 1017, 1032; and the results are often fallacious from the introduction of abnormal conditions, *ibid.*, 1085; *Walker*, 4888. These experiments are generally performed by persons not practical surgeons, and do not lead to the mitigation of pain, or to improvement of method in surgical operations, *Fergusson*, 1032–3, 1049.

Believes the statements made by a medical man that he was greatly indebted to physiologists in his practice was wrong, if he meant more than that physiology enabled him to localise disease, *Walker*, 1779–81.

Admits that knowledge is increased by these experiments, but doubts the value of it, the organs not being in their normal condition when under observation, *ibid.*, 1051–3. If nine tenths of the experiments were stopped no harm would be done, *Haughton*, 1960-1. The true use of vivisection and pathological experiment is original research, *ibid.*, 1867.

SOCIETY FOR THE ABOLITION OF VIVISECTION. *See also* REGULATION.

Reads correspondence between Dr. Ferrier and himself; in which the former complains of being unfairly quoted, and of the inferences drawn as to anæsthetics, *Jesse, pages* 221–3. Reads from the pamphlet in which the correspondence is published remarks on the subject, *Jesse, page* 222.

Reads from the "Times" a letter of Dr. Crichton Browne's, complaining of misstatements in an advertisement of the Society for the Abolition of Vivisection as regards Professor Ferrier's researches, *Jesse, page* 221.

Complains of the "unfair conduct" of certain newspapers in the matter, *Jesse*, 4439.

Inquires if the Commission could supply the society with Dr. Ferrier's Croonian lecture, and is informed that its office is simply to receive information, *Jesse*, 6443–53.

SOCIETY FOR THE PREVENTION OF CRUELTY TO ANIMALS. *See also* REGULATION.

States what evidence the society purposes to lay before the Commission, *Colam*, 1568. Several years ago the society sought information as to vivisection, offered prizes for the best essays on certain points (essays put in), and successfully opposed operations for merely acquiring surgical dexterity, *ibid.*, 1568. The society objects entirely to experiments for demonstration, *ibid.*, 1551, 1569.

Puts in a report of the proceedings against Dr. Magnan and others for cruelty at the Norwich meeting, *ibid.*, 1568, also copy of a memorial asking the society to oppose vivisection, *ibid.*, 1568, but which contained no particulars of the vivisection complained of, *ibid.*, 1569. A committee appointed by the society reported that their applications for information to the medical schools and hospitals had elicited no satisfactory replies; believes the committee were of opinion that vivisection had not improved the treatment of disease, *ibid.*, 1568, 1698–702.

For documentary evidence presented by the secretary of the Royal Society for the Prevention of Cruelty to Animals, *see* Appendix IV.

STUDENTS, EXPERIMENTS BY.

It is not a practice among students to vivisect animals in private, *Gamgee*, 5370; *Sharpey*, 453; *Rutherford*, 2855; *McDonnell*, 4464, 4512–3; they may occasionally do so, *Turner*, 3074–6, but very rarely, *Burrows*, 204; no instance has been found in London, *Colam*, 1683.

Believes that private experiments are common among zealous students, *Scott*, 5238–51.

Has never known a student desirous of undertaking an original research, *Rutherford*, 2997.

Refers to a passage in a work describing private experiments by students, *Jesse*, 4446–55. Was aware of one student experimenting on a cat, but he abandoned it on the uselessness of the experiments being pointed out to him, *McKendrick*, 3915.

Students should not be allowed to vivisect except under responsible control, and in assisting in investigations, *Humphry*, 627–9, 753–6; *McDonnell*, 4572–3; but vivisection by students can seldom be necessary, *Humphry*, 623–6. Those desirous to become physiological investigators and advance science might practise vivisection independently in the laboratory after their final examination, *McDonnell*, 4514–7; *Rolleston*, 1284–5.

Students would not tolerate experiments without anæsthetics, *McDonnell*, 4465, nor allow any frightful ones, *Sibson*, 4721–6. Dr. Pye-Smith gets about two students only out of 300 to attend his demonstrations; they have no taste for experimentation, *Gull*, 5516; gives reasons, *Purser*, 4884–5. There is no difficulty in restraining students from experimenting, but there is no getting them to work for themselves, *Burdon-Sanderson*, 2669–76.

Experiments must be mostly confined to a laboratory, as the appliances are expensive, *McKendrick*, 3982-3.

Mr. James Blake's experiments as a student were exceptional, *Sharpey*, 488-9, as also were those of the present Platt scholar, Mr. Priestly; gives details, *Gamgee*, 5374-5, 5385, 5388-92.

While a student, witness devised a new mechanical theory of respiration, and was advised by the professors and others to try it on a live animal, but felt incompetent to do so, although about to take his degree, *Hoggan*, 3472-8, 3490-506, 4022-33. Considers it was his duty as a teacher to advise Dr. Hoggan to test his theory of the distention of the lungs by experiments, *Sinclair*, 5854-77, 5885-92. Advised Dr. Hoggan to test his theory by experiments because of his great intelligence and ability; gives details, *Handyside*, 5919-27, 5964-70, 5981-5, 5977. Did not refer to the use of anæsthetics in conversation with Dr. Hoggan, and cannot say if chloroform would have interfered with the result; should not have thought it wrong to perform it without, *Sinclair*, 5898-9, 5907-8; advised him not to use cats; gives reasons, *ibid.*, 5822, 5893-7.

Believes students at Edinburgh were advised to experiment on live animals, and did so at their own discretion without anæsthesia; refers to one who experimented on 10 or 15 cats, *Hoggan*, 3479-89, 4104-6, 4209-24, but declines giving an opinion as to whether the professors encourage it, *ibid.*, 3507-27. Students of ability are recommended to make investigations and embody the results in theses, *Handyside*, 5971-4; *Sinclair*, 5878-84.

At Edinburgh neither young medical men nor students are encouraged to practise experimentation except under supervision or in preparing theses, *McKendrick*, 3893-4, 3996-9, 3974-81.

It was not common for medical students to try private experiments with the concurrence of the lecturer, *Handyside*, 5953-5; witness never advised any student but Mr. Hoggan to experiment, *ibid.*, 5958-61, 5978-80.

Students do not perform experiments at Dublin, and should not be allowed to do so unless under the direction of a professor, *Purser*, 4812-6, 4835-8.

Experiments have been made by students at the Veterinary College for the past five years, and will continue until put a stop to, *Mills*, 4952-5; gives instances and details of some cruel and painful ones, which were, however, unknown to the authorities; one on a dog sent by its owner to be destroyed, *ibid.*, 5009-31, 5136-55, 5165-6. A diseased horse, *ibid.*, 4965, bought for dissection, was kept for a week, *ibid.*, 4957, 4964, 5108-9, and experimented on all over, *ibid.*, 4966, by the students without any control, *ibid.*, 4950-1, 5107, without anæsthetics, *ibid.*, 4958-9, 5179-80; gives details of the operations, *ibid.*, 4960-1, 5110-9, 5127-32, which were performed openly in the quadrangle of the college, *ibid.*, 4947-9, 5133-5; believes the principal must have known of this experiment, *ibid.*, 4936-46, 4956-7, 5125-6; *Colam*, 1622, 1682-8. Knows nothing of the experiments by students referred to by Mr. Mills, *Turner*, 3130-3.

When a student, he was present at various private experiments by students at their lodgings, *Mills*, 4916-24, 5055-100, 5181-3, on cats and dogs obtained by cat hunts and poisoned baits, *ibid.*, 4927-31, 5167-72; gives instance, *ibid.*, 5156-9; the experiments were simply to demonstrate known things, and showed mere idle curiosity and a reckless love of vivisection, *ibid.*, 4928-32.

Thinks Professor Huxley's "Lessons in Elementary Physiology" encourages vivisection by young persons; quotes passages in support of this opinion, *Jesse*, pages 223-4; *ibid.*, 6506-27.

SUPPLY OF ANIMALS.

The animals are obtained in a secret way; gives particulars, *Colam*, 1569, 1637-43; they are obtained by private purchase, *Klein*, 3575-8; some are purchased at Leadenhall Market, *Pavy*, 2101-4; but cannot say how the cats and dogs are obtained, *Burdon-Sanderson*, 2821-4; asks no questions as to how the cats are obtained, *Brunton*, 5731-5. Does not know how the animals are obtained, *Legg*, 5318-9.

Foreign frogs are preferred to English frogs, as they are larger, *Simon*, 1496, *Schäfer*, 3784-7.

Household animals should be exempt from liability to experiments.—Hutton's Addendum to Report, pp. 22, 23.

VERIFICATION OF RESULTS, EXPERIMENTS FOR.

A fact being established, the experiments demonstrating it should not be repeated, *Sharpey*, 404-5; *Fergusson*, 1019-22; *Turner*, 3037-8; *Allman*, 5444-6; unless under anæsthetics, *Humphry*, 772-3. A thing once proved, repetition is useless cruelty, *Taylor*, 1169.

Experiments should only be repeated when the result is doubtful, *Schäfer*, 3813; *Allman*, 5444-6; or the matter still *sub judice*, *McDonnell*, 4472-3, 4587; or unless some neglected element should appear to have affected the result, *Fergusson*, 1019-22; *Acland*, 924-5, 987.

It is difficult, however, to say when a truth is established, *Colam*, 1551, 1569; *Burdon-Sanderson*, 2223-4; *Humphry*, 680-2. The number of times an experiment should be repeated for the verification of the result is a difficult question, and must be left to the discretion of the physiologist, *Rutherford*, 2945-7; although such a course must naturally work very differently with different persons, *ibid.*, 2948.

No English physiologist would repeat a very painful experiment, verified abroad, *Burdon-Sanderson*, 2780.

Results by such men as Professor Ludwig would be at once accepted in England without repetition, *Schäfer*, 3814-5.

If an experiment opens up further questions they should be solved under proper supervision, *Haughton*, 1956. If there be any doubt as to the result of an experiment it should be repeated, *Rutherford*, 2847. Experiments made to establish a new fact can hardly be relied on until tried by other observers, *Sharpey*, 519-22; but only very highly qualified men are competent to undertake experiments with such objects, *Burdon-Sanderson*, 2225-6; *Rutherford*, 2863-6.

A considerable revision of results has been necessary during the last 25 years, but such a necessity is not likely to recur, *Burdon-Sanderson*, 2781-2.

Some of Sir Charles Bell's experiments, such as that on the spinal cord, *Sharpey*, 464-5, and those of Dr. Foster as to the functions of the nerves of the vertebræ, should not be repeated, the facts being established, *ibid.*, 536. Dr. John Reid's investigations with regard to the eighth pair of nerves were also so carefully carried out, and the results shown to so many skilful men, that their repetition is unnecessary, *McKendrick*, 3944.

Thinks some of Sir Charles Bell's experiments on the nerves are not quite conclusive, *Humphry*, 635-6, 680-2.

VETERINARY COLLEGE.

Does not believe that veterinary surgeons practise physiological research, and has never seen it in a veterinary college, *Pritchard*, 788-90, 872. Is opposed to the establishment of a laboratory at the Veterinary Institution; gives reasons, *ibid.*, 869-71. At the Veterinary College the performance of operations is not permitted to students, but is restricted to the three chief officers only, *ibid.*, 807-11, 839-40. The knowledge from treating diseased animals is more reliable than that derived from physiological experiments, *ibid.*, 882-4. No experimental operations on healthy animals are performed at the College; admits that they should be if likely to benefit animals generally, *ibid.*, 786-7, 823. Instances, however, novel operations attempted for curative purposes on diseased animals, *ibid.*, 836-7, 844-5. Navicular disease is so common among horses that experiments on healthy animals are unnecessary for showing students how to treat it; the operation is performed under anæsthesia, *ibid.*, 379-80, 873-81. Chloroform was used at the Veterinary College for painful experiments and delicate operations; uses it himself in some cases of firing, *Mills*, 4962-3, 4967-8, 5046-52. Horses and donkeys brought for dissection were kept in a paddock until wanted, *ibid.*, 5120-1. Mr. Williams, the present principal, performed all the experiments, *ibid.*, 5104-6. Has known tenotomy performed as an experiment on a horse not under chloroform, *ibid.*, 5034-44; also the jugular vein of a pony opened, and the blood blown back, *ibid.*, 4997-5008. Lithotomy is very rarely performed on the horse, and might have been learnt from the dead subject, *ibid.*, 4993.

The principles of the Report apply to the practice of veterinary surgeons, and they are included in the purview of the measure recommended (*see* **REGULATION**).**—Report, pp. 19, 20.**

ZOOLOGICAL GARDENS, ANIMALS AT THE.

Lions and tigers are shorter lived in the Zoological Gardens from want of exercise, *Garrod*, 2018-9; but it would be absurd to shut up the gardens on that score, *Haughton*, 1937-8. Tubercle is more destructive than any other disease, and in most cases the conditions cannot be accounted for, *Garrod*, 2010-6. The domestic animals live as long there as elsewhere, *ibid*, 2017.

WAR OFFICE (SANITARY STATE).

RETURN to an Address of the Honourable The House of Commons, dated 14 February 1877;—*for*,

COPY "of the REPORT of the COMMISSION recently appointed to inquire into the SANITARY STATE of the WAR OFFICE."

War Office, 19 February 1877.

GATHORNE HARDY.

REPORT of the COMMISSION recently appointed to inquire into the SANITARY STATE of the WAR OFFICE.

My Lord, 31 January 1877.

IN compliance with your Lordship's wishes, we have carefully examined the whole of the War Office Buildings, in Pall Mall, from basement to roof. We have inspected, we believe, all the water-closets, the areas, and the office generally.

On the basement, we have found as sources of impurity of air:—

1. Water-closets in the area, within a few feet of doors leading into rooms residentially occupied, and passages.

These water-closets have, as sole means of ventilation, the doors leading into the areas. One of these water-closets is used by 25 men, forming the printers' establishment.

2. A laundry, vapour from which passes into the passages with sufficient freedom to be perceptible at some distance.

3. A canteen.

4. Kitchens.

5. Rooms occupied by families both for living and sleeping.

6. A printing establishment, which, as well as the passages, is lighted by gas, often during the whole day.

The passages of the basement are narrow, dark, and tortuous, with scarcely any means of ventilation, except from the areas in which are the water-closets. Communicating with the passages are several rooms, dark, unoccupied, and without ventilation.

On the several floors above are a considerable number of water-closets, placed within the building, and having no efficient means of ventilation. They are close to the rooms used by the clerks; the odour from them is in many cases complained of. We understand that these water-closets have been condemned, and will be replaced by others, to be built in the garden, at a distance from the building.

Several lavatories have been complained of as sources of bad smells; and the Committee believe that noxious gases must from time to time escape from the pipes of these lavatories, which, although trapped, open into the drains.

The urinal accommodation is altogether defective.

The overflow pipes of the cisterns supplying the water-closets open, in most cases, directly or indirectly, into the soil pipes.

Some of the cisterns which supply water-closets have taps, and are available for drinking and for domestic purposes. In one case we are informed that the water of such a cistern is habitually so used.

There is a cistern specially set apart for the supply of water for drinking and for domestic purposes. This cistern is cleaned out once a week. An order has been issued by the War Department that no water other than that drawn from the above cistern shall be used for domestic purposes. This order has not, however, been obeyed.

The rooms generally contain sufficient cubic space for the clerks employed in them, namely, from 700 feet upwards, and in the greater number of cases over 1,000 feet per man. A room recently tenanted by the Audit Department, but which was empty for the purpose of repair at the time of our visit, is, we consider, insufficient for the number of clerks who are accommodated in it.

The ventilation of the rooms, however, is most defective; there is no possibility in the majority of the rooms of obtaining any movement of the air; the doors open into narrow passages, many of them incapable of efficient ventilation, and charged with air rendered impure by the defects described above, as existing in the basement and on the other floors.

In the most lofty rooms the windows are so far below the level of the ceilings that a chamber of air, foul and stationary, remains without a possibility at present of clearing it; there is hardly a room with any cross ventilation in it. We found many of the ventilators papered up by the occupants of the rooms, in order to obviate draughts which would, necessarily, cause illness.

We have pointed out above the salient sanitary defects of the building; defects which are inherent to its structure, and which cannot, we believe, be so effectually removed as to render possible the retention of the present War Office. We shall presently proceed to examine in what manner these evils can, in the meantime, be mitigated.

Before doing so we desire to state that we found that the whole of the soil pipes and sewers are ventilated, that the basement is dry and clean, and that it was, with the reservations above indicated as to the laundry and canteen, free from smell at the time of our visit. We saw a very efficient apparatus for flushing the drains. The closets are clean and in good working order. Attempts have been made at ventilation, though from the nature of the building these attempts have not been successful. The flooring of the kitchen at the west end of the building, where report had pointed to the existence of a cess-pit, was taken up for our inspection. We found the soil below dry and clean, and a chemical analysis by Professor Abel proved it to be free from sewage matter. A trap, one foot square, from which foul gas escaped, had been repaired and cleansed before our visit.

We append a statement by Mr. Taylor, of the Office of Works, upon the subject of the general drainage system of the War Office. No plans showing where the old drains run are, we are informed, in existence, and therefore the absence of cesspools cannot be proved without the removal of the whole floor of the basement.

With regard to the health of the office generally, the annexed Return has been furnished to us. From this Return it will be seen that there has been no epidemic of typhoid fever among the officers, clerks, and servants of the War Office; at the present moment there are absent from sickness nine persons out of a total of 633 employés. The causes are—

Typhoid Fever	1	(Lord E. Cecil.)
Bronchitis	2	
Congestion of Liver	1	
Stoppage of Bowels	1	
Rheumatic Gout	1	
Sprained Ankle	1	
Ulceration of mouth and blood-poisoning	1	
Temporary indisposition	1	

By the Returns it appears that there has been only one case of typhoid fever, in addition to that of Lord Eustace Cecil, during the year 1876. Although we had no evidence before us of special outbreaks of disease having originated from the sanitary defects we have described, we have no doubt that a daily exposure for several hours to their influence must tend to deteriorate the general health of the persons so exposed.

The evidence of the office-keeper goes to show that there has been no sickness in the families that residentially occupy the building.

While satisfied of the accuracy of the opinion above expressed, namely, that by no alterations can the building be rendered sanitarily satisfactory, we desire to suggest that the following means should at once be adopted for the purpose of mitigating some of the present defects.

1. The

1. The closets in the area should be removed, with the exception of those needed by the families resident in the building, which should be thoroughly ventilated.

2. The laundry should be removed.

3. If it be impossible to remove the printing establishment, or greatly reduce the staff, ventilating shafts should be introduced into the second and third rooms, as has already been done in the first.

4. The whole of the gas burners throughout the building should have hoods and tubes.

5. The condemned water-closets ought to be removed at once.

6. The waste pipes of the lavatories, and the overflow pipes of the cisterns, should terminate in the open air, and be cut off from all direct communication with drains. No traps will efficiently supply the place of open air termination.

7. All taps communicating with cisterns which supply water-closets should be removed, so that there may be no possibility of the water being used for drinking purposes.

8. The building has been so cut about and altered that we cannot recommend any one system of ventilation as applicable to the whole office. The ventilation of each room and passage should at once be taken in hand, every case being treated specially. We would however recommend, in every instance, that the ventilators introduced should be of such a nature as to be beyond the control of the occupants of the room, and so constructed as not to create draughts.

9. To render the air of the rooms less foul we advise that rooms be set apart for luncheons, and that a special hour be fixed for the meal. The windows of the rooms should be freely opened by a porter during the absence of the occupants.

It must be borne in mind that these suggestions, if carried out, will, in our opinion, only mitigate evils, not remove them.

We have, &c.
(signed) *William Jenner*, M.D.
W. M. Muir, M.D.
Edward C. Seaton, M.D.
A. B. Mitford.

The Right Honourable
The Earl of Beaconsfield.

STATEMENT by Mr. *Taylor.*

WAR OFFICE BUILDINGS, PALL MALL.

Mr. Mitford,

MY reasons for supposing that there are no cesspools under the above buildings are:—

1. That it was, to my knowledge, the invariable rule of my predecessor in office, who had charge of the buildings for many years, and under whose directions the buildings added during the last 25 years were adapted an prepared for the War Department, to abolish all cesspools which were known to exist.

2. That I have strictly adhered to the aforesaid rule during the time the buildings have been in my charge, and have from time to time given instructions to the clerk of the works to cause careful search to be made wherever there was reason to believe that cesspools might have been left.

I have, however, to add that unless the whole of the basement floor be uncovered and excavated to a depth of some feet, I cannot undertake to say positively that there are no cesspools under the buildings.

24 January 1877. (signed) *John Taylor.*

RETURN of Staff and Clerks Absent from Illness during 1876.

THE TWENTY-SIXTH REPORT

Of the COMMISSIONER in charge of the LAND REVENUES of the CROWN in *England*, under a Warrant of the Lords Commissioners of Her Majesty's Treasury, dated the 30th of March 1876.

IN compliance with the directions contained in the Acts 10 Geo. 4, c. 50, 11 & 12 Vict. c. 102, and 14 & 15 Vict. c. 42, I have to report to Her Majesty and the Houses of Parliament, what has been done in the management of the hereditary possessions of the Crown, in charge with me, in the year ended on the 31st March last.

In the 49th and 53rd Reports to Parliament of the Commissioners of Woods, various particulars were given as to the extent of the Crown property in their charge, and the cost incurred in management, also as to the measures which have been taken since the year 1851 for the concentration and improvement of that property. The year 1851 was there selected, because, by the Act 14 & 15 Vict. c. 42, the Office of Woods was separated from the Office of Works in that year; and the duties of the former Department were thenceforward limited to the management of the Crown property in charge of the Department of the Woods, Forests, and Land Revenues of the Crown.

The result of those measures is shown in the following Statement of the amount paid to the Exchequer in each complete financial year since the separation of the two Departments, out of the income arising from the Woods, Forests, and Land Revenues, after deduction of all expenses of management except the salaries and expenses of the Official Establishment, which are paid out of monies voted by Parliament.

Year ended 31st March	Amount Paid to the Exchequer.			Year ended 31st March	Amount Paid to the Exchequer.		
	£.	*s.*	*d.*		£.	*s.*	*d.*
1853	250,000	–	–	1865	310,000	–	–
1854	260,000	–	–	1866	320,000	–	–
	*135,888	9	3	1867	†330,000	–	–
1855	272,571	16	8	1868	345,000	–	–
1856	281,515	15	9	1869	360,000	–	–
1857	284,857	1	6	1870	375,000	–	–
1858	276,654	4	1	1871	385,000	–	–
1859	280,040	9	5	1872	375,000	–	–
1860	284,479	5	8	1873	375,000	–	–
1861	290,568	4	7	1874	375,000	–	–
1862	295,000	–	–	1875	385,000	–	–
1863	300,000	–	–	1876	395,000	–	–
1864	305,000	–	–	1877	410,000	–	–

* This sum was derived from a repayment of monies advanced out of the Land Revenues, before the separation of the two Departments, for the purposes of certain Improvements in the Metropolis.

† Prior to the 31st March 1866, the cost of permanent improvements was paid out of Income, and the royalties arising from Minerals were credited to that fund. But, from and after that date, in pursuance of the 29 & 30 Vict. c. 62, the cost of permanent Improvements has been paid out of capital, subject to repayment out of income by annual instalments; and one moiety of the net proceeds arising from Minerals has been credited to Capital; the amount so paid out of Capital for permanent Improvements in the past year was 16,202 *l.* 18 *s.* 7 *d.*, and the amount credited to that fund in repayment of previous advances for Improvements and in respect of one moiety of the net proceeds from Minerals in the same period, was 28,263 *l.* 17 *s.* 1 *d.*

The payments to the Exchequer, shown in the preceding Statement, were made out of the receipts arising from the whole of the Crown property in charge of the Commissioners of Woods. That property is divided, for purposes of management, into two parts, one of which, consisting of the Royal Forests and of the greater part of the plantations in England, and also of the Land Revenues in Scotland, Ireland, Wales, and in the Isles of Man and Alderney, is in charge of Mr. Howard. The rest is in my charge.

The property in charge with me consists of the following:—

1. Windsor Great Park, Plantations and property at Ascot, Bagshot, and Virginia Water, &c.

2. Manors, messuages, land, &c., in various parts of England.

The property described under the first head consists of more than 14,000 acres of land, maintained as part of the domain attached to Windsor Castle. The income arising from, and the expenditure upon the property which, like the Royal Parks in London, is largely used by the public for purposes of recreation, cannot be considered as a matter solely of profit and loss.

The property described under the second head may be divided into seven classes, as described in the following Statement, which shows the rents and other receipts derived from it in the past year, amounting altogether to £. 347,731. 0. 2.

	Quantity.	Rents and other Receipts in the Year to 31st March 1877.
	A. R. P.	£. s. d.
1. Farms and land let for agricultural purposes - -	70,331 2 18	119,902 4 8
2. Five hundred and ninety-eight houses and other buildings, let at rack rents, or at rents which have been fined down from rack rents - -		54,737 10 2
3. Land let for building purposes, including ground-rents, which have been purchased - - - - - - - - - - - - -		138,506 17 4
(Four thousand six hundred and ninety-eight houses, with other buildings, have been erected on the land at the expense of the Lessees.)		
4. Mines, minerals and substrata, let subject to the payment of royalties -		14,316 15 4
(This is the gross amount. One moiety of the net income, after deduction of expenses, is credited to capital.)		
5. Tolls of markets, ferries and miscellaneous property in the occupation of tenants, &c. - - - - - - - - - - - - -		12,530 16 5
6. Manors (quit rents, fines, &c.) - - - - - - - - -		3,414 2 3
7. Plantations, underwood and hedge row timber, &c. - - - -		4,322 14 –
Total Receipts in the Year to 31st March 1877 - £.		347,731 – 2

In the 53rd Report to Parliament it was stated that the receipt to 31st March 1875 of the property at that time in charge with me amounted to £. 327,278.*

The increase in the revenue, which has been obtained since that date, is attributable to several circumstances. In the first place, various leases have been renewed at increased rents; in the second place, purchases of land and ground-rents

* That Report contains a Schedule of the property in my charge in March 1875, showing the counties in which it is situated, and the number of acres and of houses, &c., in and upon the different estates, and the rents derived from the various properties.

ground-rents have been made out of the proceeds of sales of property in charge of both Commissioners; in the third place, the plantations and farms at Delamere, in the county of Chester, and also some woodlands at Salcey and Hazelborough, in the county of Northampton, and at Chopwell, in the county of Durham, have been transferred to my charge from that of Mr. Howard. Those transfers were made in consequence of the death of one and of the superannuation of another local officer, and in order that the farms and plantations might, for the sake of convenience and economy, be placed under the management of the agents of other Crown estates in the immediate neighbourhood which are under my charge.

From those several causes the receipts from rents, royalties, &c., of the property in my charge have amounted in the past year to the increased sum of £. 347,731. 0. 2.

The arrears due at Michaelmas last in respect of that property, and remaining uncollected at the close of the financial year, were as follows, viz.:—

	£.	s.	d.
Rents of farms, houses, &c.	3,306	1	5
Quit and fee-farm rents	48	13	6½
Mineral royalty	25	–	–
TOTAL £.	3,379	14	11½

The arrears at the close of the year amounted therefore to less than one per cent. upon the rents and royalties due up to and at the preceding Michaelmas; a considerable proportion of those arrears has since been collected.

The cost of collecting the rents and royalties of the property before referred to, amounting, as stated above, to £. 347,731., and of the agency and local management of the several manors and estates, including the superintendence of the construction of new farm buildings, and of the execution of repairs, and also of drainage works, did not amount to three per cent. upon the sum received. The details of the expenditure in agency and management are as follows:—

COLLECTION AND MANAGEMENT.	Amount. £.	s.	d.
A poundage, at 4 per cent., on 134,124 *l.*	5,364	18	5
Ditto - 2½ per cent., on 22,114 *l.*	552	17	1
* Surveyor's charges for making plans of estates, preparing designs for farm-houses, buildings, and cottages, superintending the construction of such buildings, and the execution of drainage works, and for other services in relation to property out of London	1,308	17	–
Apportioned salary of the Receiver of Crown Rents for Middlesex, &c. (This officer performs other duties, as stated in the 53rd Report to Parliament, page 7.)	600	–	–
* Surveyor's charges for valuing and letting land and houses, and for other services in relation to property in London	864	8	10
Apportioned salary and travelling expenses of mineral surveyor	260	–	–
Local agents, clerk of the works, woodreeves, stewards, and bailiffs of manors, &c.	839	7	–
Audit dinners	231	6	5
Incidental expenses	72	7	6
TOTAL £.	10,094	2	3

* This Statement does not include the cost of sales or purchases, which is chargeable to capital, or the sums paid by railway and other companies, and by individuals for valuations of, and for reports by surveyors upon premises sold, enfranchised, &c.

The outlay incurred in the past year upon the property described in the Statement, at page 4, in the drainage and reclamation of land, and in building and repairing farmhouses and homesteads and cottages for labourers, amounted to £.18,642. 15. The proportion of that sum, which was expended in permanent improvements, falling under the definition of the "Improvement of Land," within the meaning of the "Improvement of Land Act, 1864," amounts to £. 15,629. 19. 10. That sum was paid out of capital, in pursuance of the Land Revenue Acts, which provide that the cost of such works shall be charged to capital, and that one moiety of the net proceeds from mines and minerals shall be credited to that fund. The residue of the outlay, amounting to £. 3,012 15. 2., was paid out of income.

LEASES GRANTED. Appendix, No. 1.

During the period to which this Report relates, I have granted 73 leases of land, houses, and other premises, situated in different counties in England, and not being within the boundaries of any of the Royal Forests. The rents reserved under these leases, amount altogether to £. 21,584. 1. 3., and fines amounting to £. 530 were received upon the grant of two of those leases.

The particulars of the several leases are inserted in Appendix, No. 1, and the property demised may be divided into four classes; viz.:—

1st. Farms or land for agricultural, &c. purposes.

2nd. Houses or other buildings.

3rd. Land for building purposes.

4th. Miscellaneous property, and interests of uncertain value.

Of the 1st Class, it will be seen, on reference to Appendix, No. 1, that 29 leases have been granted of land in the counties of Bedford, Huntingdon, Sussex, and York. The total acreage of the land, comprised in these leases, amounts to 11,480 A. 2 R. 35 P., and the gross annual rents for the land so demised, and for the right of sporting over some small parcels of woodland, amount to £. 19,284. 7. 4.

Of the 2nd Class, four leases have been granted of four houses in London and Richmond, at rents amounting altogether to £. 330. 10., and upon payment, in two cases, of fines amounting to £. 530.

Of the 3rd Class, 37 leases have been granted of sites for 52 houses, with stables, and other buildings, in London, and at Dover, Eltham, Richmond, and Windsor.

In all these cases, the several lessees have built, or have covenanted to build, within a limited period, and at their own cost, substantial houses or other buildings, upon the plots let to them respectively. The ground-rents reserved by leases in this class amount to £. 1,796. 3. 11.

Of the 4th Class, three leases have been granted at aggregate rents of £. 173.

The

The principal leases which have been granted are as follows; viz. :—

Stagsden Estate, in the County of Bedford.

This Estate contains 3,365 acres, and was purchased in 1874, for £.130,000., including the timber, which was valued at £. 11,000. The particulars of the purchase are set forth in the 53rd Report to Parliament (1875). The tenancies have been re-arranged in 13 holdings, containing 3,091 A. 3 R. 11 P.

The residue of the Estate consists of some labourers' Allotments and Cottages, and also of Plantations which are retained in hand, except that the shooting of the Plantations is let to the occupiers of the adjacent farms. The requisite new farm buildings, and some additions to the existing buildings, together with some drainage works, are in progress. The total rental when those various works are completed will be £. 4,818, which, together with the proceeds from the plantations retained in hand, will yield about 3$\frac{1}{3}$rd per cent. upon the outlay incurred in the purchase, in the redemption of the land-tax upon the property, and in the various works above referred to.

Leases for terms of years were offered to the principal tenants upon the conditions which are customary in farm leases granted by this Department, and under which the several lessees are bound to keep the premises in substantial repair without any allowance for materials. But the occupiers of eight out of the 13 holdings have preferred to hold as yearly tenants, the owner, as is customary in the county of Bedford, supplying materials for repairs, except straw for thatching.

Eleven of the leases and agreements by which the farms are held have been completed within the period embraced in this Report, and are specified in Appendix, No. 1.

Sunk Island, in the County of York.

This Island is situated at the mouth of the River Humber. It was originally granted on lease in the reign of King Charles the Second, at a nominal rent in consideration of the lessee incurring the costs of reclamation, and of constructing the embankments necessary for the security of the property. About 130 years ago the Island was estimated to comprise 1,550 acres of cultivated land, divided into three farms, with five houses occupied by farm servants, and a small chapel.

No material addition was made to the Island by embankment during the next 70 years, but at the beginning of the present century the property came into the possession of the Crown by the expiration of the lease under which it had been held, and a new lease was granted for 31 years from 1802, with conditions that an accretion of at least 2,700 acres, which had been gradually silted up around the embanked lands should be reclaimed and made secure at the lessee's expense, and that a church and adequate buildings for the tenants should be erected; and under those conditions much more than the prescribed extent was reclaimed.

In 1833 the system of tenancy by middlemen was deemed to be inexpedient, and was terminated, and the farms were re-let to lessees holding direct from the Crown for terms of 21 years; on the expiration of those leases in 1854, the whole property was re-surveyed, and there were found to be 5,919 acres

of cultivated land, and 686 acres of land recently reclaimed and coming gradually into full value, making a total of 6,605 acres under cultivation. The 5,919 acres were let for 21 years at rents amounting to £. 11,253 yearly, and the 686 acres at rents of £. 888 yearly, making a total of £. 12,141 yearly. Houses and buildings in accordance with the character of the tenancies were erected where needed, throughout the estate; the roads and communications were reformed and improved; the draingage was made more effective; the embankments were strengthened, and a school was built to meet the educational requirements of the Island. In 1875 those leases expired. At that date there were 14 principal tenancies, comprising 6,482 acres, let at £. 12,068 yearly, and various small tenancies, comprising 123 acres, let at £. 273 yearly. One of those tenancies is a lease of a Coast Guard Station, which is let for a long term of years. The others were annual tenancies.

The estate has now been re-let as before in 14 farms, containing 6,477 A. 0 R. 29 P., at rents amounting to £. 13,196. 14. 6. The residue is let in small holdings at rents amounting to £. 258. 2., making a total rental of £. 13,456. 16. 6. An outlay of about £. 8,000 will be made by the Crown in providing storage for water and in constructing additional farm buildings. Considerable progress has been made in the works. Upon any expenditure which may be made by the Crown at the request of the tenants, beyond the sum agreed upon in each case, interest will be paid by the occupiers.

The church before referred to was built at the commencement of the present century by the then lessees, who undertook to expend at least £. 300 for that purpose. The building, which was not more unsubstantial than might have been expected under such circumstances, became worn out during the past few years; and at the date when the farms came out of lease, it was necessary to consider the expediency of attempting to restore the church or of building a new one. The building was structurally weak and damp, and possessed no single architectural feature to render its preservation desirable. It was, therefore, decided to rebuild it. Designs were accordingly prepared by Mr. Ewan Christian for a church to contain about 200 persons, and the work is now in hand. The cost is estimated at about £. 3,300, which will be borne by the Crown, with the exception of £. 150, which has been promised by the incumbent and inhabitants.

The endowment of the Living of Sunk Island, consists of the dividends arising from a sum of £. 8,333. 6. 8. Three per cent. Consols, which was purchased by the Crown for the endowment in 1830, under the powers of a special Act of Parliament. There has hitherto been no parsonage, but, having regard to the increased extent and population of the Island since the endowment was made, a free grant was made by Her Majesty in 1875 of five acres of land as a site for a parsonage, and a house is in course of construction by the Crown on that land, at the estimated cost of £. 3,000. The designs for the house have been prepared by Mr. Ewan Christian, under whose superintendence the construction of the church and parsonage is being carried out.

Sales. App., No. 2 (A.) and App., No. 2 (B.)

APPENDIX, No. 2 (A.) and APPENDIX, No. 2 (B.), contain the particulars of various sales by public auction and by private contract, of different premises and hereditaments that it was not advisable for the Crown to retain or

that were required for local purposes, &c., also of land now or formerly below high water mark.

It is the practice of this Department to bring to sale all detached and outlying properties, and old houses and cottages that are likely to realise accommodation prices. The proceeds are invested in the purchase of estates that are convenient for management, and also in freehold ground-rents. In pursuance of that principle, the following sales have been made in the past year, viz. :—

Several old houses and cottages at Billingborough, in the county of Lincoln, which were not required for the accommodation of the tenants or labourers upon the Crown farms at that place. Various encroachments upon the wastes of the Manor of Dunstable which have been sold to the lessees or occupiers, five old houses at Richmond, in the county of Surrey, and some detached parcels of land in the counties of Cumberland, Lincoln, and Norfolk.

The total sum realised by the sales specified in Appendix, No. 2 (A. and B.) amounts to £. 14,059. 10.

Enfranchisement of Copyholds. Appendix, No. 3.

Appendix, No. 3, contains the particulars of 20 enfranchisements of Copyhold or Customary Properties, held of six Manors belonging to the Crown, which have been enfranchised upon payment of sums amounting to £. 2,966. 10.

Free Tenements Released from Quit Rents, &c. Appendix, No. 4.

Appendix, No. 4, contains the particulars of two free tenements, holden of Manors belonging to the Crown, which have been released from the payment of quit-rents, reliefs, customs, and services, upon payment of sums amounting to £. 14. 2. 6.

Enfranchisement of Copyholds in which Her Majesty has a Reversionary Interest. Appendix, No. 5.

By the Act 21 & 22 Vict. c. 94, "The Copyhold Act, 1858," provision has been made for the enfranchisement under the Copyholds Act of land holden of Manors vested in Her Majesty in right of Her Crown in remainder or reversion expectant upon an estate of inheritance.

In conformity with the provisions of that Act two deeds of enfranchisement have been completed of lands and premises holden of the Manors of Tangmere and East Lavant, in the county of Sussex, in each of which the Crown has a reversionary interest, as set forth in Appendix, No. 5.

The consideration money has been paid to Trustees, and has been invested by them in the purchase of Government securities, the income from which, until the money shall be otherwise invested in pursuance of the terms of the Act, will be payable to the person who is for the time being entitled to the rents and profits of the Manor, in which each of these enfranchisements has been effected.

LAND TAX REDEEMED. Appendix, No. 6.

APPENDIX, No. 6, contains an account of land tax redeemed, amounting to £. 3. 5. 3., in extinction of which has been paid a total sum of £. 94. 7. 6.

EXCHANGE. Appendix, No. 7.

APPENDIX, No. 7, contains the particulars of an exchange that has been made for the purpose of improving the boundary of some building land near Eltham, in the county of Kent.

PURCHASES. Appendix, No. 8.

APPENDIX, No. 8, contains the particulars of nine purchases that have been made, for the concentration and improvement of the Crown property, and for the purpose of investing monies that had accumulated on the Capital Account of the Land Revenue from the sales of estates, or parts of estates, that did not form desirable properties for the Crown to retain, and of fee-farm and other unimprovable rents, and also from the enfranchisement of copyholds, &c.

The total sum, expended in the purchases specified in the Appendix, amounts to £. 49,909. 9. 6.

RELEASE. Appendix, No. 9.

APPENDIX, No. 9, contains the particulars of a release which was made in connection with the compromise of a claim made by the Lord of the Manor of Wilton, to certain reclaimed land and foreshore of the River Tees.

IN all cases of lease, sale, enfranchisement, or purchase, of which the particulars are detailed in this Report and in the Appendices, the surveys and estimates of the land and hereditaments included in such transactions were made by competent surveyors, who have in each case certified by a report, verified by a declaration, pursuant to the provisions of the Acts 10 Geo. 4, c. 50, and 5 & 6 Will. 4, c. 62, the fair worth or value, in their judgment, of the lands and hereditaments surveyed, except in cases where, from the nature of the property, the value could not be known by a survey or inspection, or where, from other causes specified in the 62nd section of the Act 10 Geo. 4, c. 50, a preliminary survey and estimate has been dispensed with.

IN consequence of the opinion expressed in a Resolution of the Committee of the House of Commons appointed to inquire into the management of this Department, there have been inserted in each Annual Report, since the year 1850, the following additional Schedules, or such of them as were applicable to the circumstances of each year; viz.—

1st. Of Rents put in charge with the several Receivers of the Land Revenue in respect of property acquired for Her Majesty by purchase, lease, exchange, or otherwise.

2nd.

2nd. Of the Rents discharged from the Rentals of the several Receivers in respect of property sold, exchanged, or otherwise disposed of.

3rd. Of all Monies due to Her Majesty in respect of Rents in charge with the several Receivers of the Land Revenue, under leases, or agreements for leases, and which shall have been owing for a greater period than a year, showing the term during which each arrear shall have been accruing, and the measures (if any) in progress for the recovery of the same.

4th. Of all Monies remitted on Her Majesty's behalf in respect of any Rents in charge with the same Receivers, specifying whether any previous remission has taken place in respect of the same Rent, and the circumstances, and the authority under which remitted.

5th. Of all defalcations that shall have taken place in respect of Monies due and owing to Her Majesty, specifying the circumstances under which such defalcations may have taken place, and the means (if any) available, and the measures (if any) taken, for the recovery of the Monies.

I have now inserted the first four of these Schedules in the Appendix to the present Report, the Fifth Schedule being unnecessary as there have been no defalcations within the period embraced in this Report.

Appendix, No. 10. (A.) (B.), (C.), (D.)

THE APPENDIX (A. A.) contains an Account of the Monies derived from the Hereditary Possessions of the Crown under the management of the Commissioners of Woods, Forests, and Land Revenues, and received within the year ended 31st March 1877, and the application of all such Monies, including payments into the Exchequer of £. 410,000 as surplus Income arising from those possessions, as well as the appropriation of the Capital Monies arising from the sale of portions of the possessions of the Crown during the same period.

Appendix (A. A.)

The Comptroller and Auditor General has reported to Parliament upon the Accounts of this Department for the preceding year, ended on the 31st March 1876, and the subsequent monthly Accounts up to and including the month of February last have been rendered to him for examination.

CHARLES GORE. L.S

Office of Woods, &c.,
29 June 1877.

APPENDIX.

LIST OF APPENDICES.

Appendix.		Page
N° 1.	Schedule of Leases of Messuages, Tenements, and Hereditaments, in England, granted between the 1st April 1876 and the 31st March 1877	14
N° 2.	(A.)—Schedule of all Manors, Buildings, Lands, and Hereditaments sold by Public Auction, within the same period	34
	(B.)—Schedule of all Manors, Buildings, Lands, and Hereditaments sold by Private Contract, within the same period	36
N° 3.	Schedule of Copyhold or Customary Premises, parcels of, or holden of, Manors belonging to the Crown, which have been enfranchised within the same period	38
N° 4.	Schedule of Free Tenements holden of a Crown Manor that have been released from Payment of Quit Rents, &c., within the same period	40
N° 5.	Schedule of Copyhold or Customary Premises, parcels of, or holden of, Manors vested in Her Majesty in right of Her Crown, in remainder, or reversion expectant, upon the Estate of Inheritance, which have been enfranchised during the same period	40
N° 6.	An Account of Land Tax charged on Estates belonging to the Crown redeemed, and of the Consideration Money paid for the same within the same period	41
N° 7.	Schedule of an Exchange made between the Crown and an individual within the same period	41
N° 8.	Schedule of Purchases made on the part of the Crown within the same period	42
N° 9.	Schedule of a Release made under the 5th Section of the Act 16 & 17 Vict. c. 56, providing for the settlement of disputed claims	43
N° 10.	(A.)—Schedule of Rents put in Charge with the Receivers of Land Revenue, in respect of Property acquired for Her Majesty by Purchase, Lease, Exchange, or otherwise, between the 1st April 1876 and the 31st March 1877	44
	(B.)—Schedule of Rents discharged from the Rentals of the several Receivers in respect of Property sold, exchanged, or otherwise disposed of, within the same period	45
	(C.)—Schedule of all Monies due to Her Majesty in respect of Rents in Charge with the several Receivers of the Land Revenue under Leases, or Agreements, and which have been owing for a greater period than a Year; showing the Term during which each Arrear has accrued, and the measures (if any) in progress to recover the same	46
	(D.)—Schedule of all Monies remitted on Her Majesty's behalf in respect of any Rents in Charge with the several Receivers; specifying whether any previous Remission has taken place in respect of the same Rent; and the circumstances and authority under which remitted, between the 1st April 1876 and the 31st March 1877	47
A. A.	Accounts of the Commissioners of Her Majesty's Woods, &c., for the Year ended 31st March 1877	99

Appendix, N° 1.—A SCHEDULE of Leases of Messuages, Tenements, Lands, and Hereditaments, in both days inclusive:—showing, The Dates of Leases; The Premises comprised therein; The Names of the Lessees; the same; The Rents reserved; The Fines paid; The Insurances to be made against Fire; and upon what other the Premises as have been before in Lease, by the last preceding Surveys, or other Accounts; and the Rents reserved

Note.—The Sums distinguished by an asterisk (*) are increased rents which became

- - A Peppercorn for the first year, and 510 - - during the remainder of the term.	- -	- ditto -	- - ditto - -	- - These particulars cannot be given. The demised Ground formed part of a larger plot of Ground, upon portions of which two houses, Nos. 6 and 7, Hamilton Place, and some stabling formerly stood. Those two houses and the stabling were pulled down, and a considerable portion of the plot referred to was taken by the Metropolitan Board of Works, under the powers of the Park Lane Improvement Act, 1869 (22 & 23 Vict. c. 134), for the formation, through Hamilton Place, of a new street from Piccadilly to Park Lane. The demised Ground forms part of the surplus land not required for the formation of the new Street, and, under the arrangements which were entered into between the Crown and the Metropolitan Board of Works with reference to the formation of the new Street, the surplus land in question remained vested in the Crown.		
70 - -	280 - -	800 - - at the least, and such further sum as shall be equal to 3-4th parts at the least of the value of any Buildings that may be added.	- - The expense incurred by the Lessee in repairing and improving the Premises.	- -	70 - -	—
				- - The house was received in Exchange from the Commissioners of Her Majesty's Works and Public Buildings, per Act 18 & 19 Vict. c. 95.		
- - A Peppercorn for the first year, and 650 - - during the remainder of the term.	- -	- - Such sum as shall be equal to 3-4th parts at the least of the value of the Buildings.	- - The expense incurred by the Lessee in the erection of the Buildings.	- - These particulars cannot be given. The demised Ground formed part of the site of a house formerly known as No. 140, Piccadilly, which house was pulled down, and part of its site was appropriated for the formation of the new Street from Piccadilly to Park Lane, referred to in the last column relating to the foregoing Lease of No. 6, Hamilton Place. The surplus Ground, forming the residue of the site referred to, and upon which the existing house, No. 140, Piccadilly, has been built, remained vested in the Crown under the arrangements made with the Metropolitan Board of Works with reference to the formation of the new Street.

[The other Fifth share in the Mill, &c., was purchased by the Crown from Mr. W. E. N. Browne on 2nd April 1875 (*vide* 54th Report to Parliament, page 40). The whole of the Land is intermixed with the Crown's Estate at Bishop's Cannings.]	2,000 - -
		YORK:	
July - 11	Robert Prescott Harrison and others.	- - Farms, Lands, and Hereditaments, containing in the whole about 275 A. 0 R. 29 P., situated in the Township of Norton-le-Clay, and near to the Crown's Thornton Briggs Estate.	18,420 - -

Appendix, N° 9.—SCHEDULE of a RELEASE made under the 5th Section of the Act 16 & 17 Vict. c. 56, providing for the Settlement of disputed Claims.

DATE of RELEASE.	PREMISES RELEASED.	NAME.	OBSERVATIONS.
1877:			
March 10 - -	Part of the bed and foreshore of the River Tees, containing 620 Acres, in or adjoining the Townships of West Coatham, Lazenby, and Lackenby, in the Parish of Kirkleatham.	- - Sir Charles H. Lowther, bart., and his Trustee.	- - In 1872 and 1873 certain Parcels of Land, formerly below high-water mark, but reclaimed from the River Tees, were sold under the circumstances stated in the 51st Report to Parliament (page 42), and in the 52nd Report (page 48). The total sum received by the Crown under those sales amounted to 20,289 *l.* 17 *s.* Sir Charles H. Lowther (Lord of the Manor of Wilton) and his Trustee claimed to be entitled to the sum so received by the Crown, and also to a large extent of Foreshore lying outside of the Land so sold. The claim was not admitted by this Department, and an Information was filed in the Exchequer against Sir Charles H. Lowther, and others, to establish the title of the Crown. The Defendants ultimately offered to compromise the suit, and an agreement was entered into, with the assent of the Attorney and Solicitor General on behalf of the Crown, for such a compromise upon the basis of an equal division of money and land. In pursuance of that agreement the sum of 9,644 *l.* 18 *s.* 9 *d.*, with interest at 3½ per cent. thereon, from 29th September 1872, was paid by the Crown to Sir Charles H. Lowther and his Trustee out of the sum of 20,289 *l.* 17 *s.* before referred to; and the deed of release described in the second Column was executed, a Decree of the Court having previously been made to the effect that the defendants had no Estate or interest in any part of the bed or shore of the Tees, other than that described in the Release in question.

Appendix, N° 10 (A.)—A SCHEDULE of the Rents put in Charge with the several Receivers of the Land Revenue in respect of Property acquired for Her Majesty by Purchase, Lease, Exchange, or otherwise, between the 1st day of April 1876 and the 31st day of March 1877, both Days inclusive.

A Farm, containing 239 A. 3 R. 37 P., parcel of the Hagloe Estate.	545 – –	25 – –	none	In consideration of the loss of the occupation of the Farmhouse pending the settlement of a claim for dilapidations against the Representatives of the late Lessee.		
LINCOLN:						
A Farm and Land, containing 728 A. 0 R. 35 P., parcel of the Wingland Estate.	1,943 19 2	250 – –	none	In consideration of the failure of the crops on part of the Farm, which has been recently embanked from the Sea, and of the facts that the past adverse seasons have pressed heavily on this corn-growing Farm, and that the roads are in a bad state, pending legal proceedings as to the liability to repair them.		
MIDDLESEX:						
A Messuage, No. 8, Middle Scotland Yard.	100 – –	25 – –	none	This house was required to be pulled down, and the Tenancy was therefore determined by the Crown on the 5th January 1869, when a quarter's Rent was due. The Tenant was in embarrassed circumstances, and subsequently went to South America, when all trace of him was lost.		
Garden Ground in York Terrace West, Regent's Park.	15 – –	22 10 –	none	The Tenant, some time before the expiration of the Lease, died in reduced circumstances, and his Representatives could not be traced. There was nothing on the Land which could be distrained upon.		

Appendix, No. 10 (D.)—A Schedule of all Monies Remitted on Her Majesty's Behalf in respect of any Rents in Charge with the several Receivers, &c.—*continued.*

DESCRIPTION OF PROPERTY.	ANNUAL RENT.	MONIES REMITTED.	Whether any previous Remission.	Circumstances under which Remitted.	Authority for Remission.	OBSERVATIONS.
MIDDLESEX—*continued.*	£. s. d.	£. s. d.	£. s. d.			
The Enclosure or Gardens in Munster Square, Regent's Park.	5 – –	4 19 –	*See* next Column	The Gardens are kept in order by the Inhabitants, who are persons of small means. A nominal rent is therefore accepted in consideration of the outlay annually incurred in keeping the Gardens in proper order.		
A Messuage, No. 33, Brewer Street	110 – –	169 19 6	– none –	A Distress for the recovery of the arrear due from the Tenant was levied, but only 22 *l.* 10 *s.* 6 *d.* was recovered. Possession of the Premises was obtained under a Writ of Execution in March 1870, when the sum here remitted was still owing. The Tenant left the neighbourhood, and all trace of him was lost.		
ROLLS ESTATE:						
A Messuage, No. 111, Fetter Lane	45 – –	11 5 –	– none –	These Houses being very old were to be pulled down with the view to the Sites being let upon Building Leases. Notices to quit were served upon the Tenants. At the expiration of the notice to quit No. 111, Fetter Lane, the Tenant of that house left the neighbourhood, and all trace of him was lost. The Tenants of the other houses were put to some loss and inconvenience by compulsory removal, in consideration of which circumstance it was considered reasonable to allow them some remission of Rent.	– – The Lords Commissioners of Her Majesty's Treasury.	
Ditto – No. 112 – ditto –	42 – –	21 – –				
Ditto – No. 113 – ditto –	35 – –	17 10 –				
Ditto – No. 114 – ditto –	40 – –	20 – –				
OXFORD:						
Langley Farm, containing 298 A. 2 R. 24 P., parcel of the Whichwood Estate.	512 2 2	50 – –	– none –	In consideration of the losses sustained by the Lessee in consequence of the long prevalence of rain, which seriously affected the high and cold clay Land of this Farm during the past adverse seasons.		
Potter's Hill Farm, containing 489 A. 3 R. 39 P., also parcel of the same Estate.	800 11 3	80 – –	– none –	In consideration of the unproductiveness of the corn crops during the past adverse seasons.		
SUSSEX:						
A Farm, containing 318 A. 2 R. 25 P., at Selsea.	360 2 1	180 – –	180 1 –	In consideration of losses sustained by the Lessee by the overflow of the Sea, the tides having been forced by the gales over nearly the whole of the Farm, and destroyed the crops.		

THE TWENTY-SIXTH REPORT

Of the COMMISSIONER in charge of the WOODS, ROYAL FORESTS, CROWN, and other ALLOTMENTS; of the LAND REVENUE of the CROWN in *Scotland*, *Ireland*, *Wales*, and in the Isles of *Man* and *Alderney*; and of the FEE FARM and other UNIMPROVABLE RENTS of the CROWN in *England* and *Wales*, under the Warrant of the Lords Commissioners of Her Majesty's Treasury, bearing date the 30th day of March 1876.

IN obedience to the directions contained in the Acts 10 Geo. 4, c. 50, and 11 & 12 Vict. c. 102, and 14 & 15 Vict. c. 42, I have to report to Her Majesty, and to the Houses of Parliament, the proceedings in the several matters and duties so assigned to me during the year ended 31st March last.

ROYAL FORESTS AND WOODLANDS.

THE APPENDIX, No. 1, contains the particulars of a Purchase made on behalf of Her Majesty of certain premises in the parish of Whitchurch, in the county of Hereford. Appendix, No. 1.

THE APPENDIX, No. 2, contains the particulars of three Leases granted to certain persons of premises in the Royal Forests and Woodlands. Appendix, No. 2.

THE APPENDIX, No. 3, contains the particulars of a Lease granted of premises in the Highmeadow Woods. Appendix, No. 3.

THE APPENDIX, No. 4, contains the particulars of a Conveyance in exchange of certain Waste Land, the property of the Crown, for other land, the property of a private individual in the Forest of Dean. Appendix, No. 4.

Appendix, No. 5. THE APPENDIX, No. 5, contains the particulars of 52 Conveyances made to certain persons pursuant to the Act 10 Geo. 4, c. 50, of the Crown's interest in and over several Pieces of Land, and which are wholly or in part surrounded by, intermixed with, or contiguous to, other lands not the property of the Crown.

Appendix, No. 6. THE APPENDIX, No. 6, contains the particulars of a Lease granted of certain premises in the Forest of Dean.

Appendix, No. 7. THE APPENDIX, No. 7, contains the particulars of six Leases of Land granted to the registered owners of gales within the Forest of Dean, for the better working of such gales, under the authority of the Acts 1 & 2 Vict. c. 43, and 24 & 25 Vict. c. 40.

Appendix, No. 8. THE APPENDIX, No. 8, contains the particulars of 12 Leases of Stone and Limestone Quarries, in the Forest of Dean, granted pursuant to the Acts 1 & 2 Vict. c. 43, and 24 & 25 Vict. c. 40.

Appendix, No. 9. THE APPENDIX, No. 9, contains the particulars of a License to dig and get Sand from certain premises in the Forest of Dean, granted under the provisions of the Act 1 & 2 Vict. c. 43.

Appendix, No. 10. THE APPENDIX, No. 10, contains the particulars of a Gale of Coal in the Forest of Dean and Hundred of St. Briavels, granted under the authority of the Act 1 & 2 Vict. c. 43.

SCOTLAND.

Appendix, No. 11. THE APPENDIX, No. 11, contains the particulars of twenty Leases of Salmon Fishings in Scotland, being, in part, renewals of former Leases; and in part, Leases of Fishings now let for the first time. The fixed Rents reserved in these Leases amount to the sum of £.187. 10.

Appendix, No. 12. THE APPENDIX, No. 12, contains the particulars of two Leases of Mineral rights in Scotland. The certain Rents reserved in these Leases amount to the sum of £.15, increasing at the end of five years to £.115, and at the end of eight years to £.210. per annum, the Royalties which are reserved depending on the produce.

THE

THE APPENDIX, No. 13, contains the particulars of three Sales of Crown property in Scotland, the purchase-monies amounting to £. 212. 10. Appendix, No. 13.

THE APPENDIX, No. 14, contains the particulars of twenty-one Sales of Feu, &c. Duties in Scotland, the consideration monies amounting to £. 5,681. 10. 11. Appendix, No. 14.

THE APPENDIX, No. 15, contains the particulars of a Sale of Surplus Teinds in Scotland, the consideration money amounting to £. 100. 0. 4. Appendix, No. 15.

IRELAND.

THE APPENDIX, No. 16, contains a Schedule of Perpetual and Unimprovable Rents payable to the Crown which have been sold during the past year. The Rents sold amount to the annual sum of £. 333. 2. 7.; the purchase-monies received amount to the sum of £. 9,608. 14. Appendix, No. 16.

THE APPENDIX, No. 17, contains an Account showing the Charge and Discharge, and State of the Collection of the Land Revenues of the Crown in Ireland, during the past year. Appendix, No. 17.

THE APPENDIX, No. 18, contains a General Abstract of Quit, &c., and Leasehold Rents for the same period. Appendix, No. 18.

ISLE OF MAN.

THE APPENDIX, No. 19, contains the particulars of three Leases of Crown Property which have been granted during the year. Of these, two are of Mines, the certain Rents reserved in which will ultimately amount to £. 90. per annum; and the remaining Lease is of Foreshore, the Rent reserved being £. 1. per annum. Appendix, No. 19.

THE APPENDIX, No. 20, contains the particulars of two Sales which have taken place during the year, by Private Contract, of Foreshore at Douglas, the purchase-monies amounting to £. 1,260. Appendix, No. 20

FEE FARM RENTS.

ENGLAND AND WALES.

Appendix, No. 21. THE APPENDIX, No. 21, contains the particulars of Sales of Fee Farm and other unimprovable Rents of the Crown, payable as issuing out of Lands, Tenements, and Hereditaments in England and Wales.

The Rents sold amount altogether to the sum of £. 11. 18. 5., reduced by allowances for Land Tax to £. 10. 10. 5. per annum. The purchase-monies amount to £. 263. 0. 5.

WALES.

Appendix, No. 22. THE APPENDIX, No. 22, contains the particulars of 12 Leases of Crown property which have been granted during the year. Of these, three are of Sporting, the Rents reserved in which amount to £. 29. per annum. One is of Foreshore, the Rent being £. 75. per annum. The remaining eight are of Mines and Quarries, the minimum Rents reserved in which will ultimately amount to £. 686. per annum.

Appendix, No. 23. THE APPENDIX, No. 23, contains the particulars of 42 sales by private contract of the Crown's interest (reserving Mineral Rights, &c.) within and over waste lands and encroachments in Wales. The lands conveyed contain altogether about 911 A. 0 R. 24 P., and the purchase-monies amount to the sum of £. 2,155. 15. 9.

By a Resolution of the Committee of the House of Commons appointed to inquire into the management of this Department, the following Schedules were required to be inserted in each Annual Report, viz. : —

1st. Of Rents put in charge with the General Receivers of the Land Revenue in respect of Property acquired for Her Majesty by purchase, lease, exchange, or otherwise.

2nd. Of the Rents discharged from the Rentals of the several Receivers in respect of property sold, exchanged, or otherwise disposed of.

3rd. Of all Monies due to Her Majesty in respect of the Rents in charge with the several Receivers of Land Revenue under leases, or agreements for leases, and which shall have been owing for a greater period than a year, showing the term during which each arrear shall have been accruing, and the measures (if any) in progress for the recovery of the same.

4th. Of all Monies remitted, on Her Majesty's behalf, in respect of any Rents in charge with the same Receivers, specifying whether any previous remission has taken place in respect of the same Rent, and the circumstances and authority under which remitted.

5th. Of

5th. Of all defalcations that shall have taken place in respect of Monies due and owing to Her Majesty, specifying the circumstances under which such defalcation shall have taken place, and the means (if any) taken for the recovery of the monies.

Of these Schedules there is occasion, for the purposes of this Report, to introduce the 2nd, 3rd, and 4th only. Appendix, No. 24 (A.) (B.) (C.)

ACCOUNTS.

THE APPENDIX (A. A.) contains an Account of the Monies derived from the Hereditary Possessions of the Crown, under the management of the Commissioners of Woods, Forests, and Land Revenues received within the year ended 31st March 1877, and of the application of all such Monies, including payment into the Exchequer of the surplus Income arising from the Possessions and Land Revenues of the Crown during the same period. Appendix (A. A.)

The Account for the preceding year, ended on the 31st of March 1876, has been audited, and the subsequent Monthly Accounts have been rendered to the Comptroller and Auditor General for the period up to and including the month of February last.

JAMES K. HOWARD. L. S.

Office of Woods, &c.,
29 June 1877.
